I also suggest that this legislature consider adoption of measures necessary to implement the National Defense Education Act of 1958. This act recently passed by Congress provides for loans to college students, grants for equipment, national defense fellowships, the screening of exceptionally well qualified students, guidance counselor training, technician training centers, and foreign language training programs. South Dakota's allocation for the current fiscal year is estimated to be nearly $220,000. For the State appropriation of only $20,000, approximately $237,000 would be available for student loans among our colleges.

We are happy to note the steady enrollment increases at our State institutions of higher learning even though this may indicate a need for more staff and physical plant. We must meet this challenge to provide a college education for all South Dakota youth who desire it. I think there is no area of governmental activity where we can more truly think of our expenditures as investments rather than expenses, than in the field of education. In training the leaders and citizens of tomorrow, in research, and in the development of agricultural and industrial improvements, our institutions of higher learning repay the people of the State many times what they invest in them.

During the campaign and since the election I have visited most of our State institutions, in order to gain firsthand knowledge of their needs and problems. Recently I was surprised and shocked to learn of the loss of accreditation of the Engineering School at South Dakota State College. I intend to immediately inquire into all of the facts surrounding this matter, and to do everything possible to bring about prompt reinstatement of the school.

In connection with the administration of higher education I have always felt that our board of regents should be composed of the best qualified persons in South Dakota. I'm sure we all realize that under present law, no resident of a county in which any State institution of higher learning is located may be appointed to the board. This means that by residence alone, nearly one-fourth of the citizens of this State are denied the opportunity of ever serving on the board, even though they may otherwise be eminently well qualified. I recommend that this statute be amended and that the board of regents be reconstituted so that the new board membership can be selected from the most qualified persons over the entire State.

The need for relocation of the school for the blind has been apparent for some time. The easy way would be to sidestep this knotty problem or simply make no mention of it. But these young people are entitled to better than that—from those of us fortunate enough to be blessed with good health.

I therefore recommend that appropriate legislation be enacted to relocate the South Dakota School for the Blind.

NATURAL RESOURCES

One of the oldest resources will soon become our newest frontier. As such it offers our State virtually limitless possibilities for power, irrigation, industry and recreation. I refer to what will be when completed one of the largest bodies of fresh water in North America. This chain of lakes in Central South Dakota will be formed by the Missouri River dams, stretching in one continuous line from our northernmost tip to our southern boundary.

It is perhaps even more noteworthy that when these reservoirs are filled South Dakota will rank fourth in the Nation in the amount of usable water in storage. The price we have paid for this is the loss of one-half million acres of agricultural land. Whether or not this sacrifice has been worthwhile will in considerable measure depend on the action taken at this legislatitive session and upon the action taken by this administration. For simple logic will tell us that there will be a great demand from all the States to our south for the right to use and appropriate this vast water supply. Unless we move immediately and vigorously to lay claim to our rightful share of the river water we will awake one day to find that while we slept our water rights floated down the river.

I therefore earnestly recommend that this legislature enact permissive water conservancy district legislation to prove unmistakably to Congress, the Bureau of Reclamation and the Department of Interior that we intend to claim and utilize water rights for all of the water we will need within our State. The legislation enacted should be enabling legislation. It should provide a given area or group of people a choice between irrigation or dryland farming. It should give cities and towns a right to reject or accept municipal water supply from the reservoirs. At the time it should protect the rights of all the people of our State to use the water for any desirable purpose.

As the sponsor of a Senate bill early in the 1955 session calling for creation of a strong industrial promotion agency with a full-time director and staff, I can assure you that my interest in business and industrial promotion in South Dakota is not something which has developed overnight. I am keenly aware of the fact that this new water supply and electric power source could make our State far more attractive to industry than ever before. To my best ability I will make the office of Governor the spearhead and coordinator of all State offices working on any phase of Missouri River development, whether it be power, irrigation, industrial, or recreation. If this legislature will provide the tools, including a conservancy act, and adequate funds for carrying on the work of industrial promotion, we will rise to the inspiring challenge of South Dakota's new frontier. This, of course, is not to say that we should neglect other aspects of the business and industrial potential of the State. We must shape our development program to give technical and marketing assistance to the hundreds of promising small business firms in the State, aiding them to expand their out-of-State markets in the knowledge that all of our citizens will benefit, directly or indirectly, from the new money thus brought into South Dakota.

The outdoor recreation potential of our State is certainly one of our greatest natural resources. We must make the benefits of our mountains, our lakes, our parks, and other game and recreation areas readily available to the greatest possible number of our own citizens. Let us also recognize that South Dakota can become the vacation land of ever-increasing numbers of visitors from other States, for the recreation potential of our new lake system is as yet practically untapped. Vacationers leave millions of dollars annually in our State and make substantial contributions to our sales and gas tax revenues. But many other States are competing with us in the tourist field. Thus we must use all legitimate means to invite our fellow Americans to visit and vacation with us in South Dakota. In this connection, it appears that a closer coordination of our recreational and industrial advertising program can eliminate costly duplication of effort and advertising space, and at the same time fully acquaint the Nation with South Dakota's attraction in both important fields.

HIGHWAYS

There is plenty of elbow room in South Dakota and that is one of the things which makes our State a fine place in which to live and raise a family. But with our "wide open spaces" we need good roads, not only to get farm products to market but for many other business and recreational purposes today considered a necessary part of modern living. It is therefore important that we provide adequate funds for both our primary highway system, and our farm-to-market road program.

As a part of the national military road network inaugurated by our Federal Government approximately 2½ years ago, all of the 48 States of the Union are now busy with the construction of their assigned share of this Interstate Highway System. Ninety-one and eight-tenths percent of the cost of construction of the Interstate Highway is paid by the Federal Government. Fifty-six percent of the cost of construction of the State primary and secondary system is borne by the United States. If South Dakota should ever fail to provide sufficient funds for matching the Federal funds allocated to this State, there is no doubt that our share would simply be passed to other interested States. It is for this legislature to determine whether South Dakota shall secure its share of this increased Federal aid for highway purposes.

As chairman of the State highway commission I intend to commence a close study of the administrative and engineer operation of the State highway department to determine whether savings can be effected within the department. Full consideration will be given to the adoption of advanced methods of highway planning and design which I am informed other midwestern States have already instituted, with a substantial saving in operation costs and an increase in efficiency. Among other things, this can include the fullest use of aerial mapping, and installation of electronic equipment in the planning section. Study will also be given to the question of letting major maintenance projects to the lowest bidder, the same as new construction. This might make it possible to reduce the number of large, expensive road machinery units presently maintained by the State, but in use only part of the time.

From inquiry which I caused to be made, it appears substantial savings can be achieved in the purchase of materials used to reflectorize our motor vehicle license plates. Use of an alternate material which would apparently be just as effective could save the State of South Dakota $161,000 in the manufacture of these plates, under the present system. I recommend serious consideration of a return to the annual license plate. Originally South Dakota went to the 3-year plate because of the high cost of reflectorizing. Economies which we believe can now be effected in the method of manufacture, would be sufficient to enable a return to the annual plate system.

HIGHWAY SAFETY

The tragic loss of lives on South Dakota highways is a matter of grave concern to all

of us. It is a shocking fact that South Dakota's 1958 traffic death toll was the highest in the Nation. Actually, the rate of deaths per mile traveled on South Dakota highways is nearly double the national average, and more than twice that of many of our neighboring States. While there is no way of measuring the grief and anguish of the family of the traffic victims, the total cost of all traffic accidents in South Dakota in 1958 was estimated by the National Safety Council at more than $31 million, in other words, more than our entire State budget for a 1-year period. The public has now rightly come to expect that this legislature will move resolutely to curb and punish careless driving and to promote and encourage highway safety. Yet there is no magic formula or single piece of legislation which will automatically make our highways safe. The problem is a complex one and a satisfactory solution requires a coordinated attack along the following lines: First of all, any serious scheme proposed for reducing the traffic toll must include education and the educational tools we possess. We must expand our drivers education program to make the licensing of drivers under 18 years of age contingent on their successful completion of an approved course in drivers education in one of our public or private high schools. The value of this training is best shown by the fact that insurance companies grant a 15-percent premium reduction to all persons who have completed such a course. We should emphasize traffic safety education in primary and secondary schools and expand teacher preparation for such courses.

2. South Dakota is the only State in the Union which does not require any sort of drivers examination as a condition to driving on the public highways. We need a drivers licensing law which will provide for a knowledge test of traffic laws and safe driving practices, a vision test, and a behind-the-wheel driving test. This should and will improve traffic safety by upgrading driver quality and by eliminating certain drivers who cannot be trusted with the privilege.

3. The establishment of a point system of driver improvement and control. The average person will make a special effort to drive within the law if he realized the penalty for not doing so could be the loss of his driving privilege. This program is already in successful operation in many of our neighboring States.

4. In the field of engineering, traffic safety should become an even greater factor in our planning and construction. Prompt construction of the Interstate System to adequate standards in the shortest possible time without neglects of the other rural and urban systems will help make driving safer.

For the present, at least, I make no recommendation for any further increase in the size of the State motor patrol. It is my belief that the utilization and deployment of this force in the most efficient manner will enable us to do the job without an increase in their numbers.

LABOR

The adaptability of South Dakota's labor force is one of our greatest resources of economic expansion. The contributions made by organized labor to the welfare of our entire community are too little recognized. South Dakota labor has a record of working consistently for the extension of educational opportunity, for the raising of our standard of living and the mass purchasing power on which business prosperity depends, and it had been in the forefront of the battle to safeguard the processes of democratic society.

In the field of workmen's compensation, the obligation toward the injured worker has long been recognized. But South Dakota has failed to keep up with the established standards in this field, as our economy and our industry have moved ahead. Our workmen's compensation law must be modernized and brought up to date with a liberalization of benefits in accordance with the formula which was stated as the objective of this program when it was created many years ago.

WELFARE

We are all indebted to the hardy pioneers who led in the early development of our great State. Now in the sunset of their life, many of these senior citizens need our help and unfortunately the spiraling increase of living costs has far outdistanced the modest increases we have granted in assistance payments. The result has been in far too many cases substandard living quarters and too little to eat. And worst of all our assistance program has actually penalized them for helping themselves; when one of our older people was able to earn an extra dollar or two, the State has in effect taken it away from him by reducing his allotment an equal amount.

I recommend that consideration be given to amending this law so that they will have more opportunity to help themselves by earning a little extra money.

Many of these elderly citizens are in need of medical care and attention. When it is provided, under the present system, the burden is upon our counties to bear the cost. Recognizing the acute need for better medical care for our indigent senior citizens, and in an effort to give some relief to the local governments, the Federal Government has had in effect for several years a grant-in-aid program in this field. Twenty-six States now participate in this program.

I recommend that thorough consideration be given to the question of our participation.

INDIAN AFFAIRS

Our Indian people are America's first citizens. As such they leave some special problems which are not much closer to solution today than 25 years ago. Our South Dakota Indian Affairs Commission is the logical agency of State government to study this field. The membership includes both persons of white and Indian blood. Unfortunately the statute creating this body has in the past tended to handicap its operations. I suggest that the Commission be revitalized and given all necessary means to thoroughly consider the area of the State's responsibility to our Indian citizens. This Commission should make and file its report by January 1, 1960 for the appropriate action.

I have by this message sought to outline the fundamental program of the new administration. The desirability of keeping my remarks within reasonable time limits has made it impossible for me to cover all of the wide range of subjects with which you will be concerned during the legislative session. Therefore, I may from time to time during the session submit for your consideration one or more special messages on subjects of paramount interest which could not be fully treated at this time.

In conclusion I wish to express to Governor Foss and members of his administration, my personal thanks for the courtesy and cooperation they have extended. Having been on opposite sides in two recent political campaigns has not interferred with our desire and ability to be friendly and to view important matters with regard to the greatest good for the people and our State. I maintain that no problem which may divide us into separate groups can withstand solution provided we approach it with reverence and determination. My ancestors have imbued me with a sincere and deep conviction that it is man's prerogative and duty to determine, to some extent, what his destiny may be, so long as he shows respect for others concerned. The words which are spoken during this inauguration are intended to provoke constructive thoughts along the lines of some legislation which I feel merits your consideration. Ultimately the combined efforts of your joint meditation will write the lasting record from which historians will determine the extent to which the 1959 South Dakota Legislature gave the greatest benefit to the greatest possible number of our people. You have obligated yourselves as I have to carry out great responsibility with honor and with adherence in your decisions to the principle of the Golden Rule. May we never be too proud or confident to counsel together or to seek the aid of divine providence. I have profound confidence that you will enact a program which will reflect favorably on the two-party system of government. As we proceed from here, let us pledge to protect and promote this State and its government. Let us be guided in word and deed by the motto which has stood the test of time: "Under God the people rule."

The History and Development of the Louisiana Civil Code

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. WILLIS. Mr. Speaker, as is well known Louisiana is the only State in the Union governed by the civil law, as embodied in the Louisiana Civil Code. The Louisiana Civil Code was modeled after the code Napoleon, and the latter, in turn, was based on Roman law, as exemplified by the Justinian Code.

The first Louisiana Civil Code was promulgated in 1808. A very impressive ceremony was held in the new supreme court building in New Orleans on October 13, 1958, celebrating the sesquicentennial of the Louisiana Civil Code. On that occasion I was privileged to hear an address by Hon. John T. Hood, Jr., judge of the 14th judicial district court of Lake Charles, La., on the subject of the "History and Development of the Louisiana Civil Code." I commend the address of this eminent jurist to all my colleagues in this body and especially to students of law and history, and ask unanimous consent that it be inserted in the RECORD for permanent future useful reference and historical research material.

The address of Judge Hood follows:

THE HISTORY AND DEVELOPMENT OF THE LOUISIANA CIVIL CODE

The Louisiana Civil Code has been called the most perfect child of the civil law. It has been praised as "the clearest, fullest, the most philosophical, and the best adapted to the exigencies of modern society." It has been characterized as "perhaps the best of all modern codes throughout the world." Based on Roman law, modeled after the great Code Napoleon, enriched with the experiences of at least 27 centuries, and mellowed by American principles and traditions, it is a living and durable monument to those who created it. After 150 years of trial, the Civil Code of Louisiana remains venerable, a body of substantive law adequate for the present and capable of expanding to meet future needs. At this sesquicentennial it is appropriate for us to review the history and development of the Louisiana Civil Code.

The event which we celebrate is the passage of an act by the Legislature of the Territory of Orleans, approved on March 31, 1808, promulgating a compilation of laws, now commonly referred to as the Civil Code of 1808. To adequately appreciate the significance of this legislative enactment, it is necessary to review the circumstances which existed at that time, and the events which led up to the adoption of this code.

Civil government actually began in Louisiana in 1712. The French laws governed from that date until 1769, when O'Reiley abolished those laws and established in their stead the Spanish law. The United States took formal possession of the province of Louisiana on December 20, 1803, about 8 months after the Louisiana Purchase had been concluded. France had assumed sovereignty for a period of only 20 days prior to that date, during which time nothing was done to repeal the Spanish laws or to establish the laws of France, so at the time the United States assumed sovereignty the laws of Spain were still in force.

The first official act performed by William C. C. Claiborne, 1 of the 2 commissioners appointed by the President to take possession of this Province, was to provide for the retention of the "laws heretofore in force," which of course were the Spanish laws.[1]

The laws of Spain at that time were multitudinous, composed of 11 different codes, and containing more than 20,000 laws, with many conflicting provisions. Even in Spain there was a great diversity of opinion as to which of these codes or laws should prevail in case of conflict.[2] Relatively few civil law treatises were available, and those which could be obtained in the territory were not translated into the English language.

The population of Louisiana at that time was estimated by Claiborne to be about 72,000, one-half of whom were slaves. The city of New Orleans had a population of only 10,000. A great majority of the white inhabitants were of French descent, and a substantial portion of the remainder were Spanish. Only a few lawyers were located in this Province prior to the Louisiana Purchase, and most of those had theretofore limited their activities to advising the Spanish officials.

The formal delivery of Louisiana to the United States had not been completed, however, before a host of emigrants, both American and foreign born, flocked to New Orleans—intent on making a fortune. Among them were a number of lawyers, most of whom were of common law origin, and many of whom were ignorant of the language of the people among whom they had settled. Fortunately for the future of the State, however, the lawyers who were located here during these early years, whether emigrant or native born, with few exceptions, were men of remarkable ability. The names of Martin, Derbigny, Matthews, Lewis, Hennen, Duponceau, Brown, Porter, Moreau-Lislet, Workman, Carleton, Livingston, and Mazureau are but a few of the great names which would have adorned the legal history of any time. But, even these able lawyers and the newly appointed judges could not properly interpret and apply the complex and conflicting Spanish law. The need for some immediate clarification of the laws which governed Louisiana was urgent.

Claiborne was a common law lawyer, a native of Virginia. He began practicing law in Tennessee when he was 20 years of age, served on the supreme court of that State when he was 21, and as a Representative in Congress at the age of 22. He was only 28 years of age when he, as a commissioner of the United States, took possession of Louisiana. Claiborne was loyal to his country and disposed to be fair to the people of his new trust, but he was handicapped in that he understood neither French nor Spanish. His early proclamation that the Spanish laws should remain in effect was intended as a temporary measure only, because Claiborne planned eventually to establish the English common law as the basic law for this new territory, just as had been done in all of the States which had been admitted to the Union up to that time.

Many inhabitants of Louisiana, already displeased over the arbitrary powers conferred by Congress on the president and his appointees in the territory, became alarmed when they learned that the newly appointed American officials intended to institute the common law system. Their experience with Spanish judicial proceedings had left them with little or no respect for the courts, and they were afraid of the common law system where the decisions of the courts became law, and where they would be required to search through English jurisprudence to determine what laws applied. They preferred to continue to be governed by the laws of Spain, with which they were familiar, where all enforceable laws were required to have some statutory origin, and where the decisions of the courts did not assume the status of laws but were considered merely as judicial interpretations of statutory provisions.

There is little question but that the common law system would have been established here shortly after the United States assumed sovereignty, and that Louisiana would be a common law state today, were it not for the fact that Edward Livingston, a New York lawyer who emigrated to Louisiana in 1803, emerged as a leader in opposing this action, and as a champion for the cause of retaining a civil law system in the territory.

Livingston was a man of unusual ability. The history of his life and his remarkable accomplishments in political and professional fields, in New York, in Louisiana, in the Nation's Capital and in France, are well known and need not be recounted here. Although educated in common law traditions, Livingston had made a study of the civil law before his arrival in Louisiana and felt for it an effection which is evidenced all through his literary and professional activity.

Claiborne had the misfortune shortly after his arrival in Louisiana of acquiring as bitter political enemies Edward Livingston and Daniel Clark, a wealthy and influential citizen of New Orleans. Their personal dislike for each other was such that Claiborne in his official letters referred to Livingston and Clark as unprincipled and as having views hostile to the interests of the United States.[3] On one occasion in 1805 when Governor Claiborne accused Daniel Clark of being implicated in the Burr conspiracy, a duel ensued in which Claiborne received a bullet wound through his thigh. Because of this intense political fued, the controversy between Livington and Claiborne as to which of the two rival legal systems should be established in this new territory was sparked with a great deal of bitterness.

On March 26, 1804, Congress divided the area included in the Louisiana Purchase into two parts, that portion which is now substantially the State of Louisiana being called the Territory of Orleans. The law provided that the governing authority of this territory should be a legislative council, consisting of 13 members appointed by the President. The need for adopting some system of substantive law for the territory was urgent, so Claiborne, as the first Governor of that Territory, was anxious for the legislative council to convene as soon as possible for that purpose. For a number of reasons, however, he experienced considerable difficulty and delay in assembling the first legislative council.

One reason for the delay was that a yellow fever epidemic struck New Orleans at that time taking the lives of a large portion of the population of that city. Claiborne's wife and only child died on the same day—victims of the fever—and his private secretary, his brother-in-law, and several members of his staff also perished. Claiborne himself became infected and was bedridden for 3 weeks.

Also, a slave insurrection was threatened, which required Claiborne's attention in organizing a volunteer militia.[4]

A third reason for the delay was that Livingston, fearing that this first legislative council selected by Claiborne would establish the common law as the basic law of the territory, prepared a memorial urging Congress to grant statehood immediately to the Territory of Orleans in order that it might thereafter be governed by elected representatives.[5] This memorial was adopted at a public meeting held in New Orleans in October, 1804, and thereafter with the help of Daniel Clark it was distributed throughout the territory for signatures, and was then presented to Congress.[6] It thus received wide publicity. The feelings aroused by this memorial caused several men to refuse to serve on the legislative council, caused others to withdraw the consent they had previously given, and created stronger opposition to Claiborne's plan to change the basic laws of the territory.[7]

The legislative council was convened on December 5, 1804, however, as soon as Claiborne was able to locate eight men who were acceptable to him and who would agree to serve, one more than was needed for a quorum. At its first meeting this council appointed three of its members as a committee to prepare a civil code and a criminal code, and "to employ two counselors-at-law to assist them in drafting the said codes."[8]

This committee was disposed to appoint James Brown and Edward Livingston as the two counselors-at-law to assist in drafting these codes, and agreed on a fee of $5,000 for that work,[9] but Governor Claiborne, although favorable to Brown, opposed the appointment of Livingston. The passions raised by this disagreement paralyzed the work of the committee appointed to draft a civil code, and consequently it did nothing.

The memorial prepared by Livingston did not accomplish its avowed purpose, but it was one of the principal reasons why Congress, a few months later, provided that the governing authority of the territory thereafter would consist of a legislature, composed of an elected house of representatives and an appointed legislative council.[10]

In 1806, the first legislature of the Territory of Orleans convened and, apparently siding with Livingston, promptly adopted an act providing that the Territory of Orleans should be governed by the Roman and Spanish laws which were in effect at the time of the Louisiana Purchase.[11] This act was vetoed by Governor Claiborne on May 26, 1806. The legislature, in obvious annoyance, then passed a resolution for adjournment, assigning as the reason therefor that, "Their best acts were rejected by the Governor."[12]

A few days later several members of the legislature signed and published a manifesto, purporting to be a resolution for the dissolution of the general assembly because of Claiborne's veto. This document revealed the attitude of a majority of the legislators toward the two rival legal systems. Here are some of the statements contained in this manifesto:

"We certainly do not attempt to draw any parallel between the civil law and the common law; but, in short, the wisdom of the civil law is recognized by all Europe; and this law is the one which nineteen-twentieths of the population of Louisiana know and are accustomed to from childhood, which law they

Footnotes at end of speech.

would not see themselves deprived without falling into despair * * *.

"The debate in the Chamber of Representatives and even the refusal of the sanction of the Governor, do they not seem * * * [to raise] the presumption that there is a secret intention of throwing us, despite ourselves, into the frightful chaos of the common law?" [13]

On June 7, 1806, just a few days after this manifesto was issued and published, the legislature adopted a resolution appointing James Brown and Louis Moreau-Lislet "to compile and prepare jointly a civil code for the use of this territory." The resolution provided that:

"The two jurisconsults shall make the civil law by which this territory is now governed the groundwork of said code." [14]

Governor Claiborne at that point apparently decided to bow to the will of the majority, because he approved the resolution, in spite of the fact that it specifically directed that the laws of Spain, or the civil law, rather than the common law, should be used as the basis for the proposed code.

Brown and Lislet had entirely different backgrounds in law, one being bred in the intricacies of the common law, and the other trained in the principles of the civil law. Brown was born in Virginia, but practiced law in Kentucky and served as secretary of State there before coming to Louisiana. After establishing himself here he served as the first secretary of the Territory of Orleans, as district attorney, as a member of the convention which framed the first constitution for Louisiana, as U.S. Senator, and as Minister to France.

Lislet was born in Santo Domingo, a French dependency. He received his education and legal training in France, and came to New Orleans about the time of the Louisiana Purchase, while he was in his thirties. After settling in America, he perhaps contributed more to the legal literature of this State than has any other one person. During his busy career, he participated in more than 200 cases before the State supreme court, and also served at various times as a member of the State house of representatives, a State senator, as a parish judge, as attorney general, and as a Representative in Congress.

Brown and Lislet were eminent lawyers. They were well versed in both French and Spanish, and for some time they had advocated the adoption of a code of laws for the territory.

They completed the work assigned to them in less than 2 years, and the civil code which they prepared was formally adopted by the legislature on March 31, 1808.[15] Governor Claiborne approved the adoption of this code, but in a letter which he wrote to the secretary of State a few months later he stated that it was still his object "to assimilate our system of jurisprudence as much as possible to that of the several States of the Union." [16] On October 11, 1808, Claiborne also wrote to one of the judges in the territory that:

"The Code will probably be greatly censured by many native Citizens of the United States who reside in the Territory. From principle and habit, they are attached to that system of Jurisprudence, prevailing in the several States under which themselves and their fathers were reared: For myself, I am free to declare the pleasure it would give me to see the Laws of Orleans assimilated to those of the States generally, not only from a conviction, that such Laws are for the most part wise and just, but the opinion I entertain, that in a Country, where a unity of Government and Interests exists, it is highly desirable to introduce thro'out the same laws and Customs. * * *" [17]

Footnotes at end of speech.

Claiborne obviously was sincere in his belief that the common law system was superior to that of the civil law, and in his attempts to establish the common law in the Territory of Orleans it has never been questioned but that he was motivated solely by a desire to do what he considered to be best for his country and for the inhabitants of that Territory.

The official title given to the code of laws which was adopted in 1808 was "Digest of the Civil Laws Now in Force in the Territory of Orleans, With Alterations and Amendments Adapted to Its Present System of Government." Although these compilers described their work as a digest of the laws then in force, it actually was a complete civil code, divided into three books, each of which was broken down into titles, chapters, and articles, similar to our present code, except that in numbering the articles a new series of numbers was used in each title.

The resolution authorizing the preparation of this code provided that "the indemnity justly due to the jurisconsults shall be determined by the legislature at their next session," but that in addition thereto Brown and Lislet each should be paid the sum of $800 per year for 5 years after the code was completed, in consideration of which it should be their duty to attend the courts in order to take notice of the imperfections in the new code and to report their observations to the legislature.[18] A different agreement must have been entered into later, however, because in 1807 the legislature authorized the payment of $2,000 to each of these attorneys in full compensation for the services performed by them, three-fifths of which was to be paid immediately and the balance becoming due after completion of the code.[19]

The civil code prepared by Brown and Lislet, however, was not based on the Spanish law, as the legislature had directed, but it was based instead on the then newly adopted French Code, the Code Napoleon. No satisfactory explanation has been offered to this date as to why this was done. It is probable, however, that these two attorneys and the legislature had a high regard for the codification experience in France, not only as to form but also as to content, since both the French and the Spanish systems had many common sources in Roman law, and for that reason they may have used the Code Napoleon as a model without any intent to displace the Spanish law.[20] This theory is supported by the fact that there are many differences between the Code Napoleon and the Louisiana Code of 1808, due largely to the fact that there were incorporated into the Louisiana Code a substantial number of Spanish laws, which had not been included in the French Code. The Louisiana Code contained 2,127 articles, a little less than the number contained in the Code Napoleon.[21]

There is some speculation among legal scholars as to whether Brown and Lislet modeled the Civil Code of 1808 on the Code Napoleon, as finally adopted, or whether they used only the projet or preliminary drafts of such code. Judge Martin, K. A. Cross, and the late Henry P. Dart are among those who contend that only the projet of the French Code was available to the redactors at the time the Louisiana Code was adopted.[22] They base that conclusion principally on the fact that the Louisiana Code contains a number of articles which were in the projet, but were omitted from the Code Napoleon as finally adopted, and that the numbering of articles in the Louisiana Code corresponds to that in the projet, but does not correspond to the numbering system used in the final form of the French Code. Other more recent scholars contend that the final and official draft of the Code Napoleon also was used by Brown and Lislet in compiling the first Louisiana Civil Code.[23] To support that view they point out that the French Code was promulgated in 1804, 2 years before the redactors of the Louisiana Code were appointed, so they reason that it must have been available to them, and that the Louisiana Code contains some articles which correspond to those in the Code Napoleon, but differ from the text on the same subject which appears in the project.

No attempt will be made here to resolve those differences of opinion. The answer to that particular question, however, may well lie in a very interesting leather-bound book owned by the family of the late Charles de la Vergne, of this city. It is a first edition printing of the Civil Code of 1808, which appears to have been owned by Moreau-Lislet himself, since his name is printed in gold letters on the outside front cover. In this volume, written in pen and ink in French, on pages interspersed for that purpose, is an extensive commentary on the articles of that code, purporting to give the source of each such article. These handwritten comments and notations are voluminous and appear to have been written in 1814 by Lislet or by someone who had intimate knowledge of the work done in drafting this first code. No study of this volume has ever been made, and it is possible that a thorough analysis of it will reveal the actual French sources which were used by Brown and Lislet in drafting this first code, and it may affect the interpretation which has been placed on some of the articles which have been carried over into our present code.

Regardless of the French sources used by the redactors, the primary significance of the adoption of the Civil Code of 1808, of course, was that it constituted the formal recognition and establishment of the civil law, and not the common law, for the Territory.

The resolution appointing Brown and Lislet to prepare a civil code did not specify the language in which that document was to be drafted, but it did authorize the payment of expenses incurred for translations. They actually prepared their digest or code in the French language, and it was translated into English by two other persons appointed for that purpose. For their services each of these translators was paid $750.[24] In formally adopting the code, the legislature directed that it be printed in the French and English languages, and further provided that "if * * * there should be found any obscurity or ambiguity, fault or omission, both the English and French texts shall be consulted, and shall mutually serve to the interpretation of one and the other." [25] Inaccuracies in the translation did appear, and it is significant to note that in a written brief submitted in the case of Dufour v. Camfranc, in 1822, Lislet himself disclaimed any responsibility for errors in translating the code into the English language.[26] The Supreme Court has consistently held, of course, that in case of conflict the French text shall prevail, since the original draft was in French.[27]

The act of the legislature adopting the civil code of 1808 repealed only those ancient laws of the territory which were contrary to or irreconcilable with this digest. The Supreme Court, thereafter, in 1817, and in spite of Livingston's arguments to the contrary, held that all of the Spanish laws which formerly were in effect and which were not contrary to the code were still in force.[28] This had the effect of revising the Spanish law, and again throwing the substantive law of Louisiana into a state of chaos. In an effort to remedy this situation the legislature authorized the translation and publication of such parts of the "Partidas" as were in force in Louisiana, which translation was done by Moreau-Lislet and Henry Carleton in 1820. This translation did not eliminate the conflicts and confusion in the Spanish law, however, so a restatement of the law was viewed as a necessity.

On March 14, 1822, the legislature adopted a resolution appointing Moreau-Lislet, Edward Livingston, and Pierre Derbigny "to revise the civil code (of 1808) by amending the same in such manner as they will deem it advisable, and by adding unto * * * (it) * * * such of the laws that are still in force and not included therein * * *."

Pierre Derbigny, a linguist, an orator, and an able lawyer, was born in France, of French nobility, but was forced to leave that country during the revolution to avoid political persecution. He came to Louisiana while in his thirties, and shortly thereafter he joined Livingston in actively opposing Claiborne's plan to institute the common-law system here. He, in fact, was one of the three bearers who presented to Congress the memorial prepared by Livingston seeking statehood for the Territory of Orleans. He later served as a justice of the Supreme Court, as Secretary of State and as Governor.

One year after this appointment was made, Lislet, Livingston and Derbigny submitted a report to the legislature in which they made it clear that in performing the task assigned to them it would be their purpose to prepare a code which would be complete and would relieve the courts "in every instance, from the necessity of examining into Spanish statutes, ordinances and uses." [29] The legislature approved this plan and ordered the printing and distribution of the code as soon as it was ready for the press.[30]

Later that same year, 1823, these three attorneys completed and had printed a project of their proposed revision, which they labeled "Additions and Amendments to the Civil Code of the State of Louisiana, Proposed in Obedience to the Resolution of the Legislature of the 14th March 1822, by the Jurists Commissioned for That Purpose." As this title indicates, only the additions and amendments which they recommended were included in the report, the articles of the civil code of 1808 which they did not propose to amend being omitted.

This project also was prepared originally in the French language, and was then translated with some inaccuracies into English. The French text was printed in one volume and the English translation was printed separately in another. Following the text of each proposed article were printed the comments and observations of the redactors, often indicating the reason for the proposed amendment and citing the authorities upon which it was based.[31]

Although there seems to have been no act passed by the legislature for the express purpose of adopting this civil code, the legislature did authorize the printing and promulgation of the code, as amended, by act approved on April 12, 1824. The act provided that the text should be printed in English and French on opposite pages, and that the jurists who had revised the code were to superintend the printing of it, were to number the articles consecutively throughout, and were to add a complete index to it.[32]

In February 1825, the legislature granted additional time to the printer to complete the printing of the civil code,[33] and on May 20, 1825, the Secretary of State issued his certificate to the effect that the printing had been completed, and that the code should be deeemd promulgated 1 month from that date.[34]

The title of this completed code, as promulgated, is "Civil Code of the State of Louisiana." Included in it were provisions originating from Spanish law which were not contained in the code of 1808. It also contained some provisions from territorial statutes, and others from common law sources. There were a total of 3,522 articles in this code, more than 1½ times as many as were contained in the code of 1808.

In order to make certain that all of the old Spanish laws were repealed, and to eliminate the necessity of ever having to refer to them again, this code contained an article providing that:

"From and after the promulgation of this code, the Spanish, Roman, and French laws, which were in force in this State when Louisiana was ceded to the United States, and the acts of the legislative council, of the Legislature of the Territory of Orleans, and of the Legislature of the State of Louisiana, be and are hereby repealed in every case, for which it has been especially provided in this code, and that they shall not be invoked as laws, even under the pretense that their provisions are not contrary or repugnant to those of this code." [35]

In spite of this provision, however, the Louisiana Supreme Court, in 1827, held that the Spanish laws which were not contrary to the civil code were still in force, and that the articles of the civil code of 1808, which had been omitted from the 1825 code, also were still in effect.[36]

These decisions led the legislature to adopt two acts in 1828, one of which provided that "all the civil laws which were in force before the promulgation of the civil code lately promulgated, be and are hereby abrogated," and the other act specifically repealed all articles of the civil code of 1808, except certain provisions therein excepted.[37]

Even these acts did not have the effect of eliminating further reference to the Spanish laws, because the supreme court shortly thereafter held that they repealed only the positive, written, or statute laws of Spain, and that they did not abrogate those principles of law which had been established or settled by the decisions of courts of justice.[38] That apparently has remained the status of the Spanish law in Louisiana to this date.

Changes brought about by the Civil War, together with the adoption of a new constitution, made it necessary to again revise the civil code. Consequently, the legislature, in 1868, authorized a joint committee to select one or more commissioners to revise the civil code.[39] John Ray, of the Monroe Bar, who already had been selected to revise the general statutes of the State and the code of practice, also was commissioned to revise the civil code. Ray thereupon employed three attorneys to assist him in this undertaking,[40] and he and his assistants submitted a project of a revised civil code which was printed in English in 1869. The revised code which they proposed was adopted as Act 97 of the legislature of 1870, and it was given the official title of "The Revised Civil Code of the State of Louisiana." The civil code of 1870 is substantially the code of 1825, except for the elimination of all articles relating to slavery and those which had been repealed, and the incorporation of all acts passed since 1825 amending the civil code of dealing with matters regulated by the code.

There have been no other revisions of the Louisiana Civil Code since 1870, although an unsuccessful attempt to revise it was made 50 years ago. In 1908, the legislature authorized the appointment of a commission to revise and reenact the Civil Code of Louisiana.[41] These commissioners were appointed, and they prepared a project of a revised civil code which was submitted to the legislature in 1910. Action on this project was first postponed, however, and later the proposed revision was rejected, after the Louisiana Bar Association had formally recommended against the adoption of this new code.

During the 88 years which have elapsed since our civil code was last revised, many articles have been amended, repealed, or added, and a number of statutes have been enacted relating to matters which properly should be incorporated into that code. These considerations caused the State Legislature, 10 years ago, in 1948, to adopt an act directing the Louisiana State Law Institute to prepare comprehensive projects for the revision of the civil code and the code of practice.[42] The project for the revision of the code of practice is almost complete and soon will be ready to submit to the legislature. It is expected that the difficult and long-term task of preparing a proposed revision of civil code will soon get underway.

The fact that the Louisiana Civil Code has been revised twice during the past 150 years, and a third revision is being contemplated, does not indicate a weakness in that work, but, on the contrary, it evidences an orderly evolution of the law. In the course of time consolidated statements of law in a civil code become overgrown with additional data in amendments and other statutes on the subject matter. Also, new inventions and discoveries present problems which are difficult to settle by reference to older rules or principles. So it is necessary from time to time that such a code be reexamined and perhaps revised or rewritten in order to incorporate all of these changes and to keep it virile and up to date.

The Civil Codes of Italy, Venezuela, Peru, Mexico, Argentina, and Brazil have been revised recently. The French Code itself, on which our code was modeled, is in the process of being revised at this time. The revision of the Civil Code of Holland, which was originally adopted 120 years ago, is almost complete, and the Legislature of the Province of Quebec has authorized the revision of the 90-year-old Quebec Civil Code.

The Louisiana Civil Code is not simply an adaptation of the Code Napoleon. Neither is it a digest of the Spanish laws which were in force in 1808, as the title of the code adopted during that year seems to indicate. It includes many provisions having a basis in common law, but the common law system does not prevail in this State—despite arguments advanced by some to the contrary. The simple truth of the matter is that Louisiana has developed a legal system of its own, and although grounded on civil law, it must be classified as sui generis.

The civil law and the civil law method of thinking are deep rooted here, and there is an emotional attachment to it in the minds of the people of this State. The civil code is defended today with the same vigor which characterized the actions of Livingston, Brown, Lislet, Derbigny and others who defended it 150 years ago.

The affection which lawyers throughout this State have for the Louisiana Civil Code now is no less than that which Napoleon expressed for the code of laws which bears his name, when he wrote: "What nothing will destroy, what will live eternally, is my civil code." [43]

Inaugural Address of Hon. John Patterson, Governor of Alabama

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. BOYKIN. Mr. Speaker, the members of our Alabama congressional delegation had the great pleasure of attending the inauguration of our new Alabama Governor, Hon. John Patterson, in Montgomery, Ala., on Monday, January 19, and under leave to extend my remarks, I include the text of Governor Patterson's inspiring address:

INAUGURAL ADDRESS OF HON. JOHN PATTERSON, GOVERNOR OF ALABAMA, JANUARY 19, 1959

Governor Folsom, Lieutenant Governor Hardwick, Lieutenant Governor Boutwell, constitutional officers, members of the legislature, distinguished guests, and my fellow Alabamians, it is with a deep sense of humility that I stand before you on this historic occasion and express to the people of Alabama my gratitude for the high honor that they have bestowed upon me. We all sense the greatness and the traditions of our State of Alabama today when we realize that we are standing on the same spot where Jefferson Davis took the oath of office as the first President of the Confederate States of America. We sense the greatness of our State when we realize the many important events of history which have taken place in this capitol building and on these grounds on which we stand.

Our forefathers by their sweat and blood and toil have passed on to us a great heritage and you and I are charged with preserving it, improving upon it and passing it on to our children untarnished.

STATES RIGHTS

There are serious times facing us here in Alabama and in the South. Coping with the multitude of serious problems facing us during the coming 4 years will require ingenuity, fortitude and sacrifice on the part of all of our citizens. We have serious domestic problems within our State, our Nation is being attacked from without, and we are being undermined from within by the usurpation of the rights of the States through the unconstitutional encroachment of the Federal Government. The Federal courts have decreed that we must send our children to integrated schools contrary to our customs and traditions. They have told us how we must sit on city buses in Montgomery. We have seen paratroopers with bayonets try to ram integration of the races down our throats. We should bear in mind that the Federal Government is a government of delegated powers only—that it has only those powers that were granted to it by the States—and that any encroachment by the Federal Government on these rights of the States is tyranny.

I think we should pause a moment and pay tribute to a great American whose birthday is today—Robert E. Lee. Lee, a southerner, was a champion of States rights and saw in them, as did Jefferson and the other drafters of our Constitution, a means by which the people would be protected against the tyranny of an all-powerful centralized government. He so believed in this that he gave up a bright career in the U.S. Army and gave his life and fortune to defend these principles. I think we should also pay tribute to a great Alabamian, a former Governor of our State, who served on General Lee's staff, Hon. Thomas Goode Jones. We are honored by the presence of his son and daughter here today, Hon. Walter B. Jones, and Mrs. William B. Griffin, of Montgomery.

The present trend, as reflected in the decisions of the Supreme Court of the United States and actions of the executive branch of the Federal Government, shows that they are bent upon a policy of destroying the powers of the States, reducing the States to mere counties under a central government, thus creating an all-powerful central government in Washington. We face the greatest constitutional crisis in the history of our country. The attack that is being made upon us is devastating, nor is it limited to any particular State or region. New Hampshire and Pennsylvania have been told by the U.S. Supreme Court that they may not inquire into subversive activities within their borders. New Mexico and California have been told by the Court that they cannot fix qualifications for the practice of law in their States. New York has been told by the Court that it cannot fire a professor in the public schools of that State who refuses to answer certain questions under oath because the answers would tend to incriminate him. Oregon has been inhibited in the regulation of nonnavigable waters within her borders. Alabama has been hindered by the Supreme Court in the regulation of the activities of foreign corporations doing business within the State.

The Supreme Court has rendered other decisions of the same import. The Court has ordered integration on public golf courses, parks and swimming pools. It has turned loose Communists by the wholesale. It has been severely criticized by the overwhelming majority of the chief justices of our State supreme courts.

Every section of the country is feeling the heel of the Federal Government. To all of us who believe in constitutional government and who want to preserve the sovereign powers of the States and protect our democratic way of life, this is an alarming situation.

I want to pledge to you that as your Governor, I will be unyielding in my opposition to this wrongful usurpation of power by the Federal Government and I will use every power at my command to prevent any further usurpation by the Federal Government of the sovereign powers of Alabama. My administration will be dedicated to the preservation of our constitutional form of government.

I will work in every way possible with the other States, particularly the Southern States, to form a common front, so that we can better protect ourselves from the unlawful actions of the Federal Government.

EDUCATION

As your Governor, I will preserve and promote the cause of public education in Alabama. I want to see every child in this State afforded the best education possible irrespective of race or color. The well-being of this State and our Nation depends on the education of our children. Our children must come first.

As your Governor, I promise you that I will do everything possible to increase the salaries of our schoolteachers, commensurate with salaries paid teachers in other States, and provide adequate school facilities for our children.

The white and Negro pupils should have equal school facilities, but they must be segregated. I will oppose with every ounce of energy I possess, and will use every power at my command to prevent any mixing of the white and Negro races in the classrooms of this State. I dedicate every capacity to preserving segregation in the schools.

The people of this State are overwhelmingly in favor of good public education and they are overwhelmingly against integration of the races in the public schools. The people of this State will not tolerate nor support integrated schools and any attempt by the Federal Government or anyone else to integrate the schools of this State by force would cause turmoil, chaos, and violence and would result in the destruction of our public school system.

There can be no compromise in this fight. There is no such thing as a "little integration." The determined and ruthless purpose of the race agitators and such organizations as the NAACP is to bring about as fast as possible an amalgamation of our society. They seek to destroy our culture, our heritage, and our traditions. If we compromise or surrender our rights in this fight, they will be gone forever, never to be regained or restored.

I call upon the people of this State and our representatives in the legislature to support me in this fight to preserve our public school education system, and maintain segregation of the races in our schools.

I recommended for the consideration of the legislature the enactment of the law authorizing the Governor to close any public school where military or other forces are employed by the Federal Government to police their operations. I further recommend the enactment of a law cutting off all public funds to any public school which is integrated.

I am well aware that as Governor of Alabama, I am the Governor for all the people of Alabama, white and Negroes alike. The overwhelming majority of the Negro citizens of this State are opposed to integration of the races. They, like everyone else, want their children to have a good public education. The trouble between the races is being caused by a handful of race agitators who are not natives of this State, but who have been sent here to stir up racial trouble and strife.

I would like to say to the Negro citizens of this State that I am interested in your welfare and that my administration will be working to protect your interests as well as the interests of all of the citizens. However, I would like to say further to the Negro citizens, that if you wish to preserve your public education system and educate your children, you should stand up and speak out against the agitators of your own race whose aim is to destroy our school system. If you do not do so, and these agitators continue at their present pace, in a short time you will have no public school system at all. Our public schools once destroyed and closed down, may not be reopened in your lifetime and mine. Our children will suffer the consequences.

Our race problems will never be solved by court decrees, injunctions, and Federal troops. They will only be solved through mutual understanding and good will between the races without outside interference and agitation.

On May 6, June 3, and November 4, last year, the people of Alabama with an overwhelming voice gave expression to their convictions that the rights and powers of the State of Alabama must not be abandoned, and that segregation of the races must be maintained. This expression by our people was a mandate to me as Governor and to the legislature to defend and preserve the rights, customs, and traditions of our State. I shall observe and carry out that mandate and I call upon the legislature, with the utmost confidence in their loyalty and devotion to duty, to stand firmly with me in carrying out the will of the people. We must put life and meaning into the motto of our State: "We dare defend our rights."

LAW ENFORCEMENT

You know that I am a strong believer in good law enforcement. Your laws will be enforced diligently during the next 4 years. During my administration, there will be no room for gangsters to operate in this State and vice and corruption will be stamped out wherever they rear their head.

Since I have been your attorney general I have waged an unrelenting attack against those in our State who prey upon the working man by extracting from him unlawful usurious rates of interest. One of the worst of problems confronting us today in Alabama is the open, arrogant and flagrant violation of the law by "loan sharks." Our laws are inadequate to protect our citizens from this outrage. I call upon the Legislature of Alabama to enact laws which will prevent these wrongs from being practiced on our people.

FARMERS

I will work constantly as your Governor to improve the life and working conditions of our Alabama farmer. I will work to see that he has a market for his products and gets a fair price for the things that he sells. My administration will be dedicated to helping the farmer and the working man of this State to have a more comfortable living for himself and his family.

INDUSTRIAL DEVELOPMENT

One of the great needs of our State is new industrial plants. I pledge the State government's full cooperation to our citizens in their efforts to attrack desirable new industries to their communities. I have appointed a capable, outstanding, experienced businessman to head the department of industrial development and I propose fresh and vigorous efforts to attrack and bring new industry to our State and to encourage the expansion of industries presently in our State.

LABOR

I am a strong believer in organized labor. Organized labor has helped build this State and Nation. I want them to know that they have a friend in the Governor's office. During my administration I will not allow labor to be mistreated in any manner and I will work untiringly throughout my administration toward insuring good labor-management relations in Alabama.

RIVERS, DOCKS AND HARBORS

Of great importance to us is the continued development of our rivers, docks and harbors. Alabama is blessed by an abundance of natural resources of which our rivers and harbors form a most important part. We have made great progress toward the development of our rivers systems and it has brought prosperity and industry to many sections of our State. Much remains to be done, and I pledge the full resources of the Patterson administration toward pushing the program.

ROADS AND HIGHWAYS

One of the fine things that we have to look forward to is the splendid development of our system of highways and roads. We have made great strides in roadbuilding during recent years, but we still have a long way to go. We must keep our highways modern and up to date and abreast of the era of progress in which we live. We must continue to expand our farm-to-market road program to meet the needs of our rural communities, and I will see that our roads are kept in good all-weather repair.

If we are to keep pace with progress and get our fair share of the industrial growth and expansion of our Nation, the development of our highways is of prime importance. Urban areas are critically in need of relief from traffic congestion. Many areas of Alabama offer complex highway problems that will command ingenuity, boldness and money to resolve.

The Federal Interstate Highway program is barely under way in Alabama, and, when completed, it will be a wonderful addition to our highway system. During my administration, we will have available for matching purposes approximately $379 million in Federal money for the building of roads; $275 million of this sum will be for the Interstate Highway System, for which the State matches $1 to every $10 of the Federal Government. In order to keep pace with other States and carry out our duty to the people of Alabama, we cannot fail to take advantage of this great opportunity to build highways for the future. To do so, we must issue bonds to raise money to match with Federal funds for the building of roads. This bond issue can be financed from present gasoline-tax revenues without any additional taxes levied on our people. In fact, there are ample funds coming into the State treasury to finance the entire roadbuilding program throughout my administration without any additional taxes being levied. With money from the bond issue and other funds coming into the highway department, we can take full advantage of every Federal dollar available during the next 4 years and leave the highway department in excellent financial condition when I go out of office, 4 years from this day.

I call upon the people of this State and our representatives in the legislature to support this vitally needed highway program.

TOURIST TRADE

The great importance of tourist trade is evident in Alabama. No single industry contributes so much to the economy of our State. I will put into effect a program whereby every department of the State government will lend its every effort in a coordinated plan to advertise the attractions of our State throughout the country and encourage tourists to visit Alabama.

PENSIONS AND SECURITY

The public welfare and pensions of the State is an important function. Through this program the State discharges its obligation to people who are in need. This program which is carried out by the department of pensions and security is designed to protect and safeguard the State's human resources which are its most valuable assets. Much progress has been made in this field during recent years and we have seen the average monthly payments to our senior citizens, the blind, dependent children and disabled persons steadily rise. In spite of this, these payments are still low and woefully inadequate.

I stated during my campaign that we should pay an average old age pension payment of $75 per month, as well as increase substantially the payments to the blind, dependent children, and disabled persons. This can be done. I am going to put into effect a program to bring this about. When we cut out the graft and corruption and waste in State government, cut out the padding of public contracts, cut out payments

of commissions to political favorites who render no services to the State of Alabama, require competitive bidding on contracts and purchases of property, and get our moneys worth for every tax dollar spent, we will have enough money, without more taxes, to increase the old age pensions and other benefits, as well as expand the other programs of the State.

ELIMINATION OF GRAFT AND CORRUPTION

You know how strong my feelings are against the waste of the taxpayers' money. I made that clear on the stump throughout this State during my campaign. I promise you that tonight at midnight when I take over the reins of this State government that a program will go into effect to cut out the waste and squandering of your tax money. I am sick and tired of seeing your money go down the drain and into the pockets of political favorites of every administration. We have had enough of that kind of government.

I assure you that I will stop up the holes in the public treasury and get you your money's worth for every tax dollar spent. With the money saved from cutting the fat out of public spending, we can expand every program the State now has underway, without increasing the taxes on our people. We are going to operate every department of the State government in an honest and efficient manner. We are going to put the State docks department back on a businesslike basis, and we are going to operate the conservation department, as well as all the other department, as well as all the other departments, in the interest of all the citizens of this State.

There are many other serious and important matters that I would like to discuss with you today, but time does not permit me to do so. To do so would trespass further on your kindness and patience.

I wish to express my sincere appreciation to all of you for coming here today and helping to make this inauguration such a memorable occasion.

In closing, I want to say to you that I deeply appreciate the interest that you have shown in me and in our program. I deeply appreciate your support and I am looking forward with pleasure to working with you all to make our State a better place in which to live. I wish to say to the members of the legislature that I am honored to be privileged to work with you in a spirit of confidence and mutual respect during the next 4 years for the betterment of our State. I assure you that every ounce of my energy, and every moment of my time during my administration will be dedicated to serving the people of the State of Alabama, and in doing everything within my power to further the interests and traditions of our great State and its people.

We all realize that stormy days lie ahead and that our sacrifices will be great; nevertheless, with a firm belief in the integrity of the people of Alabama, and placing our trust in Almighty God to guide and direct us through the trials that lie ahead, I am sure that we will succeed in our endeavors, and shall pass on to our children a greater Alabama.

Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. GIAIMO. Mr. Speaker, Thursday, January 22, marks the 41st anniversary of the independence of the Ukraine.

Friends of Ukrainians throughout the world are remembering this date and I am honored and privileged to add my voice in commemoration of it.

The Ukraine is the largest non-Russian nation behind the Iron Curtain and one wherein the spirit of freedom lives in the hearts of 40 million Ukrainians.

The Ukrainian proclamation of independence took place on January 22, 1918, after centuries of oppression and foreign domination. It is sad to recall that the joyous event of independence was so short lived and that the fine and courageous Ukrainian nation was overrun and crushed by the oppressive forces of communism.

We in America, who have been so fortunate to enjoy the precious fruits of liberty, cannot help but have our hearts saddened at the spectacle of tyranny which prevails in the Ukraine.

We respect and admire the Ukrainian nation and its people who have continued in their steadfast resolve to attain their freedom and independence and who have stood as a shining example, for us the fortunate, of the eternal dignity of man and of his desire to be free.

We can take courage that the spirit of the Ukrainian nation and its people will eventually prevail and that the Ukraine will again be a free and independent nation. I know that all Americans join with me in saluting these brave people and extending to them our friendship and encouragement.

Education, Democracy, and Survival

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. McGOVERN. Mr. Speaker, two excellent editorials by the editor of the Rapid City Journal have come to my attention recently. The first, entitled "Ultimate Challenge," draws the grim alternatives facing modern man—the choice between peace or virtual destruction of the civilized world. The other editorial raises the important question of how a free society can best meet the cost of the kind of quality education which is called for by our modern world. Under unanimous consent, I include these two editorials at this point in the RECORD:

[From the Rapid City (S. Dak.) Journal, Jan. 13, 1959]

ULTIMATE CHALLENGE

In the First World War the German Navy made use of a phrase with chilling overtones. When one of the dreaded U-boats made a kill, it was reported that the victim had been "spurlos versenkt"—that is, sunk without a trace.

The phrase sometimes echoes in the minds of thoughtful men as they reflect on what would happen if there were to be an all-out nuclear conflict. Above all they fear this, that the great ship of civilized human society would be "spurlos versenkt" by such a conflict.

To entertain that fear, to think prayerfully of means of preventing this tragedy that would dwarf all the other tragedies mankind has suffered, cannot be taken as evidence of cowardice. It springs, rather, from a profound, loving concern for men, and for all that has lifted man above the level of savagery. To think of nuclear warfare as a solution of international troubles does not reflect bravery. It reflects unimaginative, irresponsible foolhardiness.

The nature of things has compelled us to develop nuclear weapons, as well as others which may be as terrible, though they seem less dramatic. The nature of things will compel us, and rival powers, to go on developing ever more fearful means of destruction. The only hope one can realistically attach to this is that these weapons may be enough of a deterrent to hold warfare in check.

Logic decrees that the real hope of keeping civilization from being "spurlos versenkt" lies in devising the machinery to settle disputes without going to war. In the past this has been more or less true. Our generation is the first to be faced with the absolute alternatives of peace or virtual destruction of the civilized world. No previous generation of human beings was ever thus challenged.

[From the Rapid City (S. Dak.) Journal, Jan. 9, 1959]

WHO IS RESPONSIBLE FOR EDUCATION?

Just about any way you look at school proposals submitted for the consideration of the 1959 legislature, one question sticks out: Who should be responsible for the education of South Dakota's youth?

South Dakota's claim to infinite variety applies not only to her scenic beauties but also to the distribution of her school age population. At one extreme are the heavy concentrations of youngsters in booming centers like Rapid City, Sioux Falls, Aberdeen, and other cities which have been harassed for several years to keep building new facilities for their constantly growing school enrollments.

On the other extreme are sparsely settled rural areas, particularly in the West River, where population was scarce to begin with and continues to decline as farms and ranches are combined into larger units.

Between the rural areas and the larger cities are the smaller cities and towns, a few making population gains because of some specialized industrial or agricultural development but most of them becoming smaller as improved transportation facilities shrink distances to the growing urban centers.

Shifting populations are only a symptom of what has taken place and is continuing to take place in American (and South Dakotan) life. Education becomes more and more a key to success in the competitive life of our Nation.

The educational needs of our youth who choose agriculture as an occupation are much greater today than they were even 20 years ago. Agriculture is now more than just production and hard work; it is a competitive business that calls for understanding of conditions far beyond the local situation. It demands knowledge of markets, animal and plant nutrition, entomology, soil and water conservation, government, and many other factors far removed from the farm itself.

Not only that, our generation of farmers is producing another even more significant crop: the young people themselves. From 40 to 50 percent of a community's farm youth may be expected to move to urban communities. This means that high schools have the responsibility of preparing young people to meet competition for occupations in cities as well as in agriculture.

Much as we may regret to see this change from a predominantly rural to a predominantly urban character in American life, the

trend is not one which can be reversed. It is not merely a situation which must be lived with; it is a change which can be adjusted to—and taken advantage of.

But before this is possible, we need to recognize the adjustments which must be made in our philosophy of public education.

One premise behind the establishment of free public education decades ago was that an educated populace is essential to the democratic process. If that was true in the early days of our Nation, it is even more true in the age of rockets, satellites, and missiles in which we live. The very survival of our Nation and of the democratic system in years ahead will in large measure depend on how well we are able to marshal the brainpower to harness our country's human and physical resources.

As a Nation we cannot afford to permit any budding scientist, philosopher, or statesman—even the potential poet, artist, or musician—to be denied the opportunity to develop his abilities to the fullest possible extent—regardless of where he may be born and schooled, even to the most remote corner of our West River cattle country.

Providing the opportunity for one of these potential von Brauns, Salks, or Sandburgs to reach the full flower of his genius is not just the responsibility of the immediate locality in which the child lives. Too much is at stake. This is the responsibility which all of us must shoulder.

Two main proposals are to be brought before South Dakota's lawmakers during the legislative term which opened Tuesday. Both, essentially, are wrapped in the premise that more South Dakotans need to become involved in the task of supporting our State's public educational system. Their authors' conclusion, obviously, was that more must be done to provide every child in the State with a maximum possibility for schooling.

One proposal, sponsored by the committee for education in South Dakota, would increase State support of schools through a minimum foundation program. The committee's plan is based on the assumption that the wealth of the entire State should support a minimum program of education for every child wherever he lives. The State and local school districts would share as partners in providing the minimum.

While this plan cannot be permitted to become a leveler, standardizing education at a minimum level throughout the State, its backers contend it could provide the shot in the arm which poor districts must have to meet their educational responsibilities. The committee for education also calls for a teacher retirement program and a strengthened State department of public instruction.

Finding a method to finance the minimum foundation program may prove an impossible task since its cost is estimated to run as high as $18 million. Several possible sources of money have been suggested: a broadened sales tax to apply to sales of services as well as to goods, an additional 1-cent tax on the present or an expanded base or a State income tax.

The second proposal, advanced by an informal association of county boards of education, calls for reenactment of many of the 1955 school law measures with regard to reorganization of the State's present system of school districts. The county board members contend reorganization would enable local school districts to better bear the financial burden of education by spreading the property tax load to all areas and would enable a reduced number of local districts to operate more economically by centralizing administration.

The committee for education and the county boards have no particular argument with each other. Each group agrees that the other's proposal could mean better schools.

The job of the legislators is to give both proposals serious study and enact new laws which will provide what seems an inevitable answer to the question of "Who's responsible for education?" The answer, as we see it, is "everybody."

Let's Take the Lead

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me to so do, I present to the attention of your own distinguished self and all others who may read the same, the text of two editorials appearing in one of the important daily newspapers in the great 23d congressional district which I represent, this my 13th year, in this great House of Representatives.

First, the editorial in the Daily Signal, Huntington Park, Calif., under date of Monday January 12, 1959, as follows:

DON'T BE TAKEN IN

The American public must not be taken in by the "live and let live" pitch delivered in Beverly Hills last night by Soviet Supersalesman Anastas Mikoyan.

Unimpeachable evidence over the years has shown repeatedly that "friendly" talk from any representative of the Soviet Union can be as deadly as a cup of hemlock if accepted at face value.

And particularly has this been true in the case of Deputy Premier Mikoyan, whose leadership in the betrayal of Hungary 2 short years ago properly has earned him the appellation "butcher of Budapest."

While we join with President Eisenhower in deploring mob-like demonstrations and the throwing of eggs and assorted vegetables we cannot but feel a deep sympathy and understanding of the feelings of those refugee Hungarian Freedom Fighters who have been largely responsible for such demonstrations.

And we deplore just as thoroughly the fawning attitude of many Americans, in official position and elsewhere, toward Mr. Mikoyan and his American mission.

TEMPER TREATMENT WITH FACT

Treat him courteously to be sure, for he is a guest in this country. But certainly the treatment he receives must be tempered by the cold realism of fact.

Communist Russia, its diplomats and its leaders cannot be trusted in any regard.

Read, if you will, the foreward by Chairman FRANCIS E. WALTER, of Pennsylvania, to this month's report of the House Committee on un-American activities.

"Let those of our citizenry who flutter and rejoice in response to the blandishments and smiles of suave Communist diplomats," WALTER writes, "take stock of the simple, awful truth that these blandishments and smiles are a facade behind which operate the deadly tentacles of a human meatgrinder that has already consumed millions upon millions of human beings.

"May those who accept at face value the pretense of 'peaceful coexistence' with the masters of international communism justify, if they will, the deceit, intrigue, blackmail, espionage, subversion, and mass murder which characterizes the program of communism for no less than complete world domination."

Second, an editorial in the Daily Signal, Huntington Park, Calif., under date of Monday, January 5, 1959, as follows:

LET'S TAKE THE LEAD

The United States once again has been forced into the wings while Communist Russia stands in the spotlight receiving well deserved bows for scientific achievement apparently beyond the ken of our most able scientists.

Once again Communist Russia has scored immeasurable gains in the race for world leadership at the expense of American prestige at home and abroad.

Once again our complacent national administration has been content to sit back and congratulate itself on its fiddling while Rome burns.

Frankly, this newspaper does not like it.

We do not like sitting in the back seat while Communist Russia sits behind the wheel.

UNITED STATES MUST LEAD TO SURVIVE

The United States, if it is to survive the inevitable final showdown, cannot afford to be pushed into obscurity in the field of space exploration or any other so closely allied to world politics and national defense.

Just a little more than 2 weeks ago this country put into orbit around the earth a voice-transmitting Atlas missile—an accomplishment we were told had equaled and perhaps even bettered anything Iron Curtain scientists could do.

This weekend we found out with certainty we still are lagging behind. But just a year behind, some America authorities optimistically insist.

And perhaps they are right. But we belong at least a year ahead.

We hope this latest Russian push into space will have the same effect on the American people the sputnik embarrassment of 1957 had. We even more fervently hope it will convince our national administration that world leadership and a peace-assuring national defense effort are worth far more than a balanced national budget.

And also, Mr. Speaker, I present the text of an editorial appearing in the Christian Science Monitor, Boston, Mass., on Friday, January 16, 1959:

GROWTH: GOVERNMENT'S PART

Just what are the real differences between the spenders and the budget balancers? If the American people are to think usefully on the issue and if Congress is to make wise decisions, the two cases must be presented in sharper focus. Useful light on the size of the difference—in terms of Federal expenditures—came out of President Eisenhower's appearance at the National Press Club.

In answer to one question he said that in the reasonable future the Nation could expect a gross national product of $500 billion, while the 1959 budget is set at $77 billion. Should the gross national product go no higher than $460 billion in 1960, the Federal budget Mr. Eisenhower proposes would amount to about one-sixth of it. It is unlikely that the forces favoring spending would add more than 10 percent to the budget. Related to the gross national product that is only one-sixtieth—say $7.5 billion.

Is this the amount advocates of spending rely on to make the difference between stagnation and growth in the national economy? Is this the amount the President believes can make the difference between inflation and stability?

Perhaps the difference cannot be measured fully in terms of money; perhaps attitudes are also important. The advocates of spending would point out that continued unemployment incurs an irrecoverable loss; they would put extra emphasis on the urgency of more effective economic competition

with the Soviet. Mr. Eisenhower points to the importance of fiscal responsibility and to the possibility of growth through price stability.

The public may reasonably ask of both sides: Just how big a part can the Government play and just how will its actions affect the national economy? It should ask the advocates of spending about what kind of spending might be expected to boost the gross national product most effectively. Are they chiefly interested in equipment, such as highways and better schools, or are they talking about welfare programs?

Likewise the President may be asked in what way an unbalanced budget may be expected to promote inflation. There is a $12 billion deficit this year. Would another $7.5 billion next year shake confidence in the dollar and increase the prices Government must pay for money, materials, and labor? Would it give a decisive nudge to the inflation spiral in the whole economy?

The President has rightly said that the Government is not the author of prosperity—although politicians often seem to say it is. Quite possibly more emphasis should be placed on private responsibility for recession or inflation—as in the wage-price spiral. But Government is the largest single force. It takes more than half the profits of corporations, tosses $40 billion a year into the market for military hardware, and subsidizes other sections of the economy with tariffs and farm price supports.

So its influence extends beyond the immediate question of adding or not adding something like $7.5 billion to the budget. Yet it is imperative that the public should have more definite information as to what effect that sum would have if used in different ways. Only then will it be equipped for essential decisions.

Freedom and Independence for Ukraine

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MACHROWICZ. Mr. Speaker, friends of freedom everywhere will be observing today the 41st anniversary of the independence of Ukraine. In the profound faith that Moscow's deceitful campaign of "smiles and trade" could never cause us to forget the aspirations of the captive nations and their fundamental importance to the security of our Nation, and with the hope of helping to keep the spirit of freedom alive in the hearts of 40 million Ukrainians, I join in their celebration. I hope, too, that these words will serve notice of my sustained faith in the eventual liberation of all nations enslaved by imperialist Moscow. They should also demonstrate to the Menshikovs, Mikoyans, and Khrushchevs that American memories of their crimes and our standards of civilized decency and justice cannot be erased by their calculated genteel antics or by spurious promises of trade.

The reception given Mr. Mikoyan by some of our wealthy Americans is food for serious thought. It indicates the spiritual climate in some quarters. Twenty years ago, the Nazi Dr. Hjalmar Schacht was completely ignored for what he represented. Today, despite his personal crimes, the Armenian quisling is widely feted. The thousands of patriotic Armenians, Azerbaijani, Don and Kuban Cossacks who were annihilated by his orders in 1917–21; the Millions of Ukrainians who starved to death in the manmade famine of the thirties while Mikoyan shipped grains abroad; the role he played in the liquidation of Hungarian patriots—these and other facts no longer seem to bestir the consciences of some of us. Only 2 months ago, before the Moscow City Soviet, Mikoyan delivered a violent anti-American speech; today, without self-respect, some accept him as a deliverer of peace.

I wish to pay my respects today to the many Ukrainians of American descent for keeping high their hopes and aspirations for the restoration of freedom and independence to the land of the birth of their forefathers, and to assure them that all true Americans are solidly behind them in their endeavors.

Forty-first Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. LIPSCOMB. Mr. Speaker, on Thursday, January 22, friends of freedom everywhere will be observing the 41st anniversary of the independence of Ukraine.

On January 22, 1918, the Ukraine declared itself an independent republic. This was literally the first time since the 17th century that this land and its people had known freedom.

Their liberty, alas, was short lived. In 1920 the Ukrainian Republic was destroyed by the Red army and it has borne the brutalizing tyranny of the Russian bear ever since.

It is difficult, if not virtually impossible for us in this country to have a realistic conception of what this means. Much is said of America taking her freedom and her way of life for granted. I believe that this is less so today than ever before because of the never-ending peril of communism. Nevertheless, the awareness of an enemy, and understanding the reality of living under that enemy's political system are two entirely different things. It is partially for this reason that I call to your attention this 41st anniversary of Ukrainian independence. We cannot know what the Ukrainian people have lived through. It is my sincere hope that we will never have this knowledge. We can, however, take this moment to pay tribute to a subject people who have been terrorized without letup for almost 40 years. The Ukrainian people obviously have not sunk into servile apathy. The Soviet Union has been forced to maintain its rule by force. The intangible quest for liberty—for the freedom of mind and action—never dies. It is the Russian knowledge of this truth that demands their rule by terror as the only way of dominating their subject peoples. Herein lies the tragedy of the Ukraine. Those two free years from 1918 to 1920 cannot be wiped from memory.

Today then, I wish to express my awareness and appreciation of the spirit of the Ukraine, January 22, 1918. I am aware and appreciative, because it is also the Spirit of 1776.

Responsibility of Leadership

EXTENSION OF REMARKS
OF
HON. THOMAS F. JOHNSON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. JOHNSON of Maryland. Mr. Speaker, recently there have occurred significant developments connected with the inauguration of the Governor of Maryland, who has lived in my congressional district during the period of his outstanding service to the State. While his installation marked the return of control of the executive department from Republican to Democratic, it had additional far-reaching significance. It signalized the reestablishment of executive authority in one who had already proven his worth through the conduct of the fiscal agencies of the State over a span of 20 years, thus giving reassurance to the citizenry of well-considered plans for the maintenance of solvency throughout his administration.

Our Governor, J. Millard Tawes, enters upon his high post with the greatest vote of confidence ever given to a Governor of Maryland and with unprecedented majorities in the State senate and house of delegates, assuring the adoption of programs of progressive legislation. At the same time he will adhere to sound fiscal measures eliminating excessive spending and assuring the public the fullest measure of value for every dollar expended. The beginning of his term which marks this return to the statehouse of businesslike administration was interestingly commented upon by the Baltimore News-Post in a most enlightening editorial, which I ask to have included in my remarks as a part of the CONGRESSIONAL RECORD:

WELCOME, GOVERNOR TAWES

In a mood generally cordial and hopeful, Maryland's some 3 million people today are welcoming into office the State's 59th Governor, J. Millard Tawes.

The cordiality is largely genuine and the ceremonies unusually gay and elaborate, because the courteous Eastern Shore man is personally popular.

The spirit is hopeful because an overwhelming majority of the voters have expressed at the polls their belief that he may be the man to pull the State out of the morass of overtaxing and overspending. They remain sanguine that he will make good.

The inaugural address of Governor Tawes today is couched in generalities, but it reflects a deep feeling of responsibility and opportunity to serve the people of the State well.

He exhibits awareness that the next 4 years are likely to bring a record boom in industrial and business activity and mushrooming population and a readiness to cope with the expanded need for public facilities of many kinds.

He may well keep in mind that increase in the taxable bases, rather than any increases in the tax rates, should meet the need for more money for public services.

Of great importance, Governor Tawes asserts that "matters of State no longer can be handled in a day-to-day manner, without plan or program. We must project our designs many years in advance to achieve the best results."

How true. The State and city, too, long have suffered because of hand-to-mouth spending and taxing.

Also, the Tawes aim to increase the public awareness of what is going on in the State government, and to furnish advance information of the likely effect of proposed programs, is all to the good.

So is his recognition that 70 percent of the population now live in urban areas, that the ratio will increase, and that new metropolitan areas will be created and existing ones expand. His awareness that new problems posed by their interdependence must be solved, beginning now, is a hopeful sign.

With the bulk of the State's population, we are pulling for Governor Tawes to make a shining success of his administration, with the aid of a legislature so predominantly of his Democratic Party.

But a word of warning. Just balancing the budget for the coming year and the next three, with tax levels remaining static, will not be accepted as success.

The State taxload, with its 50-percent increases in income and sales taxes adopted last year, is just too big to be borne without severe distress to the taxpayers.

What the public demands is so searching a streamlining of the taxing and spending pattern of the State that not just balancing of income and outgo but reduction of taxes will be achieved.

That would give the Tawes administration a rare and real glory.

Forty-first Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. WALLHAUSER. Mr. Speaker, today marks the 41st anniversary of the declaration of Ukrainian independence and on this solemn occasion I wish to pay tribute to the courageous and freedom-loving people of the Ukraine.

To these brave people who have kept alive the spirit of freedom and independence through long enslavement and oppression by the cruel and unrelenting Russian Communists, we in America offer our deep and enduring friendship.

Like them, we look forward to the day when the Ukraine once again will become an independent nation, free of the Russian Communist yoke and free of the indignities and cruelties that have been their lot under domination by the savages of the Kremlin.

The desire and love of freedom of the people of the Ukraine cannot be ignored and must not be denied, even though the road to its achievement is a long and hard one. We and all other God-fearing peoples cherish with the people of the Ukraine the significance of this proudly remembered anniversary day and we join in looking ahead to that future date when Ukrainian independence shall live again in reality, as it lives today in the hearts of the Ukrainian people.

Economy Budget

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared recently in the Rockford, Ill., Morning Star, entitled "Economy Budget."

ECONOMY BUDGET

Most of the provisions in the budget President Eisenhower has submitted to Congress should have solid public support. In this budget, the President is keeping his pledge to fight to hold down Government spending.

The fight which must be made to overcome grave hazards besetting our economy can be won if the taxpayers let Congress know that they stand with the President on the side of economy.

President Eisenhower believes that his budget of $77 billion for the fiscal year beginning next July 1 will allow for a surplus of $70 million at the end of the year, contrasted with an anticipated deficit of $12.9 billion at the close of the current fiscal year June 30. The President pointed out that whether he can keep the budget balanced will depend on Congress, public support, and developments in our economy and in the world.

The biggest share of the overall budget is the $40.9 billion allocated to defense. Despite the expanding missile program, the defense budget represents an increase of only $145 million over the figure for the current year. The President recognizes that there is a vast opportunity for saving in the Defense Department and he has called for curtailment of elements of the military program which do not meet present-day needs and for elimination of military waste.

The administration's budget places heavy emphasis on curtailment of subsidy programs. Thus, the President proposes to reduce the farm budget from the current $7.3 billion to $6.4 billion; to refuse to approve any new low-rent housing projects or flood control, navigation, and irrigation programs; to cut new spending for local hospital grants, health research facilities, and waste treatment works.

He also calls for modification of legislation providing benefits to veterans for disability not related to military service; puts the brakes on the new science education program; gives school construction advocates no comfort.

The President is moving in the right direction in asking for legislation to encourage more private financing of veterans' and college housing and rural electrification and telephone projects.

By calling for an increase in the Federal gasoline tax from the present 3 cents to 4½ cents, the administration concedes that it can't get the Federal highway program back on a pay-as-you-go basis without handing the motorist another substantial tax increase. By proposing new taxes on aviation gasoline and reducing airport subsidies, the President is calling on the airlines to be contributors as well as to pay their own way, something the railroads have been doing all along.

The President's request for a $350 million increase in postal revenue, evidently through a 5-cent stamp for first-class letters, needs closer study. It isn't fair to raise the first-class rate and not air mail. The public expects better service in return for the substantial postal increases granted by Congress last year.

President Eisenhower has called for a 10-percent reduction in foreign aid. There is room for a much bigger cut than that.

Maybe We Don't Worry Enough About Pride

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the January 15, 1959, issue of the Daily Intelligencer, a Bucks County newspaper, which contains some thoughts that we could all heed:

MAYBE WE DON'T WORRY ENOUGH ABOUT PRIDE

Quite a few who examine American life closely today wonder whether our people, generally speaking, take a sufficient pride in achievement.

As a nation we continue to get high marks for ingenuity, resourcefulness, technical mastery. Yet there is evidence in a good many places that as individuals some Americans show little interest in, or respect for, solid accomplishment.

Dr. James R. Killian, President Eisenhower's top scientific adviser, took note of this matter recently when he said Americans need to develop a higher regard for learning and a fuller pride in achievement.

What counts, he said, is the importance Americans attach to the factor of excellence in our society.

Disquieting signs exist that a lot of us don't worry nearly enough about excelling in the things we do, whether it's running a business, making a product, trying a lawsuit, clerking in a store, holding down a Government job, or keeping house.

There are at least a couple of things involved in this.

One is how we as individuals feel about trying not simply to do what we may vaguely define as our best, but to meet clear standards of excellence. If we do not think it is good or necessary to succeed by that test, then our pride of accomplishment is indeed sadly limited.

The game of getting through the day, the week, and the month, of drawing pay for routine effort, is one that may lure us all at times. But nothing great was ever built or sustained that way.

The day that becomes the American's general philosophy of life, the Russians can lick us without firing a shot.

The second thing is how we look upon others who excel. Do we respect them for their attainments? Or do we try to downgrade and belittle them, to treat them with suspicion because they are not like us?

If we should ever, as a people, seriously entertain the idea that to be superior in any endeavor is to be odd, to be deserving of scorn and ridicule, then we might as well fold up our tents. For this world will prove too tough for us.

More than ever, the race today is to the swift. We not only had better be swift, but if we wish to gain that end we had better learn to think well of those among us who already are.

Foreign Aid for Communists

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. SCHERER. Mr. Speaker, in the coming months the Congress will be considering legislation which will continue our foreign aid program. As we all know, it is most difficult for the average Member of Congress to know exactly where and how the money we vote for foreign aid is eventually spent.

The Indianapolis Star in its lead editorial of December 23, 1958, does an excellent job in summarizing for us how much foreign-aid money has gone to Communist countries during the last 12 years.

I would like to hear from the proponents of foreign aid just how such expenditures to these Communist countries have been justified and how in the present state of world affairs we can continue to pour taxpayers' money in the form of so-called mutual aid into Communist countries.

The excellent Indianapolis Star editorial follows:

FOREIGN AID FOR COMMUNISTS

President Eisenhower is asking for an extra $1 billion for foreign aid next year. A rundown of new Democratic Senators in U.S. New & World Report shows that almost to a man these men will vote to continue the foreign aid program. But we will bet that not 1 man in 10 in Congress knows how U.S. foreign-aid funds are spent, who gets the money, or why. How can they? The State Department will not make an item-by-item report.

We are no more able than Congress to get the facts and details of foreign spending. But we do have some figures on who got how much money during the last 12 years from the U.S. taxpayer. They come from the Library of Congress.

Communist Albania got $20,444,000 between 1946 and 1957.

Communist Czechoslovakia got $185,827,000 plus $29,583 credits.

Communist Germany (yes, that's what we said) got $17,339,000.

Communist Hungary got $17,723,000 plus $15,917,000 credits.

Communist Poland got $365,017,000 plus $88 million credits.

Communist Yugoslavia got $789,732,000 plus $55,900,000 credits.

That total for Communist countries outside the Soviet Union since 1946 is $1,585,482,000 from the American taxpayer. Did it ever occur to you that this is almost as much as the Communists have spent since 1946 for their entire foreign aid program outside the Soviet captive states? Did it ever occur to Congress and the President that the United States has provided enough money to finance the entire Communist economic offensive announced by Communist boss Khrushchev? Man, what fools we are.

As late as 1955 we sent $2,374,000 to Communist Czechoslovakia. Between 1954 and 1958 we sent a total of $17,339,000 to Communist Germany. In 1955, before the Hungarian revolt we sent $3,496,000 to Communist Hungary. Then after the Hungarians revolted and were smashed by the Reds we sent the Red Hungarian Government $11,867,000. Apparently it pays in American foreign aid to smash a revolt against communism with Soviet troops.

Between July and December of 1957 we sent Communist Poland $49,890,000 of the U.S. taxpayers' money and more was sent in 1958. Note that Red boss Gomulka has just lined up solidly with Red boss Khrushchev and damned the United States publicly.

From 1955 to 1958 we sent $170 million to Communist Dictator Tito. He is still a Communist. He still votes with the Soviets in the U.N. He still sells the Communist line in the Middle East and Asia. He still imprisons anti-Communist critics.

Is this the foreign aid program the new Congress will support? Is this what is being described as the answer to the economic offensive of the Communist world? Do we intent to send to Communist countries just the amount of money they say they are spending in order to bury us?

What sort of inverted thinking produces such insanity? Why doesn't Congress stop it? What is wrong with the President and Secretary of State who permit this betrayal of American interests?

We wish somebody in Congress or the administration would find out.

Working Together

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MUMMA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

EDITOR, DAILY NEWS:

Some time ago the uptown merchants in cooperation with the chamber of commerce sponsored a campaign to stimulate uptown business. During this project, the public was offered free maps of Lebanon, city and county. I received one of these maps and upon close examination I was amazed at the large area owned by the Bethlehem Steel Co.

Lebanon may be the home of the bologna but Bethlehem Steel must sure be paying the taxes. I also thought of all the people employed at this plant and the importance of the payroll to the community. The thought clung to my mind and I brought up the subject with some of my fellow workers from the steel plant. They had a different point of view. In a disgusting manner they informed me that the local plant is so small it could be set inside the main offices at Bethlehem. This may be true but you could hide Coleman Memorial Park in New York's Central Park. Statements such as these prove nothing but they could reveal a frame of mind which is not in the best interests concerning the progress of our community.

We all realize that Lebanon has had its share of the recent recession. According to newspaper reports, many of the steel mills in other parts of the country are recovering quite satisfactorily. Again I hear pessimistic and even ridiculous remarks referring to conditions at our local plant. First I was informed that employment would improve after recent elections. Next it was the shutdown of automobile industries. Now it will be shortly after New Year. Production workers are so sure they know what is going on in the front office. Managament doesn't pretend to always know what is going on in the plant, but they do try. It would be to everyone's advantage if we, the production workers would only try to understand the problems of management. No manager worth his salt would allow good employee relations go to pot while his competitors are doing a brisk business down the street. Management has nothing to hide. The director meetings behind pulled shades are a thing of the past. Industry's financial reports are for the public. Years ago companies made progress but they overlooked the human problems. Modern management is a highly skilled profession interested in working with and through people. They, too, are paid to perform a job.

It is my firm belief that if the production worker would understand the structure of big business he readily realizes some of his duties and not just his rights. Our local plant like all large business ventures started as an idea. This idea had to be kindled with tremendous courage. A great many people had to risk money. Stockholders had no guarantee that there would be buyers. They did not know if costs could be met much less have a profit left. If business does not grow it dies. If it stands still it will be trampled by its competitors in the stampede for progress. When business is good, Uncle Sam taps the till. When business is poor, the stockholders face ruin. Management is under constant pressure from three fronts. They must see that the worker gets a fair wage. The stockholder wants a return on his investment. The customer wants a quality product within a time limit at a low price.

Waste is our vulnerable spot. This could be waste of man-hours or material. Both are figured in dollars and cents and added to the cost of the product. If you would be in business for yourself and intend to stay in business you would soon realize the value of a satisfied customer. The plant worker has a customer also. This customer may be miles away but only minutes by wire or phone, and he does keep in touch constantly.

I like to think of the average worker as a pretty shrewd fellow. Give him the facts and I have faith in his reasoning. He should recognize false ideologies which look good on paper. One of these making the rounds tells you that the more you earn, the more you will spend. This is only part of the story. Read the fine print and see how much you can purchase with cheap abundant cash.

I do not promise a pay raise next week for a few hours burst of energy. Progress is a slow, long, hard climb. Perhaps only our children will benefit.

If you still consider the local steel plant small and insignificant, think of the company salesman. He can bat his brains out convincing a customer that you can and will do the job, but if we punch a time clock and would rather discuss last night's bowling scores this customer will find the fellow who builds that better mousetrap. Since the recession has caused a decrease in the working force and the man with more seniority can claim another man's job, there is a ruling of ability to perform the job. You may have ability but are you willing? You should not be working for Bethlehem Steel—you should be working with Bethlehem Steel.

Yours,

A STEELWORKER.

A Bill Relating to Withholding, for Purposes of the Income Tax Imposed by Certain Cities on the Compensation of Federal Employees

SPEECH
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have introduced today a bill to permit withholding on the compensation of Federal employees for purposes of income taxes imposed by certain cities. I have been in favor of this legislation for some time for several reasons. It provides for good reciprocal relations between the Federal Government and our city governments which already withhold Federal taxes from the wages of their employees. It is economical in that it provides a less costly way of collecting legal taxes, overall. It is a real convenience to the Federal employees.

I want to dwell on this last point a little bit because at one time many Federal employees thought that this legislation was unfriendly to them. Some, but fortunately a very small minority, through misunderstanding still think so.

The reason certain Federal employees thought the legislation was unfriendly stemmed from the fact that the city earnings tax was unpopular, as most taxes are, to many, particularly to nonresidents of the city who worked in the city. As a matter of fact this form of taxation was considered by some to be unconstitutional, as taxation without representation. However, regardless of the unpopularity of this kind of tax, or its merits, the courts throughout the United States have upheld its legality. This is no longer a question. This form of tax has become an important source of revenue for many of our cities and is rather obviously here to stay.

Federal employees are liable for the tax just as any other person living in or working in a city which imposes such a tax. The present bill has nothing to do with whether a Federal employee is liable for the tax or not.

Federal employees soon found out that when they failed to pay the tax the cities allowed the amounts owed to accumulate until they were sizeable enough to warrant the expense of collection. Then when the employee was forced to pay, he had a sizeable sum to pay, instead of a modest amount. It included not only the accumulated amount but interest and collection costs.

As a result the Federal employees found, as do all taxpayers find, that it is really a favor to them to have the amounts owed withheld in weekly or monthly amounts where they have none of the nuisance of making returns or the embarrassment of having to budget a sizable accumulated amount.

Most Federal employee unions are on record as favoring this legislation. The officials of the city of St. Louis, part of which I represent, have long requested this legislation. Other cities through their officials and representatives in Congress have urged this legislation. I am hopeful that the Congress will act on this this year.

The bill referred to follows:

A bill relating to withholding, for purposes of the income tax imposed by certain cities, on the compensation of Federal employees

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the Act entitled "An Act relating to withholding, for State income tax purposes, on the compensation of Federal employees", approved July 17, 1952 (Public Law 587, 82d Congress; 5 U.S.C., sec. 84b), is hereby amended—

(1) by striking out "State or Territory" each place it appears and inserting in lieu thereof "State, Territory, or city"; and

(2) by adding at the end thereof the following new sentence: "For the purposes of this section, the term 'city' means only a city which is incorporated under the law of a State or Territory and which had a population (according to the last decennial census) of seventy-five thousand or more individuals."

The International Law of Space

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. FASCELL. Mr. Speaker, the Diario Las Americas is an outstanding Spanish language daily published in Miami Springs, Fla. It has been very instrumental in bringing to Latin America a better understanding of our country. It also has been extremely helpful in developing the Latin American point of view here in this country.

Diario Las Americas, under the editorship of Francisco Aguirre, and the management of Horacio Aguirre, has always taken the course of strengthening the bulwark of the free world which lies in the solidarity of the Western Hemisphere.

Recently they commented with considerable force and logic on a major problem confronting the people of the Americas and the free world as we move headlong into the space age. The thoughts, observations and recommendations of the editorial which follows merit consideration and action:

THE INTERNATIONAL LAW OF THE SPACE

In view of the advancements achieved lately by science in the conquest of space, following is a reproduction of our editorial of April 9, 1958, which at this moment acquires special interest:

"If there is any science wherein permanent dynamic constitutes an essential element, that is international law, because it is a matter of daily recourse, so to speak, with every new situation faced by the countries, by the people and by science, and in the different existing conditions. International law is not like a body of dead water, nor is it of the static kind. The law of the seas had to be gathered here and there and had to accommodate gradually to the new needs created by the steamship, or by modern warships or submarines. Later came the international law of the air, with the conquer of air by man.

"In this atomic era it is no longer a fantasy to say that man is in the threshold of the conquer of space. The United States and Russia have launched manmade satellites that now circle the globe; and interplanetary travel, starting with the trip to the natural satellite of the earth, seems to be far nearer to realization than the human mind could conceive a few years back. Thus, in this era, when man is almost on the verge of establishing physical contact with space regions that before seemed to be pieces of abstract mathematics, the human forces will have to cope with the problem of regulating the conduct of the States and of the people in the face of these new achievements. Naturally, the man of sound mind wishes that everything be encouraged through instruments meaning broader progress for humanity and to destroy every possibility of those new instruments ever being used from the open spaces to dominate the earth.

"It is a case similar to that of the atomic energy, which together with the incalculable benefits its discovery and conquer represent for humanity, it can also be the source of unthinkable horrors when in the hands of mental deviates who aspire to world domination.

"A few days ago this paper published an article by George Marden on the 'Regulation of Space Control,' saying that Russia is trying to negotiate an arrangement with the United States on the regulation of space control, on condition that the United States abandon their military bases overseas. A dangerous proposition this is, to set a matter of pure war strategy as a condition prior to an agreement on laws that have already become a necessity. Precisely for the contrary, to prevent that any nation may try to control our planet from the spaces above, it is why this matter must be focused. It is not for reasons of space politics that the problem must be coped with. Ample discussions in the United Nations, where the most outstanding international jurists may study this undeferrable topic from all scientific and impartial aspects, will undoubtedly provide a sensible solution.

"Such discussions may lead to the laying of the fundamental principles of the international law of the space."

Rumanian Freedom

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MACHROWICZ. Mr. Speaker, today marks the 100th anniversary of the reestablishment of Rumanian freedom and independence under the protection of the Western powers. On this anniversary I wish to express my warm sympathy for the aspirations of the Rumanian nation and for their present struggle against Soviet-Communist domination.

This commemoration is a reminder of the political importance and historical reality of Eastern Europe, where old and fiercely independent peoples have developed their own cultures and national entities. These peoples, with their cultures, are a vital part of Europe, which, without their free contribution and participation within its boundaries, is reduced to

a strangled existence, as is the case today. The problem today is not to accept the limited area of discussion imposed on us by the Soviet maneuvering, but to raise the whole question of that part of Europe on which the peace and security for the future so largely depend.

It is obvious to me that the main source of tension and insecurity for the Atlantic Community stems from the inability of the West to exploit this whole unpleasant situation in Soviet-dominated Europe. This situation, as long as we condone it, constitutes an immense benefit to the Soviets, whereas, instead, if we would turn the tables and exploit this situation ourselves against them it would be a terrible thorn in the Soviet flesh.

The inevitable objection that this would increase the cold war is totally untrue. The free hand enjoyed by the Soviets in their controlled part of Europe has in no way lessened the tensions between the Soviets and the United States; on the contrary, it has actually increased them. When we do not use a weapon at our hand, such as the subjugation of a good part of Europe by the Soviets, we are actually encouraging them to continue and even increase their pressure for the advancement of their global Communist aims of world infiltration, subversion, and eventual domination.

This is what is happening right now, when Mikoyan, unlike us, is using every means at his disposal, even kissing American babies, to push us out of Europe.

It is my conviction that the American people will not be taken in by this latest Soviet, Mikoyan propaganda stunt. I believe that, together with the highly deterring defense advocated by Congress, we are going to adopt the policy which would put us on the ground of reality concerning Soviet tactics.

Must TV Booster Stations Be Shut Off?

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MAGNUSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I should like to include the following editorial from the Wenatchee Daily World of January 11, 1959, entitled, "Why the Hurry in Barring Reflectors From the Air?"

Mr. Speaker, for a number of years I have been interested in the efforts by the residents of many small, isolated communities in the mountainous areas of the West to provide themselves with television reception. Because the Federal Communications Commission had no answer to their problem and showed no inclination to help them solve it, these people have taken the initiative by erecting community-sponsored VHF booster stations or reflectors which pick the television signals out of the air from surrounding hilltops and redirect them into the homes in the valleys. Several hundred of these booster stations are now operating satisfactorily throughout the mountainous areas of the West.

Last month the Federal Communications Commission peremptorily ordered these stations off the air. It gave the operators of the stations 90 days in which to apply for licenses to convert to a more costly facility, the UHF translator, or else face legal proceedings to shut them down. Yet it has been apparent for some time that UHF translators are not the answer for many of these communities, so the FCC order confronts them with the possibility of a television blackout.

The editorial from the World properly asks the two key questions, will UHF translators on the higher channels be able to serve the people now being served, and how can the funds be raised to finance the costly installations? Until these questions are answered, what is the hurry in taking reflectors off the air?

The editorial follows:

WHY THE HURRY IN BARRING REFLECTORS FROM THE AIR?

The long arm of the Federal Communications Commission has reached out from Washington, D.C., and held up a pronouncement saying to north central Washington television reflector associations: "Get off the air. Change to UHF."

The public notice, as the new rule is officially called in the FCC's voluminous set of regulations, says the community groups who now operate the dozen and a half reflectors in this area, must notify the FCC within 90 days that they intend to comply with the order.

If they don't, they're going to be hauled into court.

The FCC decision has long been expected. It nevertheless came as a shock. It put squarely before reflector leaders two major problems: (1) Will UHF translators on the higher channels be able to serve the people now being served? and (2) how can the funds be raised to finance the costly installation?

As to problem No. 1, the UHF translators which the FCC recommends have never been tested in mountainous areas here. A Daily World representative saw one tried at Quincy but there the terrain is ideal, with the transmitting antenna on a high hill and the entire area to be served a flat plateau.

Manson has one in operation on a limited basis but its situation doesn't match conditions in many of our areas—Entiat and the Methow Valley, for instance.

At Oroville one company selling one of the better types of translators refuses to test its equipment there because of fear it won't do the job. Oroville has a receiving antenna 10 miles from town, which reflects to a transmitting antenna on a high hill above Oroville.

Every area has a different engineering condition to face. In some narow valleys the UHF device may not work at all, who knows.

Problem No. 2—financing the installation—is also far away from solution. Raising a relatively small amount of money by donation to operate the current VHF stations has proven a headache almost everywhere. A lot of people are getting a free ride—that is, a free picture, and nothing can be done to collect from them.

To pay for the more expensive UHF—figures up to $73,000 are being bandied about—a hit and miss collection system won't work. Something like State Senator Wilbur Hallauer's bill whereby a television district could charge everyone getting the picture from the district's reflector a service fee may be the answer.

Surely it will be kicked around a long time in the legislature before it becomes law. The cable companies who kept bottled up in committee a suggested State law to legalize VHF reflectors during the last session, probably will oppose the measure because of its possible encroachment on areas that they feel can best be served by cable.

Hallauer told the Daily World, in announcing his proposal, that the bill-drafting service at Olympia found it an exceedingly difficult measure to draw. There is no precedent for it, although the idea resembles one on which the hospital district law is based. The proposal may be found to be completely illegal.

In the face of these two major difficulties—and we've skipped over a lot of side problems associated with both—the year's delay in filing of the intention to comply with the FCC rules, as requested by the Washington State Television Reflector Association, seems a just one.

The various community television groups face having to accept an FCC proposal that neither they nor the FCC for that matter, really know will work in each individual instance. They're being forced to sign on the dotted line for something they don't know will work. Experimentation, required in every local situation, can't possibly be begun satisfactorily until ready access is available to the high points where reflectors are located.

The people bringing reflector TV to our valleys are ordinary citizens donating their time and energy without pay. Their work is difficult enough without saddling them with the added burden of having to face blizzards and freezing weather where the elements are at their worst. They also face months of efforts in raising funds and testing equipment.

It seems to us that the FCC has never squarely faced up to the problem of bringing television to mountainous areas. It started in the direction of legalizing VHF reflectors, and then turned about and went another direction—toward UHF—under the pressure of the lobbyists for the cable corporations.

Now it has ruled VHF must go. The little people in the remote valleys can't afford any longer to fight the powerful Federal agency. They must comply or else get off the air.

We hope the FCC will prove an understanding arm of Government and be lenient in allowing plenty of time for a big job to be done, if it must be done.

Anyway, what's the hurry? We have yet to see any proof of consequence that the VHF reflectors in our areas are interferring with anyone.

Ukraine Independence

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. DADDARIO. Mr. Speaker, Thursday marks the 41st anniversary of the independence of Ukraine. We are all likely to forget the history of the individual countries which are now involuntarily held in the U.S.S.R. The independence which was declared by the Ukrainians in 1918 was short lived. The new bolshevik Russia wrenched freedom from the militarily weak Ukrainians only 3 years after it had been proclaimed. The Ukraine harbors a hate for Communist oppression as great

in fervor as their love of freedom. It is the hope of all free men that the taste of freedom which was so fleeting in their mouths will serve to whet their appetite for liberty. The Communists can prohibit public demonstrations, but nothing can suppress the patriotism which lives on in every Ukrainian heart.

The Spending Issue Arises Early

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Chicago Daily Tribune of January 19, 1959, entitled "The Spending Issue Arises Early":

THE SPENDING ISSUE ARISES EARLY

The Democratic leadership in Congress has marked for early action a series of spending bills which challenge the basic premises of President Eisenhower's fiscal policy as it was outlined in general terms in his message on the state of the Union. Two of the three measures which the Senate majority leader, LYNDON JOHNSON, described as issues clamoring for resolution were vetoed by Mr. Eisenhower at the last session of Congress.

In his message to a joint session of Congress January 9, Mr. Eisenhower enunciated these rules: (1) The budget must be kept in balance; (2) current costs must be met from current revenue; (3) deficit financing must not contribute to further inflation.

"If we cannot live within our means during such a time of rising prosperity," the President said, "the hope of fiscal integrity will fail. If we persist in living beyond our means, we make it difficult indeed for every family in our land to balance its own household budget. But to live within our means would be a tangible demonstration to ourselves and to others of the self-discipline needed to assure a stable dollar."

It is already clear that the Democrats with their largest majorities in both House and Senate since 1940, do not agree on the need for self-restraint. The three spending measures they propose even in advance of submission of the administration's budget Monday would knock the President's proposed limit of $77 billion out of kilter, adding some 3.3 billion to the bill.

The major Democratic spending measure is a housing bill, offered in varying forms by Representative RAINS, of Alabama, and Senator SPARKMAN, of Alabama. The administration will propose a housing bill of its own which is considerably more modest.

The Rains and Sparkman proposals contemplate larger grants for urban slum clearance than the administration will seek. Provisions for restoration of authority for direct mortgage purchases by the Federal National Mortgage association would, in themselves, account for a quick outlay of several hundred million dollars. Democratic loans for college housing run $200 to $300 million more than the administration thinks feasible. Several other proposals involving large outlays will also encounter opposition from the administration.

An airport construction and improvement bill calling for $575 million in Federal aid in a 5-year period is similar to a measure vetoed last year by Mr. Eisenhower. At that time he said that, while Federal assistance may have been appropriate when civil aviation was growing to maturity, the Government had done its part and the time had arrived for an orderly Federal withdrawal.

The success of Mayor Daley, of Chicago, in persuading commercial airlines to assume the principal expense in developing O'Hare International Airport shows the soundness of the President's contention that airports should be considered a responsibility of local governments and the airlines.

The Democrats are also renewing the measure vetoed last year to alleviate unemployment in depressed areas. Spending of $275 million is envisioned. In his veto message last year, Mr. Eisenhower maintained that the major responsibility for planning and financing economic redevelopment should remain with local citizens; that the proposed bill provided little or no local participation, and that it would mean the assumption of responsibility by the Government for the direct support of local economies.

It is certainly unwise to use Federal money to freeze conditions of chronic hardship in communities where economic opportunities have become exhausted. Instead, the unemployed should be encouraged to seek work and a promising future in areas which can offer them.

It is said that Mr. Eisenhower is determined to hold the fiscal line even if he must fight off the Democratic majorities with the veto power. As things are shaping up, the first of these tests will be presented to him perhaps as soon as early March. His response will demonstrate to the people whether he means what he has said.

The President a Spender?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the text of an article which appeared in the Noveber 21 issue of U.S. News & World Report entitled "The President a Spender?" The author, Mr. Gabriel Hauge, cites the President's spending record and feels that the major portion of blame for increased Government expenditures rests squarely on the Congress, not the President:

THE PRESIDENT A SPENDER?

(By Gabriel Hauge, former special assistant to President Eisenhower for economic affairs)

It should be understood that the deterioration in the budget situation is not, of course, solely, or even mainly, a reflection of increased spending. The net change in the January budget as officially revised early in the autumn is $12.7 billion. Of this total, $7.4 billion are accounted for by lower receipts almost entirely due to the recession.

Increased expenditures account for the remaining $5.3 billion. Of these increased expenditures it is perhaps fair to say that about $2 billion can be attributed to conscious antirecession policy—mainly in the fields of housing, unemployment insurance, and accelerated public works. Looming large in the remainder are about $1.8 billion more for the Department of Agriculture and about $500 million for added defense outlays.

It is a little bewildering today, in listening to some critics of the President as a spender, to recall the scene 6 months ago when many voices, from many quarters, were calling upon him to do something, to do anything—whatever the cost—to deal with the recession. That he did act, selectively and prudently, is now a matter of record. As far as the increase in farm spending is concerned, responsibility will have to be assigned elsewhere, including the weather. And with regard to defense spending, the majority of critics complain he is spending too little rather than too much.

Second, in evaluating some of the more partisan attacks on the President, this salient fact should be remembered: In the last session Congress enacted specific appropriation items, authorizations and tax adjustments involving a total budgetary burden of $7.5 billion beyond the President's January budget recommendations.

Adjusted for reductions made by Congress in other parts of his budget, such as in mutual security, the additional net budgetary burden to be borne in succeeding years amounts to about $5 billion over and above his recommendations. Regrettably he was not equipped with such tools as the item veto to help avoid such a result.

Third, in the last session the President's vetoes of spending authorizations and his effective opposition to other appropriations and authorizations that had passed one House of Congress resulted in the avoidance of legislation involving an added budgetary burden of $5.5 billion which would have had to be borne over succeeding years. These facts suggest that the President's budget posture was a lot better than the alternative Congress sougth to impose upon him.

Fourth, it should be recalled that the Presidents' January budget contained 16 legislative proposals for economy, both for decreasing expenditures and for increasing nontax receipts. These, if enacted, would have produced estimated future annual budget savings of $3.5 billion. Congress failed to act at all on eight of these proposals, went the other way on four by increasing rather than diminishing the programs involved, and acted only partially on the others. The result was that net benefits to the budget amounted to only about $500 million.

Fifth, the President was the leader of the forces, drawing strength from both sides of the aisle in Congress, which held the line against a general antirecession tax cut. Such action, if taken, would probably have avoided little of the additional spending which did result and would have added substantially to the $12.2 billion deficit now projected for this fiscal year. Subsequent events have already begun to prove his judgment right.

These five facts entitled the President, in my opinion, to speak with authority as well as conviction on the matter of public spending. These facts make clear how much more serious the budget stituation would have been if he had not been both courageous—and right—earlier this year. The facts entitle him to the support of every throughtful American in his efforts to build a sound and sensible budget position.

Colorado 1959

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD, a poem

entitled "Colorado 1959," written by the State's distinguished poet laureate, Milford E. Shields. This year, Colorado is observing the centennial of the gold rush of 1859 which resulted in the settlement of Colorado and its eventual entrance into the Union as a State. Mr. Shields' poem is a worthy contribution to Colorado's "Rush to the Rockies" observance. The poem follows:

COLORADO 1959

Our mountains rise up in the sky,
In high and holy air;
They kiss the clouds that blow on by,
Drink virgin raindrops there.

Our plains put on a fragrant green
That ripens into grain;
Above them is a vibrant sheen
Of rainbows after rain.

Beneath the richness of our soil
We have a wealth untold,
A vast uranium and oil
More precious than pure gold.

We have our factories and mills
That call for eager hands;
They use the highest of the skills
That excellence commands.

Yet more than this we have our men,
Our giants in the sun,
Who serve our State again, again
Till time and tide are won.

Thank God for Colorado great,
Our Century Sublime;
God bless and keep our Four Square State
Throughout all future time.

—MILFORD E. SHIELDS

We Have No Right To Meddle in Cuba's Internal Affairs

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. FASCELL. Mr. Speaker, recent events in Cuba have stirred up all kinds of critical comments and discussions by Americans. The result has been that the leader of the Cuban revolution, Dr. Fidel Castro, has personally undertaken to defend himself and Cuba's new government against Americans generally.

I agree with the analysis recently written by Bill Baggs, editor of the Miami News. Bill Baggs is an outstanding newspaperman. He has remarkable objectivity in reporting on events as they transpire. He is well oriented on international affairs, particularly in Latin America.

I think what he says in this article makes sense and is the best course for the United States:

WE HAVE NO RIGHT TO MEDDLE IN CUBA'S INTERNAL AFFAIRS

A crazy rumor was shot into orbit last week.

No one seems to know who launched the piece of gossip, or from where.

But all of a sudden there was a grumbling on the sidewalks of Havana that the United States might send in the Marines to halt the trials and executions which are being conducted under the auspices of the new Cuban Government.

Fidel Castro recognized the rumor and commented on it.

If the Marines came he said, 200,000 gringos would die.

In Miami, the telephone rang incessantly. The callers were outraged. Every one of them. They were outraged by what they identified as a threat of sorts from Castro.

AIR, NOTHING ELSE

Put into place, what Castro said was a counter-threat to a threat born of a rumor made out of air and nothing else.

Thie weird bit of business rode across the headlines and took away the play from something real, something which did happen and is a fact. As a truth, however, it is almost as fantastic as the rumor.

In Washington, a Congressman on a House Foreign Affairs Subcommittee suggested an economic reprisal against Cuba fashioned to stop those trials and executions.

Perhaps, he said, U.S. credit for the country of Cuba could be shut off or Cuban sugar could be barred from the trade in our Nation.

This is a truly exotic thought.

NOT OUR BUSINESS

Since when did the Congress of the United States acquire the job of managing the domestic affairs of Cuba?

For too many generations, too many individuals in this country have stuck or tried to stick their thick paws into the domestic affairs of other countries in this hemisphere.

Every morning, afternoon, and evening, we are beat around in the conversations of Latin America because a few among us try or have tried to steer the purely domestic affairs of Latin American countries.

You know and I know that most people in our country have not even a passing notion to have an arm in running Cuba, Mexico, Argentina, or any foreign country. We know it, but the Latins don't.

DEMOCRACY AT LAST

It is rather tragic that this old kink curls into view at the moment. Fidel Castro is perhaps the best thing which has happened to Cuba since the Spanish fleet was sent to the bottom outside Santiago Bay in the summer of 1898.

He represents a fresh prospect for the establishment of democratic institutions in Cuba.

His strength is altogether inherited from the people, who swelled his pitifully small ranks as the rebels came out of the hills and marched across Cuba to take it away from a dictator.

He seems to know what self-government means, and what morality in government means.

PRESS IS NOW FREE

He sent the rebels into Habana to chop up the gambling wheels and the dice tables, and to put them off limits for the people of Cuba, and these are the people who can hardly afford to gamble a peso.

He restored a complete freedom of press, and in all history, there has never been a free society which did not have a free press—and in all history there has never been a free press in a dictatorial society. The two can't live together.

But.

What about those trials and executions?

Earlier, we have commented that a trial out in the field under a tree in the atmosphere of an angry people coming out of a revolution is wrong.

The fact that these people in the crowd have been tortured, their brothers and even their sisters killed, does not make this kind of trial right.

JOB FOR COURTS

The fact that the press is invited to these trials does not make the trials and the executions which seem to inevitably follow right.

In our opinion.

We would prefer that Fidel Castro jail the accused from the Batista gang and try them after the courts are reorganized.

But if the U.S. Government has a complaint against the field justice in Cuba, the United States should present its complaint to the Cuban Government or to the United Nations for a hearing.

No one can condone these trials, exhaustive as the trials may be, in the mood of revolution. We have seen pictures of the men, the women and the children killed by Batista's thugs and still we cannot condone the trials of these thugs by semimilitary jurors who are still wet from the revolution.

FOOLISH MEDDLERS

In spite of them, everything Senor Castro has done makes him look mighty like a bearded angel compared to the procession of dictators before him.

And, as declared in this comment, no one ever gave any citizen of the United States any right to preside over the domestic affairs of Cuba.

And anyone who assumes the right, a Congressman or anyone else, is a foolish meddler in a nervous world.

BILL BAGGS, *Editor.*

The Late Attorney General of Massachusetts a Martyr to Public Service

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. LANE. Mr. Speaker, George Fingold was attorney general of Massachusetts, and one of the best vote-getters of the Republican Party in my home State.

Even though his political allegiance differed from mine, I was but one of the many Democrats who admired his ability, his character, and his marvelous energy.

George was a bighearted man in every way.

To all outward appearances, he seemed the picture of health.

But the toll of public life, as he cheerfully endeavored to meet the impossible demands of the people who liked him, and wanted him to be here, and there, and everywhere was breaking him inside.

George never complained because he was inspired by the sincere belief that his mission in life was to help others.

Unanimously endorsed by the Republican State convention to be its nominee for Governor of Massachusetts, he was engaged in an intensive campaign for that high honor when he was suddenly stricken.

Even now, nearly 5 months later, it is difficult to believe that he has passed away, so vivid is the memory of him.

He was the first member of the Jewish faith to be elected to State office in Massachusetts. He earned the confidence of all races and creeds and he vindicated that trust by his devotion to duty, finally sacrificing his life in the service of that ideal.

There is no finer tribute to his memory than the eulogy given by Rabbi Charles Weinberg, of the Congregation Beth Israel, Malden, Mass., that appeared in the Boston Daily Globe on September 2, 1958. Under unanimous consent, I insert it in the CONGRESSIONAL RECORD:

ATTORNEY GENERAL FINGOLD EULOGIZED AS CHAMPION OF LITTLE MAN—COURAGE AND INITIATIVE CITED BY RABBI WEINBERG

The following is the eulogy given by Rabbi Charles Weinberg of the Congregation Beth Israel, Malden:

"With grieving hearts we are gathered with the beloved family of the late attorney general, George Fingold, to pay our last respects to an eminent leader in the political arena of our Commonwealth.

"The shock of the sudden death of George Fingold has barely subsided. The spontaneous reaction to this tragedy that befell the family and the citizenry of our Commonwealth is in itself a great tribute to a great leader.

"Cut down in the midst of life, George Fingold exemplified the product of this land of opportunity, wherein a young man of modest circumstances was able to reach the loftiest positions in public service.

"Reared in a traditional Jewish home he learned early the great attributes of humility and trust. These virtues accompanied him throughout his brilliant career. Though he achieved quick eminence, he never forgot his past with its struggles and hardships.

"He was therefore recognized as the champion of the little man whom he loved and respected. The dignity of man was a venerated ideal in George Fingold's heart.

"He held sacred the right of every human being, regardless of their station in life, race color, or creed.

"In his search for strengthening our system of government he was guided by the ideal of a community of equals. His radiant personality warmed the hearts of those who crossed his path.

"ENEMY OF LAWLESSNESS, DEVOTED TO FAMILY

"George Fingold early in his career declared courageously with great moral conviction his unmitigated enmity against lawlessness. He had a passion for justice and sought always to secure the rights of the citizens of this Commonwealth.

"He long ago recognized that the state was a vehicle through which the godly attributes of justice and mercy, righteousness, and truth must be served.

"There was a continuous process in his life of the unfolding of the spirit of a man whose humanity, morality, and ethics were based upon the profound teachings of Judaism.

"His ethical standards of leadership filtered through his relations with his fellowman.

"George Fingold met the challenges of life and achieved greatness because he had confidence in the validity of his dreams and projects.

"He had courage and initiative. He knew clearly what he wanted to do and went right to it. Above all, he felt the hand of God guiding him, and so he had faith.

"We were the benefactors of these attributes of our late attorney general. There is, however, another great quality which is perhaps little known, for which indeed his soul is blessed.

"George Fingold had a deep attachment to his family. The Fifth Commandment, 'Honor thy father and thy mother,' took precedence over all. In the busiest of days, he took time out to visit with his father and these were frequent visits.

"The memory of his late mother abided with him throughout his career. It was a unique type of family devotion whose exemplification should inspire us all.

"VICTIM OF STRAIN ON PUBLIC SERVANTS

"Mrs. Fingold, you shared your husband with us far beyond the call of duty. You and his beloved family were a real source of inspiration to him in his career.

"Though his years were brief in number, his record of achievement was great. The presence of all the distinguished leaders of our Commonwealth from all walks of life, the many thousands of messages that arrived from all over the Nation, bear testimony to the high esteem in which George was held.

"George Fingold was about to embark on the gubernatorial race. His service as a public servant took its toll and he was stopped short of an attempt to achieve the crowning success of his career.

"Should not his untimely death serve as notice to the public of the strenuous demands made upon our public officials? Through technical advances we have eased the burden of our daily tasks while at the same time the burdens of public servants have increased immeasurably.

"What a pity to have lost in the prime of life a leader whose guidance brought blessings to so many.

"Dear friends, we are faced now with the transition of a noble being from mortal to immortal life. George Fingold has achieved immortality. He will long be remembered by his beloved wife, his devoted family, and the hosts of friends.

"May his soul be bound up in the bond of eternal life."

Ormonde A. Kieb

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. AUCHINCLOSS. Mr. Speaker, I am very pleased to have this opportunity to pay tribute to the devoted and unselfish service rendered to our Government by Ormonde A. Kieb, who has just resigned as Assistant Postmaster General. Mr. Kieb, a resident of New Jersey, is a personal friend of mine whom I have known for some years, and at considerable sacrifice to himself he accepted his appointment to the Post Office Department, thereby meeting the challenge to reorganize and revitalize the service.

In the 5 years of his administration which will come to a close on January 31, 1959, Mr. Kieb reorganized the operations of the Bureau of Facilities of the Post Office Department by reducing it from nine divisions to three functional line divisions known as Real Estate, Supplies, and Motor Vehicles. In addition a great part of the operations of these divisions was decentralized by being assigned to field offices. In the acquisition of post office space he introduced sound business practices in the commercial leasing technique and this was made possible by his long training in the real estate business in Newark, N.J. He brought about reduced costs in the supply system of the postal service together with reduced delivery schedule time and streamlined various operational procedures. These are only a few of the constructive features that "Toni" Kieb installed for the benefit of the postal service.

Mr. Kieb deserves the heartfelt thanks of all American citizens for his devotion to duty and he leaves his office operating with far greater efficiency and effectiveness than when he first entered into it. He received from the Postmaster General in 1956 the Distinguished Service Award of the Post Office Department in recognition of his untiring zeal and constructive achievements.

I am glad to append herewith Mr. Kieb's letter of resignation to the President dated December 31, 1958, and the President's reply thereto of January 7, 1959. I include also an editorial dated January 10, 1959, from the Newark Evening News entitled "Public Service":

DECEMBER 31, 1958.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: It is with deep regret that I tender to you my resignation as Assistant Postmaster General to be effective January 31, 1959. It has been a rewarding experience to have completed almost 6-year tour of duty in Government service during your administration as President and under the direction of Postmaster General Arthur E. Summerfield. I now find the time has come when I must return to private business.

It is a comfort and satisfaction that the responsibilities assigned to me have been completely reorganized.

The Real Estate Division through a competent and able staff, using modern real estate techniques, has obtained modern space for the Department at lower average rentals. Over 2,600 new modern buildings have been erected through public bidding by private investors for lease to the Department. Even though paying local real estate taxes to the communities out of the rent, they reflect lower annual costs to the taxpayers than the occupancy costs of postal space in traditional monumental Government-owned buildings. This modernization program is well underway and ready for rapid acceleration when the Congress provides the funds for your program.

The Department's supply system has been completely revamped. It is operating with much improved efficiency and better administrative control.

The Government-owned motor vehicle fleet has been almost completely changed over to standard production-line trucks in the new red, white, and blue color scheme. This, combined with modern fleet operating standards, shows lower initial costs and lower operating costs per mile. The motor vehicle service facilities are adequately equipped and have been fully redesigned with but a few exceptions in Government-owned garage buildings.

Please understand my appreciation for the opportunity to have contributed a small part to the many accomplishments of these years. It is with keen regret that I now write you to terminate my official assignment.

Mrs. Kieb and I shall always be devoted to Mrs. Eisenhower and yourself, as well as to the kind of Government service your able and dedicated leadership have provided for the Nation.

Sincerely yours,

ORMONDE A. KIEB.

THE WHITE HOUSE,
January 7, 1959.

The Honorable ORMONDE A. KIEB,
Assistant Postmaster General,
Washington, D.C.

DEAR MR. KIEB: I have your letter of December 31, 1958, and regretfully accede to your wishes by accepting your resignation to be effective January 31, 1959. I am aware of the splendid service you have rendered to the Post Office Department since you first assumed your duties in 1953. You have certainly earned the appreciation of your coworkers in Government and the people of the United States for your contribution to the work of the administration.

As you leave Government service to return to private life, you take with you my best wishes for your future health and happiness.

Sincerely,

DWIGHT D. EISENHOWER.

[From the Newark Evening News, Jan. 10, 1959]

PUBLIC SERVICE

Career men in government are inclined to be disdainful of the businessman who enters public service. The practice of bureaucracy is supposed to be full of things he just doesn't understand.

The businessman in Government does have his limitations, but on the whole he has been more effective than the professionals will admit and has been able to show them that government has something to learn from business.

The Eisenhower administration has drawn heavily on business in filling key posts requiring a knowledge of accounting and finance, personnel policies, purchasing and managerial techniques. Most conspicuous among them are Secretary of Labor Mitchell of Elizabeth and C. Douglas Dillon of Far Hills, Under Secretary of State for Economic Affairs.

Ormonde A. Kieb, Newark realtor, has just resigned after serving 5 years as Assistant Postmaster General. As chief of his department's Bureau of Facilities, Mr. Kieb's long experience in real estate was of much use to the Government. Among other achievements, his leasing policies produced a substantial reduction in the average rent the Government is paying for post offices.

He returns to private life with the President's thanks for splendid service, a commendation which has been well earned.

Most Unkindest Cut

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the National Tribune-the Stars and Stripes on November 20, 1958:

MOST UNKINDEST CUT

Our readers will note that the heading to this editorial contains two superlative adjectives modifying a single noun. This use has been condemned by grammarians of recent years as redundant. At the time Shakespeare, in his drama Julius Caesar, wrote the line from which these words were taken, the custom of strengthening the thought to be expressed by two such superlative adjectives was accepted as grammatically correct.

We would like to point out that the noun described as most unkindest is the noun cut. Undoubtedly the Bard of Avon was anxious to bring home to his readers and to his hearers, the extent of the cut which brought an end to the life of one of Rome's greatest warriors, a man who had brought glory to the standards of the empire. So much for grammar.

All this discussion is brought about by a recent story which appeared in the columns of a Washington, D.C., newspaper.

The story goes on to say that President Eisenhower discussed new veterans spending with top aides yesterday (Saturday, November 8) in the first big test of his postelection pledge to fight for reduction in Federal spending.

The story continues: The session was held shortly before the President left by air on a weekend business and pleasure trip. Veterans' benefits, it was stated, which will cost slightly more than $5 billion this fiscal year, are one of the big spending items of the Federal budget.

And the story continues: The President said in his budget message to Congress last January that the time had come to "reconsider the laws providing veterans' benefits and services." He is reported to have said that many of these now overlap other Government welfare programs.

Over the years the National Tribune-the Stars and Stripes has always tried to go along reasonably with the Chief Executive of our country, regardless of party, but we have found ourselves in a quandary to reconcile certain of his statements with other public utterances when it comes to a question of reducing Federal expenditures.

Certainly we would like to see certain Federal costs reduced. It might result in a reduction of the income tax which all of us have to pay, for which, we are sure, all our citizens would be grateful.

We have racked our brains for some years past in an endeavor to understand the mentality of the President when it comes to the consideration of the cost of veterans' benefits.

Unhappily, we have come up with but one answer. President Eisenhower is not interested in veterans, as such, and may perhaps be influenced by the leaders of big business who, certainly, have no desire to add to their taxes by repaying the debt they owe to our war veterans.

It may be all very well for the President to proclaim Veterans' Day on November 11 in high-sounding phrases, such as are contained in his recent decree which, among other things speaks "of our obligation to the veterans of the armed services, who have contributed immeasurably to the realization of those ideals of a free society which we cherish," and that "we should give nationwide expression to our high and enduring esteem for these veterans."

These are all pretty words but when we compare them with the fact that the first item to be considerd in the reduction of Government costs is the cost of benefits to veterans and their dependents, we are inclined to think of these beautiful phrases as a mockery—something to be used once a year and then forgotten.

Up to now we must admit we have indulged in words of criticism alone. Now we would like to cite some statistics compiled by Col. Leonard P. Ayres, onetime Chief of the Statistics Division of the General Staff of the Army on the subject of our war with Germany from 1917–19.

At the outbreak of World War I on April 6, 1917, there were, in round figures, 200,000 men serving in the Regular Army of the United States.

By the end of the war approximately 4 million men had either enlisted or been drafted for service in the Army. Of this group, 2,810,296 men were draft inductees. Others included the National Guard troops which were taken into the armed forces.

After the war was declared, the size of the Regular Army jumped from 200,000 to 500,000. Thus, 300,000 were volunteers who joined the service before being drafted. Naturally, all of these came from civilian life.

According to Colonel Ayres, 20 divisions of the Regular Army served during World War I. Of these division, 12 reached France. Three of these divisions, again according to Colonel Ayres, never served in combat.

The average strength of a division in World War I was 28,000, including officers and men. Considering the Regular Army divisions who really fought the war, we find that nine of such divisions saw combat. Multiplying nine times 28,000 we find that 252,000 Regular Army men saw combat and some of these divisions did not enter the lines until late in October 1918.

So we are inclined to ask ourselves who won World War I insofar as American troops were concerned? Further study of Colonel Ayres' statistics brings us to the mathematical conclusion that of the men who actually saw combat service, 1,190,000 came from civilian life. These figures are interesting but the facts sustain them.

So again we ask ourselves: What does President Eisenhower have against the men who fought and won World War I? Is it the fact that all his military training has brought him to the belief that civilian fighting men are men to be used in time of need and then discarded, left to make their own way in the world?

Has our President become obsessed with the thought that only the man who follows a military career all his life should be considered when it comes time to repay him for such service?

We could go on quoting statistics to show that civilians won World War II and acquitted themselves nobly in the Korean war. These were not professional fighting men, but men who realized that when their country called it was time to serve, as their forefathers had done from the days of the Minute Men of Massachusetts down through all the wars our country has fought.

It has been said in these columns from year to year that the cost of veterans' care must be considered as the cost of the war in which they fought.

We can understand the National Association of Manufacturers and the National Chamber of Commerce taking potshots at war veterans. The cost of aiding such veterans hits their pockets, and when you hit the pockets of the NAM members and the members of the National Chamber of Commerce you hit their hearts.

But when a President of the United States, himself a veteran of two world wars, makes it his first objective of business to seek a way to cut benefits from the very men who made our Nation possible, we must agree with Shakespeare, "This is the most unkindest cut of all."

Florida's Governor Has the Right Slant

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. FASCELL. Mr. Speaker, Gov. LeRoy Collins, of Florida, has demonstrated his rare ability as the State's chief executive on many occasions. He has been one of Florida's outstanding Governors.

His attitude on the recent visit of Russia's Deputy Premier is reported with observations by John B. McDermott. As political writer, John B. McDermott has a very high reputation. He has traveled all over the world and has for many years been a very keen student of international affairs. He just recently returned from an extended trip to Russia. His observations and conclusions are sound and merit much consideration.

His recent article in the Miami Herald follows:

COLLINS HAS RIGHT SLANT

(By John B. McDermott)

The proposal made by Sumter L. Lowry, of Tampa, former gubernatorial candidate, that Gov. LeRoy Collins try to block a visit to Florida by Russian Deputy Premier Anastas I. Mikoyan represents isolationist thinking.

One pertinent fact this writer learned from his trip to the U.S.S.R.—we just got back—is that the U.S. Government should encourage Russian leaders to come to this country and see how we live.

The Russian people have no real concept of conditions in the U.S.A., and the only way they can learn is to have representatives come here and find out. An example of this was brought home to me during a chance meeting in Red Square when, through an interpreter, I had a conversation with some dozen or more passersby.

THEY NEED FACTS

These men and women, representing the average man-in-the-street, were concerned about the fact that unemployment is rampant in this country. They had read of this condition repeatedly in the highly censored Russian press. They were obviously surprised by my assurance that most people who want to work have jobs in our country.

I feel sure that General Lowry's intentions in wanting Mikoyan to be kept out of Florida are well meaning. But if we put an "iron curtain" around our country, how will the Soviets get a true picture of just how good conditions are here?

We live in a land of luxury which, to the Russians, is almost beyond the realm of belief. The greatest luxury I experienced in Russia were the plush accommodations and delectable dinner aboard the KLM Royal Dutch airliner over the U.S.S.R. on the last leg of a flight from New York to the snow-draped Moscow airport.

REMEMBER NIXON?

This is not to imply that I experienced hardship of living while there. I didn't. The hotels were adequate, clean and well heated. The food was plentiful and good, although not particularly inspiring with the exception of chicken Kiev.

The Russians tried hard to be friendly to the foreign visitors—a factor which we would do well to emulate when Russians or other foreigners are in our country.

Most of us recall the revulsion which swept this Nation when Vice President Nixon was spit on and insulted during his good will tour of Latin America.

Yet, has not Mikoyan been given comparable treatment during some of his stops at American cities?

Admittedly, these demonstrations are being sparked by Hungarian refugees or sympathizers who have good reason to hate the U.S.S.R. and its official functionaries. But do these demonstrations against Russia's No. 2 man do any good? I think not.

LET OTHERS COME

Governor Collins told Lowry he sees no need for urging the U.S. State Department to keep Mikoyan out of Florida. He does not feel, as does Lowry, that Mikoyan may lull us to sleep.

Lowry claims that allowing Mikoyan to visit here would be an insult to every patriotic citizen, a betrayal of the memory of Florida men who lost their lives in Korea.

Collins advised Lowry he felt Floridians were able to take care of themselves during Mikoyan's visit—that he did not feel Floridians were in danger of being contaminated by communism simply because the Kremlin's No. 2 man was passing through.

And, pointedly, he suggested to Lowry that if the former National Guard general felt a danger of being improperly influenced, he and any other person of like thinking could:

Keep away from airports or any other places where Mikoyan might be during his visit.

Refrain from listening to radio broadcasts or watching television shows which might feature the Russian bigwig.

Skip over newspaper accounts which describe his visit or which report on interviews with him.

In the opinion of this writer, based on his own experiences in Russia and covering the cold war in Europe for some 8 years, I'd say that our best weapon against communism is to expose the Communist leaders to what this land of democracy has to offer.

And where else but Florida can we show a better example of American living at its best?

Eggheads and Politics

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article, written by Leon Keyserling, which appeared in the October 27, 1958, issue of the New Republic.

Leon Keyserling, consulting economist and attorney and president of the Conference on Economic Progress, was Chairman of the President's Council of Economic Advisers from 1950 to 1953. His experience in government began as assistant to Senator Herbert Lehman and has included work on legislation relating to housing, social security, banking and currency, public works, labor relations, and unemployment. He is presently a member of the Advisory Committee on Economic Policy of the Democratic Advisory Council.

The article follows:

EGGHEADS AND POLITICS

(By Leon Keyserling)

Recent writers in the New Republic, commencing with Arthur Schlesinger, Jr., on September 15 ("The Death Wish of the Democrats"), have discussed the egghead's contribution to politics and especially Democratic politics. But only the surface has been scratched thus far.

First of all, how valid is Mr. Schlesinger's thesis that by excluding intellectuals and creative liberalism, the Democratic Party is "blowing out its own brains"?

1. In support of this thesis, Mr. Schlesinger says that the party in the 1920's was a "dreary alliance of northern city bosses and southern Bourbons," that Roosevelt and the New Deal transformed this situation, and that Mr. DeSapio in New York and others elsewhere are now part of a revolt against this splendid transformation. I had thought that, at the level of practical political operations, Roosevelt's New Deal victories in Congress (not to speak of his electoral victories on domestic issues in 1932 and 1936) were forged of this dreary alliance, and that F.D.R. lost his power to put through domestic legislation circa 1937, when the southerners in Congress withdrew their support.

2. Mr. Schlesinger says that Al Smith's Liberty League affiliation after 1933 "showed the feebleness of even the best of the party whose [presidential] nominee he was in 1928." But I had thought that this same feeble party had nominated F.D.R. for Vice President in 1920, when it also nominated the highly literate and then liberal (pro-League of Nations) James M. Cox for President. In the State of New York, about which Mr. Schlesinger is now particularly worried, the same feeble party in 1928 nominated F.D.R. for Governor and Herbert H. Lehman for Lieutenant Governor. In the same State, the great Robert F. Wagner was first nominated for the U.S. Senate in 1926. Turning from history to logic, I suppose that James F. Byrnes might now be deemed as conservative as Al Smith appeared to be when he joined the Liberty League. Does this demonstrate retroactively the feebleness of the best of the Democratic Party at the time when Roosevelt made Byrnes his chief lieutenant in the Senate, then made him a Justice of the Supreme Court, and after that made him a forerunner—and much better version—of Sherman Adams during World War II?

3. In addition to Senator Wagner—who was neither an Ivy League man nor an egghead, but who climbed straight up the political ladder from boyhood without skipping a single rung—the men whom the Democratic Party in New York State nominated and elected to the Senate during the height of the New Deal were Royal S. Copeland and James M. Mead. They were both good men and true, and my respect for their records is genuine. But assuredly they were not eggheads, and there are no indications that Mr. Finletter would have received the party preferences had he then been available. I must add that Mr. Finletter was my preference for this year, but that is beside the point. So much for New York. As for Connecticut and Pennsylvania, to which Mr. Schlesinger also calls attention, I cannot recall that a majority of the Democratic Senators from these States during the early New Deal were a composite of Messrs. Benton, Bowles, and Dilworth. I hasten to add that these three men are also among by favorites, but again this is beside the point. The Democratic Party today, and the role of the liberals in it, may be different from a generation ago, but Mr. Schlesinger's evidence to this effect is not very convincing.

What is important is not that so brilliant and accurate a historian as Arthur Schlesinger, Jr., may have taken a temporary holiday from his discipline. It is that his article in the New Republic raises implicitly the whole issue of the appropriate and feasible role of the intellectual concerned with the substance of political programs.

Let us return for guidance to the early New Deal era. I was in Washington then, in a spot where it was easy to observe what was going on. There were indeed some New Deal intellectuals who dabbled and squabbled, and even connived, with respect to the choice of candidates for governor, Senator, and even perhaps the Presidency. This they were perfectly entitled to do. But I can think of few, if any, of the bold economic and social measures of the early New Deal which shot from the fertile brains of these gentlemen. Quite to the contrary, some of the most important of these measures were originated by New Deal era intellectuals who did not concern themselves with who got nominated for what, and who remained so much in the background that they may not receive much space in the best histories of the New Deal.

I do not imply that intellectual innovators cannot, when they are uniquely gifted, successfully combine their intellectual activity with embroilment in more proximate political maneuvers. When they can, so much the better. But I do mean to say that this combination is not their most likely forte, and that when they attempt it they usually lose more than they gain. This is because the embroilment itself distracts them from the work which is their special challenge and responsibility. If it be true that the Democratic Party of today is programatically as much behind the New Deal as Mr. Schlesinger believes—which I do not personally feel—the fault seems to me not to rest primarily with the political nominees or officeholders. The trouble, primarily, is that these nominees and officeholders have had no sufficient source from which to draw the inspiration and ideas which many of them seek.

This brings us to the most important point of all. If there has recently been a shortfall

of creative liberalism in America, it has not been primarily on the straight political, but rather on the intellectual, or egghead, level. I take as illustrations Mr. Schlesinger himself, and also John Kenneth Galbraith, of Harvard, whose ideas seem rather closely allied to Mr. Schlesinger's. This selection seems fair enough, since there are probably no two eggheads writing about public affairs who are more widely read, influential, gifted, and useful. It does embarrass me somewhat to say what I am going to, for I regard these men as two of my best friends, and my admiration for them is immense. But the cause may be worth the pain. Besides, my two good friends have on occasion swung their intellectual cudgels lustily against some of the cherished ideas of some of their friends, and one of their largest merits is that they are aware of the public and private good to be served from doing this on occasion. The method I shall follow is to state what seems to me a defensible liberal position on a few key issues, and then examine what my two friends have said on these issues.

In my view, foreign policy, and especially foreign economic policy, is or should be the dominant concern of American liberalism today. The recent observation of Mr. Nehru, that the gap is widening in the world between the living standards of the few who have and the many who have not, is statisically correct. It is also of supreme human and political importance to us in the United States. For even if we avoid atomic holocaust, which we shall have a far better chance of doing if we correct this gross inequity than if we do not, we would nonetheless in the course of time become an isolated system surrounded by an ever-rising wall of totalitarianism, if the dictatorships should help to raise the living standards of the underdeveloped peoples outside their own borders much more than we do.

Our default on this score is stupendous. The percentage of our total national product which has been flowing in recent years into international economic cooperation and assistance is by now so imperceptible that one blushes to mention it. And while this decline has many roots, the debate as to how much we can do overseas has been almost entirely in terms of the effect upon our domestic economy. In this context, a high rate of economic growth at home would not per se provide the will to spend abroad, but it would at least provide the means and some better foundation for popular assent for what we need to do.

For example, a high rate of economic growth (about 5 percent annual average) from the start of 1958 through the end of 1964 would yield about $400 billion more of national product for the 7-year period as a whole, or an average of nearly $60 billion more per year, than if we continued the low annual average rate of economic growth (somewhat above 2 percent) registered during the period 1953–57 and which has meant a gradually rising level of chronic unemployment of manpower and plant. Past experience, and especially current productivity developments, indicate that a higher growth rate is entirely feasible in relative peacetime. If we allocated even 5 or 10 percent of this high-growth increment to our overseas economic responsibilities, we could without feeling any pinch at home carry forward the most ambitious international economic programs envisaged by the best informed. There is nothing extreme about this objective; it has frequently been expressed by outstanding Republican businessmen, outstanding labor leaders, and Democratic public servants.

But Galbraith's new book, "The Affluent Society," fairly read as a whole, has been written virtually as if there were no economic world outside of the United States; in fact, he sometimes uses the phrase "in an affluent world." He ridicules those who stress the rapid expansion of American production as a high priority, on the ground that we are already affluent. But in fact we are far from sufficiently affluent, even at home, to justify this derision. And even if we were later to achieve at home everything that we need and want, or think we need and want, it would not do for us to become an island of indescribable plenty surrounded by oceans of deprivation and envy. If we should for the first time in history register a technological breakthrough which could help enormously to erase the worst poverty from the face of the earth, should we not use this capacity to the full?

But in the May 3, 1956, issue of the Reporter, Mr. Schlesinger seemed to have argued that liberals should be wary of attending to international duties until America itself has been made a shining example for the world to follow. I grant that we have plenty to do at home; but the attitude of the rest of the world toward us must be affected at least as much by what we do with or to them as by what we do for ourselves. In fairness to Mr. Schlesinger, his idea about going slow on the international front probably reflected his view of practical strategy for the 1956 political campaign. But when the egghead gets preoccupied with this kind of business, he is not keeping his own store. His big job is to discover what programs are of vital national importance and why, and then to try to persuade the political spokesmen—and through them the country—accordingly.

Domestically, in addition to civil rights and civil liberties, the two prime political problems of our times, it seems to me, are: the vast impoverishment of millions of our citizens even today in their private economic lives and the vast impoverishment of our public services—relative to our current actual national wealth and product, and far more so relative to our current and rapidly growing technological potentials.

What does Professor Galbraith have to say on these matters? With respect to private property, chapter 23 of "The Affluent Society" says that it is "no longer a massive affliction" in the United States. The statistics supporting this assertion are limited to those families with annual incomes below $1,000. He says that such poverty is of the "case" variety, attributable mostly to individual shortcomings, or "insular" poverty, due largely to the desire of people to stay in the locality of their birth. The remedy for most of this, he says, is in more public services like health and education, so that the next generation may not suffer for the sins of their fathers. Based on this analysis, Galbraith says that such poverty cannot be reduced much nor quickly enough by overall economic growth, and consequently that such growth at a high rate is no longer very important.

It is unnecessary at this point to show why this is far too narrow an attack upon even this poorest sector of the American community. For the truly startling thing is Galbraith's identification of the problem itself, which in turn weakens fatally the remedies proposed. For in 1957, we had more than 7 million consumer units (multiple-person and single person families) with annual incomes below $2,000, and we had more than 19 million with annual incomes below $4,000. An affluent society? Looking only at multiple-person families, there were almost 3.5 million below $2,000 and almost 12 million below $4,000—a figure considerably below that usually established by competent agencies as the bare minimum required today for a healthy and decent standard of living. This comes to more than a quarter of all multiple-person families. These families may be living in "affluence" compared with people in India, or compared with an even larger number of people in the United States a generation or two ago. But thy are certainly living in poverty by any standard that should have meaning for us today.

Galbraith's statement (ch. 8) that social security is "finished or largely finished business" is equally neglectful of the incomes and living conditions of an aged population about two-thirds of whom in the case of individuals living alone have money incomes from all sources including social security of less than $1,000 a year, and more than four-fifths of whom are below $2,000. Similarly, Arthur Schlesinger, in the New York Times magazine of August 4, 1957, intimates that we have outlived the New Deal in part because we have outlived private poverty in its gross and extensive form.

Now, it is perfectly clear that an expansion of public services such as education and health, while urgently desirable, cannot—in the absence of economic growth—remedy the truly massive problem of private poverty. Better education and better health may awaken the latent productivity and ambitions of a large portion of the poorest. But in the final analysis, their incomes can rise significantly (except for those employed by the Government only through the expansion of those parts of the economy which provide private employment and pay wages and salaries. An increase of almost $17 billion in annual national income would be required to lift all of the multiple-person families now below $4,000 up to even this meager level. While redistributing income might help to correct some inequities, obviously so huge a sum must come predominantly from a rapid increase in total production and total national income. Much of the reduction in private poverty in the past generation has resulted from the extremely high rate of economic growth and full employment during and immediately after World War II, and this occurred despite the heavy take of the war for noneconomic purposes. Since 1953, with our overall economic growth averaging only about half of what it should, there has been considerably less progress toward the lessening of poverty.

Furthermore, all historic experience shows that a low rate of economic growth has had a regressive effect upon income distribution, while a high rate of economic growth has had a progressive effect. So whatever Professor Galbraith may intend, his conclusion that a high rate of economic growth is not of prime importance would give comfort to the view that the further substantial reduction of private poverty in short order is not of prime importance. And his proposals to expand local sales and to acquiesce in a moderately high level of unemployment—which are perhaps the two most important specific proposals in his book—would cramp economic growth, have a high regressive effect upon income distribution, and perpetuate rather than reduce poverty. (Parenthetically, it is interesting that another distinguished Harvard economist, Arthur Smithies, has just found "evidence that satiety is being approached and that the utility of additional consumption is diminishing" (Challenge magazine, Oct. 1958). He adds that, if the high costs of the cold war continue, it might be desirable to modify consumer standards rather than to press for the high growth rate which the Rockefeller report urges. Evidently, the problem of poverty is not massive in the Widener library. And on purely economic grounds, there is something remote about economists who want to restrain consumption, when a slightly rising level of total consumption was the main reason why the economic recession did not get much worse, and when consumption will need to rise much faster than it is rising now to reactivate a healthy resumption of business investment in producer facilities and to restore full prosperity—even if public outlays are increased greatly.)

In addition to the families now below $4,000 a year, there are now almost 20 million multiple-person families, or about 45 percent of the total, with annual incomes between $4,000 and $7,500. Thus, almost three-quarters of all multiple-person families are now below $7,500. Can these families now afford trips abroad, cultural enjoyments, university educations for their children—which those who say we are now so affluent regard as modest for themselves? These families need economic growth, and so do those who produce what they buy.

Let us turn to our basic public services, including both national defense and domestic welfare programs. Putting aside national defense, Galbraith's view is that much or even most of the needed domestic expansion should be taken care of, at least for the short run, through the redistribution of the existing expenditures and product, with less going into private consumption and more going into domestic public services. I would agree fully that, at any recent or current level of total national product, some redistribution away from luxuries and toward essential public services would be highly desirable.

But it is too bad that Galbraith has not in his book quantified the amounts of additional domestic public services we need. Had he done so, it would have been shown that to meet these needs reasonably well (while assuring a sufficient level of expenditure for national security and international economic cooperation) our total public outlays—Federal, State, and local—must be lifted to an annual rate by 1964 of about $33 billion, or 38 percent, above the recent annual rate. To attempt to do this primarily by redistribution of expenditures—from private consumption to public needs—rather than primarily through high economic growth, defies history and reason. Any such attempt would knock our whole economy for a loop, and would be unthinkable from the viewpoint of popular and political consent. In contrast, for the whole 7-year period from early 1958 through 1964, a high as against a low rate of economic growth would yield, as already indicated, a differential of about $400 billion in our total national product. About $70 billion of this differential would flow during these 7 years into enlarged national security programs, international economic cooperation, and domestic welfare services—housing, education, health. Moreover, granted a high rate of economic growth, adequate total government expenditure would represent a smaller part of our total national product than the starved governmental expenditures have represesnted in a retarded economy during recent years. Galbraith's allegation that other liberals have been impervious to our public needs passeth understanding.

We come to the old argument about who pays for all this growth. The method of financing domestic public programs is vital. On this, Galbraith in general argues that needed additional programs cannot be financed mainly out of the Federal budget, partly because of the heavy national defense burden, and partly because the new taxation required for this purpose could not be raised because liberals and conservatives would not agree as to who should bear the tax burden. He therefore proposes that the increased domestic public services be financed largely through local sales taxes, covering food and necessities as well as luxuries (ch. 18 and especially 22). How sound is this? In the first place, as already indicated, we probably would not need the additional taxes at all, if we had a high enough rate of economic growth. In the second place, is it wise or expedient to slide over the profoundly basic question of the proper imposition of whatever tax burden we have? And in the third place, is it practical to suggest that this political and social argument of principles of taxation could be reduced by turning the question back to local authorities, or that an attempted resolution of the argument locally would result in more equity or social balance than resolution at the Federal level?

Even the late Senator Taft, especially in his housing and educational efforts, recognized the equalization principle which imposes upon the Federal Government heavy and increasing responsibilities. Can we as a nation afford the view that the improvement of education and health services for children in the States bordering on the Gulf of Mexico be no faster than these States can afford? We can find better ways to expand our domestic public services than to take more pennies in sales taxes from the depleted pockets of the poor. And these kinds of sales taxes, by further repressing private consumption among low- and middle-income families, would aggravate the imbalances in our economy which at all times save those associated with war have caused undue economic slack.

The other main proposal contained in the Galbraith book is that we should acquiesce in a moderately high level of unemployment. The reason advanced (ch. 15) is that this is probably the best defense against inflation, the ultimate enemy of social balance. This has been for years the chief weapon of ultraconservative groups in their fight against full employment. My answer is that even if it were true that a moderately high level of unemployment were one way to repress inflation, I could hardly imagine anything more antithetical to the concept of social balance than that the affluent college professor or the wealthy foundation president should enjoy somewhat more price stability at the expense of the unemployed. Nor can I accept the notion that higher unemployment benefits are a tolerable substitute (ch. 21) for the opportunity to use one's talents for constructive purposes, and thus to enjoy full economic as well as political citizenship. From a worldwide perspective, the surrender of the goal of full employment in the United States would stun those elsewhere who properly believe that the right to work in its true sense is a fundamental human right.

Furthermore, the theory that a moderately high rate of unemployment is conducive to price stability is invalid. Galbraith's statements (ch. 15) that inflation "can occur only when the demands on the economy are somewhat near the capacity of the plant and available labor force to supply them," and is most likely only "when demand is strong and rising, and unemployment below 3 or 4 million," seem curiously remote from the actual conditions of 1957–58. For this most recent experience, and in fact all experience save under conditions emerging from war, has demonstrated that high unemployment and economic slack—short of a real depression—produce more price inflation than a high rate of economic growth with very low unemployment. The data on this is abundantly available. And the reasons are clear: a slack use of plant and manpower increases costs per unit, or at least makes costs per unit higher than they would be with reasonably full use of resources, and these increased costs are indeed inflationary. Galbraith is correct in stating that the expansion of production in itself does not prevent inflation, as war experience shows. But such inflation occurred when expanded production and incomes led to civilian buying power growing much faster than goods available for civilian consumption. There is little analogy between such a situation and a sustained and well-balanced program of full employment and full production in relative peacetime.

Moreover, Galbraith's proposal that unemployment benefits be lifted close to the wage level when unemployment becomes relatively high (an eminently desirable proposal on other grounds) would certainly be more inflationary and on all scores less desirable than productive job opportunity for these people. His proposal that unemployment reaches lower levels does not exhibit much "social balance" toward those who remain unemployed, and who are not one whit better off because they are part of a smaller rather than a larger total number of unemployed. This manipulation of the treatment of the unemployed, in the name of economic stabilization, seems to me a mechanistic disregard for the human element.

In the New York Times article to which I have already referred, Mr. Schlesinger says that "the economic problem at home seems to be fixed up for the moment." He suggests that "the liberal must recover his deeper roots in the American cultural traditions—in Whitman, Emerson, Thoreau, Melville, William and Henry James * * *." I am fond of these authors, but insofar as we are concerned with the means for improving the society's translation of liberalism I can hardly imagine a candidate thumping for dear old William James. The liberal's political task is still to discover ways of making available to all Americans better incomes, better housing and health services, better education, more freedom from economic insecurity, and more effective participation by our country in worldwide advance toward peace, freedom and plenty, all of which involve the mobilization of appropriate economic energies through the political process. The concern of the egghead in politics is a social concern. I would let each citizen decide for himself whether he prefers Melville to Mary Roberts Rinehart, or whether he would rather listen to the Fifth Symphony than Elvis Presley.

Mr. Schlesinger goes on to say, also in the same Times article, that, while the flight against poverty was the heart of the New Deal, "it has not been the central issue of traditional American liberalism," nor has it been "the heart of Jeffersonian democracy, nor of Jacksonian democracy, nor of the antislavery movement, nor of the Progressive movement." I beg to differ; it seems to me that these movements, and Woodrow Wilson's New Freedom as well, were directed toward the improvement of the relative and absolute economic and social status of the common man; they were not interested in what he read.

As I thus contemplate some of the ideas of some of the eggheads, I am mindful of the passages in Schlesinger's magnificent first volume of "The Age of Roosevelt," which point out how unprepared the most famous of the economist eggheads were to make any substantial contribution to the challenge of those days. His evidence tends to confirm my conviction, growing during the past quarter-century, that I would rather trust a good part of our political programs to the seasoned politicians than to the eggheads. Because they are closer to life, as it is commonly lived, these politicians may be better economists than those who belong to the guild. There are not many seasoned politicians today who advocate a moderately high level of unemployment or more sales taxes on food, or who tell us that we have pretty well gotten over the problem of massive poverty, or that unemployment insurance is ever a desirable substitute for jobs, or even that most of us are sufficiently affluent. Perhaps our political system is not so bad after all. Perhaps we should let the politicians continue to pick the candidates, and let the voters continue to decide who wins. And some of the eggheads, if they are not satisfied with things as they are, might consider afresh whether they might benefit by the words of Cassius: "The fault, dear Brutus, is not in our stars, but in ourselves."

The First Step

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial on the newest veterans' organization which is the Veterans of World War I of the U.S.A., Inc., under the leadership of Lewis Brake, national commander. This editorial appeared in the Stars and Stripes, National Tribune on September 11, 1958:

THE FIRST STEP

Beginning next Sunday, the Veterans of World War I of the U.S.A. will open their annual convention in Springfield, Ill.

It is pleasant to be able to say that this comparatively young veterans' organization has made splendid steps forward during the past year. It has had a sound leadership, a steadfast program, and its story of accomplishment is worthy of recording.

Under the leadership of Lewis Brake, together with the cooperation and support of the auxiliary, the Veterans of World War I of the U.S.A. has achieved one of its goals—the granting of a congressional charter, recognizing it as a veteran group to be considered and worthy of recognition in its own right, along with other major veteran organizations.

That congressional charter carries with it many privileges, much to be desired, and naturally certain obligations which we feel the group will fulfill.

The organization now has the right to represent its membership before the various claims bodies of the Veterans' Administration and to speak to congressional committees with an authority which it did not heretofore possess.

The delegates to the national convention will meet in Springfield in a few days and they will have before them two important problems to consider and act upon.

Naturally, the first and most important subject which will come up before the voting strength of the convention will be the choosing of leaders for the coming year.

Serious thought should be given by the delegates in their choice of national leadership for 1958–59. A successful surge forward has been made in many directions during the past few years of leadership and the delegates should see to it that those who are to lead and advise the organization for the coming 12 months be chosen wisely and with a view to advancing the interests of the membership they represent.

We would not consider it proper for us to advise the delegates as to how they should vote on any subject—election of officers or anything else—but we like to present to them our thoughts at this time, based on the experience of many years relating to the affairs of war veterans.

Setting aside the question of election of new officers, which is strictly the business of the organization, we would like to offer a few suggestions for the coming year's activities which we feel will aid the members and their new leaders in the guidance of the organization.

First, we recommend steadfastness of purpose. Up to the present time the Veterans of World War I of the U.S.A. have set definite goals—happily, not too many—and thus the organization has been able to confine itself to the furtherance of those goals with success partially accomplished.

We would, therefore, suggest that they retain this steadfastness of purpose and not go off on many tangents and facets which affect our national life, action which might tend to weaken their effort in reaching the goal which still remains to be accomplished—that is, an adequate pension for our veterans of World War I who are aged and needy and who deserve the consideration of the Government of the United States and its people.

It has been said that "constant dropping wears away a stone." This is certainly true, and if the organization brings to bear all its effort on the one plan which has been its reason for existence, then that constant dropping is certain to have the influence it merits.

Our next thought is membership. It is remarkable how this new group has grown, once proper leadership has been established. With its membership well over the 100,000 mark at this time and with new barracks being formed at the rate of about 4 a week all over the country, a stimulus has been provided for next year's work along this line which should excite the interest of every member and encourage every member to go out into the highways and byways and preach the doctrine of membership until all eligible veterans have joined the ranks.

The vast potentiality in membership may appear appalling but not to men of stout hearts and men of determination. The field is there—some 2,800,000 strong and the reason for joining among the class involved is sound.

We therefore urge that this year—and particularly these coming months, before the next Congress convenes—be used to build up such a membership that when the leaders of the organization appear next year before the appropriate committees of Congress they will be able to present statistics to prove that they truly represent a vast segment of the men who served in 1917–19, and that they express the will of these veterans with such figures that Congress will listen and take heed of their plea for the needy and aged comrades of that early war and grant the relief so much desired.

It should be a comforting thought to the Veterans of World War I of the U.S.A. to know that little by little, the two largest veteran organizations in the land are coming around to the new group's way of thinking.

True, there may be some divergence of opinion in the manner in which benefits should be granted to the needy veterans involved, but the basic fact remains that these two large groups recognize the need of aid and are willing to support legislation to grant such aid.

Our last thought brings up the question of auxiliaries. Happily for your organization the women who are eligible have responded nobly in their support of the organization. Almost as fast as a new barracks is formed, there you will find alongside it a new auxiliary, ready to carry on in ways which the men may not always understand but which seem to bring results just the same.

It has been said, "never underestimate the power of a woman," and, bearing this in mind we suggest that the veterans themselves encourage the formation of auxiliaries, for the combination of steadfast men and devoted women is a hard one to beat.

Therefore, we recommend that auxiliaries be built up as quickly as possible in order that the combined effort of the men and women involved may be exercised to the best possible advantage of all concerned.

As we have pointed out the Veterans of World War I of the U.S.A., have achieved their first goal—the granting of a congressional charter.

May we therefore offer as the slogan of the group for the coming year: Steadfastness of purpose, increased membership, and auxiliaries throughout the land. It's a winning combination.

Passports for U.S. Reds

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an address by Mr. Roderic L. O'Connor, Administrator of the Bureau of Security and Consular Affairs of the Department of State, which he made in Washington to leaders of the Veterans of Foreign Wars. In his address, which appeared in the December 5 issue of U.S. News & World Report, Mr. O'Connor tells how Communists are freely going abroad and how the State Department is helpless to do anything about this dangerous situation. The author stresses the urgent need for tighter regulations in the issuing of passports to Communists, and appeals to Congress for legislation to provide this security measure which I too feel is so vital to the interests of our country:

In our view, control over the issuance of passports has been an important part of our defenses against indirect Communist agression. Under the law today, that part of our defenses against Communist subversion no longer exists. Your Government is today powerless to deny passports to known Communists who are going abroad for the purpose of assisting and supporting the international Communist conspiracy. This dangerous situation exists because in June of this year the Supreme Court said that the State Department did not have adequate authority, without specific legislation, to deny passports to Communists of Communist supporters.

As a result of that decision, the State Department has received as of early this week 596 applications for passports from persons who have records of activity in support of the international Communist movement. Before the Supreme Court's decision, many of those persons had been refused passports or had abandoned their applications when asked to identify themselves as Communists. Since the decision, these persons have moved promptly to take advantage of the breach in our defenses. They are getting their passports while the getting is good.

We believe that this is a dangerous situation and one which needs to be cured promptly. It can be cured by legislation giving to the State Department authority to deny passports to Communist supporters. The Department sought to obtain such legislation in the last session of Congress. Although the House passed a bill, the Senate failed to act. With your help and active support, we hope to obtain such legislation in the next Congress.

In our view, the unrestricted travel of these 596 persons abroad represents a real danger to the security of the United States. Although the State Department promptly abided by the decision of the Supreme Court, there is a respectable body of informed opinion that does not agree with the philosophy of that decision. The majority opinion summarized the philosophy behind the decision by saying that a passport applicant need not state under oath whether or not he is a Communist because that question deals "with beliefs, with associations, with ideological matters."

This view seems to some unrealistic because it fails to take into account all of

the facts of the situation. The Communist Party and its supporters are an activist organization engaged in a worldwide conspiracy which seeks in every way to undermine and weaken the U.S. Government. I believe that our Government has a clear obligation to defend itself against that conspiracy. In doing so, scrupulous regard must, of course, be given to the rights of the individual and to the traditions of civil liberty. However, the courts should give equal weight to a realistic analysis of the danger that the Communist conspiracy presents to the American people.

After the Supreme Court decision, the administration promptly submitted legislation to the Congress. In an effort to meet the objections raised by the Supreme Court, the legislation proposed by the administration provided authority for the denial of passports to those persons whose records over the past 10 years showed activities in the Communist movement rather than mere beliefs or associations.

The administration recommended that Congress make certain findings of fact to show that Congress viewed the Communist Party as more than an organization reflecting political associations and beliefs. The proposed legislation also provided that a record of active support of the Communist Party justified a conclusion that an applicant was in fact going abroad to further the interests of the Communist Party. After a number of hearings, the House passed a shortened version of the bill on the next to the last day of the session. Unfortunately, it proved to be impossible to obtain any action in the Senate before Congress adjourned.

Much of the credit for the passage of the bill in the House must go to Congressman VORYS, of Ohio, and Congressman SELDEN, of Alabama. These two men were most persistent and effective in their efforts to bring the bill out of the House Foreign Affairs Committee and get it adopted on the floor.

But, among some of their colleagues, I repeatedly heard doubts expressed as to the need for such legislation. Through several days of hearings, I was frequently asked the question: "Why was it dangerous for American Communists to travel abroad? Why can they do more harm abroad than they can do here? Why, if the mails and the diplomatic pouch are open to these people, is it so important that they be prevented from actually traveling abroad in person?"

These are good questions and I should like to give you gentlemen the answers as I see them.

HOW COMMUNIST CONSPIRACY WORKS

To answer these questions requires an understanding of what the Communist conspiracy is and how it operates. I do not need to explain to this group the aims of the Communists or their political objectives. I should say, however, that the dependence of the Communists on direct armed aggression has in recent years lessened. The emphasis today is on indirect aggression. That type of aggression places a much heavier reliance than heretofore on subversion and espionage and on all forms of political agitation and political propaganda.

The principal instrument of the Soviet Communists for carrying out these tactics of subversion and political agitation abroad is, of course, the apparatus of the international Communist conspiracy. This international apparatus exists in almost every part of the world and is directed and supported from Moscow. It is a vast and complex organization, partly overt and partly covert. Much of its activity is public and can be seen in a variety of forms in every capital of the world.

Perhaps even a more important part of this activity is hidden from view and relies on secret communication and correspondence, on covert financing, and on hidden means of resupply. In such a worldwide organization there must be hundreds, and thousands, indeed probably millions, of persons in all the countries of the world who have their valued place in the party machinery. A fair share of these persons are here in the United States. Let me tell you about some of the worst cases who have recently applied for passports.

One of our recent applicants was born in Czechoslovakia and is now a naturalized American citizen. It was his job to furnish his contacts in Czechoslovakia with the names of active anti-Communists in the United States whose relatives were living back in Czechoslovakia. What the Czech Government probably did to those relatives would not be hard to imagine.

Another client of our Passport Office was thought by the Canadian Government to be so dangerous to the public security that the Canadians refused him entry to that country to attend a Communist rally featuring the famous "Red" Dean of Canterbury. Yet your Government is powerless to deny him a passport.

Perhaps one of the hardest cases for us to stomach, and I am sure this group of veterans will agree with me, is that of William Lorenzo Patterson.

Mr. Patterson boasts that he is a Communist. He is the general manager of the weekly Communist newspaper, "The Worker." In 1950, when he was visiting his fellow Communists in Hungary and Czechoslovakia, he gave press interviews in which he accused this Government of being a Government of criminals and cannibals. He accused us of using germ warfare in Korea. He repeatedly advocated the overthrow of the U.S. Government. He made a speech in New York City in 1952 in which he is reported to have urged his listeners to write to American soldiers in combat in Korea and to incite them to go over to the other side.

Patterson now wants a passport to go to Europe and to the Soviet Union on business and pleasure. It is not difficult to imagine what Mr. Patterson's business and pleasure will be. For the United States it will be dirty business. Yet Mr. Patterson travels with our official blessing and protection.

Another case involves a Communist labor leader who went to England some years ago during a strike at the port of London and had to be expelled by the British Government because of his activities as a Communist agent in blocking settlement of the strike. We have now been obliged to give him a passport which asks the British authorities to let the bearer pass safely and freely.

You all recall the name Julius Rosenberg, convicted of espionage for the Soviets and executed. The man who recruited Julius Rosenberg into the Communist Party in 1939 has applied for and received a passport since the Supreme Court's decision. Still a party member, his job has been to recruit chemists and other scientists into Communist-dominated organizations.

There is the case of Victor Perlo who has been identified in sworn testimony as a Communist who passed documents from the sensitive wartime Office of Strategic Services to a courier for the Communist apparatus. His application is now under consideration.

WHEN AMERICANS BERATE AMERICA

We have had to give passports to such ardent Communist supporters as Hugh Hardymen and Anita and Henry Willcox, all of whom attended a Commie peace conference in 1952 at Peiping, in Red China, in evasion of passport restrictions. All of them made statements accusing the United States of using germ warfare in the Korean conflict.

Finally, there are the more notorious cases of Earl Browder and Anna Louise Strong. Browder, onetime head of the Communist Party in this country, who had previously been convicted of misusing his passport, promptly applied again in order to renew his international travels. Anna Louise Strong, upon receiving a passport this year promptly visited her friends in the Soviet Union and, despite the passport restriction against travel to Communist China, she went from there to Peiping, where she is still visiting and talking.

These are but a few examples on our list. The list now numbers 596. These people are from every profession and every walk of life. Legally, I cannot show that they are all members of the Communist Party. I cannot prove in a court of law that all, or even a large portion of them, are espionage agents or even trained subversives. However, as a group, they share one thing in common. Most of them are disciplined and obedient to the policies and directives of international communism. Many of them perform the most humble tasks of party organization. We are convinced that the effective functioning of the international party machinery depends to a very great degree on the freedom of many of these persons to travel.

One does not have to be a student of Communist Party organization to realize the truth of what I have said. To illustrate this truth each one of you needs only to think of the organization for which he works. Everyone in business today travels almost constantly. You all know that personal contact is an invaluable way of doing business. You all know that the telephone and the mails are not an adequate substitute in carrying on your own business for personal contacts. If this is true of normal business operations, how much more true is it of the enormously complex operation of the international Communist conspiracy.

Imagine, if you can, carrying on a worldwide business where virtually all of your communication must be kept secret. Imagine, if you will, carrying on a worldwide operation, the very essence of which is espionage, subversion, and sabotage.

The necessity of personal assessment, of personal recruitment—indeed, of all forms of personal contact—will be obvious to you at once. In an organization of this sort, to hamper the movements of any members of the organization is a crippling blow and puts the operations of the organization under a most heavy handicap.

I think, once these facts are understood, the reasons for our insistence on the urgent need for legislation to control the issuance of passports to Communists become much clearer. We do not say for a minute that we can prevent all communication between Communist supporters in this country and their counterparts abroad by not issuing passports. That would be ridiculous. We do not say that we can stop Moscow direction of the Communist Party in this country. We do say that we can very seriously hinder the effective operation of the Communist Party both here and abroad by making it difficult for the supporters of that party to depart from the United States.

It is this same reasoning that lay behind the enactment of the visa provisions of the Walter-McCarran Act. Those provisions effectively prevent foreign citizens who are supporters of the Communist Party from traveling to this country.

If those laws were enacted for sound reasons, and I am convinced that they were, surely it is equally sound to pass laws which prevent Communist supporters in America from traveling abroad.

No one of these restrictive measures will of itself destroy the international Communist apparatus. Perhaps no single one of these measures will even seriously cripple that apparatus. But there is no doubt in my mind that the cumulative effect of all such measures does most seriously weaken the effec-

tiveness of the efforts of the international Communist movement.

From what I have already said, I hope you gentlemen will feel as I do about these 596 passport applicants. They are soldiers in the cold war—but they are the soldiers of the enemy. They are just as clearly the enemy as were the troops abroad that shot at you and me in World War II. They are going abroad under instructions to render service to the Communist conspiracy.

In a hot war they call this giving comfort and support to the enemy. But under the law today, your Government is forced to extend to these travelers the protection, the convenience and the dignity of a United States passport. Your Government today must not only allow them to leave the country on their infamous tasks, but must expedite their travel abroad.

This situation would be ludicrous if it were not so dangerous. It cries out for solution, and with your help the solution should be within reach. The administration will again next year request legislation from Congress to allow us to close this gap in our defenses. With the support of each of you and other like-minded citizens, I would hope that our request will receive prompt action. Until such legislation is passed, your Government remains helpless to prevent American Communists from traveling abroad to conspire against our national interest, and in some cases even against our national security. I am confident that we can count on you to help us remedy this dangerous situation.

"Mr. India"

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FULTON. Mr. Speaker, there is no doubt that to the citizens of the United States, "Mr. India" in the United States means J. J. Singh, of New York, president of the India League. J. J. Singh means this to us here in America, as surely as we think of Mr. Nehru, as "Mr. India," on the scene in India.

We in America salute our good friend, J. J. Singh, of New York City, who has done so much to improve and develop the good relations now existing between the United States and India.

"J. J." as he is known to so many American friends has not only been a successful businessman among us for many years but he has been an eloquent and tireless exponent of friendly relations between our two great countries. He deserves our lasting gratitude and sincere thanks for his unswerving loyalty to this cause during many difficult times over the years.

We wish J. J. Singh and his wife and two sons the best of everything in their new home in New Delhi. We will look forward to their continued friendship and interest in these good United States of America, and the relations between the Indian and American people.

[From the New York Times, Jan. 18, 1959]

UNITED STATES LOSES ENVOY TO CALL OF INDIA—J. J. SINGH, A NONOFFICIAL AMBASSADOR, WILL RETURN HOME AFTER 33 YEARS

(By Joseph Morgenstern)

A man from India who got to be "ambassador extraordinary" without the benefit of an ambassadorship or an embassy is going home to New Delhi after 33 years in the United States.

J. J. Singh, president of the India League of America, has decided to leave his handsome house on East 61st Street and raise his children in New Delhi.

Until now, he has divided his time between an import business and anyone or anything offering him the opportunity to explain India and the United States to each other.

The 61-year-old Sikh from nothern India, who wore a turban and a beard in his early days here, began acting like an ambassador to the United States when India had no official envoys of her own. He continued doing so, to the advantage of both countries, after India won her freedom.

NONOFFICIAL ADVANTAGE

"A nonofficial has an advantage over an official in this kind of work," he said. "People often open up more and speak frankly."

In addition to being a nonofficial, Mr. Singh was a nondrinker until 1942, is still a nonsmoker, and not the sort of person who stays inactive. Lobbying in Washington, writing articles and scores of letters to newspapers, sitting in on United Nations meetings, appearing on radio and television forums and presiding over informal dinner forums in the quiet elegance of his own home: these have helped to keep him from inactivity's clutches.

When Mr. Singh leaves New York in March with his wife and two sons, the India League will be dissolved. He became its president in 1941.

"I do hope that some other organization will continue the league's work of friendly interpretation between the United States and India," he said.

EXPOSITION FAILS

When he is asked about himself, Mr. Singh usually replies by discussing India. He said he had been gratified by the steady growth of knowledge about India in the United States.

"Originally, when people found out that I came from India, they were disappointed that I couldn't do the rope trick or produce a snake," he said.

That was in 1926 and shortly thereafter, when Mr. Singh arrived as one of the organizers of the Indian section of the Philadelphia Sesquicentennial Exposition.

"The exposition was a flop and I lost my shirt," he recalled, "so I decided to stay and recover that shirt."

Moving to New York, Mr. Singh opened the wholesale office of an importing firm specializing in Indian textiles. Subsequent business success enabled him to revive the India League with money and new ideas.

NEHRU HIS IDOL

At the center of his political convictions is a belief that India and the United States have a common bond in freedom.

During the period of British rule in India, which Mr. Singh calls the era when we were not free, he sought to rally supporters for the cause of Indian independence.

"You were once under British rule," he used to tell Americans, "and the British are ruling us." The response, he said, was usually quick and affirmative.

Convinced that India will not take orders from world communism, Mr. Singh says that modern India would long ago have torn itself into pieces, but for Nehru. Prime Minister Jawaharlal Nehru is one of Mr. Singh's idols.

DENTS IN VITAL ISSUES

A private citizen dealing with governments "can only make dents on vital issues," Mr. Singh said. One of the many substantial dents he made in Washington legislative circles led to congressional approval of United Nations Relief and Rehabilitation Administration aid for victims of the Bengal famine of 1943.

Another of his campaigns to influence the influencers led to an amendment of U.S. immigration laws permitting a hundred Indians a year to enter this country and become permanent residents and citizens.

In 1951, Mr. Singh married the former Maiti Saksena, the daughter of the high commissioner for India in Canada and consul general for India in New York. Although Mr. Singh and his wife both speak Hindustani and English, their two sons will have to learn an Indian language in India.

A STUDY OF INDIA

Before he came to the United States by way of Britain, Mr. Singh was active in Indian politics. As a young man he did what many young men did, leading mobs, getting beaten up, getting shot at, the privileges of those who fought for India's freedom. At 24 he was the youngest member of the All-India Congress Committee.

Whether he will reenter the political life of his country is a decision for the future. "My first job will be to study India," Mr. Singh said.

"With small disappointments," he said "my faith in the United States has not been shaken."

In a few months, when Mr. Singh's new home is completed in New Delhi, the United States will, in its turn, have an unofficial Ambassador to India in an unofficial embassy.

A Tuition Program

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MONAGAN. Mr. Speaker, the provision of adequate education for the youth of this country is one of the great problems facing those who have the stewardship of our national affairs. The rising cost of education has made this problem more acute than it otherwise might be. Not the least difficult of all situations is that of the privately endowed educational institution whose costs have continually risen, while its capacity to offer its facilities to the able students who cannot pay has been held in check. A most thoughtful discussion of this problem has been made by Dr. John S. Dickey, president of Dartmouth College, in a recent letter to the New York Times. I believe that he had made a valuable contribution to this discussion.

Under leave to extend my remarks, I include herewith Dr. Dickey's letter which appeared in the New York Times on December 7, 1958:

A TUITION PROGRAM

As a citizen who cares greatly about the excellence of all education, public as well as private, I feel the overwhelming need is to get more of our total national income into education at every level and through every possible channel, and especially to get more of our available tax dollars into the base of our national educational pyramid, the public elementary and secondary schools. Our great public universities have a direct stake in such an effort.

Many public educators testify that nothing would lift most public colleges more swiftly and solidly than better prepared students coming to these colleges from the public schools. This in most States means freeing up every educational tax dollar possible for

use at the elementary and secondary public school level.

I suggest for careful, dispassionate study the possibility that higher college tuition charges for those who can pay at least part of their way and the assurance of adequate financial aid for those who demonstrably cannot pay is today the path of educational wisdom and well-being for both the public and the private institutions in our mixed system of higher education. Such a program could:

Get a greater share of the national income for all education;

Free up tax dollars for public education at the lower levels where it is most needed by most of our people today;

Keep both our public and private colleges strong in a mutually beneficial mixed system;

Protect the public colleges and the taxpayers from having all higher education progressively, unnecessarily, and, I think, unwisely dumped onto their presently badly bent backs;

Protect the American college opportunity as quality education in either public or private institutions for any student who demonstrably needs a scholarship or loan.

I have no doctrinaire or trick answers for this difficult problem, but I see no prospect whatsoever of finding adequate finances now for the kind of education we profess and need on any either/or basis and do urge that all who care about American education work at this problem with realism and resourcefulness and not try to kill each other off with polemics about who among us is the more democratic; democracy is always the first victim in such a Donnybrook.

The growing public and professional discussion of tuition charges at public and private colleges is a healthy thing and long overdue. It will, however, waste much energy unnecessarily if the issues are stated in terms of the student paying the full cost and of worthy students being barred by higher tuition charges in either the public or private colleges.

Full-cost fees are not a realistic possibility for any major college today because, directly or indirectly, all higher education requires both public and charitable support. However, higher tuition fees for those who can afford to pay at least part of their way is a realistic necessity for all quality institutions unless some very unattractive alternatives are to be accepted. Among these are:

Higher and higher taxes to subsidize many who do not require educational subsidy at the college level, at least in present amounts;

Poorer and poorer elementary and secondary school systems because the available tax take for public education is going in part for increasingly unnecessary subsidy at the college level;

Private higher education progressively forced down and out by its inability to compete for students and teachers with nominal-tuition colleges.

The predictable result is an ever higher burden of numbers and costs pushed over into the public colleges and onto the tax subsidy, with the taxpayers' inevitable reaction at the expense of all education after the strength of the mixed system has been irreparably damaged by the induced weakness or disappearance of many private colleges.

No worthy student need be kept out of a public college because it raises its tuition charges from a nominal to a realistic level, provided always that financial aid in the form of scholarship grants or loans or employment is made available to that student on a basis of demonstrated need, as is fairly and competently done today in nearly all private colleges. The trouble comes when we unnecessarily subsidize all students, and often without the studen' the parent, or the public being aware of the subsidy.

JOHN S. DICKEY.

A Bill To Protect Farmers and Other Persons Who Are Required To Treat Patronage Dividends as Income for Federal Income Tax Purposes by Providing for the Collection of Income Tax at Source on Such Dividends and To Provide Tax Equity

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have reintroduced today a bill designed to protect farmers and other persons who are required to treat patronage dividends as income for Federal income tax purposes by providing for the collection of income tax at source on such dividends and to provide tax equity.

My bill provides a method of collecting some tax from cooperatives that I have advocated for several years. I have been particularly interested in it from the standpoint of the cooperative member, particularly the farmer who does not have a great deal of cash at his disposal. It is only through a withholding device like this that he will not have his personal cash position burdened with a taxpayment as the result of a noncash patronage dividend. This bill will, of course, produce revenue for the Treasury Department and will bring about a highly desirable equality of taxation among various types of business, some of which are now suffering quite unduly from the competition of the untaxed cooperatives.

A bill to protect farmers and other persons who are required to treat patronage dividends as income for Federal income tax purposes by providing for the collection of income tax at source on such dividends and to provide tax equity

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is hereby amended by adding at the end thereof the following new section:

"SEC. 39. Credit for income tax collected at source on certain patronage dividends.

"(a) IN GENERAL.—The amount withheld under section 7901 as tax on patronage dividends shall be allowed to the recipient of the income as a credit against the tax imposed by this subtitle.

"(b) YEAR OF CREDIT.—The amount so withheld during any calendar year shall be allowed as a credit for the taxable year beginning in such calendar year. If more than one taxable year begins in a calendar year, such amount shall be allowed as a credit for the last taxable year so beginning."

(b) The table of sections for such part IV is hereby amended by adding at the end thereof the following:

"Sec. 39. Credit for income tax collected at source on certain patronage dividends."

SEC. 2. (a) Subtitle F of the Internal Revenue Code of 1954 is hereby amended by adding at the end thereof the following new chapter:

"CHAPTER 81—COLLECTION OF INCOME TAX AT SOURCE ON CERTAIN PATRONAGE DIVIDENDS

"Sec. 7901. Income tax collected at source.

"Sec. 7902. Patronage dividend defined.

"SEC. 7901. Income tax collected at source.

"The Secretary or his delegate shall by regulations provide for the deduction and withholding on patronage dividends of a tax equal to 20 percent of the amount of each patronage dividend (as defined in section 274 and subject to the limitation in amount contained therein) paid in a form other than coin, currency or check dated and payable no later than the date of delivery thereof, and paid after September 30, 1956."

(b) The table of chapters for subtitle F is hereby amended by adding at the end thereof the following:

"Chapter 81. Collection of income tax at source on certain patronage dividends."

Deductibility of patronage dividends

SEC. 3. There shall be added to the Internal Revenue Code of 1954 following section 273 a new section to read as follows:

"SEC. 274. Patronage dividends paid by cooperative corporations.

"(a) GENERAL RULE.—No deduction or other reduction of taxable income shall be allowed to cooperative corporations for amounts paid as 'patronage dividends' by such corporations except to the extent such dividends increase the taxable income of the recipient for the taxable year of receipt. For the purposes of this subsection.

"(1) Such dividends shall be deemed to have been received in the ordinary course of a trade or business carried on by the recipient, and

"(2) No exemption, exclusion, credit or deduction available to the recipient shall be taken into account.

"(b) DEFINITIONS.—

"(1) COOPERATIVE CORPORATION.—For the purposes of this section the term 'cooperative corporation' means a corporation (A) that calls itself a 'cooperative' or 'co-op', or (B) that represents to any persons or classes of persons which deal with it that their patronage will or may entitle them (i) to the payment, either actually or constructively, of patronage dividends, or (ii) to an equity interest in any of the corporations' assets, or (C) that is otherwise operated for the mutual benefit of persons or classes of persons that deal with it; but such term does not include a mutual insurance company or any corporation otherwise exempt under this chapter.

"(2) PATRONAGE DIVIDEND.—For the purposes of this section the term 'patronage dividend' means an allocation or a distribution paid or payable (whether or not in money and whether described as a refund, rebate, price adjustment, or payment of a balance due under a marketing agreement) to member patrons or to member and nonmember patrons on some basis related to their sales to, purchases from, deposits with, investments in, loans from, or other transactions with the corporation during the taxable year, if (A) the allocation or distribution is conditional (i) upon profits or margins being earned by the corporation from all its operations or a class of its operations during its fiscal year, or (ii) upon income attributable to the resale of the producer's product along with products or a class or classes of products of some other producers less any deductions, determination of which is within the discretion of the corporation, or (B) the amount of the allocation or distribution can be determined only with reference to the amount of the profits, margins, or income earned, or (C) the amount of the allocation or distribution can be determined

only after declaration or payment of dividends on any class of stock of the corporation or only after the fixing of sums to be transferred to capital, reserves, or surplus."

Taxation of farmers' cooperatives

SEC. 4. Section 522 (b)(1) of the Internal Revenue Code of 1954 shall be amended to read as follows:

"(b) COMPUTATION OF TAXABLE INCOME.—

"(1) GENERAL RULE.—In computing the taxable income of such an organization there shall be allowed, subject to the limitations provided in section 274, as deductions from gross income (in addition to other deductions allowable under this chapter)—

"(A) amounts paid as dividends during the taxable year on its capital stock, and

"(B) amounts allocated during the taxable year to patrons with respect to its income not derived from patronage (whether or not such income was derived during such taxable year) whether paid in cash, merchandise, capital stock, revolving fund certificates, retain certificates, certificates of indebtedness, letters of advice, or in some other manner that discloses to each patron the dollar amount allocated to him. Allocations made after the close of the taxable year and on or before the 15th day of the 9th month following the close of such year shall be considered as made on the last day of such taxable year to the extent the allocations are attributable to income derived before the close of such year."

Some Sound Advice to Parents

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. ANFUSO. Mr. Speaker, I wish to insert an article into the RECORD which, I believe, should be brought to the attention of all parents because of its sound advice. The article is entitled "Rose Flynn and Youth." It was published in a recent issue of the Christian Family, and was written by Ralph Land.

Mrs. Flynn is a well-known educator and psychologist in Brooklyn. She is a pioneer in the field of juvenile delinquency and has devoted many years—nearly two decades—in dealing with youthful offenders or potential offenders, both in the classroom and outside the school. She is credited with having rescued at least 1,000 young people from the perils of juvenile delinquency. Her motto is: "Prevention is better than cure," and she lives up to it by proving that teaching the three "R's" is in itself not sufficient.

The article on Rose Flynn has a lot of merit and contains excellent advice to parents on youth problems. It is for this reason that I am inserting it into the RECORD:

ROSE FLYNN AND YOUTH

(By Ralph Land)

At a recent special seminar in New York City a group of top police officials were thoroughly briefed how best to handle juvenile delinquents after they ran afoul of the law. Their instructor was Mrs. Rose R. Flynn, an educator-psychologist of Brooklyn, who has reaped national recognition as an expert on curbing juvenile lawlessness. Hundreds of radio stations throughout America have been broadcasting her advice via tape recordings on how to cope with this rampant nationwide problem.

In her late forties, Mrs. Flynn is a vigorous brown-haired woman who reminds one more of a busy office executive. Her sparkling blue eyes and radiating sympathy have won over many a rebellious juvenile. Assertive, but not boisterous, calm yet firm, she has dedicated her life to uphold human values. Father James Keller has commended her true Christopher spirit: to light up a candle where there is darkness.

When she and her husband, Frank Flynn, a veteran New York City newspaperman and cousin to the late Archbishop Michael J. Curley, of Baltimore, once approached their parish priest about adopting children since they were childless, the advice was negative: "You have a special mission in this world," he told her. "God has meant that you should be mother to many."

A sixth-grade teacher at the William E. Cottle School in Tuckahoe, N.Y., Mrs. Flynn uniquely utilizes her clinical psychology training to detect and stem the growth of any delinquent tendencies among any of her pupils. "Prevention," she says, "is far better than rehabilitation. The classroom is the place where a child's mind takes shape for life. So it's up to the school to eliminate the seeds of misbehavior."

Although she has been diligently teaching the three R's since 1932, it was only 11 years ago she first turned to the study of clinical psychology because of disturbing classroom problems. She began to effectively apply psychotherapy to the juvenile delinquent, the potential delinquent and troubled children.

Stressing that the main cause of delinquency is a poor family relationship, Mrs. Flynn says: "I achieved success by being warm and human—a permissive classroom mother. When things go wrong at home, the child may be moody and depressed. I let him air his gripes before a panel of his classmates. They in turn declare how they would have behaved in a like situation. I have found the reaction amazingly beneficial.

"Maybe his demands are unreasonable," Mrs. Flynn adds. "But unless an understanding person shows the child this, he will continue to believe his parents are against him. This rejection will pile up in his mind, and then he will resent all authority. Finally, he may wind up stealing cars to get his freedom, or act out his aggression by attacking another person."

Encouraged by the initial results, she extended her after-school aid to various New York anti-juvenile-crime organizations. She became active in the New York City Police Department's Youth Squad. She undertook a challenging assignment: to reduce juvenile delinquency in a certain Brooklyn street known then as the worst in the city. Stealing, vandalism, school absenteeism, molesting, gang fights—these were common occurrences.

As a psychologist, Mrs. Flynn could easily pinpoint the underlying causes of these behaviors. The offenders came from homes steeped in family discord. Lacking love and attention, it was inevitable they would join gangs to seek the admiration they craved.

She set about combatting juvenile delinquency like a doctor a plague. Acting as a permissive mother, she visited the homes of these neglected children and effected bonds of understanding between them and their parents. Shortly after, the city built a sorely needed park for recreational facilities. Before long, the problem dwindled considerably in that area.

A high police official in charge then of the Brooklyn West Detective Bureau commented afterward, "Mrs. Flynn used methods that were effective. She achieved marvelous results. * * * In my opinion, she was responsible for breaking up teen-age gangs in Brooklyn."

Why does she believe that school is the best place to arrest delinquency development? "A teacher has a child 6 hours a day," says Mrs. Flynn. "She knows how he plays, reacts to other pupils, his weaknesses, what he is capable of achieving. It's up to the teacher to reach that child and to find out the reason for his maladjusted behavior. The next step would be to enlist the parents' cooperation in working out a solution for the emotional disturbances that lead to errant actions."

Admitting that a happy home, managed by intelligent parents, should keep a child from going astray, she points out, "Millions of homes are not happy. And unless schools apply psychotherapy, the child from an unhappy home will be scarred for life and a liability to society."

Since 1950 Mrs. Flynn attends twice weekly the Brooklyn Jewish Hospital's neuropsychiatric clinic as a clinical psychologist. And on every St. Patrick's Day the predominantly Jewish staff in appreciative tribute to a wonderful Irish lady sport shamrocks.

Three of her evenings she devotes to the Brooklyn Association for the Rehabilitation of Offenders. Here she conducts clinical tests on both juvenile and adult delinquents. She is also a consultant for St. John's Home in Rockaway Park, N.Y., for boys, ages 12 to 16. Her regular delight is to rotate her invitation to a pair of boys from the home to spend a remembered weekend with the Flynns at their Brooklyn apartment.

She belongs to the International Federation of Catholic Alumnae and is active in many civic, social, teachers, and psychological groups. The Flynns are in Queen of All Saints Parish in Brooklyn.

One of nine children, six boys and three girls, she was born in Riverdale, N.Y. Her father and mother were devout Catholics. Every night the rosary was recited as a family group. "My parents would check and double check on each of our whereabouts and activities," she recalls. "There was only one key in the family. They knew when we came home and met us. She has a sister, Mother Freehill, religious of the Sacred Heart, professor of mathematics at Manhattanville College in Purchase, N.Y. Her aunt is Sister Mary Balthassar, a Franciscan nun, stationed at the mother house, Our Lady of Angel Convent at Glen Riddle, Pa.—at 91, the oldest one in that particular order, having served 68 years.

After majoring is psychology at the College of Mount St. Vincent, Mrs. Flynn continued at New York University and received her master's degree in 1942. She studied psychotherapy at the New School for Social Research in New York, and later took advance courses in Europe.

Establishing a reputation as an educator, lecturer, certified psychologist, juvenile delinquency authority, and guidance director, she built up an increasing demand for her services. She was one of the organizers of the Police Athletic League, the first of its kind in the country with a program to enroll teenagers and wean them away from delinquency. Her brother-in-law, the late Judge Joseph C. H. Flynn, was one of the pioneers in the creation of the adolescent court in Brooklyn and, as a result, she became active in the work.

Mrs. Flynn thinks that children under 7 years of age should be included in the drive on juvenile delinquency as well as those who are older. "If a child is forever stealing, cheating, bullying, and has unusual sexual interests and behavior regardless of age," she says, he is a potential delinquent.

"I feel that the strongest factor in molding a child's personality is his relationship with his parents. If they love him with a generous, even-flowing, nonpossessive affection, and treat him as a person who, like them-

selves, has both rights and responsibilities in the family group, then his chances of developing normally are excellent."

In the treatment of juvenile delinquency, she has found that adolescents have a feeling they are lost and have little hope. Successful advances in this movement cannot only restore human beings as useful members of society, but perhaps save the community huge funds in fighting crime.

Parental obligations? "It has been my experience," says Mrs. Flynn, "that too many parents are shirking or evading their responsibility by leaving their job of raising their child to someone else outside the home."

She recently devised a plan for American Legion leaders in which she suggested that Legionnaires throughout the country be enlisted to act as big brothers to youths who are potential juvenile delinquents.

"Every youngster," said Mrs. Flynn, "looks for a hero to worship. He may be a noted baseball player or boxer, or any other celebrity famed for prowess and achievement.

"Youth needs a strong male identification and he must feel that he is wanted. It is because he feels ignored and unwanted that he takes to juvenile delinquency."

In an address before a group of social workers in New York, she advocated the setting up of youth work programs. She proposed that local organizations like the Lions, chambers of commerce, and the like, compile a brochure of names listing the qualifications of youths and helping them either in regular, summer-vacation, or after-school jobs.

"When all is said and done," said Mrs. Flynn, "youths get into trouble because of idleness. Inexperienced at finding work on their own and unable to be guided by their parents, many of them drift into crime without forethought. They innocently get in with bad companions—oftentimes older, hardened criminals. And before they realize, they are enmeshed in the law. It is especially the older criminals who are the dangerous recruiters for crime."

A world-traveled woman, she visited last summer several European countries and carefully observed their clinical techniques with juvenile delinquents. She has been to Rome three times and had an audience once with the late Pope Pius XI and more recently met twice with Pope Pius XII.

How does juvenile delinquency develop? Here are three cases culled from hundreds referred to Mrs. Flynn for rehabilitation.

The first, that of a 15-year-old boy with average intelligence. He had a penchant for stealing cars. Outwardly the patient was excessively polite, orderly, compliant, with normal reactions to everyday situations.

His parents, both professional people, were financially comfortable, and he lived with them in an exclusive suburban area.

Upon examination, it was found the boy had very hostile feelings toward his parents. He asserted they were overbearing, punitive, nongiving, and faultfinders to the extreme. They rejected everything he did or said, disapproved of all his friends, and consequently drove him into a lonesome life.

His feelings of self-worthlessness brought on by repressive parents led him to attempt to restore his self-concept by committing delinquent acts like stealing cars. This he thought would gain him social acceptance with his peers and environment.

The second case: A girl, 16, of middle class socio-economic status. She had grown up in a family where her mother did not understand her and criticized her friends. She felt that her sister, who was older than she, was idealized and that she was the "poor Cinderella."

Since she was dependent upon her mother and confided in her at times, she felt her trust was prone to abuse. Her mother had the habit of embarrassing her in front of her friends.

The patient stated she had frequent arguments with her mother, but she felt more adequate to contend with her mother than she did with her father. Her father lost control and became violent, but ended up contrite. There were many arguments between her parents about money in her presence.

Although she had good intelligence, she did not like school and cut classes frequently. She would round up 20 teen-age girls, go to a park and have her group fight an innocent cluster of teen-agers who would be on an outing to the park. When arrested, she said, "I gelt good that I was in a gang fight and the facts were reported in newspapers."

The last case: a young man of 18 with superior intelligence. He had stolen a large sum of money from his employer. His history revealed a compulsion for stealing since the age of 6.

Both mother and father worked. He saw them before leaving for school in the morning, was usually in bed when they returned home in the evening. Father worked 7 days a week. Mother was free on Saturday and Sunday, but she went out with her friends on those days.

At the age of 15 his mother took him into court because he was unmanageable and was doing poorly in high school and was rejecting the control and authority of his parents.

Subsequently, he moved out of his home and got a job. He lived alone.

The patient stated that he has always been embarrassed to tell his friends about his family. The impact of his present offense had made him realize his life had been one of lies and deceptions.

After her tape recordings on juvenile delinquency were aired nationwide, Mrs. Flynn received an avalanche of mail and phone calls. Chiefly the requests were: "What can we do for my child or children? What would you suggest?"

One particular missive evoked a chuckle. It was a proposal of marriage from a widower in Michigan who had three lively teen-age sons. He wrote he would like to have a wife like her to solve not only his personal problems but his sons' as well.

HER ADVICE TO PARENTS

1. The home should be a place of love, unity, and devotion. Religious training strengthens the moral fiber of a child exposed to many temptations. A sound home life begins with family prayer.

2. Parents should run their children or they will take the reins and run them.

3. Take time to listen to your children. You may assist in the solution of their problems. At least you'll find out what they are thinking about or what makes them tick.

4. Parents should set a good example of affectionate marital relationship. Discord in the family causes delinquency.

5. Teach discipline, respect for authority and elders, consideration for the comfort and rights of others, courtesy.

6. Teach your child on his own age level—not as an adult one day and a baby the next.

7. Give credit and praise when due. Reprimand your child privately.

8. TV and movies play an important part in forming the mental and moral outlook of impressionable minds. Have children only see productions which are inspiring, educational, and entertaining.

9. Guard the morals of your children by having them read good clean literature.

10. Too much money, too much free time, and a car at their disposal only invites disaster.

11. Guide your children in the selection of their friends and take out time to meet them.

12. Guard your child in the home and on the street. Know where they are going and with whom.

13. Be alert to know when your child goes out and the time he returns home. Don't trust him implicitly with the key.

14. Guard your children in dress. Stress decency in your daughter's appearance and proper attire for your son.

15. Too much freedom is given children at an early age, and they aren't able to use it intelligently. Remember, a child is a reflection or mirror of his home training.

Big Business in Russia

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to call to the attention of the House the following article entitled "Big Business in Russia" which appeared in the December 1958 issue of the Atlantic. This article by Mr. Edward Crankshaw, a noted authority on Russia, tells the inside story of the recent economic reorganization which took place in that country in the summer of 1957. It is indeed an interesting account of the maneuvering Khrushchev did in curbing the power of the big industrialists in Russia:

BIG BUSINESS IN RUSSIA

(By Edward Crankshaw)

(The enormous growth of Russian industry has built up Soviet business tycoons, and in this penetrating paper Edward Crankshaw shows how the power of these industrialists has been curbed and redirected by Khrushchev. Mr. Crankshaw is recognized here and in Britain as a leading authority on the U.S.S.R. His earlier books have grown out of his residence in that country, and he is on his way back to Moscow as this article goes to press.)

Few people outside the Soviet Union have ever had a clear image of the magnitude of the several branches of Soviet industry or of the power and stature of the largely unknown men who run them. Thus the news of the radical economic reorganization pushed through by Khrushchev in the early summer of 1957 evoked very little response in the West, which simply did not understand the issues involved. Indeed, at that time all interest was centered on the downfall of Malenkov, Molotov, Kaganovich, and Shepilov, and most people did not realize that Khrushchev's victory over the antiparty group (which meant the anti-Krushchev group) was inextricably bound up with an economic and administrative revolution which was at that moment, in the grand Russian manner, convulsing the whole country.

More than a year has gone by since that revolution was made. An immense upheaval, full of grief and bitterness for a host of able and formidable individuals, has left scarcely a surface sign. Khrushchev has consolidated his position more thoroughly, although it is still erroneous to see him as an absolute tyrant, or dictator, respensible to himself alone. Soviet industry, moving ponderously and magnificently along its new lines, continues to deliver the goods, as far as can be seen, no more and no less efficiently than before. And now that the shouting has died down, it is a good time to contemplate the operation in retrospect and consider what

it tells us of the workings of the Soviet system, of the Soviet leadership, and, in particular, of Khrushchev's mind.

The outward story is quite simple. In February of 1957 Khrushchev, as first secretary of the Communist Party of the Soviet Union (Bulganin was still Prime Minister), convened a plenum of the party's Central Committee. He put before the assembly an explosive set of proposals. The development of Soviet industry, he said, was being impeded by an outdated ministerial structure. If production was to continue at the required rate, there must be a radical reform of this structure, and the central bureaucracy must be broken up.

He therefore proposed that most of the gigantic industrial ministries, the chiefs of which sat on the Council of Ministers, should be abolished at a stroke. The necessity of referring everything back to the central ministries in Moscow, the rivalries produced by the conflicting interests of individual ministries, and the absence of close cooperation between concerns working side by side in the various regions, but answerable to separate ministries at the center, were strangling initiative, impeding dispatch, and resulting in excessive waste and duplication. The highly centralized bureaucratic system had been adequate, he said, in the early days of industrial expansion, when drive and close coordination from the center were a vital necessity. But it was no longer the best system.

In place of the all-union and republican industrial ministries, there should be set up a number of regional authorities, to be known as national economic councils (Sovnarkhozy), with the task of coordinating and controlling the total industrial activity of the various regions. The underlying idea was that the various industries in each separate region should be integrated into a harmonious system based on mutual interdependence within each region. In the interests of the national economy, as expressed in the state plans, there would have to be a controlling body to give directives to the Sovnarkhozy in the regions. This body, Khrushchev said, should be the State Planning Commission, strengthened for the purpose; its directives should have the force of law.

These proposals, put forward in February 1957, were first made public on March 30. From the beginning they were associated exclusively with Khrushchev and were known as the Khrushchev theses. No other member of the Central Committee or the Council of Ministers put his name to them.

The debate was, nevertheless, sharp, far-ranging, and unusually outspoken. Although the higher leadership said nothing, the debate was reflected in the party press, and there was some fairly drastic criticism of Khrushchev's proposals from highly placed individuals, usually from the ministers affected and from factories. At the same time, factory directors seemed to enjoy letting off steam about their pet anomalies, and the press was full of ludicrous examples of the muddle and waste behind the imposing industrial facade.

At the May session of the Supreme Soviet the Khrushchev theses, with certain important modifications, became law, and their author characteristically demanded speed. The whole structure of administration, covering most of the vast industrial machine, slowly built up over the years, was to be torn down and rebuilt by July 1, just 7 weeks from the promulgation of the decree. That is to say, some 20 Ministries were to be abolished (fewer than Khrushchev had originally demanded), their buildings evacuated, the Sovnarkhozy set up all over the Union, housed and manned, all in 7 weeks.

There was clearly something more than Khrushchev's impatient ebullience behind this demand for speed at all costs. The obvious deduction was that he had met with heavy opposition behind the scenes, that he was now hustling his opponents, and that he could afford to give them no time to regroup themselves. Within a month Molotov, Malenkov, Kaganovich, and Shepilov were dismissed from office, banished to remote regions, accused of antiparty activity, and, in the case of Malenkov, charged with a capital crime: complicity in the Leningrad plot.

So much for the outward story; expanding Soviet industry was being freed from redtape and bureaucratic centralization carried to the point of lunacy. The great Moscow hives of unproductive and often obstructive officials battening on the active producers were overturned. The officials were scattered to all points of the compass. The ministerial overlords, men of formidable caliber and heavily entrenched vested interests, some of them as powerful as the president of General Motors, were suddenly out of their jobs. The directors of industrial trusts, the individual factory managers, the chief engineers would no longer have to wait on Moscow's decisions before varying their appointed routine in the smallest degree. Thousands of lesser officials would be freed from paperwork for productive labor. The ceaseless and time-consuming journeys between Moscow and the distant Provinces would be cut down. It all sounded wonderful.

A dozen or more great industrial ministries—steel, oil, chemicals, heavy machines, and so on—had, over the years, taken to manufacturing for themselves and in their own factories everything that might conceivably be needed in their work. They had done this partly in the ordinary way of empire building, partly according to the Soviet version of Parkinson's Law, but more particularly in a very natural and, indeed, necessary effort to make sure that their own plans were fulfilled and their own productions schedules carefully insulated from the effects of failures and bottlenecks outside their control. Thus the ministry of coal, for example, would build its own cement works, set up its own building trusts (there were numerous separate building trusts run by different Moscow ministries in a single small provincial town), manufacture its own bulldozers and excavators and electrical machinery.

These ministerial empires, run by men who were born tycoons, were also beginning to represent centers of power which seriously threatened the one permissible center of power, the Communist Party.

Khrushchev did not mention this. Nor did he mention another aspect of the system which must also have been giving him grave cause for concern: the development of what amounted to a private enterprise network within the elephantine and rigidly controlled state network—the development and proliferation of a new kind of Soviet man not prescribed in the textbooks, the tolkach, or fixer.

Khrushchev had a good deal to say about the worst anomalies, with examples from real life. "The existing structure of the industrial and construction ministries," he said in section II of his theses, "is a multistage and complicated one. Ministries and departments exercising leadership from the center over enterprises situated throughout the country inevitably accumulate round themselves numerous parallel organizations—various offices for sale and supply, depots, trusts, and so forth. The ministries have many different central administrations, departments, divisions.

* * * The territorial central administrations in charge of enterprises in Siberia, central Asia, the Far East, and other remote regions are, as a rule, situated in Moscow. * * * The workers of the ministries are forced to spend much time on interdepartmental correspondence * * * reports and memorandums * * * The huge streams of paper coming from the ministries divert a large number of workers at enterprises from practical work. Many specialists are called to the center from the localities * * * and spend months at the ministries."

And so on. All this is a pale image of the situation vividly reflected in Dudintsev's novel, Not by Bread Alone. Khrushchev was correct in concluding that the 200,000 industrial establishments and 100,000 construction sites scattered over the face of the Soviet Union could not be efficiently guided and controlled from Moscow. What he did not say, or even hint at, was how this ludicrous system had managed to work as well as it did.

The answer, very largely, lay with the fixer. It was this merry soul who made the wheels go 'round. He inhabited a sort of shadowland between the law and the labor camp—that shadowland which is the true reality of the Soviet Union, where people show their real faces and behave like human beings and where everything gets done. The state bureaucracy left to itself, left to develop unhindered to its logical conclusion, would long ago have ground to a virtual standstill. But the Russians, for all their love of theorizing, are a practical race with a heavy dash of cynicism; and they are also brilliant improvisers. Thus it was that hard-pressed factory directors spontaneously developed a system to keep the wheels turning, a system which amounted to a private enterprise network operating under cover of the state enterprise network and short-circuiting it at all points.

Factory directors, the heads of trusts and combines, even the heads of ministries are not interested in the state plan as a whole. They are interested in their own careers and in making a success of their jobs. Each and every one of them is bound by his appointed plan, imposed by Moscow with the force of law and stretching his capacities to the limit. Heavy bonuses are earned by exceeding the plan; on the other hand, if the excess is too marked, planned production is increased for the following year: Today's surplus becomes tomorrow's norm. To fulfill the plan at all, each concern depends on the punctual delivery of raw materials and components or machines from other factories; but in the vast civil service network, smothered in redtape and abounding in bottlenecks, punctual delivery was rare. To provide against emergencies, the directors and managers made sure that they had adequate reserves of everything they needed; but this sort of hoarding was frowned on by the center.

The answer was to circumvent the center; and this was where the fixer came in. Often he was a highly respectable and trustworthy individual, although, naturally, the profession attracted its spivs. He was the contact man in excelsis. He was usually paid a salary and commission, but the interesting thing is that he was often paid by two or more concerns. On the books of an electrical components factory in Kharkov, he would appear as "our representative in Ivanovno"; but on the books of a textile mill in Ivanovno, he would appear as "our Kharkov representative." His job was to insure that the electrical factory received direct consignments of insulating cotton from Ivanovno and that the textile mill received direct supplies of electrical equipment from Kharkov, the relevant ministries being bypassed and the central planners confounded.

This is a very simple case of the fantastic and complicated barter system which flourished within the rigid framework of the state plan. On top of all this, the tolkach, the fixer, was often an expert at rigging books, at concealing reserves, at influencing important officials, at ministerial lobbying. He was, in effect, the unsung hero of the Soviet economic system. And he made the system work by the simple expedient of ignoring it. Khrushchev, undoubtedly, had the fixers in

mind when he put forward his celebrated theses. For the fixer, proliferating, was making nonsense of the planned economy. More seriously, he was making a mockery of party control.

In one way and another, and from top to bottom, the Soviet industrial system had for years been developing an autonomous life of its own and moving ever further away from party control. If the party was to reassert itself after Stalin's death, it had to take action against the new managerial class, as in 1953 it had taken action against Beria's police empire. The man who had decided to take everything on controlling and reactivating the party machine was Khrushchev. The man who was most closely associated with the new managerial class was Malenkov.

Many failed to perceive this fundamental opposition, because Malenkov himself had risen to power, no less than Khrushchev, inside the party apparatus; for years he was regarded as the arch apparatchik. Further, most of the leading figures of the managerial class were themselves party members, some of them standing quite high in the hierarchy. But there is all the difference in the world between being a party member, even a senior party member, for reasons of convenience, and being a professional party functionary, or apparatchik.

As for Malenkov, at some time during, or soon after, the war, he seems to have decided that the future lay not with the party secretaries but with the new industrial bosses and technocrats, who were beginning to consolidate themselves into the fourth center of power—the other three being the party, the police, and the army—all held in check by Stalin personally. At any rate, he was seen to be ever more closely associated with the outstanding figures of this new class, who, in the first years after the war, during the tremendous drive for reconstruction, began to invade the higher echelons of government, quite manifestly to the disgust of the professional party functionaries. I am referring to people like Tevosyan, the man who created Russia's steel industry and who was regarded with limitless admiration by old Krupp, and Malyshev, who before his death was in charge of the automation drive. There were many more. They formed a great new class, which had suffered much and won. They were less interested in politics and ideology than in managing and making and in securing a better life for their children than they had themselves enjoyed. They had been created by Stalin's industrial revolution, and, having survived all the purges, they had built up the great industrial machine, which they alone knew how to run. They considered themselves indispenable. And they were the spearhead of what amounted to a new bourgeoisie, a brandnew middle class such as Russia had never known before, with a vested interest in stability.

Malenkov, perhaps as a result of his especially close contact with these men during the war, had evidently decided that they formed the future ruling class of the Soviet Union, a class which had moved right, away from Leninism. Khrushchev, whether from conviction or ambition or a combination of both, took his stand on the party apparatus—on the cadres, that is to say, of a revitalized party (the party, in Stalin's last years, had lost its coherence, its drive, and its authority, and was good for nothing; there was no other authority than Stalin).

This opposition was visible even before Stalin's death, when, at the 19th party congress in the autumn of 1952, Khrushchev came forward as the champion of party purity and integrity; the party was to be purged of bureaucracy and careerism and restored to its pristine glory. It began to manifest itself in action almost immediately after Stalin's death, when Malenkov, yielding to pressures which are not yet understood, gave up his great office of first secretary of the party and took his stand as Prime Minister, or chairman of a formidable council of ministers. After Beria had been removed, in the summer of 1953, the conflict became ever more marked, as Malenkov continued to stress the need for a more prosperous and tranquil Soviet Union and Khrushchev began to invoke the spirit of Leninism and demand that party functionaries all over the country should give more time and thought to the supervision of every aspect of life, especially industry and economics. This was not a conflict between reactionary Stalinism and liberalizing Khrushchevism, although it was made to appear so. It was a conflict between Khrushchev and Malenkov, between the man who was determined to revive the party as the force which would carry him to supreme power and the man who had hitched his wagon to the new apolitical managers, the men who were running Soviet industry on the lines I have roughly sketched.

Thus Khrushchev's 1957 theses were by no means exclusively concerned with the promotion of efficiency. They were concerned with the reassertion of the party's grip on the economy of the U.S.S.R., and of Khrushchev's own grip on the party.

Khrushchev won his second round against Malenkov (the first was when he took the party secretaryship from him) in February 1955, when Malenkov retired from the premiership in favor of Bulganin, still remaining, however, an active figure and a member of the party Presidium. Almost at once Khrushchev indicated that radical changes were in store for Soviet industry. When the attention of the Western World was concentrated on the summit conference at Geneva in July 1955, he caused to be published a long and detailed report on the state of industry, which, it turned out, had been delivered some weeks earlier by Marshal Bulganin to the Central Committee. This report, which told the world more about certain aspects of Soviet industry than it had ever known before, was overlooked in the West at the time because the summit obscured it.

For some time, however, things went on as they were, although Bulganin had demanded a radical overhaul of the whole industrial setup. Khrushchev was then very busy improving his own position, developing his foreign policy, packing the party with his supporters, and so on. There was also agriculture. Industry was at least delivering the goods; agriculture was not, and it had to be put right first. It was not until December 1956 that it became finally clear that Khrushchev was fighting his heaviest and most critical battle on the industrial front and was within an ace of losing it.

Nineteen hundred and fifty-six was the year of the de-Stalinization. It was the year in which the Polish rebellion, the Hungarian uprising, and incipient revolt inside the Sovet Union itself brought Khrushchev very close to defeat. And the first major sign that he had lost much ground and that Malenkov was working for a comeback in alliance, not so much with his own friends as with Khrushchev's enemies (Molotov and Kaganovich) was the announcement of a far-reaching reform of the central planning apparatus for industry. It was not the sort of reform which would have appealed to Khrushchev. It left the industrialist ministries intact, reduced in importance and authority the State Planning Commission, and provided for the setting up of a new body with virtually dictatorial powers over the whole industrial front—the State Economic Committee, with the Deputy Premier, Pervukhin, as its chairman. This reform, which was agreed to at the December plenum of the Central Committee in the closing days of 1956, marked a clear victory for what is loosely called the bureaucracy (Malenkov's private army) over the party apparatus—thus over Khrushchev himself.

But the new body never got into action. For it was only 2 months later that Khrushchev, by processes which remain totally obscure (though Marshal Zhukov evidently played a part in them) made his own comeback and surprised everybody and shocked many by convening another central committee plenum and confronting it with his revolutionary theses. Under his plan the newly formed state economic committee was to be abolished, the industrial ministries were to be abolished, the bureaucracy was to be scattered, the party was to be supreme. In May, with certain modifications, his theses became law. In july they were put into effect. And Malenkov, Molotov, Kaganovich were banished. With them went Khrushchev's own proud protege, Dimitri Shepilov, who had clearly tried to change sides in the heat of the quarrel and paid for it with his career.

With this background, it is not surprising that the Khrushchev reorganization, as finally put into practice, left a good deal to be desired when seen from the blinkered point of view of the professional efficiency expert. The idea of breaking up the Moscow ministries was good, up to a point. There was no doubt a great deal to be said for establishing, or developing, regional complexes of industry grouped around local centers enjoying some autonomy and cutting across all departmental lines. I am not qualified to discuss such matters, except in very general terms. The task facing any individual desirous of rationalizing Soviet production is complex in the extreme. In the first instance he is confronted with the problems involved in making modern large-scale organizations work, of energizing them without allowing them to get out of hand, of directing them centrally without bringing them to a standstill—problems faced and only partly solved by the huge capitalist combines of Britain and America and the nationalized industries of Britain. In the second place any solution he arrives at must fit, or appear to fit, into the theoretical framework of the Soviet system as a whole.

But the solution imposed on the Soviet Union by Khrushchev and his friends is so patently bad, and so irrelevant to the real problems it purports to tackle, that it is permissible to doubt whether it was ever intended as a serious contribution to the rationalization of industry and to ask whether the whole reorganiaztion, or revolution, was not distorted out of recognition for political ends.

The task of the Sovnarkhozy is to exploit and develop the industries of their separate regions as a balanced whole. Obviously it would be impossible to make each region entirely self-supporting, and in any scheme there would have to be export and import trading between regions, particularly in the matter of raw materials. But if the regional division of the vast territory of the Soviet Union were to make any sense at all from the economic point of view, the regions themselves would have to be large, and every effort would have to be made to draw the dividing lines between regions with economic considerations heavily emphasized. For example, some regions would be contrived to offer every opportunity for something approaching self-sufficiency. Where this was impossible—for instance, in the great oil, coal, iron, and timber producing areas—the region would be contrived to concentrate, for easy export, the greatest possible aggregate of individual raw materials. There would be specialist regions, with economic councils staffed by specialists, and mixed regions.

But do we find anything like this? We do not. We find in the first place 105 separate regions; we find that the map of these regions has little or no relevance to the map of the industrial economy—instead, in almost all cases the economic regional boundaries coincide with the existing local gov-

ernment boundaries: in the case of small republics, the republican boundaries; in the case of large ones, the oblast, or provincial boundaries.

Why this total disregard for economic geography? Why this rigid adherence to the local government territorial divisions which largely date back to Imperial Russia? The answer, surely, is that the virtual ruler of each region is the party secretary, appointed and controlled by the first secretary in Moscow, Khrushchev himself. The chairman of each Sovnarkhoz must be appointed or approved by Moscow. Either he is a local industrialist bureaucrat, already used to working under the local party secretary, or he is sent out from one of the dissolved Moscow ministries, a stranger to his region and entirely dependent for support and guidance on the established party organization. At a single blow, Khrushchev took control of industry away from the new managerial class and put it into the hands of his own party functionaries in a hundred and five separate regions.

The Sovnarkhozy, scarcely more than a year old, are now, we are told, working smoothly. Certainly, according to the official figures, production has not suffered from the revolution. Equally certainly the creation of the Sovnarkhozy has not made an end of anomalies and waste in Soviet production.

It is very hard to find out exactly what is happening. In the first place, Moscow is full of senior bureaucrats who should by rights have gone off to the regions, far or near, to take up posts in the Sovnarkhozy. They have blandly refused to leave Moscow, and most of them have found other jobs—many in the inflated Gosplan organization, the separate departments of which are, in many cases, already disguised ministries. The great industrial ministries have been abolished, it is true; but innumerable trusts and combines have kept their Moscow offices, and, on top of that, each of the hundred and five Sovnarkhozy seems to have its own Moscow office for liaison with the State Planning Commission, innumerable government departments, the defense and transport ministries (which were excluded from last year's reorganization, and remain intact), and each other. There are already springing up in Moscow new bureaucratic agglomerations. These have absorbed many of the displaced bureaucrats, and they perform many of the coordinating functions of the old ministries.

On the other hand, the regional Sovnarkhozy are staffed, especially in the remoter areas, largely by local men, already strongly imbued with regional pride. I am not suggesting that there have been no transfers from Moscow to the provinces: on the contrary, there have been a great many. But the operation as a whole has produced nothing like the clean sweep that a stranger, unfamiliar with Russian ways, might expect from the terms of the Supreme Soviet's directive.

Until just over a year ago, waste and duplication arose largely from interdepartmental jealousy and distrust, from ministerial empire building, from lack of cooperation between ministries operating, as it were, in parallel in the same territory. Today waste and duplication are arising from interregional jealousy and distrust, from regional empire building, from lack of cooperation between the new Sovnarkhozy. Already there are telltale indications in the press. The Sovnarkhozy are proving to be reprehensibly selfish and more interested in building up their own regions than in the national economy as a whole. One particular outcome of this is that distribution, always one of the weakest features of the Soviet economy (especially in the matter of consumer goods), has become more chancy than ever before. Certainly the tolkach, the fixer, is still very much in evidence; but now he acts as a contact man between regions instead of between ministries.

Khrushchev has broken the growing power of the great industrial ministries; he has removed some of the more crippling anomalies of the ministerial system; without really decentralizing the Soviet economy he has given a much-needed impetus to the big provincial centers; he has provided a new framework for industry which could be invaluable in time of war and is susceptible of being modified to form a sensible and flexible adaptation to the economic facts of life. But much remains to be done, particularly in the way of reducing the number of regions and redrawing their boundaries. Meanwhile, the outstanding feature of the reorganization is the political aspect: the reassertion of party power over industry.

What do we mean by "the party?"

The party, first and foremost, is Khrushchev himself. But who are the hundred and five republican and provincial party secretaries who now play so big a part in controlling and guiding, through the Sovnarkhozy, their local industries? Are they Communist fanatics who think of their work exclusively in terms of the greater glory of the Communist revolution? I do not think they are. Do they see themselves, and the great regions they control, and everything they produce in those regions, simply as part of a great ideological design? I do not think they do. Is there in fact a fundamental difference between the preoccupations and aims of the dethroned bureaucrats from the central ministries and the higher party chieftains in the provinces? I do not think there is.

The division, insisted upon by Khrushchev himself, between the bureaucracy and the party is, it seems to me, an artificial one. It has misled many, and continues to do so, in their application of the forces at work inside the Soviet Union today. The late ministerial chieftain, now working in the provinces or creating a new job for himself in Moscow, and the average party functionary, developing his career inside the ruling body of the U.S.S.R., are very like each other: both are ambitious individuals sharing the characteristics of ambitious men everywhere in the world, both are good at managing, both enjoy the exercise of power. There may be differences of emphasis. The typical industrial bureaucrat may have a slightly more concrete approach to life, may be slightly more technically minded; the typical party careerist may be slightly more interested in ideas than in things. But both are nearer in interests, attitude, and attack to able men in the West than they are to the old-fashioned Leninist revolutionary.

In a word, Soviet industry continues to move, in spite of its new labels, in the direction it has followed since the war. The fight between the industrial bureaucracy and the party officials was, in a sense, a phony war. The real struggle was between individuals. And the real issue was whether the party organization, the ruling body, subordinated absolutely to the central secretariat, should allow individuals, splinter organizations—a whole class outside the party hierarchy—to develop into an organized pressure group, or whether, at the cost of some broken heads, some disorganization, some sacrifice of proved and valuable ability, the party organization should seek to absorb into itself the accumulated power and experience of the great industrial network.

Khrushchev chose the latter course. But he must know very well that his party secretaries all over the country will, in consequence, find themselves being pulled ever more strongly into the orbit of the makers and the producers and away from the doctrinaires. Probably he does not mind this so long as he controls the machinery which comprehends them all.

Remarks of the Honorable C. Douglas Dillon, Under Secretary of State for Economic Affairs, at the ICA All Employees Meeting, Hotel Mayflower, Washington, D.C., Wednesday, December 10, 1958

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. FRELINGHUYSEN. Mr. Speaker, because of its general interest, I am including in my remarks a recent speech made by our able Under Secrtary of State for Economic Affairs, Mr. Douglas Dillon.

This address was given at a meeting held last month of employees of the International Cooperation Administration. Mr. Dillon spoke in his capacity as the individual charged with responsibility for coordinating all matters relating to mutual security, but he shows real understanding of the problems faced by Members of Congress, who must act on requests for authorizing and financing these programs. He shows too a clear recognition of the importance of a proper attitude in our dealings with newly independent, and in many cases uncommitted, countries.

Mr. Dillon's address follows:

I am delighted to be here with you this morning and to take part in honoring 32 of our fellow ICA employees for their outstanding services. I refer to them advisedly as our fellow employees. For I have felt that I am one of you ever since Secretary of State Dulles charged me with responsibility for coordinating mutual security matters, of which ICA is so important a part.

I wish that by some miracle of transportation, we could have with us for this important hour today, the thousands of dedicated men and women who are serving ICA overseas, where I have seen them operating under difficult conditions and even under extreme hardship. For I want to tell all of you in ICA, whether at home or abroad, what a magnificent service I think you are performing for your country.

I can testify that my feelings are shared by every official of the executive branch who plays a major part in the shaping and conduct of our foreign policy, and, I am sure, by many distinguished Members of the Congress as well. This is especially true of Secretary Dulles, who has asked me to give you his warmest personal greetings and to remind you of something he said in this same room at the first ICA all-employees meeting a little over a year ago. At that time, you may recall, he told you:

"You do not have the job security of other Government positions, or the remuneration which you could obtain in private life. What keeps you on the job is patriotism and loyalty to your country. Such patriotism is usual in times of war, but especially exceptional and laudable in times of peace."

What the Secretary said is as profoundly true today as it was a year ago. Nothing I could say would add to his tribute.

After the Congress reconvenes in January, there will be honorable men on both sides of the aisle who will want to take a hard look at our entire foreign aid program. It is my hope that they will examine it vigorously, but unemotionally and without undue

partisanship. I personally applaud such a full and frank discussion. For we are constantly seeking ways to streamline and revitalize our programs, to increase their breadth and flexibility, and to enlarge our objectives.

As you know, we are now preparing to present our next budget requests to Congress. In drafting our requests, we have constantly borne in mind our overriding responsibility to the American people to insure that every cent of their tax money will be expended with scrupulous care and maximum efficiency. I am confident that when the proper time comes, we can, and shall, justify our requests. For the cost of our foreign-aid programs represents only a modest portion of our national product. And every penny spent on foreign aid is an investment in free-world security.

I should now like to touch upon a point which must disturb you as much as it disturbs me. This is the fact that too many of our people are coming to think of our mutual security and other assistance programs solely as instruments of the cold war and answers to the massive economic drive the Soviet bloc is directing against the underdeveloped nations of Asia, Africa, the Middle East, and Latin America.

Actually, as you well know, we have been in the foreign-aid business a long time. Our programs began in Latin America 15 years ago and were made worldwide 8 years ago. We are the defending champions in this field. The Communist bloc's technical-aid offensive, which began only 4 years ago, it is a response to your efforts and a tribute to your many successes.

The reasons behind the Communist bloc's offensive are readily apparent: The Communist leaders are aware that a great cooperative free-world effort to improve economic conditions in the underdeveloped areas will erect the most powerful possible barrier to the spread of communism. Rest assured that they will do everything to discredit you and the country you represent.

We can triumph over the Communists by helping the peoples of the underdeveloped nations to help themselves. But in the extension of our assistance, we must use discretion and forbearance and demonstrate true statesmanship.

In this connection, I was struck by a remark made the other day in New York by Carlos P. Romulo, Philippine Ambassador to this country, who said:

"A way of life determined by a specific set of political or economic doctrines has no meaning as such to Asian peoples. The struggle which interests them is rather the constant and bitter struggle for life itself, the struggle against hunger, poverty, disease, and ignorance."

What he meant, I believe, is that in the ideological struggle between communism and the West, most of the peoples of the newly emerging nations are uncommitted * * * so far. They need our assistance. But they are jealous of their new-found independence. They will be reluctant to accept the idea that either the Communist or the free world way provides a desirable blueprint for the good life until they have seen concrete results close at hand. The challenge to us to help them to achieve progress under freedom is clear.

The manner in which we extend our assistance can have a very great bearing upon the path they ultimately choose. We must offer aid in an unobtrusive way, working discreetly in the background. We are so accustomed to self-rule that we sometimes fail to realize how truly staggering a burden is the exercise of political responsibility for the first time.

I should now like to say a word regarding the role which each and every ICA employee must play in the conduct of our foreign policy:

Yours is a responsibility which rests squarely upon the shoulders of each individual, whether here or 10,000 miles away. It is, in part, a responsibility to help create a better understanding of our objectives at home and abroad. Each of you must also play an explicit and conscious role in the actual conduct of our foreign relations. To do so will require maturity, tolerance, and a widening appreciation of the complexities of our relations with other peoples. Let me urge you never to lose sight of the idealism in which our foreign-aid program was born. For, in the final analysis, the succes of our efforts will be measured as much in terms of reaching the minds and hearts of the peoples of the less-developed nations as in helping them to achieve material progress. It is a difficult role, but it can be as rewarding as it is challenging. I have every confidence that you will prove equal to it.

Effective Labor Regulation Legislation Needed

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. DEROUNIAN. Mr. Speaker, I offer for printing in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in this morning's New Herald Tribune, commenting on Senator KENNEDY's labor bill:

SENATOR KENNEDY IS OVERLY OPTIMISTIC

Senator JOHN F. KENNEDY is off to a fast start with a labor reform bill that would "virtually put Mr. Hoffa and his associates out of business."

That, of course, is only what the Massachusetts Democrat says. For it is hard to see just how KENNEDY reasons that this bill would stop the boss of the Teamsters Union. What the Senator offers is pretty much a re-run of last year's legislation, which failed in the closing days of Congress chiefly because some Members of the House thought the bill wasn't strong enough and others didn't want to annoy the unions in an election year with even a pale variety of regulation.

Now the problem is still not so much what is in the Kennedy bill. Nobody can seriously argue with its content, which could almost be described as noncontroversial. But the real rub is about what KENNEDY has left out.

For instance, among the most potent weapons of Hoffa and his kind are:

1. The phony picketing where, for instance, a storekeeper can't get goods delivered unless he signs up with the union;

2. The secondary boycott where an innocent third party is made to suffer in a labor hassle.

KENNEDY's bill does nothing to strike down these two evils. There is more of this kind of omission, but that's enough to show that Hoffa & Co. needn't fear yet about losing the franchise.

Of course KENNEDY hardly approves of the aforementioned malpractices. He just says these ought to be handled sometime later when Congress gets around to amending the Taft-Hartley Act. This, however, is extremely tenuous assurance.

Meanwhile the Senator says the hearings on his bill, beginning next week, should be completed in 9 days at most. Not long thereafter, one assumes from KENNEDY's prediction, Jimmy Hoffa will be hastening to abdicate.

Want to bet, Senator?

Integration in Washington

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MULTER. Mr. Speaker, a most interesting address concerning integration in Washington, D.C., was delivered by Isaac Franck before the 85th annual forum of the Conference on Social Welfare in Chicago, Ill., in May 1958. Mr. Franck, a member of the faculty of American University, is executive director of the Jewish Community Council of Greater Washington. The address was reprinted in the August 15, 1958, issue of Commonweal and I am pleased to commend it to our colleagues:

INTEGRATION IN WASHINGTON

By Isaac Franck

In dealing with the subject of racial desegregation in the Nation's Capital we confront not only one of the most interesting theoretical problems of our time but one of our most imperative practical problems; and the social changes which have taken place in Washington within the last decade are of particular moment at this juncture in our national history. Washington is a Federal city, marked off by artificial and arbitrary boundary lines from a large and expanding hinterland of suburbia in contiguous counties of Maryland and Virginia. At the end of 1957 the total population of the metropolitan area was about 2 million. Somewhat less than half this number live within the boundaries of the District of Columbia, and of those within the District proper about 45 percent are Negroes.

These figures take on new meaning when we realize that they show the population to have doubled in some 17 years. The sheer doubling of the metropolitan population in such a short period is in itself impressive. What is most relevant here, however, is the growth of the Negro population in Washington proper during this period. The growth in the Negro population of Washington is, of course, nothing exceptional. Similar and even greater increases in the Negro populations in urban centers are reflected all across the country. This is part of the general trend toward urbanization in the United States. That many of the Negro immigrants into Washington have come from southern rural areas with inferior schools for Negroes is particularly relevant to our school situation, and to the glaring inequalities between the Negro and the white schools brought to light after integration.

A graphic description of some of the aspects of the Washington situation about 10 years ago is contained in the 1947 report of the President's Committee on Civil Rights, entitled "To Secure These Rights":

"If a Negro stops in Washington * * * with a very few exceptions, he is refused service at downtown restaurants, he may not attend a downtown movie or play, and he has to go into the poorer section of the city to find a night's lodging. The Negro who decides to settle in the District must often find a home in an overcrowded, substandard area. He must often take a job below the level of his ability. He must send his children to the inferior public schools set aside for Negroes, and entrust his family's health to medical agencies which give inferior service. In addition, he must endure the countless daily humiliations that the system of segregation imposes upon the one-third of Washington that is Negro."

Let me fill in a number of additional details. Ten years ago Negroes and whites were assigned separate recreational facilities, public facilities, including the playgrounds and swimming pools of the District of Columbia Recreation Department and the swimming pools under the jurisdiction of the Department of the Interior, as well as such private facilities as bowling alleys. In addition to separate movie houses for Negroes and whites, the crazy-quilt pattern of segregation made it possible for Negro performers to appear on the stage of legitimate theaters, but barred Negroes from the audiences; while in Constitution Hall the reverse was the case: concert audiences were admitted without distinctions of color, but no Negro performers were allowed to appear on the stage.

Segregation was the practice in private social agencies. The Police Boys' Clubs were rigidly divided into white and Negro units. No Negro physicians were admitted into the District of Columbia Medical Society; no Negro lawyers were given membership in the District of Columbia Bar Association; no Negro nurses could be members of the District Nurses' Association. The Fire Department was strictly segregated into Negro and white companies. Hiring and promotions of Negroes in the Metropolitan Police department left much to be desired. The public transportation system refused to employ Negroes as motormen or bus drivers. Except for Federal Government agencies, employment of Negroes in other than low level jobs was almost unknown, either in the District of Columbia government, or in public utilities, or in private employment in department stores, offices, or other businesses. No Negro architects were employed by white architectural firms. Churches were, on the whole, separated into Negro and white churches, and it became a cliche to say that the greatest amount of segregation in Washington took place on Sunday mornings at 11 o'clock.

Many other details could be added to this melancholy recital of the unmistakably "Jim Crow" character of our Nation's Capital a decade ago. These objective facts were accompanied by a widespread assumption that this situation had existed from eternity, and would continue to exist as part of the essential nature of the city and its patterns.

However, much has changed in the intervening 10 years. And while there is still much segregation, while there are still multitudinous discriminations, while it is not possible to assert dogmatically that there has been a great change in mass attitudes, it is unmistakably true that a major social revolution has taken place in Washington. Today, Negro and white youngsters attend the same public schools. Negroes and whites go to the same movie houses, theaters, and Constitution Hall, on the stage as well as in the audience. Recreation facilities, including playgrounds, swimming pools, and privately owned bowling alleys, are unsegregated. Negroes and whites eat in the same restaurants. The public transportation system employs Negroes as motormen and bus drivers. Some of the public utilities have begun employing Negroes in such positions of high visibility as secretaries and account clerks in the front offices. The district government has instituted a nondiscrimination employment policy. Police Department hiring and upgrading of Negroes has shown marked improvement. Some beginnings have been made in desegregating the fire department. Negro physicians are admitted into the District of Columbia Medical Society. Negro nurses are members of the District of Columbia Nurses' Association. The District of Columbia Bar Association is still in the throes of deciding about admitting Negro lawyers, but there is little question about the outcome.

Voluntary social agencies are in a process of transition, and many of them are now completely integrated. There are a number of integrated churches in Washington, and more on the way. The staff and all activities of the Council of Churches, including its many, well-attended institutes and seminars, are completely integrated. We have reason to believe that in the next few weeks a number of large department stores will begin hiring Negroes as sales people. Hospitals accept Negro patients, and Negro doctors are free to practice their profession in the hospitals. At the drawing boards of a number of architectural firms Negro and white architects work side by side. Negroes, on the whole, have no problem in obtaining lodging in first-class downtown hotels.

It is easy to rattle off, machinegun fashion, this cavalcade of progress. But only those who have personally known Washington during this past decade can fully appreciate the revolutionary character of the changes; and only those who have themselves participated in bringing about these changes can know what went into this exciting and inspiring process.

Almost every one of these social changes was preceded by dire predictions about the consequences of the change. At best, people were sure that the change just would not work. At worst, disturbances and violence were predicted. It is important to note, however, that this decade of progress was punctuated by only 3 minor disturbances connected with swimming pools and high schools. Firm and intelligent police handling and public statements by the Superintendent of Schools, with helpful editorializing by the city's three newspapers, brought the students back to their classes within 3 days.

What were some of the ingredients which made possible this relatively peaceful transition? First, there were a large number of individuals and organizations who refused to accept three myths, and who succeeded in persuading others to refuse to accept these myths: the myth of unchangeability of any situation; the myth of the inevitability of violence if integration is effectuated; and the myth that there is a necessary order of priority which must be followed in a program of integration.

I recall vividly the conferences with our newspaper editors in the summer of 1950, after they had editorialized on the Interior Department's decision to integrate its swimming pools, and had expressed fears that such integration would result in riots by irresponsible elements. We argued that the newspapers must liberate themselves from the myth of the inevitability of violence; that in predicting violence they were contributing to the creation of an atmosphere permissive toward violence, and thus giving encouragement to the irresponsible elements whose inclinations they deplored; that as community institutions the newspapers had a responsibility to create an atmosphere conducive to the maintenance of law and order and to the acceptance of progressive social change. The newspapers were persuaded, and since then have on the whole been an affirmative force in the history of desegregation in Washington. Other institutions, elected representatives, and community leaders also had to be persuaded, and this process of persuasion did not proceed without considerable resistance. Moral suasion, careful social and psychological analyses of the problem, and dedicated persistence contributed to the lowering of resistance.

The second ingredient worthy of note is the cooperation of and preparation by various community organizations and institutions. In 1951, when the litigation took place which established the validity of 19th-century civil rights laws, and resulted in the desegregation of Washington's restaurants, community groups joined together in filing briefs as "friends of the court," in support of the validity of these laws. Later, in the school desegregation case, community organizations joined in submitting an amicus curiae brief to the Supreme Court, in support of desegregation. These groups included leading Protestant, Catholic, and Jewish religious and civic organizations, such as the Council of Churches, the Jewish Community Council, the Catholic Interracial Council, the American Friends Service Committee, as well as other citizens' groups such as the Urban League and NAACP. Each time the newspapers and newscasters made public the fact that a large and heterogeneous group of community organizations supported racial desegregation, public opinion was affected. Nor must one slight the moral impact of the three religious groups, Protestant, Catholic, and Jewish, speaking out jointly, in conferences, in legal briefs, and in public pronouncements, in support of desegregation.

There were other kinds of preparation also. The Catholic parochial schools quietly initiated integration 3 years before the Supreme Court decision. The religious leadership, Protestant, Catholic, and Jewish, carried on educational work within their respective constituencies, and preached from their pulpits. The Park Police and the Metropolitan Police Departments gave their men training in intergroup relations, and in the professional responsibilities of police officers maintaining law and order, and protecting the life and safety of all human beings in the community. Intergroup relations and intergroup education workshops, for teachers and community leaders, were conducted by universities and by community organizations, such as the National Conference of Christians and Jews, and the Friends Service Committee. These and other groups thus made sure that the preparation consisted not merely of exhortative appeals but of cooperative community action, and of professional training for those involved in the day-to-day business of human relations.

The third ingredient, particularly in the peaceful process of school integration, was clarity, authoritativeness, moral firmness, and lack of ambiguity in the pronouncements of the Board of Education and the implementation of the desegregation plans. It is to the credit of the District of Columbia Board of Education that it issued a clear and unequivocal policy statement shortly after the Supreme Court decision, and that it approved a carefully worked out desegregation plan, and proceeded to carry it out with dispatch and determination. When the Board of Recreation, on the day following the Supreme Court's decision, finally integrated all the District of Columbia facilities at once, the action was accepted by the community without a ripple of protest.

It should also be noted that Washington's status as the Capital of the United States made possible in this instance the added voice of moral authority and rightness behind the process of integration in the public statements of the President of the United States and of other high Federal officials. Thus Washington's experience furnishes additional evidence in support of the contention that morally right, authoritative decisions on desegregation, announced by high-level leadership, and carried out without equivocation, ambiguity, or delay, will be accepted by the community without disturbances or violence.

There is much work still to be done before Washington begins to approximate the full realization of the goals of American democracy, and of healthy intergroup relations. The progress we have made must not blind us to the need for further progress. But we must also be realistically aware of the impediments to further progress.

There are these difficulties: First, Washington's geographic location makes it a border city, between North and South, in whose population ambivalences concerning race relations will persist for some time to

come. Second, the phenomenon of suburbia reinforces in the minds of some people the fantasy or delusion that one can escape desegregation through joining the flight to the suburbs. As long as these delusions persist, as long as people fail to ask themselves realistically how far they can continue to flee, and how long they can continue to escape the inherently American trend toward integration, our progress will be impeded. The third impediment is contained in the fact that Washington is a city whose residents have no franchise. Washington has no home rule, and its citizens have no power to make their own decisions. The legislative body for the city of Washington is the Congress of the U.S., which has a few other things of importance to be concerned about. Some Congressmen, from some Southern States, seem to want to maintain a Washington which conforms to their cherished image of a Jim Crow town in their native State. Finally, there are still some elements in the power structure of the community who fear that integration will lead to changes in the power structure, and to consequent uncertainties about their own position within it.

However, in spite of these impediments, progress will continue. The most recent episode in this decade of progress was the official order issued several weeks ago by the Commissioners of the District of Columbia (the three Commissioners perform functions similar to those of a mayor in a normal municipality), creating a Human Relations Council in the Government of the District. This council will deal with problems of discrimination, segregation, and intergroup relations. And to the extent to which the element of right governmental authority is a factor of importance in facilitating the process of integration, to that extent the creation of the Human Relations Council gives us additional reason for looking forward to further progress in the Nation's Capital.

Tipping Practices

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. SANTANGELO. Mr. Speaker, I have introduced a bill which requires that the amount of tips be considered as wages for the purposes of computing social security benefits. This bill, which is No. H.R. 1342, received serious consideration in the 85th Congress, and is being considered by the Ways and Means Committee in this 86th Congress.

An article by Tom Brooks regarding tipping practices spells out the nature of tips and the reactions by the tipper and the serviceman. I believe a reading of this article will prove informative and enlightening:

The obscure 18th century English innkeeper who posted a box at the foot of the stairs labeled "To insure promptness" hardly could have realized the change he was initiating in the customs of mankind. Before the coming of the tip box, the good servant might have picked up an occasional windfall in a hastily flung coin according to a master's mood. But the standard practice of tipping was introduced by an English innkeeper systematically seeking an extra coin for better service.

Today, tipping is a widespread practice. Some 2 million Americans depend upon it for much of their livelihood. Most of these earn their money by offering some kind of service. Those who receive tips in the course of their duties run the gamut from altar boys at a wedding to waiters; their ranks include taxi drivers, caddies, mailmen, movers, delivery boys, expressmen, messengers, janitors, barbers, bartenders, busboys, beauticians, porters, garage attendants, pinboys, and an occasional organ grinder. Some of them of course get only an occasional tip, such as the annual Christmastime gifts to the postman and to apartment-house building service employees. For most, tips are the hard coinage of a living wage.

To the tipper, tips are an added cost not always easily or cordially borne. One out-of-town executive estimates that a business trip to New York City costs at least $20 a day in tips. He breaks it down this way: Redcap, 50 cents; bellhop, 50 cents; 5 taxis, $1.25; 4 doormen, $1; 3 hatcheck girls, 75 cents; 2 bartenders, $1.25; luncheon waiter, $2; dinner waiter serving 4 people, $7; captain, $5; wine butler, $1; cigarette girl, 25 cents. This does not take into account the shoeshine boy, the barber, chambermaid, or valet, if he should need their services.

A market-research company spokesman once estimated that in 1 year, the average businessman pays about five times the original price of his hat to hatcheck girls. This is vigorously disputed by another spokesman—for the Hat Research Foundation—who says, "I just don't believe that anyone except an occasional playboy would spend that much (about fifty dollars a year) for hat- and coat-check tipping."

Both gentlemen might be dismayed to know that those quarters don't go to the lovely blonde who takes his coat and hat at his favorite night spot—nearly all hatcheck girls get a straight salary from a concessionaire.

A Diamond Jim Brady leaving a one-hundred-dollar bill in the hand of a Delmonico waiter is a thing of the gay nineties past. Even in this expense-account age, no company treasurer or auditor would ever approve a three-figure tip. "It's the nickles, dimes, and quarters that add up," says a waitress at a fast-service restaurant. "But the dough ain't always there," says her glum-faced sister behind the counter, pointing to the bare space next to the dirty dishes left by a retreating customer.

"There are peaks and valleys in this business," says an old-time hackie. "Some days, you think you never had it so good. Others—?" Another cab driver, picking up a rider just after a downpour, tells this story: "I see this dame in a mink coat standing on Broadway; it's pouring, and she hails me. 'Grand Central,' she says, as grand as you please. When we get there, the meter says 75 cents. And, you know what? She hande me a nickle tip. A stinking nickle. So I throw it out on the sidewalk after her. And, you know what she does?" He shakes his head in wonder. "She bends down and picks it up."

Waiters, and others who earn their living from tips, are understandably upset over the lack of tipping savvy on the part of callow youths and out-of-towners, as well as lavishly dressed women. The harassed tourist worrying over a handy pocket tipping computer or a frugal man's guide to tipping isn't any more frustrated than the waiter who picks up a dime tip after serving a $2 meal. "New Yorkers," says one waiter, "are educated." A spokesman for the New York State Restaurant Association says, "The public usually tips about 10 percent in inexpensive places, 15 in a better spot, and 20 for special service or in entertainment spots."

"But," says a New York waiter, "the 15-percent habit is only wishful thinking. When you take into consideration, the 'stiffs' and the 5 percenters, we're happy if we make 10 percent of our total sales before paying the busboy."

Emily Post, however, warns that the "10 percent of yesterday is today anywhere from 12 to 15 percent." A minimum permissible tip, according to that impeccable guide to etiquette, is 25 cents for one person and 30 cents for two. "In a restaurant," she says, somewhat indignantly, "where the serving is done by waitresses, patrons are inclined to be very unfair in giving them no more than half (and even less) than the amount they would think of giving to waiters." This may be blind justice balancing her scales; for among tiptakers, women are generally rated poor tippers. "A woman can't do percentages," explains a philosophical hotelman. "She can figure out 10 percent in her head, but certainly not 15. So she leaves 10." Psychiatrist Gregory Zilboorg says, "In her traditional protected role, woman is not man's equal, but a plaything who does not consider it her business to tip."

Tiptakers rate salaried men, especially those in the liquor, tobacco, and advertising businesses, out-of-town buyers, and stockbrokers as among the most generous of men. Doctors, dentists, college boys, actors, politicians, musicians, company presidents, and expensively dressed people are poor tippers, according to those who ought to know. "Tips are expected according to appearance," says one authority, so, perhaps, in the last instance, clothes lead to higher expectations and greater disappointments. The most generous tippers, considering their income, are waitresses and taxi drivers.

How much is earned from tips? The Internal Revenue Service would like to have a hard and fast answer to that one. According to a restaurant-industry spokesman, the minimum that agency will accept for income-tax purposes is a report of at least $3 a day earned by waitresses in a chain restaurant of middling range. Internal Revenue denies the use of any such formula. In any case, such a rule-of-thumb estimate cannot be a reliable guide to earnings among the uncertain and inconstant byways of tipping.

Earnings from tips are hard to pin down. Unions representing workers who depend on tips for a living are reluctant to discuss the question. Tippers almost always overestimate the take of what they often consider "grapsing, outstretched hands." And the tip earners, themselves humanly fallible, frequently underestimate the amount of their take-home.

A waiter's minimum wage, as specified in the contract of a New York City hotel and restaurant worker's union, is $32.40 a week. An informed guess is that the average take-home in that segment of the food-service industry would run about double that or somewhere around the average weekly wage of a factory worker—about $80 a week. Other estimates, however, give the average waiter four times his daily wage in tips. In the swankiest white-tie hotel dining room, a waiter may make upwards of $200 a week. At the other end of the tipping scale, the average chambermaid will earn very little from tips.

Most bartenders and taxi drivers earn about half their living from tips, although cabmen also earn in commissions a percentage of the meter take. Here's what one cab driver calls an "average day." He puts $20 on the clock by picking up about 30 rides. He gets in commission, "say about eight bucks; the boss gets 12." He averages about $4 in tips. "Some days, I do better; others, worse."

Service captains and doormen earn about two-thirds of their income from tips. Very few live on tips alone, although a doorman of one very fancy nightclub is reported to

live very well on just tips. Apartment-house elevator men and doormen, janitors, and superintendents, who are tipped generally once a year, of course, do not depend on this source for income. One middle-income housing co-op—with 294 families—taxes each room a dollar, once a year, to raise about $1,200 to be divided among a superintendent, 2 guards, a firekeeper, 2 handymen, and 3 porters. This gives each man roughly $130, which may be some kind of average for this kind of tipping.

Tipping, from time to time, comes under attack from various quarters. For example, when unions were first organizing the restaurant industry, liberal-minded people used to leave a card reading, "I do not believe in tips; organize for a living wage," in place of the usual coins. But, neither the waiters nor the unions representing them were out to abolish tipping; they were seeking a "floor" under wages, and improvements in working conditions.

Nonetheless, opposition persists and is shared by persons of otherwise divergent views. An out-of-town businessman puts it this way: "It's not my responsibility to pay other people's wages. I only tip when I get extra favors." Some riders of taxicabs express their hostility by leaving the door open when they get out, if the driver fails to say "Thank you" when tipped. A union official says that the employer charges the customer for food and service, then pays waiters such low wages that he forces the customer to pay part of his wage bill.

In a backhanded sort of way, psychiatrist Zilboorg agrees with the critics. "Tipping," he says, "has nothing to do with service. There is a long, silent tradition that humans are either master or slave. The moderate tipper caters to frugality, but he thinks: 'Don't spoil the slaves.' The lavish tipper says money means nothing and believes all men are beggars."

Recently, a number of tip-wage earners have found that while they had to pay income taxes on the money they earned—whether in tips or wages—they only get social-security payments based on their wages, excluding tips. For many this has meant hardship. The Government, for its part, points out that it hasn't been able to collect social-security taxes on tips so there is nothing to do but pay benefits only on wages earned, which, in many cases, are very low.

The problem has become more acute as more people are now coming up for retirement. It was highlighted neatly in a recent case involving a banquet waiter for a New York hotel.

A banquet waiter earns his tips in a slightly different fashion from, say, an a la carte waiter. The latter depends wholly on the whim of the customer, who may or may not leave a tip as he chooses. But the banquet waiter is guaranteed his tip in the charge the hotel makes for the meal served. Actually it is more a surcharge than a tip. When someone contracts for a banquet, a menu is picked, a price agreed upon, and then the hotel adds a 15-percent charge to cover tips. This 15 percent is divided among the people who service the meal. A record of this is kept by the hotel.

When this particular banquet waiter retired, he found that he was only to get minimum social-security payments—a figure based on his wages alone. Believing he was entitled to the full benefit, based on his wages plus tips, the waiter appealed. It was decided that where service charges are placed on the bill, tips come under the Internal Revenue Service's definition of wages or moneys that may be credited for social-security purposes. Tips can be counted as wages, however, only if the employer requires from the employee an accounting of the actual or estimated amount of such tips. The ruling extended this narrow regulation to cover the banquet waiter's case. The court held that it was clearly evident the banquet department had the equivalent of such an accounting.

However, the same cannot be said of other restaurant employees, the a la carte waiters, or the many others who depend upon tips for a living. They still must pay income taxes on what they earn; but since most employers do not demand an accounting of what they earn in tips, they are not taxed for social security on wages plus tips. In effect, they suffer a loss when retirement takes place.

New York State encountered the same kind of problem many years ago in administering unemployment compensation. How much compensation is an unemployed worker, who earns part of his living in wages and part in tips, entitled to? If his employer is taxed on wages alone, the worker is entitled to a limited benefit, and certainly not the amount he would be entitled to if he worked in another job where he earned an equal amount of pay.

New York's solution was to empower the Industrial Commissioner to make rules concerning the value of board and lodging, tips, and gratuities. The value of tips is determined by a code that covers beauty-parlor operators; garage, gas station, and parking attendants; service employees in restaurants; dining-room employees in American-plan hotels and eating clubs; hotel-service employees; taxicab drivers; barbershop employees; baggage porters; pin-boys; checking-room attendants; and maritime-service employees. The rules covering each situation were worked out after a full public hearing in which employees, union representatives, businessmen, and others were heard. They have been in effect now for over 10 years.

The rules vary and were drawn up on the basis of tipping experience in the respectvie trades covered. For example, the value of tips to beauty-parlor operators, for unemployment-compensation purposes, is determined on the basis of an amount equal to 10 percent of the wages paid to them by their employers. The value of tips to banquet waiters is assessed at 100 percent of cash wages.

Applied to a la carte waiters, the procedure works like this. The waiter has a choice. He can declare in a signed statement to his employer the true value of what he has earned in tips or he can simply forget it. In the latter case, the employer must file a report in which the value of the tips is arbitrarily fixed at 7½ percent of the total table sales. The employer must pay his unemployment-compensation tax on wages plus this allowance for tips—or on the declared true value. Thus, the unemployed waiter gets the unemployment compensation to which he is entitled according to the intent and purpose of the law.

The hotel and restaurant unions in this State have urged that the Federal Government adopt a similar approach and apply it to the financing and payment of social security benefits. The problem has been discussed before congressional committees. Hotel and restaurant associations have testified that such formulas are not workable. "We cannot find how much the tips to our employees amount to," one hotel spokesman declared.

The Social Security Administration has been devoting considerable time and effort to studying the question of counting tips as wages. The agency is alive to the element of social injustice in the situation and has asserted its desire to find a just and satisfactory solution.

One of the difficulties in applying the New York administrative system of assessing the value of tips is the variation in tipping practices throughout the country. New York State had the same problem initially. The amount people leave as a tip in Buffalo is likely to be somewhat different from the amount left in a comparable New York City restaurant. But, considering the administrative headaches saved by the system—and the relative absence of resulting conflict between employers and employees—New York felt it was worth the risk of an imbalance. But the Federal Government would have a far greater disparity to cope with; therefore, Federal experts tend to favor some sort of compulsory reporting by tip earners.

In New York, more and more tip earners report true value rather than count on the employer's report and the arbitrary percentage-basis assessment. Perhaps one of the reasons for this has been the increased tightening in Federal enforcement of income tax collecting. Keeping the necessary records for a true report of tipping value to the New York State Division of Employment facilitates the accurate report of income to a Federal agency. With the same degree of compulsion, a Federal system of true value reporting would most likely set true retirement benefits.

The Crime of Bombing

EXTENSION OF REMARKS
OF

HON. A. PAUL KITCHIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. KITCHIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from the Washington Post and Times Herald of December 29, 1958:

CRIME OF BOMBING: SHOULD FEDERAL LAW APPLY?

(By Roscoe Drummond)

There is good reason to give serious second thought to the proposal which will come up in the new Congress that the bombings of schools and churches be made a Federal crime.

This legislation will have reputable sponsorship from Democrats and Republicans alike—from Democratic Senators KENNEDY, of Massachusetts, and IRVIN, of North Carolina, Republican Senators SCOTT, of Pennsylvania, and KEATING, of New York, and others.

It is an easy solution. It is an attractive solution. It will be politically painless to support it and, perhaps, for a time politically embarrassing to oppose it.

But is it the wise solution? And is it the effective solution? I am not assuming that I have the final answer, but I do know that there are high officials in Washington close to this problem who question whether there is merit in making the bombings of schools and churches a Federal offense, and whether by so doing the law-enforcement agencies could perform a better job in coping with them.

The arguments which these officials would like the country and Congress to ponder are these:

1. Crime is primarily a local problem, and the primary, first line of defense must be at the local level.

2. Unless the local citizenry and local police have the authority and legal obligation to secure the peace, they cannot be expected to accept the responsibility. To dilute the obligation is to dilute the responsibility.

3. If the bombings of schools and churches be made a Federal crime—crimes which especially stem from local conditions—the effect of such a shift of authority is to cause local

officials to wash their hands of their duty. This makes it harder, not easier, to enforce the law.

4. Obviously there is much which the FBI can do in working with local authorities in dealing with this special kind of crime. But those who have first hand expeirence in these matters are convinced that the FBI can actually accomplish more without a new statute than could be accomplished under the terms of any new legislation thus far proposed.

The sum of these judgments is that to make such bombings exclusively a Federal offense or to divide enforcement responsibility would hurt the cause of law enforcement rather than help it.

No doubt the Senate and House will hold full hearings before Congress takes any such step. They will undoubtedly seek the opinions of Attorney General William Rogers and FBI Director J. Edgar Hoover, and I would expect that they would testify to views very similar to the foregoing.

Mr. Hoover, for example, is already publicly committed to the proposition that the Federal Government ought not to weaken local responsibility. In the December issue of the FBI Law Enforcement Bulletin, he says: "Just as experience proves that crime is a local problem, so the present threat from bombings can be most effectively diagnosed and combated on the local level."

Mr. Hoover puts a very high value upon an aroused public as a needed tool in dealing with all kinds of crime and it seems to me to be implicit in his recent statement that he thinks that making bombings a Federal offense would make it far more difficult to rally public opinion since responsibility would be shifted from the scene of the crime to Washington.

"There is," Mr. Hoover says, "no more powerful weapon against hatred and bigotry than overwhelming public indignation—embracing all creeds and races—against those individuals who by their vile deeds would desecrate our way of life."

It needs to be understood that the FBI can and is giving full-scale cooperation to local authorities in connection with these bombings, whether the FBI has jurisdiction or not. It is free to cooperate and it does. Can the FBI do more than it is now doing without taking over too much authority? And to divide authority tends to weaken, not strengthen, law enforcement.

On the Rounds With the General Practitioner of the Year

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. SCHWENGEL. Mr. Speaker, in Iowa all of us are proud of the honors conferred upon Dr. Lonnie Coffin, of Farmington, Iowa, who was selected by the American Medical Association as the General Practitioner of the Year 1958. I am especially proud because Dr. Coffin is a constituent of mine, and it pleases me to see this recognition come to a man who has unselfishly devoted himself to serving his fellow man.

An article by William Barry Furlong, of the Chicago Daily News, was printed in the magazine section of the New York Times for Sunday, January 11, 1959. It is a wonderful tribute to Dr. Coffin, and, under leave to extend my remarks, I insert it in the Appendix of the RECORD. The article follows:

ON THE ROUNDS WITH THE GENERAL PRACTITIONER OF THE YEAR

(By William Barry Furlong)

FARMINGTON, IOWA.—On a recent weekend Dr. Lonnie A. Coffin, of Farmington, worked as usual—he saw 15 patients on Saturday, 4 on Sunday. "But I took Saturday night off to go to a party," he says, a little apologetically. The reason for the hometown party was Dr. Coffin's selection by the American Medical Association as the general practitioner of the year 1958.

At 68, Dr. Coffin is an anachronism in modern medicine. His career has spanned the eternity from horse-and-buggy medicine to the rocket age, but his philosophy has remained serenely unchanged: To take care of sick people, whether it's day or night, whether they're near or far, whether they're rich or poor. "That's the job of the doctor," he says firmly. "That's the least he can do."

For 10 to 12 hours a day, 7 days a week, 52 weeks a year for 42 years, Dr. Coffin has done his job. He has done it by horseback, buggy, by mule team, by rowboat, and by railroad handcar, as well as by auto. "One New Year's Eve," he says, "I took a mule team up to about 5 miles from a town named Croton. Then I got on a handcar and pumped 5 miles to town to deliver a baby." He grunted and half smiled. "That was a helluva New Year's Eve party."

He has done this kind of thing even when he knew there was little or no chance of payment. "All the time I stayed at their house," says a girl who formerly lived with the doctor's family, "I don't think he got a full night's sleep. Every night he had to go out on a sick call, sometimes going 30 miles on muddy, back-country roads. And that was during the depression, when he knew he wasn't going to get paid."

To the 899 people of Farmington, Dr. Coffin (for years he has met all humorous remarks about his name with, "Well, that's what they carry you off in and you don't have to worry about that") is as much a part of life as the frigid winters or the pine forests near town. He has spent almost his entire life in Farmington, delivered some 2,500 babies—2,000 of them, at homes, he says, "where babies should be born"—healed people when they were sick, advised them when they were unsure, solaced them when they were grieved.

His selection by the AMA, meeting in Minneapolis, touched off a celebration by the whole town. Hundreds of townspeople, along with the high school band, drove the 90 miles round-trip to the airport in Burlington to greet him when he returned from Minneapolis. Scores of others painted long, red-white-and-blue banners ("Welcome home, Doc" or "Home of doctor of the year") and hung them above the town's snow-packed streets.

"I couldn't have been prouder if it was my own father," said one woman.

"He's not just the outstanding general practitioner of the year," said one man. "He's the outstanding general practitioner of our time."

The attachment of the doctor to his town is deep and moving to see. He has observed the best and worst in its people and every home, every doorway, stirs up memories—some tender, some wry, all pleasant. Not long ago, on a 12-mile drive into the country to take care of a 72-year-old woman who had suffered a stroke, Dr. Coffin recalled a case and laughed. "About 4:30 one morning, the wife of this man calls and asks me to come out. He's a pretty old man—80-some—so I get out there right away. 'What's the matter?' I ask him. 'Got a cough, Doc. Got a bad cough,' he says. 'Uh-huh, how long you had it?' I ask. 'Since I was about 3 years old,' he says."

Dr. Coffin, a warm, happy man, laughed again. "Well, a lot of doctors who don't like night calls say that people are sick all day but never call you till it's night," he said. "That may be so—but that's because they feel a lot worse at night. And that's when you've got to go to them. You won't ever have to worry about socialized medicine as long as the doctors go to the sick when they need 'em."

Vigorously independent—and in no way a simple rustic—Dr. Coffin maintains a trenchantly practical attitude toward a problem which most physicians treat as gingerly as a third-degree burn.

In 10 or 15 years, if we don't change, we're going to see socialized medicine, he says. "I don't want it and I don't think most people want it. But it's going to come unless we do one thing to stop it: If the medical profession will go and see sick people and charge 'em a decent fee, you'll never hear any more about socialized medicine. That's all it takes—go and see the sick people and charge 'em a decent fee. Now, I might get cussed out by some of the big boys for saying that, but I don't give a damn."

What fees does Dr. Coffin charge? "Well, when I started it was $1 for an office call, including drugs," he says. "I make up my own prescriptions. Then it was $1.50 for house calls and $2 for night calls. Today it's $3 for office calls, including medicine, and $4 for house calls and $5 for night calls. But I don't charge 'em extra for night calls."

Obstetrics? "When I got started, the fee was $10," he says. "Then we"—the doctors in the county medical society—"got it up to $15 and then $25 or $30 and finally $50. Well, I thought $50 for delivering a baby was just wonderful."

Through the years, Dr. Coffin has maintained a certain insouciance toward financial matters. "I never ask 'em for money. I never send out bills," he says. "If they aren't able to pay, then I don't want 'em to pay. If people are honest, they'll pay eventually. If they're not honest, they won't pay—I don't see that it's worth while worryin' about."

The duties of the country doctor go far beyond medicine. Dr. Coffin has straightened out marital problems, picked up and delivered the groceries ("and paid for them if he knows his patients can't pay," says a friend), bought tickets for basketball games for youngsters who couldn't afford them and bought gowns for high-school girls who couldn't go to the junior-senior banquet without them.

Similarly, payment to the country doctor goes far beyond money. It is expressed in a muted gratitude and sometimes a depth of friendship that transcends the awkwardness over money. "When the bank failed in Farmington back in the depression, I lost everything but the money in my pocket," says Dr. Coffin. The next day, an old friend and patient dropped into his office. "I'd delivered 10 babies to his wife, 1 every year for 9 years, then skipped a year, then the 10th one," recalls Dr. Coffin. The friend said that if Dr. Coffin ever needed money, not to worry; just go to the bank in Keokuk, identify himself and everything would be taken care of.

A few days later, another friend and patient made the same arrangement. As it happened, Dr. Coffin needed $500 to pay a bill immediately. So he went to the bank in Keokuk and found his patients were as good as their word. "You just don't find that relationship in city doctoring," he says.

But Dr. Coffin concedes that city doctoring has become the trend in medicine. When he opened his practice in Farmington, four other doctors were already here. The other four have all since died—and no young doctors have arrived to replace them. "Today they all train for work in hospitals and

when there are no hospitals in a town they just turn thumbs down on it," he says. (Farmington has never had a hospital. The nearest such medical facility is a 23-bed hospital 18 miles away.)

Human nature stays pretty much the same, says Dr. Coffin, but medicine does not. The two most important advances in his time, he feels, are wonder drugs and transportation. "When I started a practice in Farmington, all five of us doctors together couldn't treat in a day the number of patients I handle alone now. We'd make one or two house calls a day and our whole day would be shot."

When he was born—on a farm 7 miles from Farmington on June 13, 1890—he weighed only 3 pounds. "His grandma put him in a shoe box on the open door of a warm oven to keep him alive," says a relative. When he was 5, the family moved to town and his father went to work as a clerk in a hardware store for $10 a week. Sometime later, his mother went to work in the woolen mills. So did young Lonnie. "That was my first trade, operating a loom in the woolen mills," he says.

The family had one dream in common: to send Lonnie to medical school.

By the time he had graduated from high school, the family had saved $2,000. "That's all it took—$2,000 to get through medical school," he says. At the Drake University Medical School in Des Moines, long since discontinued, he attended lectures and labs from 8 a.m. to 5:30 p.m. daily and for 4 hours on Saturday. In his spare time he earned his meals by washing dishes in the YMCA.

He interned at the Iowa Methodist Hospital and there met a nurse, Gretta Harmon, whom he married. (He has two daughters. His wife died in 1957.) In 1914 he returned to Farmington to set up practice. He borrowed $200 from the bank for an office and a second-hand Overland automobile. "I guess I've used up 15 or 20 cars since then," he says. "Those old high-wheeled model T's—they were the mud cars. Could go through anything. You'd upset 'em, then get out and set 'em back on their wheels and they were as good as ever." Today Dr. Coffin drives a red-and-white Ford.

Except for 2 years of service in the Army Medical Corps in World War I, Dr. Coffin has been in Farmington ever since 1914. There were good times and bad times.

"I delivered a lot of babies by coal-oil lamps and assisted at a lot of kitchen-table operations lit only by a lantern," he says. "I'd go to one house out in the country and all the folks out that way would come over to meet me there. That was the only way to get around to all of them."

Eight years ago, just after Dr. Coffin recovered from a heart attack, 26 local youngsters (including 3 of his 4 grandchildren) were stricken with polio. By that time he was the only working doctor in town. "That was a pretty strenuous time," he says. "In a polio epidemic, everybody is watching to get sick, and when they do they all think they're getting polio. So you've got to work harder than ever to take care of them."

As a general practitioner, Dr. Coffin can treat about 80 percent of all his patients without the help of a specialist. He deplores the rush toward specializing among doctors and among medical schools.

Nevertheless, medical education has greatly improved in Dr. Coffin's view. "I'll say this: The men who come out today are brilliant. But they're awfully dependent on a laboratory and a lot of equipment. I came out with my stethoscope and that was it."

Through the years, Dr. Coffin has developed some highly epigrammatic views on life, its pleasures and its temptations.

On liquor: "There are only two classes of people who should drink: Those who can control it and those who can afford it."

On hunting and fishing: "I used to like to hunt, but I can't walk so much in the cold air since my coronary. So I like to go out on a lake and fish—I can do that sitting down. If you catch something, fine; if you don't, you can lie about it."

On smoking: "Oh, no doubt in my mind it's bad for you. I gave it up for a year, after my coronary." He paused to light a cigar. "And I've given it up several times since then, too."

Dr. Coffin has lived a full, vigorous life in addition to one dedicated to taking care of the sick. He has been president of his county and State medical societies, and served 15 years on the Farmington School Board and 4 years in the town council. He has also known what it is to be one of the sick, himself; in addition to his heart attack in 1950, he suffered a cerebral hemorrhage in 1944, and he has been plagued by spinal arthritis for about 30 years.

"But you can't stop to think about how sick you are or when you're going to retire," he says. "All you can do is keep on going out to take care of the sick. That's what you're a doctor for."

The Businessman's Moral Failure

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Dr. Louis Finkelstein which appeared in the September 1958 issue of Fortune magazine.

Dr. Finkelstein is chancellor and professor of theology at the Jewish Theological Seminary of America in New York City. He is a student of the civil and ritual law of the Talmud and was the pastor of a congregation in the Bronx before taking up his assignment with the seminary. One of the seminary's interests is the Institute on Ethics, in which many Protestant and Roman Catholic leaders participate. These include F. Ernest Johnson, study consultant of the department of church and economic life of the National Council of Churches of Christ in the U.S.A.; R. M. MacIver, Lieber professor emeritus of political philosophy and sociology, Columbia University; and George N. Shuster, president, Hunter College of the city of New York. The article reflects numerous conferences Dr. Finkelstein has had with these men, as well as with outstanding business leaders.

The article follows:

THE BUSINESSMAN'S MORAL FAILURE—A DISTINGUISHED RABBI ARGUES IT IS A FAILURE THAT MAY DESTROY OUR SOCIETY

(By Louis Finkelstein)

If American businessmen are right in the way most of them now live, then all the wise men of the ages, all the prophets and the saints were fools. If the saints were not fools, the businessmen must be.

Too many businessmen never stop to ponder what they are doing; they reject the need for self-discipline; they are satisfied to be clever, when they need to be wise. They worry about their place on the economic ladder, but are not concerned sufficiently with whether the civilization in which they work is likely to collapse. They can defeat a local competitor, but may well be defeated by the competitor of us all, which is moral decay.

Now the American executive is very often a man of some vision, motivated by a spirit that generates great energy. Underlying the efficiency of our business community there is the principle of teamwork, cooperation, a reasonable degree of pleasure in the success of coworkers, a comparatively broad welcome to talent, and freedom in human relationships. Granted, these are virtues of no mean order. But the American businessman is losing his insight into the moral sources of American economic strength.

Our country could not have reached its present heights without the blessing of natural resources; but the United States would have failed at the outset without a philosophy developed by men more concerned with the betterment of the human spirit than the comforts of the body. These men were inspired by the writings of immortal philosophers and religious thinkers. The modern business leader is more often than not bewildered at the suggestion that the future of the Republic is in some way related to the ideals and ideas of John Locke, not to mention Spinoza, the medieval scholastics, the rabbinic sages, and the ancient Greek philosophers.

Ask the U.S. businessman why he is successful today, and he may explain to you the advantages of capitalism, the profit motive, and the American system. He may, with due modesty, point out the superiority of his own products and marketing. But he will largely ignore the philosophic foundations of the American system. He tends to ignore the great ethical laws as they apply immediately to his work. The truth is that he is preoccupied chiefly with gain, coasting on the spiritual momentum of the past, divorced from our sources of inspiration. He is the leading citizen of a largely hedonistic nation propelled by meaningless drives toward materialistic and frequently meaningless goals.

Clearly no institution will survive if it is dedicated only to self-preservation. A business has a goal beyond simple success. It is not a biological organism whose survival is a virtue in itself. Rather, it is a man-created institution, an integral part of our culture, and as such must make a contribution of service to society (as well as a profit for itself) if it hopes to survive. It cannot do this out of a focus on self gain or pride.

Why do I single out the American businessman for indictment, when he is probably no more materialistic than any of the rest of us? I do so because of the responsibility he bears, because his role in American society is so great. Ours is an industrial society, and the customs and morals and attitudes of businessmen pervade our whole life. Virtually all of us in America have adopted in some degree the pragmatic ethical standards of our business society; and to that degree we have abandoned our ethical and religious traditions.

THE AMERICAN TRAGEDY

Our American tragedy is that we fail to see the signs of our decay. But the signs are apparent in the vulgar ostentation all around us, in the sexual laxity revealed by the Kinsey studies, in the demoralization of American captives in the Korean war, in the widespread defiance of law. The signs are apparent in our general tolleration of wrongdoing, which is itself an evil and corrupting force.

Curiously, this breakdown of moral discipline has occurred when institutionalized religion is flourishing as never before. But even religion in America now tends to be superficial. For many laymen it consists of writing an occasional check and sporadic attendance at church or synagogue, rather than in personal commitment. There is a dearth of saints, and many ministers themselves are

unduly concerned with security in this world. While the percentage of truly dedicated pastors may be no smaller than in previous generations, today they suffer a special disability—a failure to communicate with the members of their flocks.

Human history is studded with the ruins of empires that came to a similar pass. Nations have been wrecked because they lacked an overriding moral goal to which individuals could commit themselves. History shows us that when we become success-dominated, we lose sight of our real reasons for living.

In its youth, America was ideal dominated. Both individual citizens and the country as a whole had an impelling motive in life that was not limited to industrial, political, or economic growth. The men who gathered in 1787 could muster all their intellectual energies to formulate the national charter, overcome differences of background and interest—all because these men were laboring for a larger goal.

An equally vital role awaiting the American businessman today will be suggested at the end of this article. Time and again in American history the businessman has transcended his industrial role and become the buttress not only of Government but of the public welfare. Today's crisis demands of him leadership in still another dimension—one where he has thus far conspicuously failed.

THE BOY IN THE DITCH

A young executive rapidly moving up the financial ladder unequivocally stated in private conversation with me: "It is impossible to conduct business in the United States today without breaking the law."

If the statement is exaggerated, it nevertheless retains distressing validity for one like myself who was educated in New York City and has resided there over half a century. A considerable portion of my time has been spent with men engaged in a great variety of businesses, who keep an equal variety of balance sheets.

The most casual observer is aware of the transgressions that go on daily in the American business community. He hears of tax returns that are outright perjury; he hears of purchasing agents who are taking bribes from suppliers, of businessmen offering bribes for false testimony or for police protection of some dubious enterprise. He reads of industries attempting to suborn State legislators for favorable legislation. He reads of businessmen bestowing favors on government officials to win special privileges. Even in my ivory tower on Morningside Heights, I have been urged by businessmen to accept a gift for the theological seminary in return for admitting a student—and have been threatened by withdrawal of contributions to the school if I failed to do so.

We hear of businessmen using wiretaps to obtain information about their competitors, of management acting in collusion with racketeers, of men using prostitution to promote the sale of their goods. We hear of businessmen violating the most elementary requirements of city building codes and profiting from rat-infested tenements. We hear of financiers deliberately lying about their operations and the financial condition of their companies to mislead investors so that insiders can make killings in stock.

There are less overt practices in the business community that may appear to be only on the borderline of unethical behavior: for example, concealing the true price of goods behind time-payment schemes that are actually usurious; employing advertising that is actually a flagrant misrepresentation of a product's worth. These and other clever dodges are accepted by many as normal phases of competition.

I would not deny that competition is the basis of our free enterprise and of our industrial success. Competition surely induces better efforts and greater production. But to compete in ways that are designed to destroy someone else is very different from competing in terms of doing better than your rival. Years ago in Lithuania, Rabbi Israel Salanter found two boys quarreling over which was the taller. One forced the other to stand in a ditch to settle the argument. Seeing this, Rabbi Israel sadly commented, "Isn't this characteristic of the world where to prove his superiority man must prove others inferior? After all, the same purpose could have been achieved by standing on a chair."

When two companies are each trying to produce superior values, one may well be more successful than the other, and deservedly earn greater profits. But to seek a crippling advantage over another company is hardly fair competition and is certainly miserable ethics.

It seems to me that a management which is worthy of success is very different from a management which just wants success. One management conducts its affairs in the spirit of contribution, the other in the spirit of selfishness. Contributions to the general good have of course been made by men seeking only their own advantage, but selfishness cannot be made a principle of life and in our time might easily be fatal. Management worthy of success remembers that the true justification for profit is an incentive to serve the community. Success is paid to business by the community for the services it renders. In this sense, profits must clearly be an earned increment.

THE PRACTICAL VALUE OF ETHICS

This reasoning can certainly be understood if stated in terms of the individual. We understand the meaning and value to the individual of a good reputation. Every businessman knows that his reputation for integrity is one of his major assets. Certainly, a man's progress in a corporation depends in large measure on the reputation he earns through his daily behavior. It is immensely difficult to falsify such a reputation over any extended period of time. We are soon known by those around us for who we are rather than what we would like others to think about us. This is a man's character in the profoundest sense of the word.

I was interested to hear a major executive point out that the criteria he uses for selecting employees run in this order: character, intelligence, experience. "A really bright executive picks up experience very quickly," he told me. "But the man we need and want most, in important places, is a man with character sufficient to resist many kinds of pressures when the going gets rough. We find, then, that character is the most important ingredient of all, particularly if the man is to be responsible for policymaking. An executive can buy brains and can buy experience, but character is something he must supply himself."

And what is a man's character but his personal moral dimension, the goals he sets for himself, his sense of honesty and of responsibility, his relations with others? This does not mean, however, that the value of character derives from its contribution to success.

Unquestionably, ethics have a practical value, inseparable from their ultimate one: the creation of better men and women. Rivalry for goodness should, in the long run, make for pragmatic gain. But it is not enough for the individual or the corporation merely to mean well. Men as individuals and as corporations must make an effort to understand what they are doing, and why they are doing it.

The first step in the ethical life is self-criticism. As the Talmud puts it, "Cleanse yourselves, and then cleanse others." Ethics is a branch of thought starting with self-discipline. Discipline, whether among children or adults, whether self-imposed or external, is not popular in America today. And a welter of codes—in companies, in industries, in combines of industries, in labor—do not meet the situation.

Before anyone can think creatively about the moral life, he must feel in his bones a few principles that are part of any civilized ethic, without which civilization would be meaningless. I wish I could say with hope of being understood that of these the most important is awareness of God and love for Him. But as those words tend to become cliches, I say instead that we have to feel the wonder and significance of life and its unique opportunity for achievement. Each of us has only one life on earth. When that life is used unwisely, the loss is irreparable for oneself and for one's fellows.

A businessman who understands these truths will develop an almost automatic pattern of behavior. Certain ancient rules apply with equal force to Jew and Christian, atheist and agnostic, to all men in all situations. These immutable laws are expressed in various ways. The Pentateuch reveals the Decalog and the Golden Rule of Leviticus 19: 18: "Thou shalt love thy neighbor as thyself," which the Gospels restate in Matthew 7: 12: "All things whatsoever ye would that men should do to you, do ye even so to them." Similar commandments are promulgated in the literature of the other great traditions of East and West.

Yet these and other binding commandments are often violated in the American business community. A man fears he may be risking his business if he obeys them, forgetting, however, that if he violates them he risks the world.

Business leaders who generously advised me in the preparation of this article said, "The majority of the American business community are not evil men, and want to do right. Let us say we admit the indictment and accept our responsibility—what can we do?"

To begin with, a businessman can develop an awareness that every decision of his life involves moral considerations. He can help develop this sensitivity in employees and associates, through example, through discussing with them the moral implications of company actions, through constant reminders that he has values in life above profit or economic security.

There are some corporations which insist that their executives assume responsibility for civic and community improvement. But the businessman can go further. In his training school for management he can introduce students of ethics, as well as management experts and psychologists, to consider the responsibilities of the business executive. He can overcome his anti-intellectualism. He can try to gain knowledge that will clarify the problems of wise decisionmaking.

WITHOUT MORALIZING

The businessman must realize that the inculcation of moral sensitivity starts in early childhood and continues throughout life. American society has achieved this kind of indoctrination in other fields. To take two familiar examples: virtually every American child is brought up with a concern for personal hygiene; virtually every female child is indoctrinated with the need to be as physically attractive as possible. Our culture is probably unique in the emphasis it places on these two patterns of education.

The businessman can, without moralizing (which would be deadening and self-defeating), transform his home into a school for moral responsibility. Avoiding precept, the businessman can make even his conversation at table serve the vital end of character education for himself, his wife, his children, and his guests. The stories he tells, the gestures he makes, the conversation he

chooses and avoids, can all show that he has at least some notion of what life, America, and freedom are about. Without being in the slightest degree priggist, and eventually without self-consciousness, he may help his family and friends obtain insight into the ethical life.

The American businessman, then, should literally place ethics on the agenda—for himself at home and in the office, for his company and trade association:

His calendar should include regular meetings of management to discuss the moral dimensions in his specific business. One firm that instituted such meetings finds it continually gains valuable insights into new relationships with the many other organizations with which it does business.

He should seek expert advice on ethics. Existing resources in the field will gladly be made available to him.

He should put moral health on the same level as mental and physical health, indeed above them. This means he should read literature dealing with ethics; devote time to the study of ethics, alone and with colleagues and scholars; work for the establishment of research in ethics, as he has worked magnificiently for the development of research in science and technology.

THE BEGINNING OF WISDOM

Whatever else may or may not be involved in the application of such principles, it will demand direction of effort—not merely doing what one happens to like at a given moment and following the easy path of self-indulgence. Wisdom begins with sacrifice of immediate pleasures for long-range purposes. There is a widespread view that belief in God and personal immortality leads to this discipline. The fact, however, is that the discipline itself is also indispensable to real belief in God and human immortality. That is why the role of the businessman in American ethics is no less crucial than that of the religious leader or scholar.

Today's crisis demands the businessman's leadership in the area of human behavior. The kind of criticism with which enlightened businessmen could confront philosophers and theologians could be a challenge. Then superficiality in religion would cease to be fashionable, and laymen would soon detect its shallowness. Morally sensitive and informed businessmen can compel American philosophy and religion to focus on the basic problems troubling mankind.

We Americans will then no longer warrant William James' description of us as worshipers of "the bitch goddess, Success." Our best young minds would strive for genuine, rather than apparent, achievement. If we can overcome the tendency to measure intellectual productivity by quantity rather than quality, America might produce works and insights into the ethical realm comparable to the eternal creations that have emerged from other civilizations. Without such creations, rallying the spiritual energies of all men, America and the free world will not endure.

ONE MODEST STEP

Civilization needs men and women whose every act and decision will bear the stamp of responsibility. The world cannot long survive, at least in freedom, if decisions are made irresponsibly—that is, without disciplined consideration of individual and general consequences. At the present moment, this may seem almost impossible to achieve. Yet without many dedicated men and women exercising disciplined consideration of each of their actions, none of the great philosophic or religious traditions could have survived.

Modest steps to focus different types of experience on the complex issues of our day have been taken in various ways, one of which is the work of a group of scholars who drew together in 1939 in New York. The group includes physical scientists, social scientists, philosophers, and theologians of different faiths, who were stirred by the apparition of nazism but recognized it as a symptom of a chronic disease of our time rather than the disease itself. They hoped they could clarify today's moral problems. Once a year, sometimes once in 2 years, these scholars have met. Some participants are frankly agnostic, some atheistic, others devout. For a long time their discussions were at cross-purposes. There were frequent outbursts when varied types of mind and experience confronted one another. Gradually, they arrived at an astoundingly simple conclusion: the problem of their concern may be summed up in a single word—"responsibility."

This conference of scholars is hopeful of establishing nothing less than a World Academy of Ethics and an Institute for Practical Ethics for Everyday Living, drawing on the wisdom not only of Christianity and Judaism but of Islam, Buddhism, Confusianism, and other traditions. The scholars need the help and participation of businessmen.

Does all of this sound as though the American businessman had to take on new burdens, and rush even more prematurely to his grave? On the contrary, one of man's primary duties to himself, his family, the community, and to God is preservation of his life on earth, so that he can realize his potentialities for good. The businessman who will take time to contemplate and to ponder the ethical dimension of life will discover new realms in which he can develop his talents, freeing himself from the bondage to private gain that menaces the maturing business executive. Clearly understanding the principles of a meaningful life, he will share them with his family, especially with his wife. He will accept philosophically the occasional defeats and frustrations of his business career. He will carry his burdens serenely and thus preserve his own life, as well as that of the community.

A POTENTIAL MOSES?

Before he decides that the moral discipline required to build a better society is too arduous for him and that he is too busy to master a new dialect of thought, before he flees his responsibility, he might do well to ponder the story of Moses in the third chapter of Exodus.

The father of prophecy was heavy of tongue. He, too, preferred the ease of Midian and the pleasures of shepherd life to the burdens imposed by the leadership of men. He could not believe that the task presented to him could not be done by another. For a moment he doubted that it could ever be accomplished. But sometimes, because of unique combinations of circumstances surrounding him, an individual is indispensable for a specific role in history. Whether or not he wished it, Moses was one of the great spiritual leaders of mankind. He could neglect his duty, but he could not assign it to anyone else.

To rise to his full stature, the American businessman—who at his best embodies many of the prophetic virtues—must also shoulder a unique burden of responsibility. The fate of the world hangs on his decisions, for above all the world needs ethical leadership from those it respects as supremely practical.

The words spoken by Moses to his contemporaries more than 3,000 years ago apply literally to us in this latter day: "See, I have set before thee this day life and good, and death and evil." If the American businessman can bring himself to choose life and good, he can save not only our own but future generations. Surely he will heed the ancient Prophet's plea. "Therefore, choose life, that thou mayest live, thou and they seed."

Hail Columbian Lawyers

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. SANTANGELO. Mr. Speaker, yesterday, January 21, 1958, was a historic day in the annals of the legal profession of New York. Fifty-three members of the Columbian Lawyers Association were admitted to the U.S. Supreme Court. Two of them were women.

The Columbian Lawyers Association is a young bar association operating in the first judicial department of the State of New York. Its membership consists of more than 500 lawyers and is composed of lawyers of Italian origin who practice principally in the city of New York. Many of them are leaders in their respective communities. They are guardians of our traditions and the architects of our future.

This organization has among its aims the maintenance of a high standard of conduct for the legal profession and the selection of capable and learned judges to serve in our courts. They believe that in order to realize the American goal of equal justice before the law, lawyers must be skilled advocates with high standards of conduct and justices of courts must be learned and experienced.

I had the high honor and privilege of sponsoring 28 of these members for admission to the U.S. Supreme Court. My former associate in the New York County district attorney's office, now a justice of the domestic relations court, Louis A. Pagnucco, sponsored the admission of the other 25 Columbian members.

I was not surprised to note that Judge Louis Pagnucco, who guided and coached me when I was a fledgling assistant district attorney in the office of Frank Hogan, still befriends and guides other attorneys in their aspirations and endeavors. It was a pleasure for me once again to be with my dear friend, Judge Pagnucco, who was one of the greatest assistant district attorneys in the homicide bureau during the administration of District Attorneys Thomas E. Dewey and Frank S. Hogan. Judge Pagnucco, who possesses a doctorate of laws, is not only a brilliant lawyer and judge but also has the unusual talent of speaking seven languages fluently.

This journey to Washington was the realization of a dream of Thomas Cartelli, the first president of the Columbian Lawyers Association. Much planning and work was done to transport 53 active lawyers to Washington from the city of New York to house them and to prepare a program. Great credit goes to Mr. Cartelli and Sylvester Cosentino, the second president of this vigorous bar association.

Prior to being sworn in by Chief Justice Earl Warren, this bar group had the distinct privilege of meeting with As-

sociate Justice Tom C. Clark at a private hearing. Justice Clark renewed old acquaintances with some of the candidates. One of them, Arthur R. Martoccia, served as a U.S. assistant when Justice Clark was U.S. attorney.

Justice Clark addressed the candidates and enlightened them as to the workings and practices of the members of the court in arriving at a determination of an appeal before the highest court. As a consequence, the Columbian group can understand events which would otherwise have been mysteries.

One newly admitted member of the group was August Massa, who despite his complete blindness, is an active and successful barrister. Mr. Massa was a classmate of Justice William Douglas at Columbia Law School in the early twenties. It was a thrill to see Justice Douglas greet his blind classmate. They had not met each other in over 30 years.

My colleagues, JOHN J. ROONEY, Democratic Representative, of New York, and ROBERT W. HEMPHILL, Democrat, of South Carolina, were present at the Supreme Court to witness this historic occasion and to lend their moral support.

After the admission to the Supreme Court, the Columbian lawyers had luncheon at the Congressional Hotel. Several Members of Congress attended the luncheon. Representative VICTOR L. ANFUSO, of Brooklyn; PAUL A. FINO, of the Bronx; JOHN J. ROONEY, of Brooklyn; JOHN DENT, of Pennsylvania; GEORGE P. MILLER, of California; ROLAND LIBONATI, of Chicago; ROBERT GIAIMO, of Connecticut; and I, ALFRED SANTANGELO, addressed the group pointing out the significance of their membership in the U.S. Supreme Court and the pride that we felt in this legal demonstration. Senator JOHN O. PASTORE, of Rhode Island, sent greetings.

On the evening prior to their swearing in, Mr. Gaspar Morell, a successful Washington builder, formerly of New York, held a reception for the Columbian lawyers at his beautiful home on Kalorama Road on Embassy Row. His Excellency, Manlio Brosio, the Italian Ambassador, was an honored guest. He was accompanied by Dr. Paolo Savina, labor counselor of the Italian Embassy. Also greeting the lawyers was Commissioner Joseph Minetti. I cannot express fully the appreciation I and the Columbian lawyers feel for the hospitality of Mr. Gaspar Morell and his lovely wife, Anita Morell.

The roll of the newly admitted members to the Supreme Court is as follows: Andrew A. Adinolfi, Italo Henry Ablondi, Pasquale J. Amico, Anthony J. Cannistraci, Joseph Captain, Vito A. Cardo, Thomas Cartelli, Vincent S. Conti, John Copertino, Sylvester Cosentino, Gennaro L. Crispino, Joseph F. Cuccia, Mario J. Cusati, Alexander A. Delle Cese, Leonard P. DeNatale, Joseph F. Periconi, Vincent John deRosa, Vincent J. DiStefano, Anthony J. Edwards, Angelo C. Ninivaggio, Adolph C. Orlando, Edward Papantonio, Christopher L. Ribaudo, Henry D. Sforza, Frank C. Termini, Joseph J. Verdicchio, Miss Theresa E. DiCrocco, Lawrence N. Fariello, Miss Josephine Ferro, Joseph F. Fichera, Joseph W. Genzardi, Joseph N. Giamboi, Vincent A. Giaquinto, Michael A. Greco, Philip A. Greco, Nicholas P. Iannuzzi, Michael W. LaPenna, Salvatore A. Locurto, Richard D. Magro, Arthur R. Martoccia, Augustine F. Massa, Michael F. Mazzola, Anthony J. Mercorella, Mario Merola, Alexander Minella, Ferdinand J. Mondello, Richard J. Nardi, Louis C. Palella, Lino J. Pietrantoni, Joseph A. Robustelli, Thomas A. Signorelli, Vincent J. Velella, Frank J. Zeccola, and Ray V. Manfredi.

The president of the organization is Ferdinand J. Mondello.

Now that these lawyers have returned home to New York, leaving Washington richer because of their visit, I say to them, "Congratulations and Hail Columbia."

The Bipartisan Seminar

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. WOLF. Mr. Speaker, a new institution began this year on Capitol Hill and I, for one, hope that it will grow and become a part of the permanent orientation process for new Congressmen. The purpose of this institution, which is called the Bipartisan Seminar, is to encourage the confidence of new Members by broadening their understanding of the legislative process. The meetings, held at the Coolidge Auditorium of the Library of Congress, were exciting and informative. Answers were given to perplexing problems which many times vex, annoy, and frustrate the freshman Congressman. Insight was given to us from our senior colleagues on the workings and the meanings of the rules by our beloved parliamentarian, Lewis Deschler; the problems of committee work for junior Congressmen by worthy and distinguished alumni of this body, Senator Engle, of California, and Senator Keating, of New York; the House as a changing institution was brilliantly analyzed and discussed by Senator McCarthy, of Minnesota, Senator Scott, of Pennsylvania, and George Galloway, of the Library of Congress. Particularly informative was the discussion by Congressman Baldwin, of California, Congressman Coffin, of Maine, Congressman Frelinghuysen, of New Jersey, and Congressman Udall, of Arizona. Participating in the opening session was the chief of the Washington Bureau of the New York Times, James Reston.

From this list of impressive and brilliant people one is quickly able to ascertain the importance of these meetings. I commend these gentlemen and I thank the bipartisan sponsoring committee: JOHN F. BALDWIN, Republican, of California; FRANK M. COFFIN, Democrat, of Maine; CARL ELLIOTT, Democrat, of Alabama; GERALD R. FORD, JR., Republican, of Michigan; PETER FRELINGHUYSEN, JR., Republican, of New Jersey; JAMES G. FULTON, Republican, of Pennsylvania; MELVIN PRICE, Democrat, of Illinois; and STEWART L. UDALL, Democrat, of Arizona.

I also thank the distinguished foreign policy expert, Dr. Jay Cerf, of the Foreign Policy Clearing House; the distinguished political scientist William Gibbons, formerly associate director of the American Political Science Association and now director of the Foreign Policy Index; and Dr. Paul David, of the Brookings Institution. Mr. Speaker, I thank these men and the organizations they represent for helping to make this seminar a success.

Simple Justice—House Joint Resolution 20, by Representative Philbin

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. LANE. Mr. Speaker, I am pleased to bring to the attention of the House an editorial appearing on the front page of today's issue of the National Tribune-Stars and Stripes, renowned weekly newspaper devoted to the interest of veterans of all wars, which endorses legislation being sponsored by our valued colleague and my good friend, the Honorable PHILIP J. PHILBIN.

This measure is House Joint Resolution 20, which designates and defines veterans pensions as partial repayment of a debt owed by a grateful nation to its fighting men. The National Tribune-Stars and Stripes, which has raised its voice so effectively time and time again in the veteran's cause down through the years, signals the need for spelling out into law that our veterans are entitled to pensions, not simply as gratuities but as a matter of right.

Congressman PHILBIN has gained an enviable reputation as the devoted friend of the veteran. In this bill, once again he has shown his warm and humane, and ever active, interest in the needs and problems of the veteran and his dependents.

I am happy to join the National Tribune-Stars and Stripes in its endorsement of House Joint Resolution 20 and ask that the text of today's editorial be printed in the CONGRESSIONAL RECORD.

The material follows:

PENSIONS ARE A RIGHT

In reading through the bills introduced in the early days of the 86th Congress relating to veterans and their dependents we ran across one particular bill with which the National Tribune-the Stars and Stripes is in complete agreement. The proposed measure is a short one but its language is clear as crystal.

It was introduced by Representative PHILIP J. PHILBIN, of Massachusetts, and is known as House Joint Resolution 20 and the text of the resolution follows:

"That all monetary benefits awarded veterans of the wars of the United States,

and/or their dependents, by the Congress of the United States, on account of physical or mental disabilities incurred by said veterans in defense of their country, are hereby declared to be, both in law and in fact, a partial repayment of a debt owed by the Nation to such veterans and/or dependents.

"That the common-law doctrine holding such awards to be, as a matter of law, a gratuity, is hereby abrogated and annulled."

The bill in question speaks of physical or mental disabilities incurred by veterans in defense of their country. Even the most biased antiveteran group will agree with this.

But we would go a step farther and include the payment of pensions to aged and physically disabled veterans as a right earned honorably by reason of their service in time of war.

In the past we have traced the history of pension payments to war veterans from the time of Solon to the present day, and we have always found that a grateful country was quite willing to care for its old war veterans as a recompense for their service when their country needed them.

We say this down to the present day, but this is not correct for the past 20 years there has been raised a great outburst at the possible costs of pensions to needy war veterans. The opponents of pensions have cited astronomical figures as to this cost but when these figures are analyzed it will be found that they have little or no foundation of fact.

With our curious mind we looked up the definition of pensions in Webster's Unabridged Dictionary and find the following:

Pension: A stated allowance or stipend made in consideration of past services, specially a regular stipend paid by Government to retired public officers, disabled soldiers, the families of soldiers killed in service, etc.

Another definition of the word pension is something paid to one by way of subsidy or allowance whether as a means of securing goodwill, cooperation, or the like, or as a gratuity at to royal favorites or to men of eminence in art, literature, or science.

The definition as furnished by our authority is quite interesting. It speaks of a pension as something paid * * * to disabled soldiers, the families of soldiers killed in battle, etc.

It then goes on to speak of another type of pension which it calls "something paid to one by way of subsidy or allowance whether as a means of securing goodwill, cooperation, or the like, or as a gratuity, as to royal favorites or to men of eminence in art, literature, or science."

Now this second definition speaks of payment as some sort of gratuity, quite distinguished from the first definition.

Surely it cannot be said that the payment of a just pension to aged and disabled war veterans is a means of securing good will, cooperation or the like or as a gratuity to royal favorites. As a matter of fact, a check of the situation would indicate that if there exists such a thing as royal favorites in the United States of America, they cannot be counted in the ranks of the aged and needy veterans. The truth is that the very highest authorities in the land are opposed to granting pensions to such veterans.

This brings us down to January 14 when we were privileged to attend a dinner tendered by the National Legislative Commission of the American Legion to Members of Congress. Only one speech was made after the introduction of distinguished guests and that was made by Preston J. Moore, national commander of the Legion. We can truthfully say that our heart was warmed by his expressions on the policy of the Legion as it relates to war veterans.

After welcoming the distinguished visitors National Commander Moore gave the Legion's stand on national defense. Commander Moore went on to say:

"Building America's military, economic and moral strength for peace is our first obligation. To recognize this is not to deny the American Legion's historic and continuing responsibility to disabled veterans, their dependents and survivors.

"Nowhere are the needs of these Americans more completely understood than in the Congress of the United States. Nowhere is their entitlement to essential help more readily appreciated than in the Congress.

"You have built a sound structure of veteran benefits in response to the expressed will of a grateful people. In the veteran's hour of need you have extended America's heart and hand to him who served our Nation in its greatest hour of need. You have accomplished these things while advancing the best interests of our country.

"This service to America and its veterans requires and reflects a kind of statesmanship that merits the applause and appreciation of every citizen. We in the American Legion are especially grateful that you have given to our Nation's veterans and their loved ones your greatest understanding, wisdom, and leadership. As long as they are the beneficiaries of such responsible representation in the Congress we never need to fear for their future.

"America's future as a land of freedom and opportunity can be secured if we rely upon guided principles instead of guided missiles. We can safeguard and transmit to posterity the principles of justice, freedom, and democracy if we have faith in God, in ourselves, and in you who lead us."

As we have said, it was heartwarming to hear the leader of such a powerful veteran organization as the American Legion state in clear language the knowledge and understanding of the needs of our veterans and that his organization would not stand idly by if the veterans' cause was threatened from any source.

We are quite sure that all right-thinking men will agree that the veteran in need, who served his country in time of war, sometimes against his own desires but always with honor, is deserving of the Nation's gratitude when the time comes that he is no longer able to care for himself. If Webster's definition of pensions can be accepted then pensions become a right and not a gratuity as some sophists would have us believe.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. WEAVER. Mr. Speaker, the legislature of the State of Nebraska has recently adopted unanimously a resolution memorializing Congress to enact a statehood for Hawaii bill. For the information of my colleagues, I wish to enclose that resolution, which follows:

Whereas the Territory of Hawaii is vital to the defense of the United States; and

Whereas said Territory has greatly contributed to the economic and cultural life of the United States; and

Whereas the people of said Territory have demonstrated their maturity, responsibility, and willingness to accept in full, and ability to discharge, the responsibilities that accompany citizenship in one of the States of the United States; and

Whereas not only principles of fairness, but also considerations of mutual benefit to said Territory and the States of the United States demand that said Territory be granted immediate statehood: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 69th session assembled—1. That the Members of Congress are hereby memorialized to grant immediate statehood to the Territory of Hawaii.

2. That copies of this resolution be transmitted by the clerk of the legislature to the Vice President of the United States as President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, to each Member from Nebraska in the Senate of the United States and in the House of Representatives of the United States.

DWIGHT W. BURNEY,
President of the Legislature.

Stop the Use of U.S. Mail To Spread Hatred

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. ANFUSO. Mr. Speaker, on January 7, the opening day of the 86th Congress, I introduced a bill calling for the most severe penalties for anyone bombing or attempting to bomb a house of worship, a school, or other public building. Closely associated with the recent wave of bomb terrorism is the dissemination of hate material through the U.S. mails which is a major factor in stirring up race hatred and inciting acts of lawlessness.

I am, therefore, now introducing two more bills which are intended as companion measures to my earlier bill to outlaw bombings. One of these measures seeks to amend title 18 of the United States Code to prohibit the transmission through the mails of communications which are intended to incite hatred on account of race, creed, color, religion, or national origin. A fine of $1,000 or imprisonment of not more than 1 year, or both, is prescribed in this bill for anyone who knowingly uses the U.S. mails for delivery of cards, pamphlets, circulars, books, or other matter wihch is regarded as nonmailable under this act.

The other bill is very similar in language, except that it prescribes that material which is intended to incite racial or religious hostility shall not be conveyed in the mails, and shall be withdrawn from the mails under such regulations as the Postmaster General shall prescribe. In other words, this bill is intended to give the Postmaster General the authority to withdraw such matter from the mails or refuse to convey it, while the first bill makes it unlawful to mail such matter and prescribes a fine.

Mr. Speaker, I wish to make it clear that my bills are not intended to hurt basic American freedoms, especially freedom of the press and freedom of expression. They are intended primarily and solely to strike against the peddlers of racial and religious hatred, the crackpots and the lunatic fringe who are

spreading poison against various segments of our people, without realizing how they themselves by their own vicious tactics are undermining American democracy, our way of life, our free institutions, and our religious faiths which are the strongest bulwarks and the most powerful influence in the struggle against communism.

The purpose of these hate sheets which are flooding the country is only to foment trouble and to arouse hatred of Negroes, Jews, Catholics, foreigners, and others. We live in a crucial era when unity of the American people is the crying need of the hour in order to be able to cope with a godless enemy who seeks to destroy us. At such a tragic period in human history, these irresponsible rabble rousers are playing right into the hands of the Communists by spreading dissension, mistrust, and hatred in our own ranks.

Our laws forbid the distribution of seditious literature through the mails because it is treasonous. They forbid the dissemination of pornographic literature because it corrupts our youth and incites them to criminal acts. What can be more treasonous or criminal than this hate material which is equally destructive of everything that America stands for? Pitting race against race, inciting one segment of our people against another, is no less seditious because it serves only the interests of America's enemies.

Mr. Speaker, it is high time to put a stop to the deliberate use of the U.S. mails for spreading race hatred and to use it as a medium for hate propaganda. This is not what the mails are intended for. The demagogs and hatemongers are exploiting a major medium of communication to serve their own sinister purposes. Postal authorities report that in recent years the volume of hate material going through the mails has increased substantially, but under existing laws they are powerless to prevent the distribution of this material through the mails.

It is for this reason that I am introducing my bills. I believe that this problem can and should be dealt with through legislation. I urge the Congress to give these measures early consideration.

Protest on Federal Tax on Motor Fuels

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication I received from representatives of member organizations of the Connecticut Highway Conference:

Representatives of member organizations of the Connecticut Highway Users Conference, present and voting at meeting today in Hartford, went on record unanimously as strongly protesting President's proposal for further increase of 1½ cents per gallon in Federal tax on motor fuels and/or any increase in any of the Federal automotive excise taxes.

They adopted a resolution stating "The highway user is already carrying an excessive burden on taxation, at both Federal and State levels, and has borne the entire cost of the Federal trust fund since it was established in 1956."

Connecticut motor vehicle owners now paying grand total of $51.8 million a year in special Federal taxes levied upon them, including $23 million in present Federal tax on motor fuels alone. This in addition to State gasoline taxes and licensing fees and all the general taxes, Federal and State, that everyone pays.

Proposed increase in Federal gasoline tax would add more than $11 million annually to Connecticut motor vehicle owners' taxes.

The Neglected Coal Industry

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MOORE. Mr. Speaker, the editorial which follows is, I think, pertinent to our situation in West Virginia, as it relates to the depressed condition of our coal industry.

I submit this in the hope that it will continue to call attention to a situation which has thoughtful residents of our State involved in consideration of the basic problem of how to survive in an economy based largely on the coal industry.

The article I submit is from the Charleston Daily Mail of January 19. It was written by Mr. John D. Maurice, the able editor of the newspaper, and whose views command wide respect in my State.

FOR SAGGING PEANUTS SOME PROMPT RELIEF—FOR AILING COAL THE BACK OF THE HAND

When the price of peanuts begins to sag, something happens in Washington. The farm bloc goes into action, and something is done to spare the peanut farmer the severest consequences of overproduction in peanuts. Much the same is true of wheat, cotton, and corn.

If Wisconsin's dairy farmers can't sell all the cheese they can make—and they make plenty—the Government takes action. It doesn't necessarily make good sense, but the Wisconsin dairy farmer is not left alone to subsist on his miscalculations.

When the Bolivian economy begins to fall apart, thanks to expropriation of the tin mines, Washington takes notice. In the interests of solidarity and to shore up the Bolivian economy, the Federal Government is spending millions of dollars on and in Bolivia.

In all the free world, in fact, it would be hard to find a place where the American Government is not dedicated, for one reason or another, to relieving or countering the normal and often harsh application of strict economic law. Among the world's underprivileged nations, there is scarcely a one which has not appealed to Washington and received there some ointment for its economic bruises.

Indeed, it is now economic doctrine in the Nation's foreign policy, supported by both parties, that it is the inescapable mission of the United States to assist to the limit of its abilities in raising the living standards of the whole world. The only remaining question is not whether or no, but how much.

Let the coal business hit the skids, however, let the coal miner go on relief, and what happens? The answer is very nearly nothing.

Washington sends polite word that what West Virginia needs is new industry and ought to set about getting some. As advice this is excellent. But it does not go unnoticed that only a short time ago Secretary Dulles offered to build the Aswan Dam for the Egyptians and would have done it, too, if Nasser had not overplayed his hand.

It leads to a question which may be stated something like this:

Why is it that Washington will consider almost any answer, including some palpably foolish and even ruinous ones, as an answer to the farm problem, and fairily dismiss the coal problem as something of no concern?

Or, why is it that Washington will program almost any form of technical assistance and outright subsidy, so long as it is headed overseas, and wash its hands of the depressed coal miner?

What is the difference?

The answer, we suggest, lies almost wholly in the kind of voice and appearance West Virginia makes in the Nation's Capital. For reasons which lie deep in the State's political history what happens to West Virginia counts considerably less in the determination of national economic policy than what happens in Wisconsin or Bolivia.

When the farm economy sags, the farm bloc goes into action. Something must be done to see that the farmer receives for what he has to sell a price commensurable with the price of what he has to buy.

When the Bolivian economy goes into a tailspin, the State Department takes notice. If at all possible, Bolivia must be propped up.

But when the coal business goes into a prolonged decline, throwing thousands of families on permanent relief, West Virginia cannot even get the audience normally extended as a matter of diplomatic courtesy to the bandit chieftain of some hostile tribe.

Address by Stanislaw R. J. Suchecki

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I wish to include the text of an address delivered in the Lowell Auditorium, Lowell, Mass., by Stanislaw R. J. Suchecki, national director, Polish American Congress, and president of the eastern Massachusetts division, at the ceremonies commemorating the 350th anniversary of the arrival of the first Polish settlers in Jamestown, Va., on October 1, 1608. These ceremonies were held on October 19, 1958. The address follows:

The Polish nation from its earliest beginnings, about 965, has been linked very closely with the Western World and its culture and civilization. By the earliest part of the 16th century, Polish culture was representative of the best of the European renaissance. This was the heritage which gave the world

such notable figures as General Kosciuszko, Count Pulaski, Henryk Sienkiewicz, Joseph Conrad, Chopin, Paderewski, and Madame Maria Sklodowska Curie.

Recently when restrictions were eased in Poland, the people again turned to the West to renew their old bonds of friendship. For centuries, the West, and particularly the United States of America, have been a symbol of the freedom the Poles cherish so deeply. In fact, fully 12 years before the Mayflower came to Plymouth, the first Poles, attracted by these same ideals, landed on American soil in Jamestown, Va., on October 1, 1608.

The Poles are credited by historians with:

1. Helping save the first English settlement in America from total failure.

2. Building the first industry in the New World.

3. Saving the life of the colony's first president, Capt. John Smith.

4. Calling the first strike in America. This they won. But it should be noted that the strike was called to gain their right to vote in the new settlement along with the Englishmen, and not for economic gain. The first strike in America—not for higher wages but for civil liberties.

5. Manufacturing of the first export goods in America. Within 2 months of the arrival of the Poles in Jamestown, an English ship returned to England carrying the first export of manufactured goods, soap ashes, tar, pitch, green glass bottles, and vases.

All this and far more about the contributions of Polish craftsmen and workers are to be found in the dusty annals of American history, hidden far too long.

In reviewing the glorious history of the Americans of Polish descent in our Nation, let us not forget Poland today. If Kosciusko and Pulaski were alive today, they would say: "Fight for the freedom of Poland. Do everything in your power to bring justice to Poland, because Poland is now the test case of freedom, as was your nation in 1776." Let us all repeat in our hearts the opening words of the Polish national anthem, "Poland is not lost, ere we live." "Jeszcze Polska nie zginela, poki my zyjemy."

Let us forever cling to our great traditions of freedom and never cease to fight for the freedom of Poland.

Today, when totalitarian tyranny from the East has again overwhelmed Poland and threatens the peace and security of the entire world, this spirit, the unconquerable spirit of men like Count Pulaski, whose anniversary we celebrated only last week, not only inspires the resistance movement of his fellow countrymen, but serves as a reminder to all mankind that there can be no compromise with evil.

If freedom fails in Poland, it will fail in all of Europe. Let us remember the great heritage of those who went before us so that it may guide us in our determination to defend the dignity of man everywhere as a creature of God.

Hon. George H. Christopher

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an article by Dr. George S. Reuter, Jr., Holden, Mo., containing an editorial from the Pleasant Hill Times, Pleasant Hill, Mo., relating to Congressman CHRISTOPHER:

HOME SWEET HOME

(By Dr. George S. Reuter, Jr.)

Miss Martha F. Redford recently wrote "Holden, 1858–1958, Town of the Prairie." It is a very fine book, but only those who have lived in the community will appreciate it completely. If anything, the community has become sweeter with the passing of the years. Many of the residents have followed the "Discipleship Pledge":

"I will live my life under God for others rather than for myself; for the advancement of the kingdom of God rather than for my personal success.

"I will do my utmost by prayer, investigation, meditation, and service to avoid drifting in my work in life, and to seek out the place and form of work where I can become of the largest use to the kingdom of God.

"As I find my place of largest usefulness, I will prepare for it and follow it, under the leadership of Christ, wheresoever it takes me, cost what it may."

My mother, Mrs. G. S. Reuter, and I enjoyed the celebration very much, but we liked the pageant the best. "The First Hundred Years" was directed by Mrs. E. Ben Cast. It was divided into the following scenes:

1. "New Frontier."
2. "A Town Is Born."
3. "Singing Rails."
4. "Strutting Our Stuff."
5. "Nineties So Gay."
6. "Turn of the Century."
7. "From Holden to Tipperary."
8. "Roaring Twenties."
9. "Turbulent Times."
10. "Vision of the Future."
11. "Happy Birthday."

Holden has always appreciated greatness and is quick to note it. One such example is cited from the Holden Progress of Thursday, October 16, 1958, page 2. This editorial was quoted from the Pleasant Hill Times, and it was very fitting. The editorial read:

"OUR EXTRAORDINARY CONGRESSMAN

"GEORGE H. CHRISTOPHER, the Bates County dirt farmer who represents the Fourth District in Congress, is an extraordinary man.

"A horny-handed son of toil, this Congressman can hold his own in debate with the sharpest wits in the House and is an interesting man to listen to anytime he takes the platform.

"He has never been downed by adversity, either the kind that put him on the WPA in the early thirties or the kind that forced surgeons to amputate one of his legs early this year.

"He is a battler, and one of the greatest fighting advocates of true farm parity the Congress has.

"He is a liberal Democrat in the Roosevelt tradition and never a fence straddler, a Congressman who can always be depended upon to take the part of the small businessman and the laborer as well as the farmer.

"The Fourth District, mixture that it is of metropolitan and rural Missouri, is one of the few districts of its type in this country that is represented by a real farmer. The rural counties are particularly fortunate in having GEORGE CHRISTOPHER as their Congressman.

"It ought to be a whopping big majority they give him in November—just as they did in the August primary."

Holden was right again and Congressman CHRISTOPHER won by a large majority. This community of public-spirited citizens, fine homes, healthy businesses, productive farms, superior schools will continue to progress. The next hundred years will be even greater.

Britain's Fears of Two-Power Deal

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. COHELAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following views of Mr. Walter Lippmann which appeared in the news on January 20, "Today and Tomorrow—The Morning After":

[From the Washington Post and Times Herald, Jan. 20, 1959]

TODAY AND TOMORROW—THE MORNING AFTER

(By Walter Lippmann)

Mr. Anthony Nutting, writing from London on Mr. Mikoyan's visit, has succeeded in demonstrating how hard it is for even the friendliest nations to understand one another. Mr. Nutting reports that it is being seriously debated in London whether the United States is moving toward a two-power deal with the Soviet Union. After a long report on how much our motives are suspected in Europe, he proceeds to lecture us on what we must do to make our European friends feel better about us. What we must do, according to Mr. Nutting, is precisely what in fact we have been doing day by day, namely, to make a full and reassuring report to all our NATO partners, and to discuss and agree with them on future policies and procedures. "A failure to do these things, which we are doing," says Mr. Nutting quite solemnly, "would be playing Russia's game beyond the point of safety."

If this is the kind of uninformed suspicion which exists in London, it is enough to make anyone despair of the effectiveness of a free press. Here are two allies, both speaking the same language, both enjoying free institutions, both able to print and to read whatever they choose, both committed to the same international ideals, and yet a writer with connections in official quarters in London suspects us of being so foolish and so disloyal that we are contemplating a two-power deal at the expense of Europe.

For my part, I do not expect us to be understood or trusted in Moscow. But we have, I submit, earned the right to be trusted by our closest allies. We do not betray our friends, and the suspicion that we are so gullible that Mr. Mikoyan can sell us into betraying our friends is an affront to the honor of America and an insult to its intelligence.

The public part of Mr. Mikoyan's visit seems to me to show that between the Communist world and ours there can on the great issues be little free and open communication. We live in very different worlds. We see things with very different eyes. We judge them with very different minds. The best we can do is to negotiate cautiously more or less at arm's length. But the kind of full understanding needed for political cooperation is a very long way off. It is, therefore, absurd to invite Mr. Mikoyan to subject himself to a public exhibition like "Meet the Press" and it is absurd for Mr. Mikoyan to accept the invitation to do that. The show on Sunday was as useful as an attempt to mate a whale which lives in the sea with an elephant which lives on the land.

Those who have studied carefully the problem of communication between the Soviet Union and the West know that the communication cannot be general but must be specialized. The mathematicians and the physical scientists can communicate with one another. So can the engineers or the

agriculturists. So can artists. So can experienced and sophisticated statesmen. So can ordinary tourists meeting ordinary people. But Mr. Mikoyan cannot talk to the American people in the mass nor could Mr. NIXON talk, even if he had the freedom of the Soviet radio, to the Russian people in the mass.

As to the results of Mr. Mikoyan's tour, they cannot be measured by the crowds and the headlines, by the curiosity of the people who saw him or by their courtesy. The results of the visit will be tested as we see whether or not we are moving toward negotiations on the whole German question. For surely that was the real objective of Mr. Mikoyan's visit, as it is the objective of the Soviet gambit in Berlin.

His purpose cannot have been to enter a popularity contest, for which he is at little qualified as he would be for a beauty contest. If the purpose of his visit was to open up the German question, he is not going home empty handed, For the President and Mr. Dulles have shown that they hope to make the German question negotiable if Moscow is seriously interested in negotiating.

The Question

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. ROGERS of Texas. Mr. Speaker, my good friend, Paul Ord, editor of the Childress Reporter, at Childress, Tex., has posed a provocative and age-old question for the new year. In the January 15 issue of the Reporter, he has editorially submitted the question of the hour as well as his studied answer. The Reporter is a weekly newspaper which has served Childress and surrounding Childress County well for approximately 12 years. Under unanimous consent, I insert herein the editorial that all Members may have the benefit of Mr. Ord's splendid comments:

THE QUESTION

Just about everything in this country has been getting bigger.

This trend, the economists confidently tell us with hardly a dissenting voice, is not only sure to continue but to accelerate. They blueprint a future of ever-increasing incomes, ever-improving living standards, the mass enjoyment of luxuries which would have been beyond the imagination of man not long ago.

We are on the verge of explosive breakthroughs in physical sciences. The age-old mysteries of space are being fathomed, and soon will be mysteries no more. The miracles of nuclear physics are at hand. Longer, healthier, happier lives for all are promised. And we are not alone. All over the world, peoples and nations are swept along, to varying degrees, in the same tide.

This is fine. Almost everyone wants more money, more of the things that money can buy, more of what we know by the word "progress."

Yet a nagging question arises—the biggest unanswered question that confronts the changing world. While just about everything is getting bigger, is the greatest resource of all getting smaller? That resource is the individual. Not just people in the mass, but individual people—each different, each unique, each a spirit as well as an appetite. Is the individual in very real danger of being dwarfed by the bigness around him, and of being reduced to a statistic?

It's easy enough to say that it can't happen here, even though we have all seen it happen in vast reaches of the earth. Easy enough, but untrue. This Nation was founded on certain concepts—the fullest freedom for all, an unflagging sense of the spiritual nature of man, a passionate regard for the worth of every individual human being. But these, like all other concepts and philosophies, will wither away to nothingness unless they are eternally prized beyond all else and faithfully protected. They must be supported in absolutely specific ways. They demand the highest degree of individual independence and responsibility. If, for instance, we give to government the initiative and the power to regulate and dominate our lives in the name of security, the ultimate end will be the security of the penitentiary. Power once granted to government must always be balanced against a greater power in the hands of the people.

We pride ourselves on our material achievements. But pride can result in a deadly blindness. Other nations, whose concepts are utterly opposed to ours, are producing their own wonders. Communist Russia and Communist China are, so to speak, moving mountains. The whip and the chain, used with dedicated ruthlessness, can also get out the goods, while the soul of man dies.

It took centuries of turmoil, war, and revolution to establish the rights of man—the rights of the individual. They can be lost overnight by sins of omission no less than sins of commission. A people whose eyes and minds are fixed on material ends alone will not long remain a free people. They will become merely instruments of power.

There is no foreseeable limit to what we, through our economics, social, and political organizations can achieve. It wil be the ultimate irony if, in the light of this, we surrender the individual to material bigness—whether in government or anywhere else. We never had a more urgent need to uphold age-old principles and convictions that make for the only worthwhile kind of progress—confidence in something, faith in ideals, fairness, the determination to defend what one believes to be right.

Walt Whitman wrote, a century ago: "The whole theory of the universe is directed unerringly to one single individual—namely, to you." Man in the mass must never hide the face of the individual man.

The Administration's Development Loan Fund Request: Shirking Our International Responsibilities

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. REUSS. Mr. Speaker, the aspiring peoples of Asia, Africa, the Middle East and Latin America—those with the greatest need for help along the road toward economic development—may be our best friends in the future. Congress set up the Development Loan Fund 2 years ago in order to assist underdeveloped peoples by loans—not by grants—to help themselves.

The Congress felt that the "revolution of rising expectations" of people emerging from backwardness should be assisted by us for its own sake. But we well know that the Communists are also exploiting this revolutionary surge in the underdeveloped countries for their own purposes. In less than 3 years, Communist Russia has extended $1.7 billion in long-term low-interest loans for economic development. Communist trade agreements with underdeveloped countries increased from 49 in 1953 to 147 in 1957. Trade between the Soviet bloc and the underdeveloped areas is 50 percent greater than it was 2 years ago. Today, more than 2,000 students from these areas are studying in Moscow and other Soviet centers. Some 2,300 Soviet technicians are now at work in the underdeveloped areas.

The Development Loan Fund was off to a good start. Two years ago Congress gave it a needed 2-year authorization, to insure some continuity of administration. The congressional authorization for the Development Loan Fund for the current fiscal year, that ending June 30, 1959, is $625 million.

Since the Development Loan Fund began operations just a year ago in January 1958, it has had a profoundly constructive, although limited, effect on the health of the underdeveloped world. Of the $3 billion of applications made in the last year, to the end of January 1959, $700 million have been committed in loans, $500 million have been rejected as not sufficiently worthy, and $1.8 billion of applications which are deemed worthy but for which no funds are available, are on file. Applications for further developmental loan capital are still pouring in. It is anticipated that valid applications on the order of $3 billion will be on hand before the Development Loan Fund in a matter of weeks.

The Development Loan Fund is financing basic economic facilities, such as roads, ports, power, communications, and irrigation, and is loaning to private industry. The Development Loan Fund will also be a source of United States contributions and support to regional development institutions as they come into being.

Here are some illustrations of the type of loans being made by the Development Loan Fund:

In Taiwan a loan of $21.5 million to assist in financing the cost of the Shihman Dam project in the northwest to produce power needed for further industrialization, flood control, and water supply. Shihman will increase the total power available to Taiwan by 15 percent and provide a water supply for 340,000 persons and irrigation of 140,000 acres.

In Pakistan a loan of $4.2 million to assist the privately owned Pakistan Industrial Credit and Investment Corporation in extending loans to private borrowers for the purchase abroad of machinery, equipment, materials, and services for economic development purposes.

In Liberia a loan to a joint American-Liberian private company of $190,000 to assist in financing the costs of expanding existing sawmill operations.

In Honduras a loan of $5 million to a large-scale road program being under-

taken by the Government of Honduras. Proceeds of the loan are being used to help construct a new 45-mile paved highway serving one of the most populated regions of Honduras and to improve a highway linking the capital with the Pan-American Highway and Pacific ports. The DLF financing supplemented a $4,500,000 loan by the World Bank for the import of equipment, materials, and services required in this project.

In Ceylon a loan of $1.6 million toward the purchase abroad of equipment and materials required to continue Ceylon's irrigation and land development program and to assist in rehabilitating 29 major reservoirs and 1,200 village reservoirs breached in the winter floods of 1957–58.

In Paraguay a loan to a private U.S. firm, the International Products Corp., of $2.6 million to assist in modernizing and expanding its operations of ranching, meat packing, and production of quebracho extract.

In Turkey a loan of $10 million to assist privately owned Industrial Bank of Turkey to make small- and medium-sized loans for the expansion of industry.

For many months now, the administration has been telling the people of this country, and of the world, that America's international responsibilities require, for the 1960 fiscal year, a considerably expanded use of the Development Loan Fund. It must be set up on more than a 2-year basis, the administration has rightly proclaimed, and it must have loanable funds at its disposal at a rate of $1 billion a year.

Thus Under Secretary of State for Economic Affairs C. Douglas Dillon, testifying before the House Committee on Foreign Affairs on March 11, 1958, said:

You may ask why, if the executive branch believed last year that long-term financing was needed for the Fund, we, have not renewed the request this year.

We have not done so through any belief that the need has diminished. In fact, international developments during the last year have convinced us even more firmly, if possible, that long-term assurances of funds is necessary to obtain the maximum results and so is essential to the future peace and security of our country and the free world. However, we recognize that the House of Representatives determined last year that the Fund should be established with capital sufficient for only 2 years as a trial and that consideration of longer term financing should be postponed until the Congress can have for it the record of requirements and performance for this initial period.

We are abiding by that decision, and we are deferring until next year proposals for the longer term financing which I had said we are more than ever convinced is essential. In the meantime, our experience, thus far, has demonstrated overwhelmingly that the appropriation of the full $625 million now authorized, is needed for the coming fiscal year.

Under Secretary Dillon, in an address to the Foreign Policy Association at the Waldorf-Astoria Hotel in New York City on May 21, 1958, said:

The less-developed countries are fully prepared to bear the major burden of their own economic development. But to acquire the industrial techniques and the machinery and equipment which they cannot yet make for themselves they need help from the industrialized countries. As the greatest industrialized country of the world we must accept the responsibility for leadership in this field.

This means that we must lift our sights. In the fields of international development assistance, international finance, world trade and private investment we must find ways of doing more than we are doing now. For unless we meet the challenge of the times, our own safety, let alone our economic well-being, will surely be placed in the gravest danger. * * *

For the future, I believe that we should contemplate a higher level of lending from the Development Loan Fund, something on the order of $1 billion a year. I believe that such an amount could be spent wisely in stimulating development abroad and would be warranted by considerations of our national security.

Secretary of State John Foster Dulles spoke movingly to the United Nations General Assembly at New York City on September 18, 1958:

Economic development is, of course, an aspiration shared by all peoples. In the newly independent nations, and indeed in many long independent, there is a burning desire for economic and social progress, for higher levels of living, for freedom from the slavery of poverty.

Much has been accomplished already. The American people admire the vigorous efforts of the leaders and the peoples of less developed countries to help themselves. Yet much remains to be done.

The United States believes the time has come for the nations of the world to take stock of accomplishments to date and to chart anew long-term courses of cooperative action.

We propose that the nations dedicate the year 1959 to these purposes.

Let me mention some of the major steps that the Uinted States would be prepared, subject to action by Congress as appropriate, to take or support in the coming year:

1. The United States will carry forward its existing development financing programs on a vigorous and effective basis. * * * The great challenge of poverty and disease can only be met by vigorous realistic action. The United States stands ready to play its full part in this great peaceful crusade.

Again, on November 7, 1958, Under Secretary Dillon, addressing the World Affairs Council of Northern California at San Francisco, said:

In my view a most serious threat of all is the Soviet economic offensive. * * * I believe that we must place our chief reliance in meeting the Soviet challenge on the mobilization of our economic and technical resources, both public and private, to help raise the living standards of the less privileged nations of the world. * * *

During the past 12 months, our country's responses to their needs has taken many forms. Perhaps the most striking is the Development Loan Fund, which has added a whole new dimension to foreign loan program. The Fund, which began operation early this year, represents a new hope for the underdeveloped countries. * * *

At the present rate of operations the Fund will have committed all of its available resources within a few months which means an annual rate of operations of about $700 million. I believe that we should contemplate a still higher level of lending from the Development Loan Fund, something on the order of $1 billion a year.

Three days later, in his address to the Colombo plan meeting at Seattle, Wash., on November 10, 1958, President Eisenhower joined the crusade:

Our task is a great one. It will take many years to fulfill. Yet if we undertake it boldly, with wisdom and determination, we can and will succeed.

What are the steps that we should take?

First, we must keep in mind our goal. That goal is to enable free nations to achieve a momentum of economic progress which will make it possible for them to go forward in self-reliant growth.

Next, we must determine the means by which we are to achieve that goal. To this end, Secretary of State Dulles suggested at the meeting of the United Nations General Assembly on September 18 that all countries of good will should chart anew their long-term courses of action to promote the growth of less developed areas.

If both the less developed and the more developed countries move vigorously to carry out this proposal, their action could pave the way for the 1960's to become a decade of unprecedented progress toward our common goal.

The United States stands ready to play its full part in this great peaceful crusade to achieve continuing growth in freedom.

And on November 13, 1958, Acting Secretary of State Christian A. Herter told the International Cooperation Workshop in Washington, D.C.:

Among the five specific measures proposed by the President at Seattle, I should like to place some special emphasis on the Development Loan Fund.

This Fund is a major instrument in our effort to assist the less developed nations to carry forward their own plans for progress. It is important to realize that the Development Loan Fund will be substantially out of funds available for new commitments by January 1, 1959. Yet it will have a backlog of over $1.5 billion of applications for loans to help on important projects in many countries. If the Development Loan Fund is to be an effective instrument for peaceful development, it must have resources for substantial increased activity on the order of $1 billion a year. It must also have continuity over a period of years.

Only under such circumstances can the wastefulness of inadequate planning be avoided.

But in the last 2 months, something has happened. The administration has been seized by the magnificent obsession for balancing the budget at a low level, by whatever arithmetic tricks it can get away with, and with a fine unconcern for the future of the free world. Nowhere does this show up more shamelessly than in the Development Loan Fund budget request.

As Secretary Herter said, "If the Development Loan Fund is to be an effective instrument for peaceful development, it must have resources for substantial increased activity on the order of $1 billion a year." The 1960 budget request is for a mere fraction of this, $700 million a year. As Secretary Herter said, only if the Development Loan Fund has "continuity over a period of years, can the wastefulness of inadequate planning be avoided." Yet the budget request is for only a 1-year authorization, not even for the 2-year authorization which the administration had the courage to request, and Congress granted, back in 1957.

If there is one clear lesson in the politics of foreign-aid requests, it is that

in order to get at least part of what is adequate, the administration must ask what is adequate. How easy it would have been to have requested a 2-year authorization, now that the Development Loan Fund has proved its worth, as was successfully done in 1957, when the Fund was a fledgling. How easy it would have been to have asked for a $1 billion authorization for fiscal 1960, as the administration has been saying for many months was vitally necessary. While the additional $300 million request would have thrown the administration's paper budget out of balance by $200 million, 10 times this $200 million could readily be recouped, and a substantial surplus shown, if the administration were willing to plug some of the more outrageous loopholes in the tax laws.

And what nonsense it is to say that the country's economy could not stand the administration's sticking to its guns on the need for $1 billion for the Development Loan Fund. More than 4,100,000 Americans are unemployed, some 6.1 percent of the working force; less than 75 percent of our manufacturing capacity is being used. Why shirk our international responsibilities just to keep our unemployed unemployed, and our unused industrial capacity still unused?

Mr. Speaker, the President movingly pointed to the need for "the 1960's to become a decade of unprecedented progress." His administration can practice what it has so eloquently preached by amending its budget request for the Development Loan Fund for 1960 to include authorization for more than 1 year, and for more than the $700 million requested.

Five-Minute Rule of the House Should Be Universal

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. O'HARA of Illinois. Mr. Speaker, there are few columnists in the United States, if any, who hit the target more frequently than Morris Kaplan in his "To the Point" column in the South Side News-Courier in the district that I am privileged to represent. My colleagues all will agree with me, I know, that Morris Kaplan is writing straight to the point in his column of January 14, 1959, which, by unanimous consent, I am extending my remarks to include.

Most chairmen at gatherings I attend do a pretty good job in brevity of introductions and holding speakers to reasonable time limitations, but when a chairman occasionally goes the other way all one can do is to sit and take it, silently hoping that the happy day will soon come when the 5-minute rule of the House is the law of this and every other land. One can say so very, very much in 5 minutes if he really has to put his mind to it, and he can lose audience appeal as rapidly as falling off the top of a mountain when he has said all he has on his mind and keeps on talking.

The greatest chairman I ever knew was Harriet Taylor Treadwell, who worked with Catherine Waugh McCulloch, mother of the able and dedicated administrative assistant of the senior Senator from Illinois, in bringing suffrage to the women of America by getting passed in Illinois the partial suffrage State enactment that opened the door. Harriet Taylor Treadwell was the chairman of a league of women in Chicago, some 2,000 or more, and operated strictly under the 3-minute rule. If it were the Governor of the State, or the mayor of Chicago, or anyone else speaking, the very second the 3 minutes was up down went Harriet Taylor Treadwell's gavel, and there was not one more word said, even if the Governor or the mayor, or whoever he was, was left hanging in the middle of a sentence. The fact that Harriet Taylor Treadwell, working with Catherine Waugh McCulloch, won the battle of the votes for women is pretty good proof that even in the yesterdays Morris Kaplan's column had a point.

The column follows:

THE ORGANIZATION MAN

Every time I attend a meeting I am struck anew by the way in which presidents and chairmen flounder through the business at hand, allowing lengthy repetitious speeches from the floor, even when they are not germane to the issue being discussed. With a good chairman many of these meetings could transact their business in half the time. But it needs a firm hand, which knows when to loosen the reins and when to pull up short.

When an organization—be it civic, fraternal, service or social—selects a new presiding officer, the nominating committee or the membership-at-large usually bases its choice on the personality of the man or woman candidate. A reasonable amount of intelligence, warmth, ability to speak are usually considered necessary. How often, however, is knowledge of how to conduct a meeting, or the ability to keep a tight hold on proceedings taken into account?

A good chairman is strong enough to stop the man who loves the sound of his own voice, or the wisdom of his own set ideas. He doesn't allow the member with the most imperious manner and voice dominate every debate. Once any member is allowed to take over the prerogatives of the Chair, that organization is leaderless.

Memorial: "Gus" Cook

SPEECH
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MILLS. Mr. Speaker, I rise to pay tribute to the memory of an individual who served for many, many years in an important position in the Capitol of the United States and whose death has brought sadness to all of those who knew him, and particularly to those such as myself who had the privilege of knowing him closely through a period of many years. "Gus" Cook was one of those rare individuals whose conscientiousness and devotion to duty set an example for all who came in contact with him. Through close personal relationship over a long period I had the opportunity to observe in him those characteristics which deserve emulation by all who serve our Government. My sincerest condolences go to his surviving family.

New Price Policy of American Can Co.

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in the light of the growing importance of rising prices and their effect on the value of the dollar, and the concern of responsible officials over this trend, as expressed by President Eisenhower in his economic report, I would like to call attention to the efforts of one of the Nation's large concerns that recently instituted a new price policy that is expected to result in substantial savings to its customers. This program, instituted by the American Can Co., supplier of containers for much of the Nation's food and other commodities, involved an expenditure of $32 million in a new coil-processing program which permits processing of tin plate and steel plate in their own plants.

Mr. Speaker, this is a large sum of a private company's investment capital, spent in a way which promises to reduce the cost pressures of recent years on food prices. It is evidence of a forward-looking company's faith in the future of American business and the soundness of the economy.

American Can Co. President William Stolk said when he announced the new price structure that it would eliminate the method of averaging metal can prices over broad geographic areas and, instead, establish separate f.o.b. prices at each of the company's plants for each type and style of container. This company has about 50 can-manufacturing plants strategically located near large agricultural areas in all parts of the country.

At this point, I would like to insert into the RECORD the remarks of Mr. Stolk, presented to the press at the time the company instituted its new price policy:

STATEMENT BY WILLIAM C. STOLK, PRESIDENT, AMERICAN CAN CO., NEW YORK, N. Y., NOVEMBER 19, 1958

I have called this meeting to have the opportunity of discussing with you a number of drastic and far-reaching actions the American Can Co. is announcing today.

They are completely unprecedented in the metal can industry and are bound to have tremendous advantages for all of the can-using industries we serve.

I felt it was important to talk personally with you about these actions not only because of the widespread interest they will

arouse but also because of the many ramifications that are involved.

As I think all of you know, we formally opened our newest coil processing center at Hillside, N.J., 2 weeks ago. That was the eighth such facility we have installed in this country in the past 18 months and it completes the network of coil plants outlined in our original planning more than 2 years ago.

Our coil program is a revolutionary development in the can industry. It was undertaken by Canco—at a total investment of $32 million—in order to effect substantial reductions in our can-making costs.

We decided to invest this sum after exhaustive studies convinced us we could accomplish important savings by processing tinplate and steel plate in our own plants. As a result, we are now doing the inspecting, shearing, stacking, and sorting operations which previously had been performed by the steel mills.

This undertaking dramatically illustrates our belief that unremitting action to hold down the cost of metal cans is essential. Cans represent 70 percent of American Can Co.'s business. Our cans are faced with competition as vigorous and determined as any you can name.

It is obvious that every possible economy must be injected into our operations if we are to serve our own interests and the best interests of our can-using customers.

It is most gratifying to be able to report to you today that the coil program already has amply justified our faith in the economies we believed it could produce.

More than that, the tremendous amount of study that has gone into this project has revealed other areas in our business where worthwhile economies can be accomplished. We are taking steps to effect these economies also. In so doing, we are eliminating certain pricing policies that long have been standard in the can industry.

As background, let me illustrate why we believe all of these courses of action are necessary.

Our two key costs are tinplate and labor, which represent as much as 85 percent of the cost of a can.

Since 1946 the base price of quarter-pound electrolytic tinplate, the type most commonly used for cans, has been raised 11 times, increasing its cost 109 percent.

In the same period, the average hourly wage in our company has gone up from $1.08 in 1946 to $2.63½ today. In addition, employee benefits have increased 46 cents per hour. These latter two figures represent an increase of more than 166 percent.

The two upper lines of this chart show the rise in these two costs during the past 12 years.

But since World War II, the price of a standard No. 2 can, made from the quarter-pound plate, has increased only 93.5 percent, as shown here on this line.

It is obvious from the spread between our two major can costs and can prices that we have been absorbing substantial proportions of these cost increases.

This situation, of course, has resulted in part from the intense competition in the can industry.

It has been necessary to find every means to help offset these drastically increased costs. Through technological improvements, new processes and new manufacturing and can-handling methods, we have made considerable progress. Had it not been for the economies that have been made, for example, a can that costs three and a half cents today might well have cost 15 cents if it were made by the same processes used in earlier years.

These accomplishments, of course, have been extremely valuable to us and to our customers. But they have not been enough to stay even with inflation, much less move ahead of it. It was apparent that we still had to find new ways of cutting costs without sacrificing quality or service.

Over the past few years, we have made a searching reexamination of every phase of our operations. These studies have shown that some existing practices, which have grown up over the years in the metal container industry, have clearly outlived their usefulness. To us, they appear to be archaic and unrealistic. We are consigning them to the junk heap.

These are policies dealing with the pricing of cans that came into being in the earlier years of the present century. They reflect the industry concept of former times that "cans is cans."

There is a vast difference between the metal can industry today and 50 years ago. In the early years, there was one basic can, used primarily for packing food. Today, the industry produces tremendous quantities of cans—more than 40 billion of them a year—for a vast and growing number of products, each of which requires its own set of can specifications and features.

Whole new concepts have been evolved, for new cans, new techniques, new markets. New methods of processing and merchandising have appeared. In short cans and the services they perform have taken on a new look. We at American Can believe it is time to take a new look also at pricing policies.

In making these changes, we are following a company philosophy that every outmoded and impractical method or system should be junked just as quickly as an obsolete piece of machinery.

The practices we are discarding undoubtedly served a good and useful purpose in other times. Why or how they came into being is no longer important. In our view, they have no place in our business today.

Instead, we are adopting an entirely new pricing philosophy.

Our approach, frankly, is revolutionary. It will mean two basic and far-reaching changes in our existing practices.

The first is that every can will be priced in more direct and closer relationship to the process and the differing costs of raw material and labor involved in its manufacture.

We have already put this plan into effect, and will continue to reflect it in our pricing.

As you may recall, we announced this new method of the specific pricing of cans on September 25. Under the previous practice, when there was a change in can prices, a single, average percentage figure was applied uniformly across the board to all types of cans. Now we determine a separate price for each type and style of can.

The second pricing change, which we are announcing today, is also a clean break with industry tradition.

We are putting into effect on next January 1 for each type and style of can a separate f.o.b. price at each of our plants. This is in contrast to the previous policy of having two general pricing areas dividing the country east and west of the Rockies.

Under the new plan, our can prices no longer will be averaged over these two broad geographic areas. Instead, our prices will reflect to customers the freight-cost advantage of their nearness to the steel mills supplying our basic raw material.

The recent large increases in transportation costs on raw materials make the use of wide area pricing no longer fairly adaptable to the needs of our customers. From January 1 on our can prices will give effect to differences in freight charges on tinplate between a can plant located near a steel mill and one located farther away.

At the same time, we are eliminating the free delivery of cans which exists in certain metropolitan areas.

It is our conviction that all of these changes will provide long-range benefit to our customers. Together they will mean more equitable pricing for the many can-using industries we serve.

The economies we have achieved through the coil program and the new pricing policies which the coil operation has made possible have given us the opportunity of making what in these days and times is an unusual, even startling, announcement.

We are passing economies resulting from all of these actions on to our customers.

On January 1 we will put into effect this new and more equitable pricing system which will mean lower can costs for most of our customers.

We will hold the line on these prices until October 1, 1959, except for adjustments that may be necessary to reflect any increases the steel companies might make in their tinplate prices.

In the aggregate, the price reductions we are making will mean a total saving to our can-using customers of more than $9 million.

This will mark the first time in my recollection that any can prices have been cut voluntarily by a can company as the direct result of economies it has been able to achieve.

The action is all the more startling, we believe, because it comes at a time when our costs are still rising.

We are particularly gratified about our ability to pass on these savings to our customers for two reasons.

As I have indicated, we believe this to be the soundest sort of business practice. It is a virtual truism to say that the broader the economies we build into our operations, the stronger will be our competitive position and the greater the service to our customers.

The second reason is that it is in the public interest. We believe that under present conditions any voluntary reduction in the price level of a product as widely used as metal cans is a contribution to the economy as a whole.

Government leaders have made it abundantly clear that management, labor and Government itself share the responsibility for halting inflation. The American Can Co. endorses these views 100 percent.

To us at American Can, the action we are taking today stands as a clearcut example of the company's traditional policy of service in the interests of its customers and the Nation. It is on this philosophy of service that the growth of our business has been based. We are determined to continue to serve these interests, with all the strength and vigor we can apply.

Thirty of Thirty-four Schools Overcrowded in Gary, Ind.

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. MADDEN. Mr. Speaker, the following news item from the Gary, Ind., Post-Tribune will give the Members some idea of the school crisis in the industrial Calumet region of Indiana. Gary is taxed to the limit to keep pace with school construction considering the influx of population during and since World War II. Federal defense industries have contributed greatly to this influx of population and overcrowded schools in Gary and other localities in this industrial area:

Overloading Reported in 30 of 34

The frightening problem of overcrowding in Gary public schools was presented to the school board last night by Alden H. Blankenship, superintendent.

Blankenship gave each board member a 10-page summary of information on the school-building situation which showed that 30 of the city's 34 schools are overcrowded.

Fourteen of the schools are crowded more than 25 percent over their capacity.

The report was termed "frightening" by Robert E. Penn, board member. Other members of the board agreed with Penn that the report should be publicized as much as possible to make citizens aware of the real problems facing the board in trying to find money and land to build the necessary new schools.

A related difficulty was pointed out by Chris Retson, board member, who said the city will be continually faced with overloaded schools and increasing enrollment unless something is done about new housing developments springing up in various areas of Gary, with no provisions made for schools to handle the children of the subdivision.

"This is the basic cause of tax troubles in Gary," Retson said.

Retson said that every day he drives past a new subdivision which displays an advertising sign: "Come to Gary and live in this subdivision; near new schools."

The Gary school system is asked to absorb people from neighboring communities, many of which have no open land like Gary, Retson said.

"The taxes from low cost homes don't produce enough money to educate the children from that home," he said.

"It's fiscal suicide," Retson said.

Blankenship, in his report last night, made special mention of the 14 schools which are crowded more than 25 percent over their capacity.

Heading the list of five heavily overcrowded high schools was Froebel, which is 122 percent over its capacity. This is expected to be relieved somewhat next fall with the completion of the Norton Park School.

Tolleston is overcrowded 63 percent; Roosevelt, 49 percent; Lew Wallace, 43.5 percent; Emerson, 42 percent.

Edison is 21 percent over capacity.

The other two city high schools are under capacity: Mann, 7.8 percent, and Wirt, 7.3 percent.

Leading the list of overcrowded elementary schools is Garnett, which is 70.6 percent over capacity. Others more than 25 percent overloaded are Banneker, Beveridge, Carver, Douglas, Lincoln, Nobel, Pittman Square, and Pulaski.

Blankenship pointed out that three elementary school areas will have special potential problems next fall.

The Aetna School was 4.3 percent above capacity in October 1958. Four hundred new homes are scheduled in an area between present homes and Lake Street. Sewers and streets are in, and exterior shells have been completed for many of these units.

In the Nobel School area, on Gary's far East Side, much of the area at Inland Manor has been prepared for new homes. Long-range plans include some 1,500, and eventually 2,500 units, Blankenship said. Nobel is now 26 percent overcrowded.

At Pittman Square in Glen Park, many new homes are being built east of the school. The school site is too small for another addition.

Pittman Square is 36.6 percent overcrowded, counting the addition which will be completed next month.

Blankenship said six new elementary schools are needed now.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

Code of Laws of the United States

Title 44, Section 181. Congressional Record; arrangement, style, contents, and indexes.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

Title 44, Section 182b. Same; illustrations, maps, diagrams.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the Record shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. *Thirty-day limit.*—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Javits, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Bridges, Saltonstall, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Keating.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Keating.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Martin.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Javits, and Morton.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.

Appendix

The Partnership of the Private Citizen in the Field of Social Service—Address by Dr. Frederick M. Lange

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. JOHNSON of Texas. Mr. President, a distinguished Texas citizen, Dr. Fred M. Lange, executive vice president of the Dallas Community Chest trust fund, served as a member of the U.S. delegation to the Ninth International Conference of Social Work, in Toyko, Japan, last November 30 to December 6.

Dr. Lange was invited by several organizations in Tokyo to discuss the work of the Community Chest movement in America. As one of this Nation's outstanding Community Chest leaders, he has special qualifications for speaking on this subject. Among the organizations he addressed were the Central Community Chest of Japan, the Tokyo South Rotary Club, and the Tokyo Lions Club.

This eminent Texan has given high praise to the hospitality extended to him and Mrs. Lange in Japan, including assistance given by American Government personnel stationed there, particularly Mr. Robert J. Boylan, Chief of the Exchange of Persons Branch of the American Embassy, and his assistant, Miss Nancy Downing.

Dr. Lange was truly an ambassador of good will to Japan. Evidence of that is the fact that after his return to his home in Dallas, Tex., he was notified that the Central Community Chest of Japan had awarded him a special citation for his contribution to the Japan Community Chest movement. He is the first foreigner ever to receive a national Community Chest and welfare award in Japan.

Mr. President, Dr. Lange's address, as delivered in Tokyo, on "The Partnership of the Private Citizen in the Field of Social Service" is a scholarly discussion of a subject on which he is an expert. I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PARTNERSHIP OF THE PRIVATE CITIZEN IN THE FIELD OF SOCIAL SERVICE

(Address delivered by Frederick M. Lange, L.H.D., LL.D., executive vice president, Dallas Community Chest Trust Fund, while in the Far East as a member of the U.S. delegation to the Ninth International Conference of Social Work, held in Tokyo, Japan, November 30 to December 6, 1958, before the representatives and leaders of the Central Community Chest of Japan, Imperial Hotel, Tokyo, Japan, November 26, 1958, Tokyo South Rotary Club, December 3, 1958; Lions Club, Tokyo, Japan, December 4, 1958)

Based upon the English poor law, which the English colonists brought to America, for roughly 300 years the major source of the necessities of life (food, clothing, shelter, and medical care) for needy residents in the United States, was the local government unit. This responsibility was written into the State constitutions of many U.S. States.

As the population and the welfare problem grew in the United States during the first two centuries, it became more and more difficult for the local governmental units to provide certain social services, such as institutions for the care of the feebleminded, the mentally ill, the criminal, the tuberculous, and institutions for the education of the blind, and the deaf. Also, it became more difficult for the local governmental units to provide adequate health services alone. For these reasons, about 100 years ago, the State governments in the United States began to assume responsibility for these services. For many years longer, however, the National Government continued to limit its social welfare activities severely, especially in the area of financial assistance.

The business depression of the 1930's forced a change in this situation. The inability of both the States and the local units of government to provide for the needs of the millions of unemployed made it necessary for the National Government, which had taken over the taxing power with regard to many of the major tax sources, to assume responsibility for most of the financial assistance to needy U.S. citizens. This became a permanent responsibility of the National Government with the establishment of the social security program in 1935.

Early in American history voluntary agencies began to develop, some to do things not considered the responsibility of the governmental agencies, and some out of dissatisfaction with the inadequacies of some welfare services under governmental auspices. Voluntary agencies have continued to grow in numbers and importance throughout American history for these and other reasons. Many times voluntary agencies have closed down or altered their functions when the time came that their former services were no longer needed or were assumed by some level of government. It is some indication of their continuing health that this fall Community Chests and United Funds in 2,100 U.S. cities and towns will raise more than $400 million to help finance a major part, but only part, of the voluntary health and welfare agencies in the United States.

From the beginning of American history to this hour, there has been an important and indispensable partnership between the Government and the private citizen in welfare matters.

We now have voluntary and government agencies at all levels working side by side, one helping the other. Since 1935, the major role of our private agencies has shifted from providing primarily relief in the form of food, clothing, and shelter, to supporting and carrying on new or pioneer programs, mostly in the prevention field. As newer methods were discovered, or as new services were needed, it was usually the voluntary agencies in the 1930's which experimented and started them. As their value was proved, and as the new programs expanded, they were often incorporated into the methods and services of the large governmental programs. More recently the national governmental agencies, too, are experimenting, pioneering, and carrying on much research. In general, the governmental agencies have taken responsibility for the large mass programs directed toward providing food, shelter, clothing, and medical aid for those who cannot provide these things for themselves. The size of the national government programs is now far larger than that of the voluntary programs.

This, however, does not mean that the partnership between national and State governments and the private citizen is weakened. Particularly at the local and State levels, the governmental agencies try to keep close to the thinking of private citizens through the establishment of advisory boards and auxiliaries. Most government agencies are anxious to know what private citizens think and go out of their way to explain their programs, invite comments, and provide for citizen participation.

The private citizens, then, not only control the private agencies, but by serving on the advisory boards and committees of the Government agencies, influence and guide them too. Many of these citizens have been active in both kinds of agencies, therefore they know intimately what each does and what each is responsible for. This helps to coordinate the whole pattern of welfare service, keeps it close to the real needs and sees that the total effort is as efficient as possible.

I recently read a paper entitled "Social Welfare Services in Japan in 1957," by Mr. Chujiro Kimura, vice president of the National Council of Social Welfare. I was pleased to see the many similarities between the Japanese and American systems. You, too, have national, state or prefectural, and local government participation in welfare programs. You, too, have government agencies cooperating with voluntary agencies. The article gave me the impression that in Japan, as in America, the National Government is carrying the largest part of the financial responsibility. I also received the impression that your local councils for social welfare, voluntary organizations, are charged with much responsibility, even with the administration and provision of some services that are government financed.

I have the impression that while in the United States the role of the volunteer agency has long been very strong, the role of the voluntary agency in Japan apparently is only recently growing important. However, I was pleased to learn from the article how much your Government relies on your local voluntary welfare councils not only for the planning of local welfare services, but for coordinating them and actually giving some of the services.

The partnership between the Government and the private citizens in matters of welfare in the United States takes many forms. Most tax supported welfare programs were established because private citizens active in private welfare projects knew so well the need for the programs that they became their spokesmen. After public programs are established, private citizens working in private groups keep in close touch with them,

because Government and private agencies cooperate so closely on so many projects. Private groups know well the strength and weaknesses of the total effort. Private groups, through social action, through encouraging helpful welfare legislation, work for changes, expansions, or reductions in the government effort. These efforts are based on knowledge and facts gathered as results of working together. For instance, improvements in the services of our local Dallas County Welfare Agency was brought about because voluntary agencies working with some of the same families became aware of the severe limitations of the county program. Some members of the advisory board of the county agency were also active in the voluntary agencies. Their firsthand knowledge of the facts made changes possible in the country program.

Another way in which the private citizen keeps in touch with the Government agency is by volunteering his services. Many people in America are members of auxiliaries or voluntary committees whose members visit and donate their time, doing useful work in the agency, ranging all the way from helping to care for children to helping beautify the agencies grounds. This visiting and volunteer service enables the private citizen to become acquainted with the service. Then, he can better influence not only the agency, but the Government which supports and controls it. The most outspoken and infiluential supporters of our Dallas Juvenile Department are the women and men who donate their time to help in certain phases of the work. In this way they know what the agency needs and can speak intelligently and forcefully to officials who control it.

We, too, have local welfare councils, which bring together all organizations, government and private, so that local services can be planned and coordinated. Here the government agencies and the voluntary ones map out who will do what, so that the total effort wil produce most benefit. Here the partnership is very close. Some services are too broad and burdensome for voluntary agencies to carry, and government must be encouraged to assume responsibility.

As conditions change, some new services, never tried before, may be needed. They often must be started with private funds from campaigns such as the Community Chest or United Fund compaign, or perhaps by funds from a private foundation. America has increasing numbers of private foundations established with gifts from well-to-do persons, who wish to assure that the income from their gifts will be used for beneficial philanthropic endeavors.

In all this the total patern of welfare services is kept in mind. As needs change, services change, and both government and private agencies work hand in hand. Each knows what is needed. Each does his part, without duplication. This is possible because the private citizen, working in private agencies, helping to raise money for voluntary causes, donating his help in the work of private organizations, is often the same citizen who serves on an advisory board or an auxiliary, or a voluntary group in the government agency. He is the same person, who through his activities in the local welfare council, knows who can and should do what.

This partnership with government keeps the Government agency close to the people who support it and use its services. This partnership encourages efficiency. It encourages a total welfare system which provides those services which the people are convinced are really needed.

A large proportion of the United States giving goes to support what we call prevention programs. By this we mean social services which can help to prevent problems which may require extensive help. When, at the invitation of the Austrian Ministry of Welfare, I spoke in Vienna to welfare leaders, and also when I spoke in Stockholm to Swedish welfare leaders, there was much interest in this. They asked why Americans support so many services such as Boy Scouts, Girl Scouts, YMCA, YWCA, youth centers, recreation centers, day camps, overnight camps, etc. They questioned whether such services could be classed as necessary welfare programs. We believe they are vital welfare programs because through constructive youth activities, they help to build sounder bodies, minds and personalities. Such youth have a better chance of growing into independent adults who can better cope with life, and therefore be less damaged by problems which require extensive aid. We look upon such programs as an investment in people, an investment which will strengthen them, not only to lessen their later dependence on welfare services, but to increase their ability to live happier, more productive lives, from which they and all people around them will benefit.

Our youth programs are largely voluntarily supported and directed. However, here again we have cooperation with government at all levels, for many of the physical facilities which these voluntary youth agencies use are provided by government. These voluntary groups use public school facilities, public playgrounds, parks, campsites leased for $1 a year from government, etc.

While government cooperates, we prefer to leave the direction of such programs to voluntary groups directed by private citizens. This removes the temptation which may sometimes appear, for a particular political group to influence or exploit youth programs for political ends.

We feel that a welfare program which only provides social services to remedy or repair damage after it has happened is incomplete. While we must, of course, give first emphasis to helping people who are in trouble, we must also look ahead and try to help people so that they will not get into serious trouble. Obviously, this is not always possible because of accident, misfortune, etc., but by helping to develop strong minds and bodies we can lessen their vulnerability to trouble. In this way we help to preserve human values, which in the long run, is the objective of a welfare program—to increase the well-being of our people, mental, physical, and spiritual.

Although I have said little specifically about the activities of our religious bodies, they are the backbone of our voluntary effort. Our welfare efforts have grown from religious roots, and spiritual values are the foundation of our whole program, regardless of whether the program is directed by a religious or a secular organization.

While taxes in America, as in Japan, provide the bulk of support for welfare activities, the total of American voluntary aid is nevertheless tremendous. In addition, the role of foundations and trust funds is growing. More and more of our people with means are giving large sums of money which are used to finance needed services. Here, too, we have a partnership with government, since our laws and tax provisions encourage this practice.

I can speak to the role of the voluntary agency and of the trust with some authority, since I now direct such a trust. Also, during my 25 years of experience in social welfare, I have directed or influenced the gathering of over $50 million in voluntary gifts for welfare purposes. This could not have been accomplished without the teamwork of the Government which believes that the dignity of every man should be upheld and preserved. Human dignity is enhanced through providing for human well-being. In this vital endeavor there is a place for government and for the private citizen. They need each other if the job is to be done right.

I have recently reviewed a report on "Public Health and Welfare in Japan" published by your information service in New York City. Again, I was impressed with the similarities between your services and ours. Perhaps this is because human beings all over the world, basically, have similar needs and require similar services.

Perhaps the most significant research in the welfare field in America in the last quarter century concerns work done by Bradley Buell & Associates in St. Paul, one of our large midwestern cities. Painstaking study indicates that the great variety of problems which plague people can generally be divided into four groups. Also, the great variety of needed services can in general be divided into four groups. I found that your problems and services can be classified similarly.

The first of the four categories relates to dependency, or the need for basic living essentials: food, shelter, and clothing. The second category relates to ill health, or the need for necessary medical care. The third category relates to social maladjustments, or the need for counseling or guidance services for personal difficulties. The fourth category relates to recreation, or the need to provide leisure time, adult education, and recreation activities, so that people can refresh themselves and maintain mental health.

I was struck in reading reports of your programs that each one of your services could be classified under one of these categories, too. However, there was different emphasis placed on them. Most emphasis in your program seems to be placed on provision of living essentials and providing health and medical services. The other two categories, counseling and recreation, were mentioned, but infrequently. I wonder if this is because the disruption of life due to the war has created such great needs for essentials of living, and for health services, that you have not yet been able to devote as much emphasis to counseling and recreation. It is obvious that living essentials and medical services must come first, but I would predict that as needs in these two basic areas are met more adequately, you will become more increasingly aware that problems and services in all four areas are interrelated. Lack of counseling for a personal problem may lead to a more severe problem which needs medical care and basic assistance, just as inability to provide living essentials can cause a health problem, or a health problem can cause inability to provide living essentials.

Much research is being carried on concerning how best to help families who have so many problems that they require help from a large number of specialized agencies, both government and private. Although most of this research is supported by private trusts and foundations, the results will be of greatest importance to the government agencies, since they are now giving the most help to these families.

So, here again, we have an example of teamwork. The government agency, which we call the public agency gets its support from taxes. It is controlled by law. It is set up by a city, county, State, or the National Government. It is administered by employees paid from taxes collected from the people. This government agency works cooperatively at every turn with the voluntary or private agency. When private citizens join together unofficially and voluntarily to help their fellow citizens in other ways than the government agencies provide, they do their work through voluntary or private agencies. These private agencies are administered and financed voluntarily by private citizens.

In our system, through the influence and activity of private citizens in both types of agencies, the overall program meshes smoothly, as gears in a machine. There is no competition, duplication, or waste. We are ever alert to preserve this teamwork, and would not permit a system where the government agencies could not readily be influenced by private citizen leaders.

We believe this sensitivity and response to what our private citizens think is best, is our guarantee that our future welfare services are not exploited for political or undemocratic purposes. We believe that this is the best way to assure that these services will strengthen human dignity through increasing human well-being.

Spiritual Ends Must Motivate the Deeds of Man

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. KUCHEL. Mr. President, last Wednesday evening a consecration service for our colleagues in the Congress of the Jewish faith, was held in Washington at Adas Israel Congregation. Along with many other Members of Congress, I was most honored to attend to witness a service of deep religious significance, and to hear Rabbi David H. Panitz deliver a splendid, moving sermon, which I want my colleagues, and those who read the RECORD, to share.

I ask unanimous consent that the text of the sermon delivered by Rabbi David H. Panitz be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

SERMON DELIVERED AT CONSECRATION SERVICE FOR MEMBERS OF THE 86TH CONGRESS OF THE JEWISH FAITH ON JANUARY 21, 1959, AT ADAS ISRAEL CONGREGATION, WASHINGTON, D.C., BY RABBI DAVID H. PANITZ

At the end of the third century of the common era, the Jewish community in Palestine was guided by the members of the rabbinical schools and academies. These teachers served as religious mentors, as pedagogs for young and old, as legislators in civil matters, as judges in the courts, and as advisers in intracommunity and in intercommunity affairs. They were rabbis in the fullest extension of the meaning of that term.

The head of the major academy in Jerusalem, the Nasi Rabbi Judah the Second, once sent three rabbis to traverse the land of Israel in order to survey the work of the local communal academies. They came to one town where there were no teachers, contrary to the tradition that one may not dwell in a city which has no teachers. The visiting delegation assembled the inhabitants and said, "Bring us the protectors of the city." The townspeople immediately summoned the military guard; "these are our guardians." "O no," said the rabbinical visitors, "these are not your protectors; in fact, these may be your destroyers." "Who then are our guardians?" The answer was brief and pointed: "Your teachers" are your guardians, your teachers who serve as legislators and judges, as the goad to your consciences, as your mentors in moral and ethical decisions, as your guides to the fulfillment of God's will. And then they cited the opening verse of Psalm 127: "Except the Lord build the house, they labor in vain that build it; except the Lord guard the city, the watchman wakes but in vain."

While these ancient rabbis were aware of the need to provide physical protection for their towns, cities, and country, they stressed and reiterated the message that sheer power of arms and that even the ultimate conquest of universal nature will not suffice to bring peace and fulfillment to the individual hearts and colletcive lives of men and peoples.

This teaching, of course, is not limited to Judaism. It has become the common heritage of all religiously oriented men, and of all whose values stem from a divinely inspired message. It is a lofty legacy which impels us to view our every act and decision in terms of its consistency with God's will. Not material purposes, but rather spiritual ends should motivate the deeds of man, and the very use of material and physical properties of man and nature must be directed toward the ennoblement of human life and the sanctification of God's name. Habits and practices in the family and home, forms and norms in business realtionships, broad interpersonal acts, indeed, the ideas we utter and votes we cast in the public forum, the halls of legislature and the sanctuaries of the courtrooms—all are potential moments of fulfilling the yearnings of the spirit and the quest for uninhibited truth and justice. This means, for example, that a vote in Congress should be viewed as a sacred opportunity to "labor in the vineyard of the Lord" and to obey the noblest promptings for the implementation of our spiritual ideals. The legislator is a teacher; he helps establish a moral and ethical tone; he points the way to amity and understanding for his fellow citizens near and far; he leads his neighbors in the path of cooperation for mutual advancement. He is a "guardian of the city."

We share the belief in one God. This means that there is a unity to all creation, there is a unity amongst all the children of men, there is a unity to our joint worldwide striving. Because God is one, man can be one. My brother's welfare is my concern because I am not complete without him, who like me comes from Him. This is man's role in the scheme established by the universal God. We have no alternative, then, but to find ways in which to help our fellow men to secure the freedoms and the blessings which may be achieved on this earth.

The Congress of the United States is the greatest forum, tribunal, and academy yet devised on this globe. As the sessions of the 86th Congress open, we lift our voices in joint prayer that its deliberations may be of lasting benefit to the people of our country, that its concerns may be a boon to all the nations, and that its actions may serve to strengthen the hands of all men of good will and lead in the path of meaningful peace and amity. May the Members of the Congress never falter in pursuing the will of God, and may the blessings of the Almighty be upon them. Amen.

Reclamation in South Dakota

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. CASE of South Dakota. Mr. President, with the taming of the Missouri River, which bisects South Dakota, a new era has been opened to our State.

It is an era which holds the promise not only of power and recreation but also of tremendous irrigation potential.

Recently, Mr. W. A. Dexheimer, Commissioner of Reclamation, addressed the South Dakota Reclamation Association and outlined the progress which has been made in developing past irrigation projects in our State as well as the steps taken to develop new ones.

I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Dexheimer's speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY COMMISSIONER OF RECLAMATION W. A. DEXHEIMER BEFORE THE SOUTH DAKOTA RECLAMATION ASSOCIATION AT PIERRE, JANUARY 12, 1959

It was with a great deal of pleasure that I accepted the invitation of Raymond Lund to participate in this meeting of the South Dakota Reclamation Association.

South Dakota and its problems of irrigation are not new to the Bureau of Reclamation, nor is the Bureau new to you in the western part of the State. We have not, however, gotten so well acquainted with you who come from east of the Missouri, but that is the direction in which reclamation seems to be moving as the need for greater water conservation develops all across the country.

Soon after the passage of the Reclamation Act in 1902, work began on the Belle Fourche project. Of all the investigations made in the State in those early days, this is the only project that showed feasibility. It has been constructed and has served the local area and the State for many years.

Because other areas did not appear feasible for development, not only was there no construction for many years, but even the collection of basic data was largely discontinued. The drought and depression of the thirties caused a renewal of interest in reclamation and under the Water Conservation and Utilization Act, Deerfield Dam was constructed.

MISSOURI BASIN PROJECT

During this period the Pick-Sloan plan evolved and the Missouri River Basin project was authorized by the Flood Control Act of 1944. Changing values and increased needs opened the door and made additional projects. The lack of continuous data collection meant that some features were included in the Missouri River Basin project without adequate knowledge of conditions, and some mistakes were made.

We are just now reaching the point where the evidence many support a decision to irrigate from Shadehill Reservoir. We were obliged to abandon Bixby Dam because of poor quality of the water.

On the other hand, Keyhold Reservoir is beginning to serve its function of supplying supplemental water to the Belle Fourche project, and Pactola Reservoir has become the primary source of water for Rapid City and the Air Force base.

ANGOSTURA UNIT

The Angostura unit is a development to which you can point with pride as a remarkable example of the effect of the more intensive use of the resources of the State. Crop production and farm income from this unit are probably six times what they were prior to the availability of water for irrigation. This has made possible a quadrupling of the number of farms in the area, besides increasing the amount and stability of the income per farm.

This has been achieved early in the development period before the time that construction charges become payable under the irrigation district contract. A few years ago there was concern among the water users as to whether they could make a go of farming in the area.

I understand that at the recent annual water-users' meeting the story had completely changed. Now the comments are, "We

have licked the production problem and now are trying to improve our markets."

With respect to further development west of the Missouri, the outlook, frankly, is not too good. There is no feasible development on the Bad River and only a minor amount on the White. A small amount of new land along Rapid Creek can be served from Pactola Reservoir. Action there is dependent on wishes of the local people.

The real new value to South Dakota in the construction of the Missouri River Basin project can come from development along the Missouri River and in the eastern part of the State. The Corps of Engineers has been engaged in harnessing the river itself for flood-control and power purposes and has the job well along.

Since the first reservoir was completed at Fort Peck, the Garrison, Fort Randall, and Gavins Point Dams have been constructed; closure was made at Oahe last year, and work is beginning at Big Bend. South Dakotans have made a major contribution in this river-control job by furnishing the sites for Fort Randall and Big Bend Reservoirs and much of the area needed for Oahe Reservoir and Lewis and Clark Lake.

DRAMATIC MOMENT

One of the dramatic moments and major events in the State's history occurred on March 15, 1954, when President Eisenhower pressed a button in the White House signaling former Governor Anderson to throw a switch at Fort Randall. This was the first generation of power from a Missouri River dam in South Dakota. In addition to Fort Randall, generators are spinning at Gavins Point and Garrison Dams, producing power for the benefit of South Dakota and the other States in the area.

The program of powerplant, transmission line, and substation construction has stimulated strong immediate economic activity both in the area and in the places where the materials have been produced and fabricated. But more important is the lasting impact of wide distribution of hydroelectric power throughout the Plains States. This impact is felt in city and country, in industry and on the farms where the farmer and rancher and their wives can produce more efficiently and with less drudgery and with opportunity for progressive, fuller living in the home and community.

The impact is also felt in areas where the relatively low-cost power is used for irrigation. This offers some real possibilities in your State. Along the Missouri River are a dozen or more small pumping units in South Dakota on which we are now completing a general report. These units vary in size from 500 acres to 7,000 acres, and will require pumping from the Missouri or one of the reservoirs. It developed they can provide a reliable feed base for livestock herds in the area, and stabilize agriculture well beyond the unit limits.

CHARLES MIX, BON HOMME

As a part of the investigation of these South Dakota pumping units we looked at land in Charles Mix and Bon Homme Counties, and found areas near Wagner and Geddes which appeared to offer possibilities. Here there is strong local interest in irrigation, and also in the possibility of restoring Lake Andes as a fishing and recreation center. We are making more detailed studies of the Wagner unit and should it or a larger unit prove physically and economically feasible it might be a good pilot development to demonstrate the value of irrigation in the subhumid area of South Dakota.

The impact of power development is also being and will be increasingly felt as the revenues from power sales assist in paying the construction cost of irrigation features. This is one of the basic features of the Missouri River Basin project.

OAHE UNIT STUDIED

The greatest benefit in the State can be realized if the Oahe unit is constructed. This is one of the largest potential irrigation projects remaining to be built in the United States. Since work began on firming up the Pick-Sloan plan we have been studying this unit. Investigations have been expensive and there have been many setbacks.

We have learned a great deal about the glacial till and the lakebed soils east of the river. In 1956 we issued an interim information report which indicated about 550,000 acres of land were suitable for irrigation in the James River Valley, and which showed a favorable benefit-cost ratio for the Oahe unit. The current studies are for the purpose of firming up the earlier figures, both as to the amount of land suitable for irrigation and as to the cost and benefits.

The investigation will culminate in a report, scheduled for completion in the summer of 1960, which will have a firm economic and financial analysis and will definitely establish whether the entire Oahe unit is feasible. It will also give the farmers a firm plan for irrigation, and tell them within reasonably close limits what the operation and maintenance and construction charges will be. At that time the extent to which power revenues will assist in repayment will become apparent.

NEED LOCAL SUPPORT

This is the situation on Oahe unit as far as the bureau's work is concerned. The other principal facet is that of local interest and support. No reclamation project, however, small, has any chance of authorization by Congress without local support, the larger the project, the stronger and more widespread is the support needed. The construction and development of the Oahe unit is an undertaking which would require the constructive effort and foresight of many individuals and organizations in South Dakota.

The magnitude of the project will require that it be constructed in several stages over a considerable period of time. Some works would be built to full capacity initially. Construction of water supply works larger than needed to serve the first irrigation districts that may be organized poses an operation and maintenace financing problem that must be faced before construction work can be started.

Irrigation districts, organized in the usual fashion, can underwrite the reimbursable cost of distribution works in their districts. This would not meet the financial requirements of a project of this magnitude, particularly in the early years.

We can foresee that an organization such as a conservancy district will be necessary to coordinate the promotion and development of the entire project. Additional moneys will be needed to pay a portion of the operation and maintenance costs, particularly of water supply works, and a portion of the construction costs. Because of the widespread benefits a conservancy district is the logical answer.

Such a district must have the power of assessment and must be broadly based to provide the financial assistance necessary until irrigation districts covering the entire irrigable area attain their ultimate development.

NORTH DAKOTA EXAMPLE

You are fortunate in having the model and experience of your neighboring State of North Dakota in considering a conservancy district type of organization. The Garrison Diversion Conservancy District in that State covers 25 counties in entirety. Its authorized 1-mill assessment enables, on present valuation, the financing of a budget of more than $300,000 per year, if necessary. This financing authority of the conservancy district has been very useful in its educational activities and in hiring technical and legal counsel.

The existence of the conservancy district has also warranted organizing irrigation districts where there was not unanimous acceptance of irrigation at this time, on the assumption that the objectors would ultimately come into the irrigation district. Without the conservancy district it would have been necessary to include in the irrigation districts nearly everyone within their exterior boundaries, and strong opposition to district formation might have developed.

Along with the six irrigation districts now organized in that State, the conservancy district will be a key entity for purposes of contracting with the United States for the financing of a portion of operation and maintenance cost during the early stages and repayment of a portion of the construction cost of the irrigation facilities.

The benefits of reclamation development to industrial development, wholesale and retail business, and professional services have long been recognized. Diversified irrigated farming brings greater wealth and opportunity.

The businessman and the farmer need to know what irrigation can mean to the area and the State. Getting the facts across to them will require a full measure of foresight, understanding, and hard work. I commend your leaders who have been active in this field of endeavor.

In considering the need and importance of further irrigation development in South Dakota, you should look to the experiences in other States. Take a trip through the North Platte project in western Nebraska and Wyoming, for example, and see the results of long-time irrigation development there and how it has released that area from a one-crop economy.

A recent economic survey showed that the irrigated area and towns therein support 27 times as many people and provide 40 times the income of adjacent prairie areas. What's more, the irrigated area provided 40 times the income. It is worth remembering that during the drought of the 1930's, the dryland areas lost 12 percent of their population and the irrigated areas gained 18 percent.

POPULATION NEEDS

Remember, too, that the United States is experiencing a population growth that will put us over the 200 million mark by 1970 and 220 million by 1975. At the same time, we are losing more than a million acres of farmland per year to urban and industrial expansion and associated needs. These two facts mean a constantly increasing demand for food and fiber from existing farmlands and also sharply increased water needs for all purposes.

Recent population estimates show South Dakota gaining only 12.9 percent by 1975 compared to a national increase of 35 percent. That means many of your young people—your sons and daughters—probably will leave the State for better economic opportunity unless new industry and diversified agricultural opportunities are created here.

You have one of the Nation's most valuable resources flowing through your State. For centuries it has been a liability, alternately flooding many sections of the State and then drying up to the point where it would hardly justify the nickname, "The Big Muddy." River control has been accomplished. The Missouri has been mastered. Potential irrigation, power, and recreation are possible sources of great economic expansion in South Dakota. Future use, as a resource of your State, lies in your hands.

The Challenge of Metropolitan Growth

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. HARTKE. Mr. President, on January 16, 1959, the distinguished Senator from Nevada [Mr. BIBLE] delivered a most interesting and educational address before the Citizens Conference on Metropolitan Area Problems, which was held at American University.

In order that Senators may have an opportunity to read the address and benefit from the experienced analysis of our great chairman of the Joint Committee on Washington Metropolitan Problems, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ALAN BIBLE, CHAIRMAN, JOINT COMMITTEE ON WASHINGTON METROPOLITAN PROBLEMS, TO THE CITIZENS CONFERENCE ON METROPOLITAN AREA PROBLEMS, AMERICAN UNIVERSITY, JANUARY 16, 1959

Commissioner McLaughlin, President Anderson, and ladies and gentlemen of the Citizens Conference on Washington Area Metropolitan Problems, you are meeting today to consider not only the problems of the National Capital region, but problems typical of our modern America, where some 60 percent of the people live in the 168 standard metropolitan areas. Of this metropolitan population, more than half live in 14 of the 168 areas. Washington is one of them. Of our city dwellers, nearly 9 out of every 10 live in a metropolitan area. The outlook for the future growth of our burgeoning population is for further concentration in a handful of large cities. If we expect in the year 1975 a total population of about 220 million persons, urban areas will have to face the absorption of 50 million more people.

When we speak of metropolitan areas we are talking about large aggregations of population living in politically fragmented areas. The metropolitan trend is a suburban trend. Over the last 10 years, at the rate of 4,000 people a day, our population has moved into the suburbs. That is where 14 million of them have moved since 1948. And again there is no expectation that this trend will slacken.

But it is not with these facts of growth alone but the problems that they imply that conferences like this are concerned. What are some of these problems? The pressure of increasing urban populations against limited natural resources, such as water, is certainly one of them. In my dry section of the country it is probably the principal problem. But even here in the humid East we are concerned with it. The problem of metropolitan mobility is another one. By 1975 there may be 88 million passenger cars and a two- and a three-car family will be commonplace. The shortage of school buildings is evident to everyone who lives in suburban communities. The increase of our school population by approximately one-third or 13 million pupils is expected in all our elementary school population by 1975 and a high school enrollment of 5 million is also contemplated.

These are some of the things that our increasing population will demand if the American standard of living is not to be lowered and if the prospect of metropolitan growth is not to be stifled.

I repeat that these are national problems when looked at in their true perspective. Senator LYNDON JOHNSON has recently called attention to the need to know more about this vital sector of American life. He has recommended the creation of a broad study commission to survey these emerging problems and how they are affecting our great metropolitan centers. The widespread congressional interest in these matters may be further described. In the last session not less than four bills proposing the creation of a Federal Department of Urban Affairs, or, as one Representative phrased it, of "urbiculture," were introduced in the House. Earlier this week Representative OSTERTAG introduced in the House the first of what may be a series of proposals for a study of national metropolitan problems. Senators KENNEDY and CLARK have already voiced their concern with these problems and the need to do something about them in the present session of Congress. Even the President has recognized this need in his message earlier this week.

I think that we can take it, without further demonstration, that the subject of this conference is not only one of national importance but one of congressional concern.

What you are going to discuss here today and tomorrow may seem, to many, a local problem. But I would like to begin by setting it in a broad frame and by reminding you that what is done in Washington will have a far-reaching significance in other metropolitan areas throughout the Nation.

The position of our city as a prototype of the ideal American city, as a pilot plant of metropolitan area government, has frequently been urged upon us, and with good reason. The government of the District of Columbia is a national problem, made such by the Constitution of the United States which confers upon Congress the exclusive legislative jurisdiction in all cases whatsoever for the government of the District of Columbia. It is the inseparable relationship between the government of the District of Columbia and its rapidly growing surrounding area that gives rise to the concern of the Joint Committee on Washington Metropolitan Problems. In the studies of the last year much has been learned of this relationship.

We know, for example, well over half of the area's population is now located outside the boundaries of the District of Columbia. What is more surprising, one-third of the Federal employees in the area are working in establishments located in the environs rather than in the Capital City itself. The Federal Government has tremendously increased its land holdings in the metropolitan region and is today by far the largest single economic factor in all four metropolitan counties. While the entire metropolitan area constitutes one market, of course, I think it is with some interest, in illustrating the dispersal of Federal employees throughout the area, to note that of the Federal payrolls in the fiscal year 1958 which totaled $1,350 million, nearly 30 percent was paid to those employed in adjacent counties of Maryland and Virginia.

Let me return to the hope that has been voiced over many years that the Federal Government exercise its unique responsibilities in the National Capital region to create an ideal metropolitan area. This has been forcefully stated by Prof. Daniel Grant of Vanderbilt University in the following terms, "If the Federal Government could achieve an effective integration of the government of the District of Columbia with its suburbs by some method also available to other metropolitan areas, the result would be new hope for metropolitan integration the country over." Another scholar, Victor Jones, has urged, "The least that the Federal Government should do is to study the problems of its own metropolitan area. Here Congress has exclusive jurisdiction over the central city. The Federal Government has an opportunity and I believe a responsibility to act as a model to the rest of the country by recognizing that the National Capital is a metropolitan community spilling over into several counties and independent cities of two States. It also has an opportunity to develop a model approach to a comprehensive and cooperative study of the problems and to the development of solutions."

My purpose in marshaling these facts and citing these quotations is to inspire and encourage your efforts at this conference by reminding you of its broader significance. Let me now turn to another aspect of this subject which I believe you will also find invigorating.

Washington has an enviable record in recognizing and dealing with the problems of metropolitan growth and expansion, and Congress has been prompt in recognizing the appearance of these problems and supporting enlightened measures for dealing with them. This record over nearly a century is one reason why the creation of the Joint Committee on Washington Metropolitan Problems was a logical and altogether consistent step for Congress to take, and why I believe that the recommendations of the committee in its final report (which will be handed Congress the end of this month) should receive favorable consideration.

Let me review this record. Over a century ago, Congress acted to protect the metropolitan area water supply by creating the Washington Aqueduct, one of the first large-scale regional water supply undertakings in the United States. They planned on such a large scale that with minor repairs and alterations this system has lasted until the present day, when it provides treated Potomac water not only for the District of Columbia and the whole of Arlington County, but for other local and intermittent needs as well. In 1902 the Senate Park Commission, headed by Senator McMillan, of Michigan, drew together a team of outstanding national figures who produced the great McMillan Report which retrieved the original conception of the Capital city left by our Founding Fathers from its 19th century obscurity and laid the foundations for the Capital city that we know today. The National Capital Planning Commission and the Fine Arts Commission, to say nothing of innumerable parks, monuments, and building projects all derive from the McMillan Commission Report. This is well known. But it is not so well recognized that the scope of the Commission's work was not limited to the National Capital but extended up the Potomac River to Great Falls and down the Potomac to embrace that great historic shrine, Mount Vernon.

Large portions of the metropolitan area also acted independently to deal with the problems of metropolitan growth in an orderly fashion. This was conspicuously true in 1918 when the Maryland Legislature established the Washington Suburban Sanitary Commission, and a few years later the Maryland-National Capital Park and Planning Commission. For the Maryland portion of the suburban area these two agencies have rendered invaluable service. Today it is apparent that they have not only helped plan the orderly development of the Maryland suburbs but by the provision of waterlines and sanitary sewers have tended to structure the development of these areas in such a way that they are inherently more economical to provide with local government services than would otherwise have been the case, and is tragically the case in so many suburban areas in American cities. A good beginning in the same direction has also been made in Virginia through the establishment of the Northern Virginia Regional Planning

Commission, which this year is being greatly strengthened. Our committee has contemplated the proposed establishment of a Northern Virginia Sanitation Authority as a natural and beneficial step.

In 1952 Washington became the second metropolitan area in the United States to establish an official regional planning agency. In 1955 Congress authorized the creation of a metropolitan area mass transportation survey which, in method and in boldness of conception, has already set the pace for similar studies in other areas.

The organization of the Washington Metropolitan Conference, under the leadership of Commissioner McLaughlin, 2 years ago, was a major step forward in developing a political organization that reflects the interests of local governments throughout the area. It has other characteristics which are unique and valuable. These include the membership in the conference of the State legislative delegations in Maryland and Virginia. (I was interested to read in last week's New York Times a proposal to strengthen the only other comparable metropolitan body in the United States, the New York Metropolitan Conference, in a report prepared by Prof. Wallace Sayre of Columbia University. His recommendations impress me as mild, indeed, compared with the role for the conference proposed by our committee's own staff consultants.)

May I claim, too, the establishment and activities of our own Joint Committee on Washington Metropolitan Problems as another milestone in metropolitan area progress. There have been, of course, other studies of a broadly similar nature in other American cities. But, I know of none that compares to what we have undertaken—in its unique combination of broad scope and the consideration of metropolitan areawide problems and solutions in an institutional sense, and considerable depth in the analysis of the specific problems selected by the committee for detailed study.

Earlier I have referred to the final report of our committee which will be given Congress the end of this month. The committee also proposes to continue its work through the summer in order to receive the report of the mass transportation survey and hold such hearings on it as may be necessary. When that remaining task has been completed, our work is done. But, however useful, the report of a temporary committee is far from all that is needed if our enduring metropolitan problems are to yield to continuous attack. We need, both in Congress and in this community, organizations that will bring continuity to our efforts to deal with area problems. In this very real sense, it is up to you, the people who have demonstrated their interest in working on these continuing problems by your attendance here. The many legislative acts and administrative decisions required by regional problems will gain unity if there is a regionwide and fully representative citizens organization at work in this field. At the least, let me voice the hope there will be further regional conferences of this sort.

This record of metropolitan progress, taken as a whole, is one, I claim, that any American metropolitan area would take pride in, and sets a high mark for our present and future efforts. In particular, it allows me to hope that we have already made substantial progress toward the goal of that municipal ideal and national example that we have been urged to create.

Now from these heights where, in the role assigned me as keynoter of your conference, I have tried to look ahead and behind and to either side, to provide a framework for your deliberations, and to inspire your efforts, let me descend briefly to the level where you will find yourself working in the next 2 days. I would like to say a word or two about the political problems of the National Capital region. Many of the things people want to accomplish cannot be achieved through existing local governments. Many of the things that metropolitan growth and expansion require, if indeed growth is not to be frustrated altogether, are beyond the capacity of the existing instrumentalities of government. We must choose whether to take the necessary forward step and create new institutions of government that can deal with problems on a regional scale, or to submit to the consequences of inaction. These consequences are formible but the difficulty of moving ahead seems to me to have been exaggerated in most of the solutions that have been offered.

I can concur with those who believe that a general purpose regional authority is too remote from the people to be a realistic solution to what is, in the end, a problem of local government. I also share the fears of those who object to the proliferation of a number of separate functional authorities and special districts, lacking relationship to each other or to the established local governments of cities and counties in the region.

The opportunity which is open—in theory, at least—in most American cities, of annexing the adjacent suburban development or of consolidating cities and counties, appears to me barred by the provisions of our written Constitution. The course of retrocession, ardently urged by Professor Franchino of the Georgetown University Law School, on the precedent of the retrocession of Arlington County to Virginia in 1846, also seems to me politically unlikely, to say the least.

I suspect that in this area we will have to find some new means of organizing to undertake the unique tasks of metropolitan government. I suggest that the eventual solution should be one in which local interests can find effective representation, giving them not only a voice, but some control. I am sure that, given the unique congressional responsibility for our central city in the District of Columbia, and the great and growing Federal interest in the surrounding area, the desirable structure of regional government must be one in which the Federal interest will be effectively represented.

Perhaps this does not sound like the tidy administrative conceptions that have been offered in some metropolitan areas of the United States, and chiefly by those concerned with administrative efficiency and economy. It does not pretend to respond merely to those aims. Earlier I said that, "Many of the things people want to accomplish cannot be achieved through existing local governments." The reason we have governments is to allow people to do things, some of them perhaps unreasonable things, but things which are wanted and often desperately wanted to reflect their ambitions, to support their standard of living, to enrich their life. The glowing words of our great national documents were not written to voice platitudes but the aspirations of a free people. We have now become an urban people and our destiny now must be worked out in urban terms. It will not be easy. Politics never is. The result in the end may not be neat. That is not the way of legislation. But I am supremely confident that the forces of modern life, as we see them written here typically in the Washington metropolitan area, cannot be denied, and in finding expression for them I am equally confident that even in this unfortunately disinfranchised central city, the dominant interests of our people will seek and find appropriate recognition.

Matthew Fontaine Maury, the Pathfinder of the Seas

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. HILL. Mr. President, one of the most erudite Members of the Senate and one of its greatest students of history is the distinguished junior Senator from Virginia [Mr. ROBERTSON].

On last Monday, January 19, the birthday of Gen. Robert E. Lee, the Senator from Virginia delivered a beautiful and most informative address on Matthew Fontaine Maury, "The Pathfinder of the Seas," to the Albemarle Chapter, No. 1, United Daughters of the Confederacy, at Charlottesville, Va. In his address the Senator from Virginia [Mr. ROBERTSON] not only gave us a picture of Maury and of his monumental work, but he also spoke words of appreciation of Robert E. Lee and Stonewall Jackson.

The Senator's paternal grandfather was a captain of infantry in the Stonewall Brigade and was killed at the bloody Battle of Cold Harbor. His maternal grandfather and nine of his grandfather's brothers served in the Army of Northern Virginia under General Lee, and five of them were killed.

In 1922 the junior Senator from Virginia, as a member of the State Senate of Virginia, sponsored a bill to provide for the erection of a monument to Matthew Fontaine Maury in his beloved Goshen Pass. The legislature passed the bill and the Senator from Virginia [Mr. ROBERTSON] was named chairman of the commission to select the monument and to arrange the exercises for its dedication. The dedication took place in 1923 and was a historic occasion.

The Senator from Virginia is himself a veteran of World War I, in which he served with honor and distinction.

I ask unanimous consent to have the Senator's eloquent address on Matthew Fontaine Maury printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR A. WILLIS ROBERTSON BEFORE THE ALBEMARLE CHAPTER, NO. 1, UNITED DAUGHTERS OF THE CONFEDERACY, CHARLOTTESVILLE, VA., JANUARY 19, 1959

My life, as most of you well know, has been lived within the shadows of the Blue Ridge Mountains. By inheritance, environment, and training, I am devoted to the memory of Confederate leaders and the principles of government for which they made sacrifices, never surpassed in the history of our Nation.

No one in the South could be more grateful than I for the wonderful work of the United Daughters of the Confederacy in preserving the memory of southern leaders. In doing so, they have not only helped to perpetuate in the hearts of all sons and daughters of the Confederacy the principles of States rights for which men like Lee, Jackson,

and Maury made great personal sacrifices, but the Daughters of the Confederacy, through high idealism, and in refusing to admit that it was a lost cause, have set a standard of true greatness which both our Nation and the world have finally been willing to accept.

In all of recorded history, there never was a nobler man than Robert E. Lee and none who has left a greater imprint upon succeeding generations. Yet, shortly before his death, Lee, in his great humility, indicated he felt he had done nothing worthwhile saying, "Life is gliding away and I have nothing to show for mine. I pray I may be spared to accomplish something for the benefit of mankind and the honor of God." There is at least one historian who still lists Lee as a failure simply because he was the commander in chief of an army that suffered total defeat and the leader of a cause which that historian listed as a lost cause. But most historians, including the great Virginian, Douglas Southall Freeman, and the people generally of the entire Nation endorse the opinion of Lee expressed by Senator Ben Hill, of Georgia, when he said: "He was a foe without hate, a friend without treachery, a soldier without vices, and a victim without murmuring. He was a public officer without vices, a private citizen without wrong, a neighbor without reproach, a Christian without hypocrisy, and a man without guilt. He was Caesar without his ambition, Napoleon without his selfishness, and Washington without his reward. He was as obedient to authority as a servant and royal in authority as a king. He was as gentle as a woman in life, pure as a virgin in thought, watchful as a Roman vestal, submissive to law as Socrates, and grand in battle as Achilles."

Military experts throughout the world now rank Lee as one of the greatest military leaders of the English speaking peoples and second only to him, Thomas J. Stonewall Jackson, the great lieutenant on whom Lee so heavily relied. In the quiet and reserved VMI professor, in the consecrated Presbyterian deacon, who each Sunday morning taught a class of Negro slaves, no one in Lexington could visualize the military genius later to be displayed by Jackson in his famous valley campaign. Even his own soldiers at first misunderstood him. They thought him harsh, even cruel; but as their experience increased they recognized the wisdom of his severity and when they looked upon that kindly face, grave and determined as it was, they realized how closely his firmness was allied to tenderness. No one could, like him, unless it was Napoleon, establish and maintain discipline worthy of the best in the Anglo-Saxon nature, which had honor for its principle and glory for its reward. From him his soldiers and the people of his Southland learned the self-denial, which is the root of all religion, the self-control which is the root of all manliness. It was this discipline which enabled the first brigade to turn the tide of battle at Bull Run, or first Manassas. McDowell's men were carrying all before them and by an impetuous rush had carried Henry Hill which was a commanding point in the very center of the Confederate lines and the key of the battleground. Bee, Bartow, Evans, and Hampton were driven in and Jackson alone stood fast. General Bee, with his hat off, his sword in hand, covered with dust and his horse foaming, dashed up to Jackson and said: "General, they are beating us back." "Then, sir, we will give them the bayonet," said Jackson, as his thin lips closed like a vise. Bee, inspired by Jackson's confidence, galloped back to his broken lines and shouted: "Look, there is Jackson, standing like a stone wall. Rally behind the Virginians."

Notwithstanding military achievements of Confederate leaders which in themselves are proof of greatness, the United Daughters of the Confederacy have taught the South and the Nation the fundamental truth that true greatness is not based upon physical strength, political power, mental brilliancy, or accumulated wealth, but rather upon the type of sacrificial service that a man renders to his day and generation. Their test of unselfish love and devotion to duty as applied to our Confederate leaders goes beyond the political idealism of Pericles' tribute to the young men of Athens when he said: "So they gave their bodies to the commonwealth and received, each for his own memory, praise that will never die, and with it the grandest of all sepulchers, not that in which their mortal bones are laid, but a home in the minds of men, where their glory remains fresh to stir to speech or action as the occasion comes by. For the whole earth is the sepulcher of famous men; and their story is not graven only on stone over their native earth, but lives on far away, without visible symbol, woven into the stuff of other men's lives * * *."

Jackson gave his life for the cause and as a professional soldier who had suffered a major defeat it would have been easier for Lee to have done likewise because it will be recalled that he said shortly before he surrendered at Appomattox: "How easily I could be rid of this and be at rest. I have only to ride along the line and all will be over. But it is our duty to live. What will become of the women and children of the South if we are not here to protect them?" It was in that devotion to duty, to protect the women and children of the South and to train the youth of the South to repair the ravages of a fraternal war that Lee made his greatest contribution not only to his day and generation but to all succeeding generations.

We are now in a period when the heritage of constitutional liberty in which both North and South believed, although they were divided on how it should be preserved, is threatened anew by so-called liberals at home, who wittingly or not would take us down the road to socialism, and by Communists abroad who threaten to impose their will by force upon a free world. Therefore, for the preservation at home of those priceless principles of political and economic freedom that were born of the brain and purchased with the blood of our Founding Fathers we have never had a greater need to be reminded of the example set us by Confederate leaders like Lee, Jackson, and Maury.

We also live in a time when men are challenging the statement of the Roman philosopher, Seneca: "There is no easy road from the earth to the stars." Rockets are shot into outer space and brought back with data which scientists assure us will chart a pathway through the skies. Manmade missiles have penetrated beyond the moon and our Government is appropriating millions of dollars to continue these studies and experiments. Hence, the appropriateness of the request of your program committee that I speak primarily tonight concerning the greatest scientist of the Confederacy, Matthew Fontaine Maury. While these annual celebrations normally are held on January 19, the well-known birthday of the immortal Lee, it perhaps is not so well known that the birthday of Maury was January 14 and that of Jackson, January 21. Like Lee and Jackson, Maury's claim to immortality rests more securely upon his qualities of Christian character and his unselfish and constructive contributions to humanity than upon public recognition of his scientific achievements.

Maury was born in Spottsylvania County, Va., January 14, 1806. He entered the Navy as a midshipman in 1825 but 14 years later, when he was 33, he was thrown from the top of a stagecoach, having yielded his seat in the coach to a lady, and suffered a permanent lameness, which disqualified him for further active service at sea. In 1841 he was placed in charge of the Depot of Charts and Instruments, out of which grew the U.S. Naval Observatory and the Hydrographic Office. The weekly reports published by the Hydrographic Office in Washington are headed with this statement: "Founded upon the research made and the data collected by Lt. M. F. Maury, U.S. Navy." This is a recognition paid to no other naval officer.

When he was only 25 years old, Maury became convinced that the waves, the winds, the storms, the currents, the depths and temperatures of the sea constituted a system so mathematically interrelated that the mind of man could understand its phenomena and forecast its processes. The Prophet Job had written an explanation of God's power "Which alone spreadeth out the heavens, and treadeth upon the waves of the sea." Then David had written Maury's favorite passage, in the 107th Psalm:

"For He commandeth, and raiseth the stormy wind, which lifteth up the waves thereof. They mount up to the heaven, they go down again to the depths; their soul is melted because of trouble. They reel to and fro, and stagger like a drunken man, and are at their wit's end. Then they cry unto the Lord in their trouble, and He bringeth them out of their distresses. He maketh the storm a calm, so that the waves thereof are still."

The young Maury was firmly convinced that the same God who had made nature's laws for the dry land which man was beginning to understand also made them for the waters of the earth which likewise, through patient study and observance, could be understood. And so it was that Maury was able to discover the tradewinds and the ocean currents which reduced weeks of sailing time in Atlantic waters, and around the Cape of Good Hope to the Pacific, resulting in savings of millions of dollars to American shippers. Because of that monumental work, Maury was given the sobriquet "The Pathfinder of the Seas."

Maury's pinnacle moment was yet to come. His system of sea lanes had been utilized chiefly by American ships, his coworkers being chiefly Americans, but Maury wanted all nations to cooperate with the U.S. observatory for the benefit of the maritime interests of the whole world. So, he called an international conference to meet in Brussels in August 1853. That might properly be termed the first League of Nations. It included Belgium, Holland, Denmark, Norway, Sweden, Russia, France, Portugal, Great Britain, and the United States—representing 95 percent of the shipping of the world. The conference lasted 16 days, Maury's charts were unanimously adopted, and for the next 50 years those nations cooperated in exchanging maritime information along the lines proposed by Maury. But typical of Maury's modesty in declining to accept the presidency of the league was the reply he made to the praise that was given to the value of his scientific research: "I am extremely grateful for the sympathy you have expressed and the praise you have been pleased to bestow on my humble efforts. On my part I beg to thank you for the kind assistance that you have afforded me. Allow me to add that we are taking part in a proceeding to which we should vainly seek for a parallel in history. Heretofore, when naval officers of different nations met in such numbers, it was to deliberate at the cannons' mouths upon the most efficacious means of destroying the human species. Today, on the contrary, we see assembled the delegates of almost every maritime nation for the noble purpose of serving humanity by seeking to render navigation more and more secure. I think, gentlemen, we may congratulate ourselves with pride upon the opening of this new era."

Time will not permit me to enumerate the details of Maury's remarkable career but

they can be summarized by saying that in addition to founding the Naval Observatory, his magazine articles resulted in the founding of the U.S. Naval Academy, he furnished the data necessary for the laying of the first transatlantic cable and he was the real father of the Weather Bureau which grew out of his recommendations to the Government when he was a professor of physics at the Virginia Military Institute.

Maury had formulated the plan for the weather bureau for the benefit of farmers as well as mariners when he was head of the naval observatory but war came before he could perfect his plans. We find this significant statement, however, in one of his sailing directions to accompany the wind and current charts published in 1858: "As much as we have accomplished at sea, more yet can be accomplished through the magnetic telegraph on land. With a properly devised system of meteorological observations to be made at certain stations wherever the telegraph spreads its meshes, and to be reported daily by telegrams to a properly organized office, the shipping in the harbors of our seaport towns, the husbandman in the field, and the traveler on the road may all be warned of every extensive storm that visits our shores and while yet it is a great way off."

When Virginia seceded from the Union in 1861, Maury, like Lee, threw in his lot with the South and became head of coasts, harbors, and river defenses. He invented the electric torpedo for harbor defenses and because of his international fame as a scientist, President Jefferson Davis sent him to England in 1862 to procure torpedo materials. Maury remained in England until 1868 where he received signal honors, including an honorary degree from Cambridge. Both Russia and France offered him the directorship of their imperial observatories. But Maury loved his native Virginia, and like Lee, he felt he owed a duty to the youth of the South. So, turning down offers that would have meant international fame as a scientist, a life of wealth and ease, Maury returned to a professorship at VMI where he labored for the rest of his life seeking to solve the riddles of nature, particularly for the benefit of the farmer in connection with weather reports and passing on to younger men his thirst for scientific knowledge.

In utilizing his chair of physics as a sounding board for a national program in behalf of a weather bureau, Maury overtaxed his strength. Returning from a lecture in St. Louis, he knew that his career was near its close. He knew that the task of interpreting nature in terms of help rather than of hindrance for mankind had been permanently advanced by his efforts. The end came quietly on February 1, 1873. "Do I drag my anchors?" he asked with a smile. "Yes," said his son. "All is well," he replied.

Maury loved the beauty of Goshen Pass and his last wish was that he be carried through the pass when the Rhododendron and Laurel were in bloom. It was the flowers that blossom in Goshen Pass in the spring that he wished placed upon his coffined body as the last and only tribute of affection:

"Wait till the Laurel bursts its buds,
And creeping ivy flings its graces
About the lichen'd rocks, and floods
Of sunshine fill the shady places.

"Then, when the sky, the air, the grass,
Sweet nature all, is glad and tender,
Then bear me through the Goshen Pass
Amid its flush of May-day splendor."

Careless of monument by the grave he built it in the world—a monument by which man might be taught to remember not where he died but where he lived.

Maury was truly, as Dr. C. Alphonso Smith said at the dedication of the Goshen Pass monument, "founder of a new science, pilot of every ship that sails and herald of a new era of international cooperation."

If we of the present generation join with the Daughters of the Confederacy in Charlottesville and throughout our beloved Commonwealth in being true to the principles of Lee, Jackson, and Maury, there will undoubtedly be heard again the Bull Run battle cry, "Rally behind the Virginians."

The Food Crisis of Humanity

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. CARLSON. Mr. President, Floyd E. Dominy, Associate Commissioner of the Bureau of Reclamation, stated on January 20, 1959, before the Kansas Conservation Contractors Association in Hutchinson, Kans., that "Kansas is confronted with an obligation to the Nation and to the world." In his excellent address before this organization he stressed the growth of population, both in the Nation and in the world, together with increased demands for food that must be met within the next few decades.

Kansas will play an important part in this program, but in my opinion our part in the program will be largely determined by the amount of water we can conserve and use for beneficial purposes.

We have made great progress, but there is much more work to be done in controlling the water runoff of our State. With increased water supplies both for agriculture and industry, Kansas will be in a position to maintain its place among the States of the Union.

I ask unanimous consent that Commissioner Dominy's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FOOD CRISIS OF HUMANITY

(Address by Associate Commissioner Floyd E. Dominy, Bureau of Reclamation, before the Kansas Conservation Contractors Association in Hutchinson, Kans., Jan. 20, 1959)

I was a little astonished, on receiving the invitation of your association to address this meeting tonight, to read that a suggested topic was "The Food Crisis of Humanity."

Here in the center of the Wheat Belt where, every year, we grow more grain to put in more warehouses with more subsidy from Uncle Sam to finance the growing of more wheat, in a seemingly endless circle, it may seem strange to be talking about a food crisis. Nevertheless, there is a continuing crisis which sends a good share of the world's population to bed hungry every night. You people are to be congratulated on your interest and foresight in discussing this problem even though it seemingly has no immediate relationship to your situation here.

A century and a half ago, the Reverend Thomas Robert Malthus forecast a catastrophe for the human race. He contended that, in time, the rise of population would ultimately overtake and pass the food supply.

His prophecy brought consternation to the world of his day. Then the industrial and agricultural revolution so stimulated food production that the Malthusian theory fell into disrepute, and its author with it.

Today, some economists, sociologists, and demographers—the people who forecast population trends—are finding many reasons for believing that the theory might yet come true. These people figure old Malthus was a pretty smart fellow, just a few centuries ahead of his day.

The world is divided between optimists and pessimists. When the pessimists examine the present world crisis in food, they become prophets of doom, subscribers to the Malthus theory. I prefer to be an optimist—I prefer to believe that man will continue to find ways to solve his problems.

But an optimist would be foolish to belittle or run away from reality. The reality is potentially ominous and spells out the gravity of the problem. A genuine crisis in food supply does confront the world. It is here—now—not in the future. It is real. The United States, the land of plenty has no immediate shortages but we must share world responsibility. And we must also keep an eye on that future time when our population growth outstrips our farm productive capacity and we become a potential land of want. As an optimist, I prefer to think that day will never come. As a realist, I prefer to take steps to insure that it does not come.

I think you will be interested in some figures that will indicate where present trends are carrying us.

In 1650, the world population was somewhere around 600 million. During the next 300 years, this population more than quadrupled to 2,700 million. The current trends are still upward—and from a constantly broadening base. Some demographers foresee another quadrupling within the next 100 years. There may well be 9 billion people in the world by the year 2050.

Put the problem in different and current terms. Population growth is the difference between births and deaths. Since this hour last night, the world population has increased by 123,000 hungry mouths. Since this hour last night the net increase in U.S. population is 8,000, or roughly one-fourth the population of Hutchinson, Kans.

Simple multiplication, at such rates, produces frightening totals. Within just 4 years the world population will increase by about 175 million people, the equivalent of the present United States population. The present world population of 2,700 million would nearly double in about 40 years, and the United States in the year 2000 would have more than 300 million citizens.

Now, all of this multiplication needs to be put into frames of reference to our topic tonight. The figures are meaningful if related to ability to produce food, fiber, and fuel, to standards of living, and to levels of subsistence.

Without assuming the role of pessimist, it can be stated simply that some 60 percent of the present inhabitants of the world are undernourished—certainly one-third of them seriously so. Peter Drucker, the economist, has pointed out that three-fourths of the world population have only one-tenth of the world's goods and income. Conversely, the North American Continent, with less than one-tenth of the population, enjoys up to three-fourths of the world's income and goods.

This gap between the underdeveloped portions of the globe and the more favored areas is not narrowing; rather it is widening—even in the last 10 years. The have-nots are getting less food and income and the haves are getting more. The effect must be that the 60 percent of people who are existing on less than 2,200 calories a day are those who day by day are being forced to drop further below the subsistence level.

Decline in death rates, rather than increase in births, is making the big difference in present population growth in the under-

developed lands. Each time these countries take a step forward in public health measures their population soars. In Ceylon, after the jungles were sprayed with DDT to reduce the incidence of malaria and other diseases of the tropics, the death rate dropped nearly 35 percent in 2 years. Food production remained constant. So in a few years famine struck. Once again population growth had outstripped food supply.

However, we should not limit ourselves to the underdeveloped areas in considering future food and population balance. The United States, for example, requires sustenance for 3 million additional people every year. Yet every year the United States is experiencing the loss of more than 1 million acres annually that hitherto had been devoted to agricultural production. Despite this annual loss in productive acres, our total area in farms has been relatively the same for the last 40 years, thanks to diligent efforts by private and public enterprise to bring new lands into production. Parenthetically, I might remark that the lands brought under irrigation or given supplemental water supplies by the Bureau of Reclamation have been averaging about 175,000 acres a year.

In spite of the annual land loss to new roads, industries, and community expansions, the United States continues to be a Nation having surpluses of certain foods. This paradox is caused partly because of technological advances in plant breeding, in mechanization, and in uses of insecticides, pesticides, and fertilizers. As an outstanding "have" Nation insofar as food supply is concerned, we Americans owe a real debt of gratitude to our soil scientists and to our free agriculture and its related businesses and producer cooperatives.

I am sure that most of you in this group are aware that the United States' production per acre has increased sharply during the last 2 decades. But it is also a matter of record that the rate of increase of production was greater during the earlier decade than in the second; in fact, the rate of increase during the last 10 years has been only about two-thirds that of the preceding period.

The Agricultural Research Service, the source of this comparison, adds that the rate of increase of crop production per acre per year must be more than twice the increase experienced during the last 10 years, if we are to meet our requirements by 1975. In the face of our glutted warehouses of basic agricultural commodities, this observation is generally unknown or unappreciated.

Commenting on these statistics, the Committee on Irrigation and Reclamation of the 1958 National Rivers and Harbors Congress, declared:

"Even if we are able to increase our total farm land 30 million acres by 1975, the rate of increase in crop production until then must be 50 percent greater than the rate of increase in the last 10 years. Furthermore, this projection of 30 million additional acres of farm land by 1975 is predicated upon the assumption that 5 million of these new acres will be irrigated.

"That is more new land than the Bureau of Reclamation has brought under irrigation during its 56 years of existence. Therefore, it is plain to see that if we are to meet 1975 and subsequent conditions we must have more land under cultivation, or the rate of increase in production per acre per year will have to be far greater than it has been in recent years."

We get concurrence from a Department of Agriculture source. Donald A. Williams, Administrator of the Soil Conservation Service, has said:

"In our time we shall see the rising population and the dwindling amounts of farm land meet. From that day on, you and your children can no longer be assured of the healthy balanced diet to which we have become accustomed."

This is the situation that portends here in food-rich America. Robert C. Cook, Director of the Population Reference Bureau, emphatically summarizes what it means. Said Dr. Cook: "The population bomb is as great a threat to mankind as the nuclear bomb. Fortunately, its fuse is longer."

Now, what are the implications that would particularly concern and interest this gathering? One long-range effect is extremely significant in this area, dominated as it is by production of grain and livestock. That is, that production of domestic animals for work purposes is a luxury that the world ultimately will not be able to afford. In the future—and I hope it is in the far, far distant future—production of domestic animals for meat consumption purposes may follow the same course to oblivion. Even today, in industrialized and rich western Europe, beefsteak from a prime steer is almost a rarity.

Dr. J. Murray Luck, Stanford University biochemist, points out that cattle, sheep, poultry, and swine consume about three times the amount of food calories that are consumed by man. Only a small part of this is food refuse, unfit for human consumption. In a world of 9 billion people, it seems certain that the number of domestic animals raised for meat will be reduced. Mankind may have to go more largely to a cereal diet with the amino acids of the animal proteins being substituted by laboratory synthesis. Again I emphasize the hope that any such substitute for a good beefsteak is a long way off.

Dr. Luck also reminds us that less than one-tenth of the earth's land area of 36 billion acres is under cultivation, and one-sixth of the earth's land surface is now used as pasture. Some of the pastureland and another billion acres of marginal land in the north and in the tropics could conceivably be brought into cultivation in the coming world struggle against hunger. Through such recourse to lands not now cultivated, existing techniques would permit possibly a doubling of world food production. But even this increase will hardly keep up with exploding population increases.

Says Dr. Luck:

"To feed 9 billion people in the year 2050, even at minimum levels, it is reasonably certain that vast sums will have to be expended in land reclamation, in the prevention of further erosion, in the manufacture of fertilizers, in the husbanding of nitrogenous and phosphorus-containing wastes, and in irrigation and water conservation.

"Domestic animals, whether used for food or for work will be displaced—the former by the synthetic products of the food industry, and the latter by the machine. The harvesting and cropping of food from the oceans and from the fresh waters of the earth will be carried out much more efficiently, and the cultivation of bacteria, yeasts, and photosynthetic algae for human food will be further developed where regional conditions are appropriate."

Aldous Huxley observes that "world output of mineral fertilizers could easily be doubled, with immense benefit especially to backward countries," and that the average wheat yield per acre is less than one-fifth of that of the best farms in the best countries. The world average of milk yield per cow probably could be trebled.

Irrigation, multiplication of the effective yield of grasslands, reduction of loss because of weeds, pests and animal disease, genetics and chemical production of synthetic foodstuffs all are waiting to be exploited, Huxley points out.

He concludes:

"Thus, if we really set our minds, our muscles, and our machines to it, it would clearly be possible, one way or another, to increase the world's food supply very appreciably in the space of a few decades, and probably to multiply twofold or threefold in the space of a few generations."

Certain measures that can be considered immediate are equally obvious. Foremost among these is irrigation but this, in turn depends upon conservation and wise development and use of our water resources. The United States wastes water flagrantly, and at a time when the water consumption per individual is skyrocketing.

Today's national demand for water—250 billion gallons a day—will be double that amount in 20 years. A possible remedy close to you conservation contractors is the urgent requirement for reducing water loss attributable to seepage, weeds, and phreatophytes. We, as a Nation, cannot afford this deplorable waste; neither can we go on wasting the substance of our lands by letting erosion continue at its present rates.

Current experiments toward enlarging our available water supply are encouraging. In this field are studies to retard evaporation on bodies of stored water; conversion of sea water and brackish water; and means of encouraging greater precipitation from the atmosphere.

Not only in the 17 western reclamation States, of which Kansas is one, but elsewhere in the Nation, there are numerous opportunities for private and public sources to develop both surface and ground waters. Such enterprises takes much time, planning, and money and the year 2000 is really much closer to us than it seems. When we refer to the year 2000, we are expressing concern for the welfare of our own children and grandchildren—and you parents all know how amazingly fast those youngsters grow to adulthood.

The Colorado River storage project, which includes both mainstem storage and participating projects, will require between 30 and 50 years to complete. The Missouri River basin project, from which Kansas benefits, was authorized 15 years ago and only now are we beginning to realize some of the positive benefits by irrigation. Any large scale irrigation on this project is still some years away.

Although requiring fewer years for completion, other smaller reclamation projects also emphasize that the 41 years until the year 2000 is a short span of time because many of those proposed, surveyed, and needed soon, haven't even been authorized.

I am one who believes that the principles on which the Reclamation structure has rooted and grown strong should be perpetuated. I believe in the continuation of the family-size farm as a means of individual agricultural enterprise. I believe in the principle of reimbursability, a credo of Reclamation since its inception in 1902. I believe in the worth to the Nation of reclamation enterprise. I believe—yes, I know—that reclamation projects stabilize, develop, and enhance not only the economy of the local area in which each exists, but also yield important benefits to the respective States and the Nation.

These being my convictions, I remain firmly of the belief that all water resource development groups—private, local, State, and Federal—should cooperate to develop surface waters for agricultural, municipal, and industrial purposes at a rate equal to or, if possible, even beyond that of recent experience. The population pressures of our times—to say nothing of the population pressures of the immediate future—should be recognized for the inexorable force that they are.

Meanwhile, urgent water requirements conflicting with the development of irrigated agriculture are with us at this moment. An example is found along the Kansas-Oklahoma border. The city of Wichita has an urgent need for domestic water supply. Cooperatively, the city and the Federal Gov-

ernment are proposing the construction of the Wichita project on the Ninnescah River. If authorized by the Congress, the Bureau would build the dam and multiple-purpose reservoir, and the city would, in addition to amortizing the cost of the dam, construct the pipelines to deliver water to the urban users.

Other projects along the Kansas-Oklahoma border contain prospects for agricultural developments. These developments will come, just as surely as hopes of a quarter century ago have become realities near the Kansas-Nebraska border. The Kirwin and Webster Units of the Missouri River Basin project on the Solomon River, and the Bostwick Division on the Republican River in Kansas, are new irrigation developments which will diversify dryland agriculture and aid the struggle for adequate diets the world over.

Collectively, these same projects will have facilities by the next crop year to deliver water to about 23,500 acres. Actually, on the Bostwick division in Kansas and the Kirwin unit, about 19,500 acres received irrigation water during 1958.

These Federal projects represent a rather small proportion of the total of irrigated acreage within your State. Kansas State College calculated that the irrigated acreage of the State of Kansas in 1957 was 644,000 acres. This is a total acreage, including lands receiving water from both surface and underground sources, from both gravity and sprinkler applications. It is a rather dramatic threefold increase from the total irrigated acreage in 1949 of only 248,000 acres.

There are prospects for important expansion of irrigation and of food production in Kansas and in others of the semiarid reclamation States. To deal with the problems of the imminent future, however, we should not confine our thinking to the irrigation States. In all of these United States, water for irrigation must compete with demands for water for domestic and industrial purposes, and indeed with water for navigation and for carrying off the wastes of our urban and industrial civilization.

Wise men of the immediate and the more distant future must concern themselves with the problems of competition for the available water supplies. Where water exists as surplus today, these wise men should devote their abilities to the end that the water is put to use, and at least part of it to enhance the productivity of the land.

It is such an approach that is involved in the development of irrigated agriculture outside the semiarid areas of the West. Arkansas' irrigation totaled nearly 900,000 acres in 1956. Florida irrigated 600,000 acres in 1957. Even Iowa has risen to 40,000 irrigated acres, Michigan to 68,000, Missouri to 32,000, South Carolina to 62,000, and Virginia to 37,000 acres. As you know, these are all States of relatively high annual rainfall.

In those areas of the populous East and South in which water can be devoted to agricultural production, some striking production results have been achieved. Gov. George D. Clyde, of Utah, told the recent convention of the National Reclamation Association about some net increases in crop yields in experiments with irrigation. After taking all irrigation costs into account, he said, sweetpotato production in Georgia increased in value about $400 an acre; tobacco in Virginia increased $282 per acre; cotton in Missouri $242 an acre, and even pasture land in Tennessee gained in value by $122 an acre.

Kansas is confronted by an obligation to the Nation and the world. It is blessed by having productive land, precipitation which is adequate for agriculture during most years, and water supplies which are greater than are needed in some places for current municipal, industrial, and irrigation demands.

You contractors, whose purpose is to assist residents of this State to conserve their water and land resources, should be among the first to accept Kansas' obligations for leadership in this coming battle against worldwide hunger.

Kansas is likely to be spared some of the greater problems inherent in population growth—the concomitant urbanization and industrial pressures that now confound smaller States and those with less productive soil and water. This really is a most fortuitous position. You Kansans have the opportunity and the responsibility to use your most abundant resources to help others who have and will have more complex and greater population pressures.

You might be distracted by the shibboleth—yes, shibboleth—of grain surpluses. Such surpluses, today and more so in the future, are transitory, even so far as United States needs are concerned. Right now, your grain production seems to be a problem to yourselves and to the National Government.

In the light of world needs, take pride in your 1958 production, overwhelming as it was. Take pride, and hope that future years will be as productive: In your winter wheat yield of 291 million bushels, 54 percent above the average; your record grain sorghum yield of 129 million bushels; your record soybean crop of 9.3 million bushels; your corn and your alfalfa hay crops, one-third and two-thirds greater respectively than the 10-year average for Kansas.

In the interests of conservation—of husbanding of Kansas' soil and water—each of you bears his individual obligation to mankind. The conservation work you perform now will help assure bountiful harvests for future generations.

Thank you for your courtesy in extending to me this invitation, and my very best wishes to you in your present and future efforts to develop the abundant soil and water resources of the great State of Kansas.

Highway Legislation

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two speeches which I recently delivered before groups interested in highway construction. The first one was given December 1, 1958, at San Francisco before the American Association of State Highway Officials and the second one, January 19, 1959, before the American Road Builders Association in Dallas, Tex.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

LEGISLATIVE PROBLEMS AHEAD

(Remarks of U.S. Senator FRANCIS CASE, of South Dakota, ranking Republican member, Senate Subcommittee on Roads, at 44th annual meeting of the American Association of State Highway Officials, San Francisco, Calif.)

Roadbuilding in the United States is the outstanding example of a working partnership between the several States and the Federal Government. You are the people who carry out the program of that partnership. We Members of Congress may write the charter of the partnership—but if the program is to be successful, the terms and the modifications must be based upon an understanding of the conditions which you encounter at the grassroots of action.

That is why, Mr. President, your representatives are so welcome at congressional hearings. It is also why we welcome these opportunities to rub shoulders and exchange views with you at these annual meetings of your association. All of us have our responsibilities in the partnership.

To illustrate the responsibilities of partnership or teamwork in a negative way, I like the story told me by an old prospector friend in the Black Hills. His search for the elusive El Dorado took him, some years ago, into the northern part of Canada. There he employed as guide a native who was part Indian, part French in blood.

The guide told him one night that they were near the place where the British Hudson Bay Company had lost a fur trader some years before. The trader had died during a hard winter and those with him buried his body in the frozen earth. Next summer, the Hudson Bay Company sent a party into the northlands in an effort to find the grave and recover the body. They employed some of the natives to assist them. The guide of my prospector friend, however, was employed that time not as a guide, but as a cook.

The party searched for several weeks in vain. They did not recover the body of the lost fur trader. My prospector friend from the Black Hills said to his half-breed guide, "That was sure too bad. I wonder where he could have been buried."

"Oh," the guide said to him, "You want to see the grave? I show you."

"What," my prospector friend said, "Do you know where it is?"

"Sure do," the guide replied, "I show you."

"But," my friend said, "Why didn't you lead the Hudson Bay party to it?"

"Oh," his guide came back, "On that trip I not hired to guide. My job to cook, so I cook, not guide."

DIFFERENT APPROACH NEEDED

Needless to say, such an approach to a Federal-State partnership in roadbuilding would leave many problems unsolved. Unless there be an understanding at the Federal legislative level of your problems in the field at the roadbuilding level, and at your end an understanding of our legislative problems, and at both levels a spirit of, and freedom in, teamwork, we would not get the job done. That there has been good progress, outstanding progress in the past year on all Federal-aid systems is evidence of excellent understanding and teamwork.

During the last session of Congress, three bills were passed which were the result of outstanding teamwork, teamwork within our congressional committees, teamwork with the Bureau of Public Roads, and teamwork with the highway officials of the several States. The three were:

1. The Federal-Aid Highway Act of 1958.

2. The General Highway Act of 1958, which codifies and brings together all of the Federal highway legislation in one compact statute.

3. The act to amend the Federal Aid Act of 1958 by extending for an additional year, 1960, the estimate of costs on the Interstate System so that apportionments could be made for the customary biennium.

This last act would not have been passed without the help given by your association officers in bringing out the inconvenience and delay that would have been created in the several States had the many legislatures which meet in January not known the Federal aid apportionment for the second year of the biennium for which they customarily provide.

NINETEEN HUNDRED AND FIFTY-EIGHT AID ACT NOTABLE

In addition to the usual features of the regular biennial Federal aid act, the first bill that I cited, the Federal Aid Highway Act of 1958 was notable, I think, for these things:

1. Acceptance of the new cost estimates as the basis for making apportionments of funds for the Interstate System. That was a definite break from the old area-mileage-population basis.

2. Establishment of a modified form of billboard regulation on the new right-of-way portions of the Interstate System.

3. Creation of the emergency fund of $400 million for auxiliary construction of roads not on the Interstate System, the so-called "D" fund of the Bureau which States might use on the other Federal aid systems in the way best calculated to meet their emergency needs with matching "L" funds advanced, if needed, on an automatic repayment or deduction basis.

4. Provision for hearings for rural people on highway locations, giving them the same right previously accorded bypassed towns and cities.

Those were all notable legislative accomplishments, I think, and they reflected teamwork in the field of roadbuilding for the United States.

NEW PROBLEMS AHEAD

The coming session of Congress opening in January will bring some very definite problems. On them we will need your counsel and help. Of many that might be mentioned, I shall discuss briefly three:

1. Adequate financing for the trust fund.

2. A demand for greater highway safety.

3. Requests by States for recognition of money they have put into free roads and toll roads that are on the Interstate System.

I will take them up in reverse order.

First, then, as to the requests by States for recognition of the money they have put into both free roads and toll roads that have become a part of the Interstate System.

I must frankly admit that I did not realize the importance of this matter to some States until I drove to New York, up the Thruway, and into Connecticut and into Massachusetts and saw what splendid and expensive modern highways were being or had been built on the initiative of those States without getting apportionments on a 90-to-10 basis of Federal aid, yet which would be parts of the Interstate System.

In New York, for example, I was told that 540 miles of the 1,210 miles of interstate in that State, are on that toll road—a project with a construction cost of $800 million absorbed into the Federal system without earning as of this time any credit in the apportionments to that State. Also, that an additional $100 million would be put into bridges and traffic separations as a part of the Interstate System but financed by tolls and getting no recognition in apportionments.

In Kansas, I am told, one-half of her toll road system is similarly incorporated into the Interstate System without reimbursement. And a similar point could be made for toll roads in New Jersey, New Hampshire, Massachusetts, Connecticut, Virginia, West Virginia, Ohio, Illinois, and Indiana.

INTEGRATION OF STATE ROADS

But if this point can be made for States with toll roads that are incorporated into the Interstate System without reimbursement, what about the same States and other States which see many miles of roads that have been paid for on a regular 50–50 matching basis and are put into the system without either tolls or apportionment to reimburse the States? Obviously, they are entitled to consideration, too.

During a hearing on this matter, last spring, we were told by the Bureau of Public Roads that $4.83 billion would be required to reimburse the several States if they were to be reimbursed at this time for the depreciated value of all the roads, toll and free, that are being made a part of the Interstate System.

That figure illustrates the difficulty of doing anything with the problem at this time. It would take the funds equal to 2 years of past apportionments to fully reimburse the States on that basis. I am sure that no one wants to suspend the construction program for 2 years in order to do that.

The Bureau of Public Roads, however, is under a congressional directive to report to the next Congress on possible formulas for reimbursement. While recognizing there is merit in the principle of reimbursement, I for one believe we cannot accept any formula which would interrupt or delay the construction program now underway. I hope your association will feel the same way about it.

HIGHWAY SAFETY IMPORTANT

A second problem which I predict will receive increasing attention in Congress is that of highway safety. Public opinion will not forever tolerate the casualty lists that papers carry today of fatalities and injuries due to highway accidents.

In the last Congress, no less than 30 bills were introduced which proposed to deal with highway safety in one way or another. Five of them proposed studies and investigations—notwithstanding the parts of existing law which place upon the Bureau of Public Roads the responsibility for a continuing study of accidents and efforts to reduce them by methods of design and construction.

The Bureau of Public Roads has studied and analyzed and is installing electronic equipment better to catalog types and causes of accidents—but no mere classifying of accidents is going to correct the situation unless we have the courage to enact necessary legislation at State and Federal levels.

Three separate bills proposed requiring safety belts to be installed on automobiles sold in interstate commerce. Three others proposed speed limitations with speedometer control or other devices.

One bill would sanction interstate compacts to promote highway safety while another would encourage the establishment of uniform traffic laws throughout the several States. Another would require luminous buttons or strips on freight cars in an effort to prevent broadside crashes into trains stopped at or passing highway crossings. Another would reward acts of heroism by drivers of motor vehicles under carrier regulations of the Interstate Commerce Commission.

This review does not exhaust the list or the approaches to the problem but should suffice to indicate a growing consciousness on the part of Members of Congress that something should be done to reduce the accidents that, in round figures, are killing 40,000 people a year in the United States and injuring three to four times that number, with a terrible cost in pain, suffering, lost time, broken families, maimed and crippled people—to say nothing of high insurance rates.

STUDIES UNDERWAY

Executive agencies are making studies of accidents. In addition to the activities of the Bureau of Public Roads under section 117 of the Federal Aid Highway Act of 1956 in attempting to classify accidents by types, the Department of Health, Education, and Welfare has completed 1 year of fieldwork in an effort to evaluate national well-being in terms of highway accidents.

I am told that these studies bring out a lack of uniformity in definition and reporting of accidents and their causes. The Bureau of Public Roads is trying to get statistics on a fairly uniform basis from 11 States. This data will be put through an electronic high-speed computer in an attempt to determine accident rates by speed, type of vehicle and kind of driver. An intensive accident investigation project is underway at Northwestern University. The President's Committee for Traffic Safety plans to present legislative needs to the several State legislatures.

These steps are all to the good—but it is becoming increasingly clear, I believe, that mechanical devices in the cars and safety designs in highway construction will not of themselves prevent many of the most tragic accidents which are catalogued under the head of reckless driving.

I was impressed some months ago to see an article in the Saturday Evening Post with this title: "We Jail Drunken Drivers." The article was by Goodwin J. Knight, Governor of California—so in the State which is host to this convention, I offer my commendation for his frank statement of a policy which other States might well adopt.

DRUNKEN DRIVING

Somehow since the repeal of the Prohibition amendment it has seemed to be regarded as politically unethical to propose legislation to deal with excessive use of liquor and dangerous to report that an accident in early morning hours was due to careless driving by a drunken driver. That, of course, is not always the cause but many an innocent life has been snuffed out in an accident labeled as reckless driving where the circumstances clearly indicate a more precise cause could be given.

We can design and build roads and intersections for greater safety but all this will be for naught unless the man or woman, the boy or girl at the wheel has the competence and the sense of responsibility necessary to drive safely for those they meet on the road as well as those who ride with them.

Police powers under the Constitution rest with the States—but I do not hesitate to say that if the States fail to enact adequae and effecive legislation on car inspection, driver tests and driver performance, the Federal Government will find a way to do so. An aroused public opinion will demand that it do so.

ADEQUATE HIGHWAY FINANCING

I come now to the first problem that I listed—perhaps the one that is first in priority as a mechanical matter of highway legislation—namely, that of adequate financing for the highway trust fund.

We are told that revenues accruing to the trust fund during the fiscal year 1957 and 1958 totaled $3,526 million, or $41 million more than the original estimates. During the first 4 months of this fiscal year, the revenues have been slightly below estimates.

Last spring and summer Congress passed, and the President approved, legislation directing that the full amount for the several Federal aid systems should be apportioned to the States notwithstanding the provisions of the so-called Byrd amendment which is found in section 209(g) of the 1956 Highway Act. That is the portion of law which says that apportionments for Interstate System aid for any fiscal year may not exceed the amounts expected to be available in the trust fund to liquidate obligations resulting from such apportionments.

As a result of that waiver of the Byrd amendment, full apportionments were made for 1959 and 1960. Under present law, money will have to be borrowed from the general funds of the Treasury to meet the obligations that will accrue under the apportionments. But also, under existing law, amounts so borrowed must be repaid and those repayments must be provided for before apportionments can be made for 1961 and subsequent years.

I am advised by the Bureau of Public Roads, then, that on the basis of present

estimates, there will be no funds available to make apportionments for the Interstate System for the fiscal year 1961. And that the interstate apportionment for fiscal 1962 could not exceed $600 million and that thereafter the interstate apportionment would range from $1.3 to $1.5 billion per year in accordance with amounts estimated to be available in the highway trust fund for the interstate program, instead of the $2.5 billion authorized in the basic legislation if available. Congressman FALLON told us this morning that the prospective shortage in the fund may even reduce the apportionment for ABC roads by $200 million for 1 year if the fund is not rehabilitated.

FIVE POSSIBLE SOLUTIONS

This creates a situation which must engage the attention of the public works committees and roads subcommittees in the next Congress. One does not have to be a prophet to predict that there will be a variety of opinions on what to do about it. At least five possible solutions suggest themselves:

1. Place the burden of rehabilitating the trust fund on the general funds of the Treasury.

2. Increase the present tax levies which go into the trust fund, meaning most likely an increase in the Federal gasoline tax.

3. Adopt some new or additional levies and dedicate the revenue to the highway trust fund.

4. Authorize a special bond issue to cover the anticipated shortage in the trust fund and extend the period of time for which the special levies are now authorized from a total of 16 years to 17 or 18 years, or whatever may be needed to retire the bonds.

5. Modify the scope of or standards required in the Interstate System; in other words, a stretchout.

I shall give only a sentence or two of comment upon each of these possibilities. I have no doubt each one present has some idea about them.

Resolution No. 1

On solution No. 1, the taking of funds from the Treasury, we can expect vigorous opposition, not only from the Treasury Department but from powerful Members of Congress in both parties who resist any move to increase the national debt. Many of these people are members of the House Ways and Means Committee or of the Senate Committee on Finance who would pass upon any legislation dealing with the subject.

To propose the assigning to the trust fund of any revenues from levies or excise taxes not now dedicated to that fund would be regarded as equivalent to taking the deficit money from the general funds of the Treasury and would meet the same opposition.

Such a solution, in my judgment, could not be enacted into law. If it should pass Congress, which is doubtful, I would expect a Presidential veto that could not be overridden in the face of the present high national debt and the prospect of $10 or $12 billion deficit in the current fiscal year.

Resolution No. 2

With regard to solution No. 2, an increase of the Federal gas tax, there will be some support, possibly administration support. For myself, I cannot be enthusiastic about such a solution. Many States either raised their gasoline tax in the last legislature or faced that possibility for next year. Public opinion would react badly to another Federal gasoline-tax increase—at least, until the new highway building, and particularly the Interstate System, has had more of a chance to show the economies and benefits that can flow from this development.

In passing I would make this observation: people who travel toll roads and pay 1½ cents per mile for the privilege are paying the equivalent of a 22-cent gas tax, assuming that the average car makes 15 miles per gallon.

In time, if the Interstate System achieves the acceptability that toll roads have won, an increase in the gas tax may be popular as a means of expediting conclusion of the system. That time is not yet.

It must be kept in mind that a great many people do not travel and will not be near to any part of the Interstate System. An increase in the gas tax will be paid by them as well as by Interstate Highway users. True the ABC roads come out of the trust fund but the Interstate apportionments take more than twice as much money as do the ABC roads. It is also to be kept in mind that an increase in gas taxes also makes a levy on those who use and pay for the toll roads.

Thus a solution based upon increasing the Federal gas tax will have its problems even though the method is appealing from the standpoint of easy administration and costs of collection.

Resolution No. 3

As for solution No. 3: New levies or sources of revenue. Only one comes to my mind, the possibility of employing a windshield sticker as a highway use fee to be collected by selling a stamp at the postoffices as was done during the war.

Publicity on the fact that the proceeds from the windshield stamp were to be used to pay for the road program would help but could hardly make this plan popular. A $5 stamp for passenger cars and a graduated stamp for pickups, trucks and buses could raise from $400 million to $900 million per year, depending, of course, upon the size of the stamps required for trucks and buses.

Even at the lower figure, with an even $5 stamp for all motor vehicles on the highways, the receipts if continued for the remaining period of the original 16-year levy period would probably retire or liquidate any shortage in the trust fund. This approach to the problem should be explored along with other possible solutions.

Resolution No. 4

Solution No. 4: The authorization of a special bond issue with the bonds to be retired by extension of the period of time for existing levels dedicated to the trust fund is the one for which I have heard most congressional support.

It has the defect, of course, of adding to the national debt, either directly or indirectly. However, it would have the virtue of carrying a specific plan for retirement of that debt increase which cannot be said for most other increases of the debt. Certainly this proposal deserves serious consideration.

Resolution No. 5

As for No. 5—modification of the scope or standards now required for the Interstate System, you may expect this answer to be pushed by some influential people.

An example came to my attention on my way to this gathering. The Deseret News-Salt Lake Telegram for November 29, 1958, devoted its major editorial to the subject and closed with these questions:

"Why can we not slow down the construction program, in other words, to fit the receipts rolling in? Those receipts amount to staggering totals—$8 billion by 1960, for example, which is just eight times the largest yearly amount ever spent by the Federal Government for highways before this highway program was adopted. Are expenditures of that magnitude really so inadequate?"

With a Federal budget facing a $12 billion deficit and new taxes unpopular, this attitude will develop support in many places.

So—we who are engaged in the building of a modern highway system for the people of the United States face some problems as we approach the year 1959 and a new session of Congress.

It would be possible for members of your association to say, "O, well, it is the business of Congress to find answers to these problems."

Similarly, members of the Committees of Public Works could say, "O, well, it is the business of the Finance and Ways and Means Committees to find the revenue to pay the bills. We are only supposed to map programs that will develop the country."

To such attitudes, however, I respectfully recall the story of the guide my prospector friend found up north. If he was hired to cook, he felt no obligation to be a guide, he had no feeling about teamwork. None of us desires a stretchout in the interstate program but if that is to be avoided, there must be an answer to the question: where do we get the money for the trust funds? We cannot dispose of it by saying that we were only hired to cook. Someone must guide.

I said at the first of my remarks that road building in the United States has been the outstanding example of a working partnership between the several States and the Federal Government.

Under the inspiration of the message of President Eisenhower to the Governors' conference in 1955, the greatest road-building program for this or any other nation in the history of the world was authorized and begun.

Each year, the dollar volume for that program is 10 times greater than the original cost of the Panama Canal. Everyone who has a part in this program, every-day worker, contractor, engineer, highway official, legislator or Congressman has a right to take pride in the program.

It is a constructive program not a destructive one. While valuable for national defense, its primary benefits are from day to day in adding to the pleasures, conveniences and welfare of the people in peacetime.

It is a partnership job—and I am confident that the Congress will have in the future, as it has had in the past, the counsel and the support of the American Association of State Highway Officials.

HIGHWAY FINANCING

(Remarks of Senator FRANCIS CASE, of South Dakota, before the American Road Builders Association, Dallas, Tex., January 19, 1959)

The big road program is rolling. In 1958 $6.2 billion went to work on roads in the United States, an all-time high.

Congress passed its regular biennial highway act with approval of the revised cost estimates and authorized using them for making apportionments for the Interstate System for 1960 and 1961, at a rate of $2.5 billion for each year, started an annual increased increment of $25 million per year on the ABC roads, provided a new D program with $400 million for emergency or problem areas within the States, and wound up with a single act codifying all highway acts and their amendments into one compact document.

It was a notable year for roadbuilders in Congress, at the Bureau of Public Roads, in the several State highway departments and out on the highways and byways where the people want—and now are getting—better roads.

WHERE TO GET THE MONEY

But, as Federal Highway Administrator Bert Tallamy said to the American Association of State Highway officials at San Francisco a month ago, "It would be near the truth to say that all our problems are practically solved except the big one."

That big one, of course, is that old pocketbook problem—where are you going to get the money? The highway trust fund will, prospectively, be out of cash when the ABC apportionments are made in June this year for fiscal year 1961 and there will be nothing on which to make the 1961 apportionments for the Interstate System.

That will be due to the operation of section 209(b) of the Highway Revenue Act of 1956, known as the Byrd amendment.

Similarly, only $600 million will be available for the authorized $2.5 billion for 1962. Thereafter the interstate apportionment would range from $1.7 billion to $1.8 billion per year, roughly three-fourths of the authorizations.

BILLIONS SHORT

Put another way, over the span of the remaining years of the interstate program, the highway trust fund will be short a gross total of $13.3 billion, under present estimates. It adds up this way:

	Billions
Increased cost estimates on Interstate System (including the added 1,000 miles to 41,000)	$10.4
Increase ABC apportionments by $25 million per year up to an annual $1 billion per year	1.5
Allowance for the Federal or public land road items	1.0
New D program for problem areas	0.4
Total	13.3

Or, if we allow for contingencies, we could add $200 million and round off the problem at $13.5 billion for the 10 years.

To meet the immediate problem of apportionments for fiscal 1961 and 1962, I understand that the President's budget message being sent to the Congress today will probably recommend an additional gas tax levy of 1½ cents per gallon. That, it is estimated, will yield $1.7 billion per year, and supply the three-fourths deficiency indicated for those years.

The Bureau of Public Roads, by congressional directive, is presently engaged in making comprehensive studies from coast to coast to get a better idea of the distribution of benefits from improved highways. We in Congress directed the study in the belief that it would give guides which would be useful in future legislation, particularly in any reshifting of taxes or increase of levies.

ALTERNATIVE FINANCING METHODS

An increase in the gas tax is not the only method of meeting the problem which has been suggested. Other approaches mentioned include:

1. Taking funds from the general Treasury, which, of course would add to the Treasury's current deficit prospects.

2. Allocating to the trust fund the proceeds of certain excise taxes already levied, which, of course, would have the same effect on the Federal deficits and debt.

3. Giving special borrowing authority to the trust fund to go into the market and sell short- or long-term obligations to meet actual cash requirements and extending existing levies beyond 1972 to meet them.

4. Extension or readjustment of the authorized building program.

There is one other complication which I think has not been faced but which I foresee; namely, that Alaska at once, and Hawaii in the near future, will be asking for an allocation of some funds on a 90-percent Federal basis for the construction of some part of their highways, with controlled access design to connect principal points, even though a strictly interstate connection may not be possible. The new States will be paying the same Federal gas tax that other States do.

So, there is the big problem. I could discuss it further, but I anticipate that the question and answer plan for the panel will bring out the particular phases of the problem and possible solutions that are of most interest to you.

I assure you, President Steelman and delegates, that it is always a pleasure to meet with you and to get the benefit of your counsel as well as to share your enthusiasms in the great job of building better roads for a better America.

Grass as a National Floral Emblem

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. MORTON. Mr. President, I believe that all of my colleagues are aware of the wide interest currently prevailing for the Congress to designate an appropriate flower as the national floral emblem of the United States. Just this past Wednesday the Senator from Illinois [Mr. DOUGLAS] introduced a joint resolution which would make the golden corn tassel our national floral emblem.

That same day I received correspondence from two organizations in Kentucky supporting the selection of grass for the honor spot on the floral design. The Kentucky Bankers Association has approved, by resolution, a grass floral emblem, and Mr. William C. Johnstone, agricultural representative of the association, has responded to the corn tassel proposal with a highly interesting rebuttal and counterproposal which I should like to commend to your attention.

He says that he might go along with an ear of corn but not the tassel. As a matter of fact he even rates an ear of corn behind cotton. It is proposed that grass—all grass—should be considered for the floral tribute. Kentucky is noted for its grasses, its lush rich bluegrass from which stems the State's nickname as the "Bluegrass State," and its Kentucky 31 Fescue, a hardy grass popular for pasturage and conservation. We also have plenty of crabgrass in Kentucky, but I prefer to have some other State take the credit for it.

In order that my colleagues may further familiarize themselves with the merits of the grass proposal, I ask unanimous consent to have published in the Appendix of the RECORD the resolution adopted by the Kentucky Bankers Association, a statement by the association, the conservationist's response by Mr. Johnstone, and a letter dated January 15, 1959, from Mr. L. W. Murdock, chairman, Graves County Soil Conservation District.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

RESOLUTION IN FAVOR OF GRASS AS A NATIONAL FLORAL EMBLEM

Whereas it has been suggested that the Kentucky Bankers Association, along with all other State bankers associations, endorse the adoption by the U.S. Congress of the corn tassel as our national floral emblem; and

Whereas joint resolutions have been introduced in Congress to make the corn tassel the national floral emblem; and

Whereas it has been brought to the attention of the Kentucky Bankers Association that the corn tassel is not a perfect flower but is only the staminate, or male flower, and in itself is of little value; and that the pistillate, or female flower—the ear of corn—is the part that produces the valuable grains; and

Whereas the Kentucky Bankers Association recognizes the value of corn to the economy of our country, both in the past and present; but at the same time it is cognizant of the destruction of land and the terrible losses in fertility brought about by leaching and erosion due to the improper culture of corn on hilly, rolling, and unadapted land; and

Whereas the Kentucky Bankers Association has considered the merits of other plants as the national floral emblem and has found that grass, with its beautiful blooms and artistic seed heads, more nearly represents, than any other plant, the ideals and aspirations of the American people. (It is grass that was mentioned first, of all living things, in the story of creation; it was grass with its deep, penetrating rots that gave fertility and protection to the great plains and prairie soils of America; it was grass that sustained the buffalo whence came our forefather's food. It is grass that feeds the lowing cattle, the gentle sheep, the patient horse; it is to grass that we turn to heal our fields after they have been eroded and ravished by the plow and the cultivator. Grass is truly the hope of the conservationist and the dream of the naturalist): Now, therefore, be it

Resolved, That the Kentucky Bankers Association through action of its executive committee, meeting on December 17, 1958, and after much consideration, endorse the adoption of grass as the floral emblem of the United States and urge its adoption by the United States Congress and request the President of the United States to declare such fact by proclamation; be it further

Resolved, That a copy of these resolutions and supporting documents be entered in the minutes of this meeting and copies be sent to the U.S. Senators and Congressmen from Kentucky, State bankers associations, State and National farm organizations, conservation associations, and the farm press and other individuals, groups, and organizations interested in the conservation and welfare of our country's greatest natural resource—its soil.

MAURICE KIRBY,
President.
RALPH FONTAINE,
Executive Secretary.

KENTUCKY BANKERS SEE GRASS AS BEST NATIONAL FLORAL EMBLEM

The Kentucky Bankers Association, always vigilant of the welfare of the State and solicitous of the conservation of its natural resources, has endorsed grass as the national floral emblem, urged its adoption by Congress and requested President Eisenhower to proclaim it, according to Ralph Fontaine, executive secretary of the association.

The action of the bankers' association was taken at a recent meeting of its executive committee as a result of a campaign originating in another State to make the corn tassel the national floral emblem. "The Kentucky Bankers Association is opposed to this," Mr. Fontaine said, "because, in the first place, the corn tassel is not a perfect flower. The corn flower is borne in two parts: The male part is the tassel and the female part is the ear". "Furthermore," continued Mr. Fontaine, "the culture of corn on unadapted land has caused serious erosion and untold damage to millions of acres of land in the United States."

"The adoption of the male corn flower is in direct opposition to the goal of conservationists and lovers of nature," according to Mr. Fontaine. The Kentucky Bankers Association has for years cooperated with agricultural leaders and organizations in promoting a grass-type agriculture in this State, putting emphasis on pastures and pasture-

using livestock. Only this month did the bankers association adopt the phrase "Conservation Is Everybody's Business" as their theme of the year and approved conservation as the major agricultural activity for 1959.

"Bankers believe in conservation," said Mr. Fontaine, "and grass is the hope of the conservationist. For over 10 years the Kentucky Bankers Association has been using scenes of livestock grazing on beautiful pastures with the phrase, "Kentucky, the Center of the Pasture Belt," as a part of its agricultural letterhead, and they are not ready to change at this time. There is nothing more beautiful and satisfying than lush, green pastures with occasional seed heads of bluegrass, orchard grass and fescue waving in the breeze. The adoption of grass as our national floral emblem would pay tribute to a worthy family and encourage its wider usage."

Copies of the bankers' resolutions have been sent to Kentucky's Senators and Congressmen, other State bankers' associations, and to State and National farm and conservation organizations. Many other groups are expected to join with the bankers in behalf of grass.

A Conservationist's Response to an Appeal To Make the Corn Tassel Our National Floral Emblem

Why the corn tassel? The American floral emblem should be a perfect and complete flower, representing all that is best in both men and women, a united family—a united country. The corn tassel is not a perfect flower. It is only the male organ of the corn plant. It blooms, it sheds pollen, it dries up and leaves nothing to show for its existence.

The male corn flower? No. It towers over the female, it waves in the wind and dominates the field. For only a few days it is virile and then, in its last wild rampage, it scatters its pollen to the wide ranges of the compass—then fades and dies and is gone forever.

The female corn flower? Yes. Well, maybe yes. Although not so showy as the tassel, it represents stability—food (and drink), clothing, warmth, beauty, fertility, and motherhood.

The corn tassel? No. They are in surplus production. Even though nine-tenths of the tassels were lost, the harvest would not be diminished. The tassels serve one purpose only—to bear, for a few hours, the pollen to fertilize the ovaries of the ear. They leave nothing to posterity.

But the female flower, the ear? Yes, well, maybe yes. The female flower and its three component parts; the cob, the grain and the husk, has intrinsic and historic values. The cob, from which emerges the golden, silver, and ruby silks, is the symbol of peace. From it is fashioned the oldtime corncob pipes; the pipes of peace, so to speak. And how we need them today. The grain—each one a veritable package of atomic energy which no human can produce without the help of the Almighty, might well be the symbol of immortality. They are the links between the past and the future. In them are those sparks of God-given life which, even though buried for thousands of years will grow again and reproduce themselves a thousandfold. And the shucks that wrap the cob and precious grain—even they might well symbolize protection and care. They protect those intricate parts, the tiny embryos and fragile silks until from them the kernels have developed. From these shucks our forefathers wove their chair bottoms, braided their welcome doormats and fashioned their mattresses. Even the silks that wither and dry so soon after fulfilling their purpose have a nostalgic remembrance for those country boys who used them, wrapped in the thin tissues of shuck, to enjoy their first venture into youthful freedom—the pleasure of smoking a cornsilk cigarette.

And what is more beautiful than an ear of corn? Fresh buttered sweetcorn; golden rich, yellow dent corn; rich, silvery, white corn. What child does not enjoy the mysteries of the exploding popcorn, and who does not admire the beauties of the colorful squaw corn?

The tassel? Never. The ear—yes—maybe, yes.

But why the rush? Why not consider other flowers? The cotton flower, for exemple, is a perfect combination of the male and the female blossom, the product of which represents food and fiber. Cotton has, from our early days, been the bulwark of trade and commerce. It has paid more foreign debts and brought over more foreign money than any other single American product.

But above all, why not consider grass as a national floral emblem? Not just one grass—any grass—all grass.

No more fiting tribute could be paid to any plant than that composed by the beloved late Senator from Kansas, John James Ingalls, who, in 1872, under the title "Bluegrass," wrote these immortal words:

"Next in importance to the divine profusion of water, light and air, * * * may be reckoned the universal beneficence of grass. * * * Grass is the most widely distributed of all vegetable beings, and is at once the type of our life and the emblem of our mortality. * * * Our earliest recollections are of grass; and when the fitful fever is ended, and the foolish wrangle of the market and forum is closed, grass heals over the scar which our descent into the bosom of the earth has made, and the carpet of the infant becomes the blanket of the dead.

"Grass is the forgiveness of nature—her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass, and carnage is forgotton. Streets abandoned by traffic become grass-grown like rural lanes, and are obliterated. Forests decay, harvests perish, flowers vanish, but grass is immortal. * * * Its tenacious fibers hold the earth in its place, and prevent its soluble components from washing into the wasting sea. It invades the solitude of deserts, climbs the inaccessible slopes and forbidding pinnacles of mountains, modifies climates, and determines the history, character, and destiny of nations. Unobtrusive and patient, it has immortal vigor and aggression. Banished from the thoroughfare and the field, it bides its time to return and when vigilance is relaxed, or the dynasty has perished, it silently resumes the throne from which it has been expelled, but which it never abdicates. It bears no blazonry of bloom to charm the sense with fragrance or splendor, but its homely hue is more enchanting than the lily or the rose; it yields no fruit in earth or air, and yet would its harvest fail for a single year, famine would depopulate the earth."

What more can we add? And what could be more beautiful than a colorful floret of grass waving gently in the breeze above a carpet of emerald green?

As for us—we cast our vote, first for grass, next for cotton, third for the ear of corn—but as for the corn tassel—we vote "No."

Wm. C. Johnstone,
Agricultural Representative, Kentucky Bankers Association.

Graves County Soil Conservation District,
Mayfield, Ky., January 15, 1958.

Senator Thruston Morton,
Washington, D.C.

Dear Senator Morton: The Graves County Soil Conservation District Supervisors would like to urge you to do everything possible to get grass adopted as the national floral emblem.

We know that grass is one of the most important tools we have in Kentucky for conservation of all natural resources. We feel that nationwide, it is the most important crop of all plants that are being grown in the United States.

Sincerely yours,

L. W. Murdock,
Chairman, Graves County Soil Conservation District.

Senator Alan Bible—A Good Man To Have Around

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. HARTKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two recent editorials praising the distinguished Senator from Nevada [Mr. Bible], for his work on the Senate District of Columbia Committee and expressing relief that he has decided to remain on the committee.

The first entitled, "A Good Man to Have Around," was the lead editorial in the January 22 issue of the Washington Daily News.

The second, entitled, "D.C.'s Aldermen," appeared in the January 16 Washington Post and Times Herald.

There being no objecion, the editorials were ordered to be printed in the Record, as follows:

[From the Washington Daily News, Jan. 22, 1959]

A Good Man To Have Around

District citizens can feel considerably relieved that Senator Alan Bible, Democrat of Nevada, has agreed to stay on the Senate District Committee.

Many politicians consider this a relatively thankless job. Senator Bible has served most conscientiously. His insight into District problems and his realization of the Federal Government's responsibilities to the city which it inhabits have made him particularly valuable to all those who share his concern for our town.

The fact that he now is serving on the Senate Appropriations Committee, too, should strengthen his hand in District affairs.

The Senate District Committee has had its membership cut from nine to seven. It has suffered from quorum troubles and this should enable it to get more business done. All seven are able men. They should accomplish much for the District in the months ahead. We need their best efforts and we wish them well.

[From the Washington Post and Times Herald, Jan. 16, 1959]

D.C.'s Aldermen

It is good news indeed that Senator Alan Bible will continue as chairman of the Senate District Committee. He led it energetically and capably in the last Congress. His recommendation, which was adopted, that the Committee be reduced from nine to seven members to make it more manageable, seems to bespeak a determination to get some business done in this Congress, too. The appointment of Senator R. Vance Hartke, of Indiana, a former mayor of Evansville, as the only new Democratic member of the Committee is also welcome. In happy contrast to the attitude of some new Members of Congres, he seems to recognize the crying need for sincere congressional attention to

the affairs of the Nation's Capital. Senators MORSE and FREAR, each with long experience in District affairs, will also be back, and the prospect is for the appointment of well-qualified Republican members. While we'd rather be congratulating a Washington city council, these men have our sincere good wishes as they undertake their aldermanic chores.

Splendid Junior Achievement Program in Southeastern Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. WILEY. Mr. President, I rise to invite attention to the splendid program which is helping to train our young people in knowledge and skills of our free enterprise system—that is, the junior achievement program. During the week of January 25 through 31 special recognition will be given to this outstanding program designed to educate our young people on the working principles of our economic system.

Last week I was delighted that the distinguished majority leader, the Senator from Texas [Mr. JOHNSON], introduced a concurrent resolution requesting the President to declare a week in January as National Junior Achievement Week. Unfortunately, the Judiciary Committee, before which this is pending, has not as yet had an organizational meeting. Consequently it has not been possible to act on the resolution.

I hope that the committee and the Congress will find it possible to take early and favorable action on this resolution, encouraging our young folks to learn more about our free enterprise system and thus be better able to cope with the problems of the future.

The program itself is a constructive learn-by-doing system of planned activities in which our youth, guided by advisers, become familiar with the many problems and challenges in setting up a business. Among others, these include acquiring a charter, deciding upon a product, planning production schedules, figuring production costs and operating expenses, paying wages, keeping accounts and other aspects of business operations. In addition, the junior achievers are required to plan for purchasing raw materials, leasing machinery, advertising, marketing, and other decisions necessary in conducting private enterprise.

Recently, I received from Mr. Ken Weidt, program director of the Junior Achievement of Southeastern Wisconsin, Inc., a résumé of their fine work in junior achievement. In recognition of the sound principles upon which this program is based, I invite their work to the attention of my colleagues and request unanimous consent to have the résumé printed in the Appendix of the RECORD.

There being no objection, the résumé was ordered to be printed in the RECORD, as follows:

JUNIOR ACHIEVEMENT WEEK, JANUARY 25–31

One thousand six hundred and seventy-five teen-agers known as achievers and 350 volunteer business leaders known as advisers will be celebrating Junior Achievement Week January 25–31.

The junior achievement program constitutes the one movement in America, among our youth 15–19, that is really doing something to stem the tide of thinking that "the Government owes us a living" and that is realistically educating the coming generation to the false concepts in the philosophies of socialism and communism.

It is a practical business education program, a laboratory for developing business know-how in our teen-agers of today who will be the business men and women of tomorrow. It's better understanding and appreciating American free enterprise economic system.

During an 8-month period these teen-agers experience every facet of a corporate business. This includes acquiring a charter, deciding on a product, planning production schedules, figuring production costs, operating expenses, pay wages, selling costs, mark-up, profits, and account to their stockholders.

These achievers are also called upon to plan for purchasing raw materials, leasing machinery, inventory control, promotion, advertising, marketing the product, deciding on policy at board meetings and any and all of the other thousands of decisions, activities and worries that go with conducting a business private enterprise system.

The program in southeastern Wisconsin ranks nationally seventh in 152 areas operating in more than 235 cities.

Junior Achievement operates in Milwaukee, 3800 West Wisconsin Avenue, with 53 companies; West Allis, 1964 South 86th Street, with 13 companies; South Milwaukee, 914 Rear Madison Avenue, with 4 companies; Wauwatosa, 8830 West Bluemound Road (House of Good Shepherd), with 5 companies; Fort Atkinson, Wis., 1 company; and Lake Geneva, Wis., 1 company.

Products range from children's toys, clothes trees, auto accessories, household articles, outdoor tools, chemical products, and transistor radios.

A typical Junior Achievement company has 4 advisers and 20 achievers. Average capitalization, $105; average income, $342.31; average wages, $101.74; average sales income, $339.67.

The Plight of Our Senior Citizens

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. ENGLE. Mr. President, I recently received a most compelling letter from one of our senior citizens. I was so impressed with the depth and sensitivity of the letter that I felt it should be read by the readers of the CONGRESSIONAL RECORD, and I ask unanimous consent that excerpts of the letter be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM LETTER TO SENATOR CLAIR ENGLE

I am one of those so-called senior citizens, nearly 70 years of age and about ready to retire from active practice of law, due to my inability to compete with the younger lawyers before the bar, as my memory along with rest of my body has "balanced wear."

Since the will to survive continues, even in spite of these handicaps which the senior citizens have, I am naturally interested in some things that when I was younger I did not let my mind dwell on. When we are young, life seems endless, and the ability to compete and make a good living seems sure. It is then that we feel that only the poor are deserving of poverty, and if they are poor it is all their own fault and their own planning. If they fail to use good judgment, due to a poorer and weaker mentality, that also is their own fault, and we are our brother's keeper, so what?

Now I am about down to what I want to say to you. We have some laws that are neither fish nor fowl, and no one can understand that kind of law enactment by our great Government. For instance, the Social Security Act administered through the Social Security Administration. Does this act provide charity or insurance? If it is insurance why do we have to actually retire first after we reach the handicapped age and cannot compete anyway for a living? If it is charity, why do we call it insurance and pay the full value for the protection? Is it half charity and half insurance? If it is insurance, why does it provide about one-fourth the amount required for a person to live? If it is charity, why do we have to retire from all our labors to get one-fourth the amount required on which to live? We are our brother's keeper, at least to the extent of being consistent and rational, even if we have no charitable inclinations, or emotions. Everyone gets old and helpless at the extreme end of life, both the rich and the poor share the same fate. All our mothers and fathers reach this position in life, if they live long enough. It doesn't matter what their personal opinions are when they are young and vigorous. They change them when the hour of disability and death draws near, and the bell in the graveyard tolls.

Financing of the Interstate Highway Plan

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, entitled "Somebody Must Pay for Those Highways," published in the Hartford (Conn.) Courant of January 22, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOMEBODY MUST PAY FOR THOSE HIGHWAYS

Already the Connecticut motorist pays a 9-cent gasoline tax—6 cents to the State and 3 to the Federal Government. That means that if you can find a pump to sell you gas for 27 cents, one-third of it goes for taxes. though some goods, like cigarettes, are taxed even more outrageously, this is still pretty steep.

In view of all this, who is there who will not join the protest against President Eisenhower's budget recommendation that the Federal gas tax be raised by one-half, from 3 to 4½ cents? Certainly we do not lack for protests. Local newspapers and radio, for example, yesterday got a shower of six of them. They came from the Connecticut Petroleum Council, the Connecticut Motor

Stage Association, the Connecticut Conference of Farm Organizations, the New England Bus Association, the Connecticut State Grange, and the Motor Transport Association of Connecticut. Nor does the fact that all came in the same envelope, on the same paper, and presumably from the same mimeograph machine, necessarily mean that these pleas are not valid. They are part of the modern American way of mobilizing various conflicting pressures, out of which we shape our legislation.

At the same time it is questionable whether it is wise to protest the Eisenhower tax proposal. The budget balance is, as the President himself noted, precarious at best. What if this tax is rejected? What will that do to the dollar, and to our whole economy?

It is curious, too, that the same people who protest that Uncle Sam is reducing them to wearing a barrel ride their oversized, overcostly, 300-horsepower automobiles with much pleasure over such sections of the new Interstate Highway System as have been built. The 13-year program for criss-crossing the country with a network of modern highways is going to be barely enough to bring our roads up to our own motoring habits. If these roads are good enough for us to want, then they are good enough for us to pay for. There isn't any Santa Claus beside the taxpayer, whether you call him the Federal Government or not. And who is a better one to pay for the new roads than the man who uses them?

The same philosophy applies to other budgetary fields. The other day the first district's new Congressman [Mr. DADDARIO] was lamenting that the Eisenhower budget omitted a new Federal office building for Hartford. This is indeed regrettable. And no doubt the omission is a popular issue on which to make votes. But again, if this building is good, doesn't somebody have to pay for it? And if we don't want to pay for it to the tune of unbalancing the budget, as we shouldn't, maybe we can get along for awhile without.

After all, we are in a cold war. And as the $42 billion defense item in a $77 billion budget makes clear, a cold war is the most expensive thing you can have short of a hot war. Here we are, trying to compete with totalitarian peoples who work a 60- to 70-hour week, and like it because they have a sense that they and their country are going places. We want a 4½-day week, and we want even more good things from our Government. But we scream when it comes to paying for them. It doesn't make sense.

Most Young Citizens Are Better Than We Think

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. YARBOROUGH. Mr. President, although numerous newspaper headlines recently have dealt with juvenile delinquency, investigation reveals that most American young people are not included in this category. By far the number of young people today are working seriously at being good citizens and becoming better ones. This is evidenced not only in their studying to prepare themselves for the future, but in what they are doing now.

Young people today are doing volunteer work in hospitals and nurseries, helping to collect funds for charities, working for better government by supporting for public office persons in whom they believe, joining church and civic work projects to better their own community or to assist someone else, and participating in a number of other worthwhile activities to make this a better world.

They do this work earnestly and quietly and are seldom recognized for their service.

Mr. President, in recognition of the vast majority of the fine young people in our Nation today, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Young Citizens," which was published in the Corpus Christi Caller of January 8, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOUNG CITIZENS

Not all schoolchildren are little monsters, according to the National Education Association, despite the impression that may have been created by the publicity given to juvenile delinquency. The NEA finds a higher percentage of those in school lead exemplary lives than do members of the older generations.

In a handbook for parents and teachers entitled "Juvenile Delinquency—Research, Theory, and Comment," the education association goes into some detail in analyzing the age groups of the most susceptible and the influence of schools on the problem. It even categorizes delinquency into two parts: Cultural and emotional delinquencies.

Less than 5 percent of school-age children were found to be other than normal, reasonably healthy and law-abiding citizens, and of this 5 percent a remarkably large number were found to be not in school. Of delinquents, 95 percent of those 17 years old, 85 percent of those 16 years old, and 50 percent of those aged 15 do not attend schools, according to the NEA's survey.

"The big stumbling block—for the general public as well as for teachers—is the scarcity of reliable information on the subject compared to the abundance of medicine-man prescriptions," complains the NEA. Despite the lack of material and proper guidance, the schools seem to have done a commendable job in promoting citizenship among their students.

In dividing juvenile delinquency into two parts, the educators have eliminated from the hard core of hoodlums the passively antisocial cultural delinquent. He is described as the otherwise normal child who shows antisocial tendencies only so far as is necessary to conform to the code of his gang.

The emotional delinquent is the bully, the sadist or the violent hoodlum who is motivated by inner urges. He is the true delinquent, the menace to society, and the one responsible for the shadow of guilt cast wrongly on many of his youthful contemporaries. He is also the one in need of psychiatric or psychological help.

It is both gratifying and revealing to note the small percentage of youths who have earned themselves the label of juvenile delinquent. Even this small group, however, is responsible for some of the most heinous crimes and it is to the eradication of this element, and not the blackening of youthful reputations, that the fight against juvenile delinquency must be waged.

Civil Rights Legislation in the 86th Congress

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. CHURCH. Mr. President, yesterday the Washington Post's lead editorial, entitled "Coup on Civil Rights," opened the substantive discussion of civil rights legislation in the 86th Congress.

I do not believe that the scope of the civil rights bill of 1957 has the immutability of the laws of the Medes and the Persians. S. 499 presents some new ideas, which I intend to study thoroughly, and I commend to the Senate the Post editorial in the thought that consideration of civil rights legislation should never be approached from fixed, or doctrinaire positions.

I ask unanimous consent that the editorial be printed in the RECORD.

We should ever strive not for civil rights issues, but for the enactment of feasible civil rights legislation, marking progress in this field.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COUP ON CIVIL RIGHTS

Senate Majority Leader JOHNSON has prepared a coup of potentially great significance in the introduction of a moderate and thoughtful civil rights bill. Senator JOHNSON has taken the lead away from the administration with a bill which, as the President indicated on Wednesday, may be similar in several particulars to what the Department of Justice is expected to recommend.

It is significant also that Mr. JOHNSON intends to use the bill as a test of the revision of rule XXII which he sponsored. Having persuaded the Senate to adopt his compromise plan for curbing filibusters, he wants to demonstrate that a civil rights bill can be passed without prolonged paralysis in the Senate. This strongly indicates that the bill is offered as a practical piece of legislation rather than as political window dressing.

Major discussion no doubt will be focused on the section of the bill establishing a Community Relations Service "to provide conciliation assistance" in communities in which peaceful relations among citizens might be threatened by disagreements over interstate commerce or "disagreements or difficulties regarding the laws or Constitution of the United States." In plain language, this means conciliation in such situations as the Montgomery bus boycott.

Whether such efforts by an independent Federal agency actually would be helpful in reestablishing communication between disputants on civil rights issues still must be proved. The idea is an appealing one borrowed from the work of the Federal Mediation and Conciliation Service in labor disputes. But there is a basic difference between the adjustment of wage disputes and the enforcement of law.

Basic human and legal rights of course cannot be compromised or bargained away. Obviously it would require a very special type of conciliation to find means of bridging such community gaps in conformity with the Constitution, and a prerequisite

probably would be a basic anxiety on both sides actually to reach a settlement.

The least controversial sections of the bill are likely to be those extending the life of the Civil Rights Commission to January 31, 1961, and giving the Department of Justice subpena powers in voting rights cases. The CRC of course will have to be continued if it is to carry out the mandate Congress gave it. And the effective protection of voting rights is in many ways the key to respect for other civil rights.

The new subpena power would enable the Department of Justice to examine registration books and other documents without going through the cumbersome process of impaneling a grand jury. That power would not be used when documents could be voluntarily obtained, but it would assure the Department ample data on which to make cases when voting rights are denied. With the facts thus at hand, the Attorney General could go into court and seek an injunction against further denial of voting rights.

Some question may be raised about the possibility that another section of the bill might weaken local law enforcement in bombing cases. This section consists basically of a prohibition against transportation of explosives across State and National lines with intent to destroy property. It will need close examination to avoid collision between Federal and local authority and duplication of the present law under which the FBI cooperates generally with local police in such cases.

Irrespective of any controversy over particular emphasis in the bill, Mr. JOHNSON not only has advanced a novel idea on community conciliation but also has sought to keep all his proposals within the realm of the possible. His invitation to wide debate with the objective of passing an effective civil rights bill is a challenge that merits constructive response.

An Early Skirmish in the Global War Against Disease

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the continuing world struggle against the ravages of chronic disease is a subject which I am sure will be considered in this session of Congress. The distinguished Senator from Alabama [Mr. HILL] is sponsoring legislation to develop greater world cooperation in this never-ending struggle. The senior Senator from Minnesota [Mr. HUMPHREY] reports that Mr. Khrushchev is disposed toward cooperation in this area that knows no politics or power blocs. An address by John T. Connor, president of Merck & Co., Inc., of Rahway, N.J., provides a vivid illustration of the kind of effort that is beginning in this field and should be expanded.

Mr. President, I ask unanimous consent that the speech of Mr. Conner be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN EARLY SKIRMISH

(Address by John T. Connor, president, Merck & Co., Inc., Rahway, N.J.)

It may be helpful to you who are interested in the economic offensive of the Communist bloc if I explore the ramifications of a lively skirmish between the Russians and a single American company that took place recently about 9,000 miles east of New York.

I do not contend that this skirmish was typical, or even that it was inherently significant. But as we explore it, we will pick up the footprints of Soviet aggressors probing the defenses of freedom among the hungry, the sick, and the hopeful in the underdeveloped parts of the globe.

Our story starts on a plane high above the Bay of Bengal, at 11 a.m., Calcutta time, January 26, 1957. Two officials of an American pharmaceutical company, bound for New Delhi, were reading the latest report from India, handed them early that morning at the Bangkok Airport. The report contained two surprises. One was an opportunity; the other, a threat.

The opportunity was a list of drugs, just announced, that the Indian Government wanted produced locally under its second 5-year plan, in order to provide employment, build up native skills, and save precious foreign exchange. From the point of view of these two men, the timing could not have been better. Anticipating this development, their company had sent them to India to try to negotiate an agreement to establish manufacturing facilities there. The officials ran quickly down the list, checking off the drugs their company could make and putting them in rough order of priority. By the time their plane reached New Delhi, they had worked out their strategy.

Their sense of urgency sprang from the threat in the report. A team of Soviet experts, having surveyed India's pharmaceutical needs, was on the spot, ready with a proposal to replace Western imports with a state-owned and managed drug manufacturing industry. As most of you in this room will instinctively understand, few situations could quicken the competitive pulse of an American businessman more rapidly than a team of Russians in possession of the ball with first down and goal to go.

SOVIET PROGRESS IN MEDICINE

Now, before I tell you the outcome of this early skirmish in what is fast becoming a global war against disease, let me sketch in the background of the Soviet skirmishers. We have to start almost 40 years ago. The civil war that followed in the wake of the Russian Revolution let loose a series of epidemics that killed several million persons, demoralized the country, and threatened the hold of the new Communist government. The devastation of these epidemics taught Lenin the importance of human capital in the development of a backward country.

Taking stock of the human capital at his disposal, Lenin discovered that Russia's death rate was nearly twice that of the West and that the average citizen had a life expectancy of only 40 years. Though there is no record that he was distressed from a humanitarian point of view, it is clear that the Soviet leader could translate these figures into national output. Financial capital for development of Russia, he knew, could come only from the production of the workers and peasants. First, they had to be educated and trained. If, after that investment, they were weakened by disease and doomed to a short life, the rate of capital accumulation would be so slow that the Communists would never build a modern industrial state short of a hundred years.

When Lenin acted on these conclusions, health became, along with education, the outstanding exceptions to the rule of human exploitation that has marked the Soviet Union since the beginning. For the past 40 years the Russians have been campaigning for better sanitation, public health, and preventive medicine. They have been diverting scarce materials for hospitals, clinics, and medical schools. And they have been turning out enormous numbers of new doctors; their current annual rate of 16,000 is more than twice that of the United States.

What have been the results? They startled me, when I first learned them. I shall not go into the reasons for being skeptical of official Soviet statistics. I shall merely report them with two comments: first, that the ones I am about to use seem to be within the realm of probability, and, second, that we have gone further astray when we ignored Russian claims than when we took them seriously. The number of hospital beds per thousand population, according to these statistics, multiplied four and a half times between 1913 and 1956. The per capita number of doctors jumped 10 times—from about 17 for each 100,000 Russians before World War I to about 164 in 1956. The comparable figure for the United States that year was only 130. This means that, in proportion to the population, which in their case is just over 200 million, the Soviet Union now has 25 percent more doctors than we. Though their quality is still well below ours, we cannot feel smug about the future.

This mammoth Soviet health establishment now boasts 2,750,000 employees and is one of the Communist Party's proudest achievements. What has it been able to accomplish? The best single measures of a nation's physical well-being can be found in the mortality and longevity rates. The Kremlin recently broke its long silence on this subject and announced the figures. Let's take a look at them.

The Soviet Union, the announcement said, had raised the health of its people up to the level of the West. It had slashed the crude mortality rate about 75 percent since before the revolution and by 1956, at 7.7 per 1,000 population, it was comparable to ours. At the same time, it had lengthened average life expectancy from about 40 years at the beginning of World War I to a claimed 67 years in 1956. This was within reaching distance of longevity in the United States, which in the same year stood at 69.5.

This is an extraordinary achievement. What does it mean? Some persons will say that it is a natural consequence of industrialization. The Soviets have already told us, as you might expect, that it is a natural consequence of communism—a claim, incidentally, that is effectively destroyed by the even more spectacular health progress of our own capitalist neighbor, Puerto Rico, which added 50 percent to the average length of life in only 15 years.

THE CONCEPT OF HUMAN CAPITAL

What it means to me is something else. It means that the Bolshevik planners were right when they decided to pour enormous effort into their human capital on the theory that better health as well as better education would have to precede better output. This is a point that we often overlook in our own plans for the underdeveloped countries. We tend to think too much, I believe, in terms of dams and roads, farm machinery and steel mills, money and credit—and not enough in terms of the people who will build them and for whom they are to be built.

Because of our concentration on physical and financial capital, we are inclined to forget the importance of human capital, which is both the means and the end of industrialization. This concept of the relation between human capital and economic growth could turn out to be decisive as the Soviet sets forth to meet the rising expectations of

Asia, Africa, the Middle East, and even Latin America with a program of health, development, and communism.

This brings me back to the skirmish in New Delhi with which I opened this talk. The two gentlemen, as you doubtless had surmised, were officials of Merck Sharp & Dohme International, a division of my own company, Merck. In common with most of the pharmaceutical industry, Merck Sharp & Dohme is no stranger to international business. It is selling today in 80 foreign countries, in 11 of which it has manufacturing plants. Out of total company sales of nearly $200 million last year, 27 percent were outside the United States.

Merck, however, had never been up against quite the situation that confronted these two men when they arrived, after proper introductions from Ambassador Bunker's helpful staff, at the ministry of commerce and industry. They were immediately confronted with two problems: first, Russian competition, and second, a danger that the Indian Government would build its new pharmaceutical industry in what is called the public sector, which means that it would be state-owned and controlled.

INDIA'S PROBLEM

After the formal atmosphere had been thawed by some frank conversation it turned out that the Indians were glad to see these Americans. Near the top of their list were facilities for the production of streptomycin and its important derivative, dihydrostreptomycin, both of which Merck had pioneered.

The streptomycins were vital to India because they are leading drugs in the treatment of tuberculosis. TB is one of the great scourges of Asia. It kills more than half a million Indians a year. More than five times that many are currently suffering from it. The director of the Central Drug Research Institute in Lucknow recently estimated that this disease cost his nation almost a billion man-days of lost work per year.

Here is a typical problem of an underdeveloped country, desperately trying to raise the standard of living of its people against considerable odds. A disease like TB not only kills enormous numbers, but it saps the will and the ability to work, forcing countless human beings to live off the production of others.

The rout of the debilitating disease of tuberculosis, therefore, ranks high among the objectives of India's second 5-year plan. To reach their goal, the Indians need, among other things, the modern drugs with which we in this country have cut our TB death rate down to about a fifth of what it was before World War II. India has been importing these drugs from the West at a cost of millions of dollars annually in precious foreign exchange.

Just before the two men from Merck arrived on the scene, the team of Russian experts had recommended that India build a state-owned basic chemical-pharmaceutical manufacturing industry to free itself from dependence on the West. It would—though this had not yet been made explicit—be designed by Soviet engineers, financed by Communist bloc loans, and, of course, politically motivated. Every ruble that goes through the Iron Curtain is bound on a political mission. In this case, the mission would be to build a showcase to display communism as the friend of the sick and disabled.

THE INDIAN NEGOTIATIONS

Within this context, the meeting between Merck and the Indian Government representatives quickly produced a proposal. The Indians suggested we go into partnership with a government-owned corporation to produce a long list of needed drugs. In view of the realities of the situation, we agreed to consider this proposal, even though it meant indirect partnership with socialism. Our refusal to be rigid and our willingness to look at India's problems from the Indian point of view have, I believe, been major contributing factors in stalling the Russian offensive for almost 2 years.

The Indians have not been rigid, either. Though they are extremely good at bargaining, they have always been willing to take our problems into account, and we have found integrity, frankness, and fairness in all our contacts with the Indian Government.

The Indian proposal, in the end, proved impractical from our point of view, mainly because we thought there would be too many basic conflicts of interest in a partnership with a government agency in such a broad enterprise. But we were able to offer them a creative alternative. We split the problem into two parts. The first is an agreement that was signed last April. Under it, we are now helping the Indians build what will probably be the most modern streptomycin plant in the world.

The plant will be owned by Hindustan Antibiotics, a government corporation already producing penicillin by the fermentation process. It will be built with our plans and the help of our engineers, and it will be operated by Merck-trained Indian technicians using our know-how. The needed machinery and equipment will be financed by means of a loan from the U.S. Export-Import Bank. This new plant will supply all the country's requirements for the drug at an initial saving of nearly $2.5 million annually in foreign exchange. For our help, we are receiving a modest fee to be paid out of sales over a period of 10 years.

Under the second agreement, which was just announced 3 days ago, Merck and a partner, the well-known Indian firm, Tata Sons Private Limited, have set up a new corporation to manufacture several Merck specialties, such as vitamin B_{12}, certain steroid hormones, our new drug, "Diuril," and other discoveries as they come from our own laboratories and are needed in India. We will build a basic medicinal chemical plant, and, as far as possible, use indigenous materials. Our part of the capital investment will be about $3,500,000, and we expect to earn a reasonable profit from the operations.

We will be criticized—perhaps by some persons in this room—because we are helping build a streptomycin plant in the public sector. If it succeeds—and we are doing our best to make it a success—won't this encourage the Indians to produce more medicines and other products in the public sector?

We took a long, hard look at this question before we made our decision. It is not easy for a believer in private enterprise to swallow a Socialist deal. There are several reasons why we did it.

First, this is the way the Indians wanted it. They made this perfectly clear to us after we had done our best to dissuade them. We finally concluded that, if we really meant to help the Indians, we would have to help them in the way they wanted to be helped. To have insisted that we do it our way or not at all would have been transparently arrogant, a quality the Asians find less than endearing, as is so dramatically illustrated in the revealing new novel, "The Ugly American."

Second, by devising our plan, we forestalled the Russians, who, in the midst of our negotiations, offered the Indians a $20 million, 40-year loan at the incredibly low interest rate of 2 percent to finance several basic units for a pharmaceutical-chemical industry, including a streptomycin plant. I used the word "forestalled" because the Soviets have not given up. They are making new proposals to India and may still build some plants in this industry.

Third, our willingness to be flexible enough to adapt our resources to their needs undoubtedly helped make Merck seem a reasonable company with which to do business in the private sector. The fact is, we now will build a private sector pharmaceutical and medicinal chemical plant. Other Western producers in our industry are doing the same. There is therefore a possibility that what started out to be a government-owned industry may end up being mostly in the private sector. This will probably hinge on whether we and the other producers do a good job for India.

Let us remember that some people in this world have a hard time believing that the American corporation deserves a major share of the credit for the social benefits and the high standard of living that we enjoy in the United States. They have known businessmen mainly as traders and exploiters, which is perhaps part of the explanation why so many countries have turned to socialism. If we can perform as well in the underdeveloped countries as we have at home, and do it with humility and understanding, perhaps we can persuade them that we have found a way of improving the welfare of their citizens, that makes socialism obsolete.

In reality, what we have done in India is only a small beginning. I have told the story about it, not because I think it is significant but in the hope that it might suggest a few useful ideas that you could adapt to fit the problems and opportunities your own company and industry are facing in the underdeveloped countries.

MEDICINE AND FREEDOM

Our big job, however, is not just to sell understanding of private enterprise; our big job is to sell freedom. We are in the midst of a war that stretches eastward almost all the way around the globe. It is not a cold war; that adjective describes nothing but the absence of shooting. It is a war against poverty and disease. In the past few years, the rising expectations of the peoples of Asia, Africa, the Middle East and Latin America for a better and a longer life have become the most dynamic human force at work in the world today. Four years ago it lured the Soviet Union out of its lair and the West now finds itself pitted against the Communist bloc in a struggle to see which system can do a better job of economic and social development.

The Soviet economic offensive is being more than adequately described by the other participants in this conference, so I shall confine myself to the coming Russian drive on the other front—the war against disease—an opening skirmish of which we have seen in India.

The Soviet is at least as well equipped medically as it is economically to match us in the underdeveloped countries. It already has 25 percent more doctors in relation to the population than we have and its medical schools are still producing new ones at the rate of 16,000 a year compared with our 7,000. All its physicians and other health personnel work for the State and can be sent where the Kremlin thinks they should go, in or outside the country. The Russian doctor's training in foreign languages and his familiarity with relatively crude living and working conditions put him in a better position than his American counterpart to adapt to service in most parts of Asia or Africa.

And when this well-staffed army sallies forth from its borders—as it will—carrying the nostrums of communism in its medical kit, it will have a proposal to make that could be quite appealing. Reorganize your state along our lines, the proposal would go, and you, too, can do what we did—make the fastest progress in health achieved by any large nation in modern times.

This may not seem appealing to many in this room. But what about someone who was born with a life expectancy of only 35 years and who can never forget that death may visit him or his family at any time, and does, without even bothering to knock

on the door? Most of mankind is surrounded by sickness and is helpless against disease. Whoever provides the tools to fight it will earn the gratitude and might win the allegiance of the multitude.

The Soviets, at no cost to their ideals, can set out to buy the allegiance of people with the promise of good health, because they believe that the end justifies the means. But we cannot. We cannot deflect our great system of medicine from its historic mission—service to humanity—and use its fruits to buy the allegiance of anybody to anything—even to the United States or to the noble idea of freedom.

The population of a large area of Burma feels friendly toward the United States today because of the activities of a single American—Dr. Gordon Seagrave, the famed Burma surgeon. He won this friendship for his country not so much by the healing he dispensed as by the way he did it, and most important, the concern for the individual that was so transparently his motivation.

It might be argued by some that we should not concern ourselves with what might appear to be only the fine points of philosophy when we are in the midst of a long tough fight for survival against a ruthless enemy. But in the long run we can win only if we concentrate more on what we are fighting for—which is the rights of man—than on what we are fighting against.

We can win if we can learn how to export the spirit of the West, not just the material creations of the society that was built with that spirit. Charles Malik, the Lebanese philosopher who is now President of the U.N. General Assembly, put it this way in a magnificant address at the Harvard Business School in September:

"Freedom, independence, respect, equality, fellowship—these spring from the inmost soul of the western tradition; and the question is how much the West can be existentially true to them. And there is in the faithful observance of these things all that is needed, and more, to meet the challenge of communism."

The faithful observance of the things that Dr. Malik mentions requires, it seems to me, that we export American medicine to the underdeveloped countries and that we do it in the form that it is wanted by them, in a modest desire to share our good fortune and with no strings attached.

As we all know, we have been doing precisely this for several generations now. Medical missionaries established clinics in these areas before the turn of the century. They were followed by the foundations, notably Rockefeller, and by scores of individuals, such as Dr. Thomas Dooley. The Russians have only just begun, and, as I have pointed out, they are there for a different reason.

A FOREIGN MEDICAL AID PROGRAM

The haphazard system we have used in the past has been made obsolete by the speed of events—the advent of the Soviets and the rapid rise in the expectations of the peoples in this area. The logic of survival requires that we now make a concerted effort on a broad front. As a beginning, I should like to suggest the following:

1. Alert the public to the challenge of Soviet medicine in the underdeveloped countries: Intelligence and sustained action will have to be based on public understanding. The facts about Soviet progress in medicine and about Russian moves in the underdeveloped countries should be more widely known. One way to do this would be through a commission of leading experts who would find the facts and report them.

2. Develop a bold new foreign medical aid program of our own: This can be built around the excellent bill that Senator LISTER HILL and Congressman JOHN FOGARTY introduced at the end of the last session of Congress to set up an international medical research program. Their bill might be enlarged to provide for scholarships and fellowships in the United States to train students from the underdeveloped countries who would then return home to practice and teach as well as do research on the indigenous diseases that plague their native lands.

Several agencies of the Federal Government are developing a program for the next session of Congress. Part of it should be, I think, continued and expanded support of World Health Organization activities in the underdeveloped countries.

We need at the same time to enlarge our own facilities for medical education so that we can take care of added foreign students and also train American doctors for service abroad.

3. Support private organizations that are working in the foreign medical field: In many ways nongovernmental agencies, such as Medico, the people-to-people program, Dr. Howard Rusk's World Rehabilitation Fund, the World Medical Association, Columbia University's newly formed Institute of Nutrition Sciences, and several of the foundations, with help from our medical profession and our medical schools, are or can be more effective as emissaries of our way of life than official bodies. Though the job to be done is too enormous to be carried out through private support alone, these agencies, which can be more imaginative and flexible than Government, will serve the additional purpose of pioneering promising new projects.

4. Encourage participation by our pharmaceutical industry: It is in the interests of firms such as ours as well as of the Government for the two to work together on a program that would make more drugs available in these countries. In many countries the commercial incentives are strong enough for pharmaceutical firms to take the financial risks themselves. In such cases, support such as the State Department gave Merck throughout its negotiations in India would be helpful. But in some countries, where private incentives are inadequate, the alternative to Russian plants in the public sector is some form of U.S. Government help to make the know-how of American corporations available.

In this connection, we should explore the merits of the imaginative plan proposed by Dean Donald David at the 50th anniversary of the Harvard Business School. He suggested that Federal funds be used to retain corporations, rather than just individual technicians, to build foreign facilities or even develop whole industries in areas where the risk is too great or the reward too small to justify the use of private capital. As Dean David pointed out, this is the way we tooled up to win World War II.

A global war against disease is a vast undertaking. At this stage of public awareness and with the resources presently at our command, we can make only a small beginning, which is why the program outlined above is a modest one. But the urgency of the problem in the underdeveloped countries requires that we make an immediate start.

When we do, we should do it, not because we are worried about what the Soviet Union will do, but because we cannot abandon these people to a mortality rate that is twice our own and a life expectancy of only 35 years.

We should do it because the day has passed when either a man or a country can live with either moral comfort or physical safety on an island of plenty and good health surrounded by a sea of poverty and sickness.

We should do it in the hope that loosening the bonds that bind most of mankind to hunger and disease will be a major step in helping to liberate the human spirit.

The President's Budget—The Inside-Out Straitjacket

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, entitled "The Inside-Out Straitjacket," published in the Wall Street Journal of January 22, 1959, dealing with the President's new budget.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE INSIDE-OUT STRAITJACKET

The President's new budget, in one view, rests on "the assumption that there is some magic figure into which the budget should be forced, like putting a man in a straitjacket."

The words are LYNDON JOHNSON'S, the so-called moderate Senate majority leader, but they reflect the attitude of many liberals in and out of Congress. For instance, the Democratic Advisory Council, which includes former President Truman and Adlai Stevenson and other important Democrats, declares that the budget puts "pocketbook before people" and proceeds to contend that "what is bad for people is also bad for pocketbooks, both private and public."

Now what all these people are really saying is that a budget should not be a budget at all. For a budget is meaningless if it is not in fact a straitjacket of sorts. A real budget, whether it is yours or ours or the Government's, is a financial discipline based on the ancient and certain knowledge that people and governments that consistently live beyond their means are headed for real trouble.

Rejecting this accumulated knowledge, the statists of today who unjustifiably call themselves liberals propound a reverse theory. In one version it goes like this: Closing the "deficit of needs" is far more important than closing any fiscal deficit; indeed, they speak of balanced budgets with ill-concealed contempt. Their idea is to decree the things they think Government should do and ignore the problem of paying for those things.

And they have been applying their theory with a vengeance—abetted, unhappily, at times by the Republican administration. During the fiscal years 1932 through 1959—28 years—the Federal budget has been in the red 23 years. To be sure, there was World War II, in which the deficits were extremely heavy, but that war comprised only 5 of those 23 years of red ink.

As a result of these almost uninterrupted deficits the public debt has risen from less than $20 billion in 1932 to an estimated $285 billion at the end of the current 1959 fiscal period. And the debt is rapidly soaring out of control. President Eisenhower felt impelled to request, in his budget message, still another increase in the permanent debt ceiling—that most impermanent of ceilings.

Since the deficits have been largely financed, in effect, by the printing presses, in them lies the chief explanation of the inflation which has destroyed more than half the value of the dollar in that same generation. And in their continuation lies the menace of the future inflation which could destroy all value. This menace the inflationists even now blandly propose to study; they intend to search assiduously for its

causes almost everywhere except in the Federal Government.

But inflation, monstrous though its mien can be, is not the only outcome of the theory that a budget should not be a budget. The rejection of financial discipline must also mean Government by chaos.

This can be seen even in expenditures for defense, which hardly anyone dares say might be cut. If the military were permitted to have all they want, the existing waste and duplication would be multiplied a hundredfold. Not only that; without discipline, innovation and development would be retarded, for a certain amount of stringency is a goad to invention. Without financial discipline the defense effort would be impaired and finally wrecked.

For the Government as a whole, one result of the denial of discipline is to destroy selectivity. The question becomes not whether this program is better than that; instead, any program anybody thinks of is embraced. Thus, Government becomes a leviathan, speeding the inflation and in the whole process suppressing the individual.

So what kind of nonsense is this about putting the pocketbook before people? The inflationists, the spoiled children who resent discipline, are the ones who are antipeople. For what they propose would ruin the people.

Fortunately there are still some who reject the inside-out budgeting theory and realize that a budget must be a firm control. It would also be well if reason could put a straitjacket on folly.

Ham Operators' Service Is Important

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. YARBOROUGH. Mr. President, in our modern world, the field of communications is especially valuable and important. This is particularly brought to our attention in times of emergency.

And there is one group of people who are always on hand to help in any way possible in this field. They are the amateur radio operators of this Nation.

The services this group provides are innumerable and invaluable. They have assisted law enforcement officers both in the apprehension of criminals and finding persons who are lost. Amateur radio operators have received distress messages from ships at sea and downed aircraft and have notified authorities so help can be sent. During times of serious fire and flood, these people—often endangering their lives and valuable equipment which they purchased with their own funds—have stood by authorities, relaying emergency messages for help and supplies and assuring anxious relatives that their loved ones are safe. They have also crossed many miles with their radio beams to bring messages from home to our servicemen and scientists in remote outposts.

As an example of the type of service these "hams" render, it was an amateur radio operator who first got out word of the disaster which had befallen Cameron, La., and parts of my own State when struck by Hurricane Audrey in 1957. As a result, aid was quickly dispatched to the scene.

Wherever these amateur radio operators are needed, they are on hand, helping in any way possible. They specifically prepare themselves to be able to give highly mobile assistance in any emergency.

Mr. President, in recognition of the outstanding services performed by these people, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Woody Montgomery which appeared in the Temple, Tex., Daily Telegram for Sunday, January 11, 1959, under the heading "Central Texas Hams Set for Emergency Work."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CENTRAL TEXAS HAMS SET FOR EMERGENCY WORK

(By Woody Montgomery)

In some circles when a fellow is called a big ham he's liable to resent the implications, but in amateur radio circles being called a big ham is a compliment.

Temple has about 25 active hams, the radio variety, as members of the Temple Amateur Radio Club and they're ready for any emergency.

Central Texas has not called for their services to a great extent since the Waco tornado a few years back, but the Temple club hasn't relented in preparing for any emergency.

And the rigs, a term the amateurs fondly call their transmitters and receivers, range from a small mobile job to the near-maximum 1-kilowatt jobs.

The Temple club is equipped to move on short notice to any location and is ready to set up to aid in flood, fire and any disaster.

The local club at one time had a fully equipped mobile unit for use in emergencies but the van truck had its limitations and was abandoned.

Now, according to Club President Paul Gardner, the club has a portable generator mounted on a small trailer that can be towed behind any car.

On another trailer, furnished by the Red Cross, can be mounted at a moment's notice a fully-equipped transmitter and receiver.

"With the separate units they can be moved by any member when needed and as a number of the hams have mobile units in their cars it makes the operation doubly effective," Vernon Starnes, a club member said.

"Right now things are running smoothly but no one knows just when the amateurs may be pressed into emergency service," Gardner said.

Amateurs never seem to be satisfied with their equipment and are always either working on it or building something new to add to their present rig.

And the hams are the "tradingest" bunch of people in the Nation. They never buy a part if they can trade someone out of what they need.

The Temple club meets the first and third Tuesday of each month; the members engage in a swap session, swapping either information or radio parts.

The Temple club, boasting members from the radio, photography, medical, electrical and just about every field, is getting ready for their annual nationwide field day.

It isn't until June, but then the members of central Texas clubs will journey to the Ed Brod farm near Cameron and set up camp.

During the field day, operated only on emergency power, the clubs across the Nation vie for the honors in contacting the most other stations over the world.

It's a fascinating hobby and pastime, but as one ham put it, "It takes up a lot of time."

Educational TV

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles which describe an educational television series which is being conducted in my hometown of Fayetteville, Ark.

Fayetteville does not have a television broadcasting company; but through the cooperation of Radio Station KHOG, The Trans Video Corp., which operates a local community antenna system, the Fayetteville Public Schools, and the University of Arkansas, it has been possible to establish Arkansas' only closed circuit educational television program. I believe that the series may be the forerunner to a wider and more effective use of television in schools throughout the Nation.

The articles which I would like to have inserted in the RECORD are "TV Goes to Public School," which appears in the January issue of Arkansas Alumnus. The second article appears in the November 1958 issue of the Journal of Arkansas Education and is entitled "A Look at Educational TV."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Arkansas Alumnus, January 1959]

TV GOES TO PUBLIC SCHOOL—ART, MUSIC, AND SCIENCE PROGRAMS ARE VIEWED BY ELEMENTARY CLASSES

Now that everybody agrees television is here to stay, educators are searching for ways to use it to the best advantage.

On the University of Arkansas campus that search is headed by Norman DeMarco, associate professor of speech, who spent 9 months of last year studying and observing in the New York network studios and at educational station WGBH–TV in Boston. The study was made possible by a Leadership Training Award from the Fund for Adult Education.

Bringing back to the campus both know-how and a belief in the value of TV as a teaching aid, Professor DeMarco this fall initiated TV Classroom, a series of educational programs for elementary schoolchildren.

Countless persons of both the town and gown communities have cooperated to bring these art, music, and science programs into the public school classroom once a week. Each Wednesday at 2:15 the second-grade children all over the city view the music program for 30 minutes; on Thursday the sixth-graders watch art; on Friday the fifth-graders see the science program.

Those in the community who have helped include Superintendent Wayne White (BSE '40, MS '45), the school principals, and the teachers who make the classroom arrangements, prepare the children, and offer constructive criticism. The school board and the PTA's have provided two television sets for each of the five elementary schools; Trans-Video Corp., installed cable service in

each school without charge (cable users normally pay for installation and a monthly service charge); and radio-TV station KHOG gives time and studio space. Although the university owns one TV camera and accessories, it has no studio space. Fred Stevenson, manager of the station, offered the studio, and KHOG and the university combined equipment.

The university has contributed the planning and production. The teachers are faculty members; the members of Professor DeMarco's TV production class do everything from operating the cameras to announcing the programs. In addition to his roles as director and producer, DeMarco himself usually operates the control board.

Faculty members receive no credit or extra pay for the time given to TV—and that time involves preparing a 30-minute lecture on a special subject, attending at least two rehearsals (one called a "dry rehearsal," which is outside the studio, and another a before-camera rehearsal), as well as the actual TV airing.

In advance of each program the classroom teachers whose children will be observing receive an outline so that they can discuss it together before and after. They also receive an evaluation sheet on which they assess the quality of each program: Whether the children were interested, whether the aural and visual qualities were good, whether they have suggestions for improvement. Through such evaluations the producers discovered, for example, that their first art programs were too difficult for the third-graders who were viewing them; they switched to the sixth-graders, who were fascinated.

The art presentations are under the supervision of David Durst,, head of the art department. He has also done most of the on-camera teaching. He has discussed the art of cartography and the art of costume in the time of Columbus, both as prefaces to Columbus Day. Aided by Charles McGimsey, assistant curator of the museum, who brought art examples from the university museum displays, he has discussed art work of various American Indian tribes. At Christmas, with Lothar Krueger and Ed Albin, also of the art department, he demonstrated how to make Christmas decorations out of common objects.

Miss Catherine McHugh, associate professor of music, is in charge of the music programs. Usually she has in the studio second grade guests from different schools; occasionally she talks alone about music, demonstrating on the piano and with blackboard.

In setting up a whole year's schedule of the science TV Classroom, Dr. R. F. Kruh of the chemistry department has called upon scientists in a number of departments. Topics have included Insects and Their Work, Controlling Fires, Streams at Work, and Warm Weather Indoors.

Since TV cable service is used by so many adults, Professor DeMarco would like to start a language program, preferably a class in Russian. He also hopes to produce a series for adults on the creative process, which would be viewed in the evenings.

He, along with other faculty members, would also like to experiment with TV in the university classroom, but that will have to wait upon the provision of a campus studio and more equipment.

In the budget request for the next biennium President Caldwell commented that "television will be used more and more in higher education, for both on-campus and off-campus instruction. The university has been able to qualify at least three splendid members of its faculty for developing institutional use of this medium—but we have not had the space nor the 'seed-money' to begin experimental use of TV."

[From the Journal of Arkansas Education, November 1958]

A Look at Educational TV

(By Don Murphy, Jr.)

The big news in the fall roundup of television is neither the newest adult western, nor the old comedian making a comeback, nor the singer with the most cleavage in her gown, nor the most extravagant spectacular with a galaxy of talent and peacock color. The big news this fall is television for the classroom.

While autumn leaves litter Arkansas lawns, video waves are beamed into homes and classrooms bringing shows that are designed to teach. In eastern Arkansas many high schools are participating in a program of TV physics broadcast from a Memphis station. In Fayetteville viewers are offered three regular weekly educational television shows, one designed for public information, the other two for classroom work. And every commercial channel in the State is giving time to educational television which is aimed either at classroom enrichment for students or at informing the public about what goes on in schools.

Let's take a look at the various programs throughout the State to see what they are doing and how they came about.

Eastern Arkansas Physics Program

Thirteen high schools in six cities in eastern Arkansas are taking part in the physics program offered by Memphis station WKNO-TV, channel 10. In films being shown by WKNO-TV, Dr. Harvey E. White, professor and vice chairman of the department of physics at the University of California at Berkley, teaches physics. The 30-minute film series was prepared especially for high school level work by Dr. White. The schedule each week allows for three lecture and two laboratory periods. For the convenience of all the schools in making their class schedules, the films are televised four times a day; at 9, 10:30, and 11:30 a.m., and at 1 p.m. By having a choice of telecast times, each school can schedule its physics to suit its school day.

High schools offering the course in television physics include those at West Memphis, Parkin, Wynne, Marianna, Osceola, Leachville, West Ridge, Lepanto, Weiner, Trumann, and Forrest City. In both Parkin and Forrest City there are two schools bringing the televised lessons into their classrooms.

The series, inaugurated September 8, 1958, includes not only the Arkansas schools listed above, but also schools in Mississippi and Tennessee. The series will continue throughout the school year.

Preliminary Planning

Considerable preparation was poured into the program long before it went into operation. Station WKNO-TV questioned high schools within its broadcasting range concerning their interest in the plan. After contacting those schools interested, the station telecast test patterns to determine the quality of reception in each area.

In practice, the size of the classes averages 26 pupils. A crew of engineers determined the best television screen size for classroom viewing to be 21 to 24 inches.

Reports from teachers concerning the success of the program are most gratifying. With few exceptions the teachers are pleased with the classes by television. Many praise the program, pointing out that their students have made more progress in the study of physics than in previous years. They report that the films on laboratory work are especially useful because no time is wasted in having to set up the materials, and students can actually see the experiments better on the screen than in a laboratory.

Station WKNO-TV has scheduled preview showings of the films at night a week prior to the time they are to be used in the classroom in order that teachers may familiarize themselves with the material to be covered and plan their classroom procedure. The 30-minute showings leave sufficient class time for teachers to answer questions about the filmed lesson for that day and to emphasize important points.

Dr. White's series on high school physics is no stranger to Arkansas schools. Last year the same films were put on 16-millimeter projectors and shown in many high schools within the State. In some instances specific films in the series were used; in others several of the units were used.

College Series

A similar physics film series, made by Dr. White for use on the college level is also being televised in the State. Several colleges, including Little Rock University, Henderson State Teachers College, Arkansas State Teachers College, Arkansas A. and M., and Arkansas A. M. and N. are currently offering credit for successful completion of the course.

The films are telecast over KARK–TV, Little Rock, at 6:30 every morning, Monday through Friday. The series covers 32 weeks or the equivalent of 2 college semesters, and is good for 4 hours' credit.

Using the program of Little Rock University as an example, here is how one college conducts its physics-by-television course. At the beginning of the school year the students enrolling in the course were given a syllabus containing daily textbook assignments plus problems to be solved. With the syllabus as a guide, class members view the filmed lecture-demonstration in their own homes. They meet for class at 7:30 each Wednesday evening during the semester, at which time the regular professor answers questions arising from the filmed lectures. At these weekly class periods, students turn in their homework and take periodic tests. When a student has successfully passed his examinations, his grade for the course is placed on his transcript.

Joint Project in Fayetteville

In Fayetteville, where the State's only closed-circuit educational channel is located, the television teaching is being tried out on the elementary level. While attending past national administrative conferences and meetings, Superintendent Wayne White had heard the subject of television discussed at great length in connection with schools. When Fayetteville got its station last year and free time became available to the local schools, Mr. White was anxious to accept.

Gaining the support of the school board, the staff of station KHOG–TV, and faculty members of the University of Arkansas, he referred to a committee the matter of setting up a schedule of local educational television shows. The committee, consisting of educators, professional television men, and the lay public started its work by drafting plans for two 30-minute shows each week.

One of these shows is an informational program about the Fayetteville schools planned and conducted by Mr. White every Tuesday morning at 10:30. It may feature students and teachers in a discussion of classroom activities, or parents and PTA members discussing supervised play periods or the school lunchroom. Any issue of importance to the public school system is a must for airing on his program.

The second program drafted by the committee was a weekly 30-minute instructional program directed to third-grade art. A team of two third-grade teachers and members of the University of Arkansas art department decided on a program schedule and selected the material to be covered. This weekly show is viewed by the third-grade art classes under the supervision of their regular

teacher and is a supplement to their daily instruction.

These informational and instructional programs were begun in late September. Since that time the program has been expanded by adding, in mid-October, a 30-minute show on elementary music similar to the existing one on art. The committee hopes to expand the television series further to include additional instructional programs before the end of the school year. On the agenda for next year is a plan to include the junior high school level in the television series.

A great deal of community cooperation and spirit was displayed in putting the television shows on the air in Fayetteville. Faculty members from the university volunteered their time as television teachers. Norman De Marco, cochairman of the planning committee and the university's representative on the committee, supervised his undergraduate students in the university's television classes in producing and directing the shows and operating the cameras. Anxious to do its part, station KHOG–TV saved the school system the expense of hooking onto the coaxial cable by installing the connections at the schools without charge.

The school board and PTA combined forces in procuring television sets for the six schools. Both 21- and 24-inch console and table models were purchased and installed in the auditorium and lunchroom at each elementary school. Each set was placed in an elevated position to facilitate maximum viewing by the classes.

STATE LEVEL ALSO

On the State level, also, experimentation in the use of educational television is being encouraged by the State department of education. It began last spring, when the State department of education was approached by the representatives of the seven commercial television stations in the State about the possibility of endorsing a project in educational television. The State department of education acted favorably on the offer, and work commenced.

Under the plan the State department of education is sponsoring a weekly 30-minute program over each of the seven participating stations for a period of 6 months. To expedite the plan and put it into working order a local committee has been selected for each station. Membership on these program planning committees includes school administrators, school board members, employees of the TV stations, business and civic leaders, and interested laymen. A State department coordinator, selected by the State commissioner of education, is working with each of the local committees.

The primary duty of each local committee is to plan the programs to be presented over its station for the 6-month period. Each station's programing includes some adult information and some enrichment shows.

Four of the stations had their programs on the air by the middle of October, and by the first of November two others had joined them.

Telecast times for the State department of education sponsored programs are as follows: KARK–TV, Little Rock, Sunday at 1:30 p.m.; KTHV, Little Rock, Saturday at 11 a.m.; KNAC–TV, Fort Smith, Sunday at 11 a.m.; KRBB–TV, El Dorado, Tuesday at 4 p.m.; and KCMC–TV, Texarkana, Tuesday at 5 p.m.

The new activity in educational television in Arkansas is quite pronounced and is an indication of the recognition of its potential as a teaching device. The future of its use in the classroom is very much wrapped up in the pilot projects that are now underway in many parts of the State. Whether it will ultimately become a mature influence and an effective teacher for Arkansas youth as well as an effective interpreter of the schools to their patrons, depends to a great extent upon the experimentation now taking place.

Soviet Barriers to Friendship

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Friday, January 23, 1959

Mr. MORTON. Mr. President, on December 2, 1958, the Hon. George McGregor Harrison, U.S. representative to the United Nations General Assembly, spoke before the Special Political Committee. The subject of his address was "Peaceful and Neighborly Relations Among States."

The address is an excellent one, but I feel that it is too long for inclusion in the CONGRESSIONAL RECORD. I do, however, ask unanimous consent that part V entitled "Soviet Barriers to Friendship" be printed in the Appendix of the RECORD following these remarks of mine.

For the benefit of any of my colleagues who might be interested in reading the entire address it can be obtained from the U.S. delegation to the General Assembly of the United Nations and is listed as "Press Release No. 3099."

There being no objection, the excerpt from the address was ordered to be printed in the RECORD, as follows:

V. SOVIET BARRIERS TO FRIENDSHIP

To avoid bitterness in this debate, I prefer not to burden the record with examples of the ceaseless flow of official propaganda within the Soviet Union, consistently portraying my country and other non-Communist countries in false and hostile terms. Nor shall I go into details here about the elaborate system of control which prevents anything from being published within the Soviet Union that disagrees with the official line.

But I do wish to describe briefly how the Soviet leaders, having created this artificial and fearful climate of opinion within their country, then attempt to seal it off from contamination by any different facts or opinions from the outside world.

This is done chiefly by two techniques. The first is exclusion of foreign radio broadcasts by jamming. The second is censorship and control of the printed word, both incoming and outgoing. I shall discuss both.

A. RADIO JAMMING

It may be well for us to remember just what jamming is, because very few countries represented here engage in this practice.

Jamming is deliberate interference with a radio broadcast, to prevent it from being listened to, by drowning it out with noise from another transmitter using the same frequency.

Soviet jamming of Russian language news broadcasts on the Voice of America began in 1948. Since then the Soviet jamming operation has grown by leaps and bounds. The number of radio transmitters operated by the Soviet Union and the other countries of the Soviet bloc for jamming foreign broadcasts has risen as follows: Spring of 1948, about a dozen jamming transmitters; April 1949, about 150; December 1950, over 1,000; 1952, over 1,500; 1956, about 2,000; 1958, about 2,500.

This army of jammers is one the the largest radio systems in the world. It represents a capital investment of some $250 million, and an annual operating cost of about $100 million.

It is 5 or 6 times more expensive than all the broadcasting of the Voice of America, in all languages, to all parts of the world. Yet it broadcasts nothing but meaningless noise.

Its purpose, which it partly accomplishes, is to shut off the peoples of the Soviet Union and the Soviet Communist bloc from outside broadcasts in all their native languages. This includes broadcasts not only by the United States but by other countries too—and even by the United Nations itself.

Mr. Chairman, the United States has opposed radio jamming from the beginning. In April 1949 the United States made a written protest against Soviet jamming to the Secretary General of the International Telecommunications Union, a special agency of the United Nations. We pointed out that this practice was a violation of articles 11, 13, 19, and 44 of the Atlantic City Telecommunications Convention, to which the United States and the Soviet Union are both parties. Our protest was duly forwarded to the Soviet Government, which never even replied to it.

The United Nations General Assembly has taken a position against jamming. On December 14, 1950, after a full debate in the third committee, the assembly adopted Resolution 424 (V). This resolution declared jamming to be "a violation of the accepted principles of freedom of information" and condemned it as "a denial of the right of all peoples to be fully informed concerning news, opinions, and ideas regardless of frontiers." It invited member states "to refrain from such interference with the right of their peoples to fredom of information." It further invited member states "to give every possible facility so that their peoples may know objectively the activities of the United Nations in promoting peace and, in particular, to facilitate the reception and transmission of the United Nations official broadcasts."

The vote on this resolution was 49 to 5, the Soviet bloc alone in opposition. Since it was adopted, the Soviet Union has increased its jamming network from about 1,000 stations to 2,500.

It is not just United States programs that are jammed by the Soviets. The British Broadcasting Corporation and the Vatican radio, among others, get the same treatment. In fact, all radio broadcasts to the Soviet Union, in any of the languages of that country, are jammed.

Even the Russian language radio transmissions of the United Nations Secretariat have been jammed. They are beamed to the Soviet Union every day for 25 minutes on a transmitter in Geneva. They consist of summaries of developments at the United Nations, with special attention to the statements of the Soviet representatives here. They are edited by officials of the impartial U.N. Secretariat. And yet it seems that even these broadcasts must be prevented from reaching the ears of the Russian people.

Last August the United Nations General Assembly held an emergency session on the situation in the Middle East. Its proceedings were broadcast—the full proceedings, word for word, not just summaries—in all five of the official languages of the United Nations: English, French, Spanish, Russian, and Chinese. The U.S. Government made available its own powerful transmitters for this purpose. The voice which was broadcast in each language was the actual voice either of the original speaker or of the United Nations simultaneous translator.

Those historic debates were clearly heard by radio in English, French, Spanish, and

Chinese, in the countries where those languages are spoken. But the Russian language version was jammed by the jammers of the Soviet Union.

Not only did the Soviets jam the speech of the President of the United States in the General Assembly, they jammed all the speeches. They jammed the speeches of the Foreign Minister of the United Arab Republic and of the delegates of all the other Arab States. They jammed the speeches of the delegates from the countries of Africa, the Americas, Asia, and Europe.

And they even jammed the speech of their own Foreign Minister, Mr. Gromyko.

In 1955, when a Soviet agricultural delegation and a delegation of Russian churchmen visited the United Kingdom, their remarks were broadcast by the B.B.C. to the Soviet Union—where they were jammed. And in the same year, when the heads of government met at Geneva, messages by Mr. Khrushchev and Mr. Bulganin were broadcast in the original Russian to the Soviet Union—where they were jammed.

Can it be that the Soviet Government sometimes does not even want the Soviet people to know what their own representatives abroad are saying to the rest of the world?

The newspapers recently printed a report by a leading American, Mr. Adlai Stevenson, on his trip to the Soviet Union last summer. In his report Mr. Stevenson said this:

"We kept a careful log on foreign broadcasts with a shortwave radio. Never once were we able to hear more than the first few seconds of Russian-language broadcast from the Voice of America, the B.B.C. or even the United Nations before the jamming drowned them out. They go to great trouble and expense to see to it that the people hear only one side of a story and to keep them in ignorance of the United States and its motives."

One last comment before I leave the subject of jamming. The Soviet Union, in the first half of 1958, transmitted an average of 938 broadcast hours every week to foreign countries. That means five or six radio programs going at the same time at any hour of the day or night.

Of those broadcasts, 112 hours a week, or 16 hours a day, are English language broadcasts originating in Moscow and beamed at North America.

No Soviet broadcasts to other countries are jammed as far as we know, Mr. Chairman. Certainly none of those aimed at the United States are jammed. Anybody in the United States is free to listen to them—no matter how much they falsify U.S. policy. We believe in the old principle of Thomas Jefferson: "Error of opinion may be tolerated where reason is left free to combat it."

Now I turn to the matter of censorship.

B. CENSORSHIP AND CONTROL OF THE PRINTED WORD

The Soviet Union has the same "closed door" policy with regard to the printed word.

In the Soviet Government there is an organization almost unknown to the outside world, called Glavlit. Its full title is "Main Administration for Safeguarding Military and State Secrets." Its duties are broader than its name implies. It exercises censorship over all publications, motion pictures, etc.—not only those which originate in the Soviet Union, but also those which enter from the outside.

Glavlite, among other functions, controls both the importing and exporting of publications and films. It may confiscate any publication which it considers unsuitable for distribution. Every book, pamphlet, newspaper or periodical, whether it originated in the Soviet Union or outside, must have the Glavlit imprint before it is allowed to be published in the Soviet Union.

The only exception to this rule is the monthly illustrated magazine Amerika, which I mentioned a moment ago.

Censorship applies also to dispatches of foreign news correspondents in the Soviet Union. Every dispatch must be submitted to the central telegraph agency for scrutiny by the Glavlit censors. Their decisions are final. They refuse even to discuss them with correspondents.

Here are a few examples of how that power of censorship is used:

In Moscow last August 1, the Japanese delegate to the Assembly of the International Geophysical Year made a speech in which he reported that most of the radioactive fallout over Japan had been caused by Soviet atomic explosions. There was nothing secret about his speech. But foreign correspondents' reports about it were stopped by the Glavlit censors.

Recently a correspondent in Moscow was forbidden by the censors to send out of the country the text of a biography of Charles de Gaulle, now the Premier of France, taken word for word from the "Great Soviet Encyclopedia."

The censors also stopped dispatches reporting that the birthday of former Premier Bulganin went by this year without any official observance.

When an American delegation of physicians, visiting the Soviet Union, gave a news conference in Moscow, foreign correspondents were allowed to report everything favorable that the doctors said about Soviet medicine—but everything they said which was unfavorable was cut out by the censors.

A Ukrainian Anniversary

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MULTER. Mr. Speaker, January 22, 1959, marks the 41st anniversary of Ukrainian independence.

There is an irony of history here. The Ukrainian people have not known liberty since they were mercilessly incorporated into the Russian Empire in 1920. Their long-sought freedom from the yoke of Russian domination lasted but 2 years, from 1918 to 1920.

Today it is only fitting that we salute this brave and valiant nation that ceaselessly retains the desire to be free. The Ukrainian people are proud, individualistic, and have a tremendous amount of resilience to the present fates of history. Even though they are once again under the hated heel of historic domination, and have been under Soviet domination longer than any other nation now under Kremlin control, there is no shadow of doubt but that the interlude of a 2-year span of freedom immediately after World War I was enough to make the reality of freedom the ultimate national goal.

Since 1920 the Ukraine has been one of the bloodiest battlefields of modern history. The people of this rich agricultural land have died by the hundreds of thousands. Neither the dead nor the living can celebrate the 41st anniversary of Ukrainian independence. The Iron Curtain, so obvious to the rest of the world, is also within the segments of the Russian Empire.

Thus it is up to us who live in freedom not to let this day pass without recognizing its significance to those brave men and women who make such an event meaningful. I, for one, am happy to be able to give this recognition. To the peoples of the Ukraine and those of Ukrainian descent in this country, I give my respect and my admiration.

The Importance of Foreign Trade

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. MAGNUSON. Mr. President, the importance of foreign trade to the economy and prosperity of our country generally is recognized much more fully by residents of ocean port areas than by citizens of other sections. However, the benefits of this trade are spread widely throughout the inland industrial and agricultural areas, to such an extent that it may well be said that every single person in the United States participates in some way or other in the fruits of foreign commerce.

An editorial in the January 17 issue of the Marine Digest points this out most effectively. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

SHIPS ARE YOUR PARTNER

How important is foreign trade to this country?

An individual and an organization have recently provided answers. President Eisenhower says: "World trade makes jobs for at least 4.5 million American workers." The U.S. Council of the International Chamber of Commerce reports: "Foreign trade provides more direct employment in the United States than the textile, auto, chemical and steel industries combined."

Moreover, the employment thus created is spread throughout the whole country; it isn't concentrated in the seaports or along the oceans. As an example, an official of the Committee of American Steamship Lines recently described what foreign trade means in terms of income and employment to two States which are far from any sea—Kansas and Missouri. In a late year, their share of the U.S. exports of six industries alone amounted to $330 million. And their share of farm exports in the same year added another $270 million.

Putting it another way, the Kansas-Missouri work force totals 2.1 million persons. Some 750,000 of them are affected directly or indirectly by foreign trade. And imports, it should be noted, are as important as exports. We must go overseas for all manner of raw materials used in our factories—iron ore, long staple cotton, animal skins, and so on.

All but a small fraction of foreign trade moves by ship. That makes the U.S. merchant marine the active partner of industry and agriculture.

BENEFITS FOR EVERY COMMUNITY

"Every community in America benefits from American shipbuilding."

That statement comes from the head of one of the leading American steamship lines, and is based on a study of purchases made for the construction of two luxury passenger cargo ships. Five hundred job classifications were involved in filling those orders. All manner of raw materials, parts and services were required.

These two ships cost more than $50 million. And they are only part of this particular company's $400 million shipbuilding program. That program, in turn, is only part of the $3.5 billion rebuilding program now underway for the American merchant marine as a whole.

The point is that the economic benefits of shipbuilding aren't confined to the seacoasts and the port communities. The money flows out to every section of the country. It's a fact that many a man who has never seen an ocean-going vessel owes a part of his livelihood to its existence.

The building of ships is only the beginning. The jobs of close to five million of us depend on import and export trade.

The Dollar and the Next Budget

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. MUNDT. Mr. President, the largest problem the U.S. Senate faces as we meet to begin the 1st session of the 86th Congress is the problem of inflation. Our great need is to determine what fiscal policies will insure a strong and stable economy. A balanced budget will be a strong force in maintaining a sound fiscal structure in our Nation. It is not the final answer; but it is one which will determine, in a large measure, whether we keep a sound dollar, an expanding economy, or whether we panic and take the road to runaway inflation.

In the December 8, 1958, edition of Life there is a reasonable and convincing editorial on the importance of working out a budget which will reduce spending and k.ep inflation under control. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DOLLAR AND THE NEXT BUDGET

For the Secretary of the Treasury and the Director of the Budget, these are the busiest days of a critical year. Preparing the budget that goes to Congress in January, they are vetting the multitudinous Federal claims on the taxpayer's dollar—that 1959–60 dollar which he has yet to earn. Heroically and against a tide of political cynicism—but with Eisenhower's support—they are striving to balance that budget. What difference does it make?

The current deficit (fiscal 1959) is some $10 to $12 billion, the recession having knocked last January's budget into a cocked hat. Expected tax revenues fell by $7 billion, while spending rose $5 billion. The Pentagon budget, which Eisenhower and McElroy were wrestling over in Augusta last week, takes about half of the whole Federal expenditure, but it is not responsible for the current deficit; the biggest increases in spending have gone to farmers, the unemployed, housing and other welfare items. And on such items the new Democratic Congress is widely expected to be even more openhanded with our money than the last.

"The time for a showdown with inflation is now," declared Anderson before setting to work. But would another deficit (even of $5 billion or so) mean inflation? Not necessarily. The Federal budget is only one of the factors that influence prices. There are at least four other major factors to watch:

The cost-price push, chiefly the force of steadily rising wage rates. But this is not an urgent problem at the moment, since a recent spurt in productivity has offset (temporarily anyway) its inflationary effect.

The policies of the Federal Reserve. It has delicately but firmly been restricting credit since last August and, if necessary, could create anything from a mild deflation to a full depression overnight.

The way the Treasury manages our huge Federal debt—now a record $283 billion. If he wanted to raise interest rates high enough, Secretary Anderson could stop the housing boom in its tracks and sequester the lion's share of our savings.

The tax structure, which influences how people spend their money. The present structure is probably inflationary; but it could be reformed in the direction already suggested by Vice President NIXON and others, from emphasis on income taxes to excise taxes, thus increasing Federal revenues and production.

In addition the Government has many other unused weapons against price increases, as a speech by Arthur Burns recently pointed out. It could reduce or even jettison price supports, import duties, import quotas, wage regulations, stockpiles, and subsidies. In short, the Government has enough power to drive prices through the floor.

Nobody expects it to drive prices through the floor. But the surprising thing is the number of people who expect the Government to do nothing at all.

The idea that inflation is inevitable is fomented by many sophisticated people, including Harvard economists, the Kiplinger letter, and half the professionals on Wall Street. The cynical syllogism goes like this: big labor controls Congress; big labor means higher wages, more Federal spending, cheaper credit, soak-the-rich taxes, and every other cause of inflation, which is therefore bound to come. A good example is the remark in Kiplinger's last letter: "Eisenhower won't stop this trend toward more spending. Truth is he probably couldn't even if he wanted to." Wall Street market letters echo this wise-guy certitude; the active market in stocks probably reflects as many bets on inflation as bets on prosperity.

Yet the plain fact is that most prices (other than stock prices) are not rising; businessmen, unlike Wall Streeters, are not buying as though they expected prices to rise; and indeed the whole fear of inflation, as a Federal Reserve man has put it, is "a state of mind rather than a state of facts." The state of mind assumes that U.S. democracy is incapable of self-discipline and that you can fool most of the people most of the time. This assumption has been disproved so often that it is odd to find smart men betting on it. Our advice is: don't.

A balanced budget for fiscal 1960 will not in itself determine whether we have more inflation or not. But it will make a big difference—and it could do a lot to wake up the wise guys about the real strength of our economy and our democracy. Most people are smart enough to want a sound dollar. The Government has plenty of ways to give it to them. In trying to keep the 1960 budget within bounds, Ike, Anderson and company are using one of the most important of these ways. They are fightinog one of the worst sources of inflation—what an earlier Budget Director called the "peculiar tendency in Government to add but never to subtract." They deserve all the support they can get.

The Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, entitled "The Talmadge Plan," from the Sunday, January 18, 1959, issue of the Winston-Salem, N.C., Journal and Sunday Sentinel.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TALMADGE PLAN

With the Department of Agriculture's budget standing at $6.9 billion for the current fiscal year and with nearly $9 billion in Government funds already tied up in surplus commodities, the farm program has become a matter of increasing concern in Washington.

In his State of the Union message President Eisenhower said that Government outlays for the support of prices on a very few farm products for the current fiscal year will exceed $5 billion—a sum equal to two-fifths of the net income of all farm operators in the United States. He said annual Government expenditures just for storage, interest, and handling of the surplus will reach a rate of $1 billion by July 1.

These mounting costs and our obvious failure to control production, and thereby stabilize the market, challenge Congress to seek more realistic approaches to the whole problem. Legislation proposed last week by Senator HERMAN TALMADGE, of Georgia, could be a step in this direction.

Senator TALMADGE would abolish the present farm program and substitute direct Government payments to farmers for part of their output. This is a Brannan plan type of subsidy which the Government now provides for woolgrowers.

Under the TALMADGE program all Government planting controls and price supports would be wiped out. In their place farmers would be given quotas covering their individual shares of the U.S. domestic market. The farmers would grow as much as they wanted to and sell their products in the open market for whatever consumers would pay. The difference between the open market prices and 100 percent of the "fair earning power" parity price—on domestic quota sales only—would be paid to the growers by the Government. But no individual farmer would be allowed to collect more than $25,000 a year in such parity payments. According to TALMADGE, his plan would cost between $1.5 billion and $2.5 billion a year, as compared with $5 billion for the current fiscal year under the present farm program.

Theoretically, both the farmer and the consumer would benefit. In the absence of a created scarcity economy or artificial price supports, the old law of supply and demand would come back into the marketplace. Supplies would be more plentiful and prices to the consumer would be lower. This in turn should result in more purchases and greater public consumption. In time the

expanding domestic market might eliminate the necessity of any Government subsidy to the growers. But in the meantime, the payment of the subsidy on part of the growers' crop would assure them of a fair earning power income.

In actual practice the TALMADGE program might not work as well as theory makes it appear. Congress may not even give it a chance to prove itself. It embraces the main features of the never used (except for wool) but long abused Brannan plan which has become a bogeyman of welfare statism to some politicians. The fact that it is offered by a southern Senator, who can hardly be termed a radical, may gain for it serious congressional study.

Certainly, as both Senator TALMADGE and the President have emphasized, the time has come to deal realistically and effectively with the farm problem. It is clear now that neither the costly Benson policies nor the old rigid parity price support and acreage control program afford adequate relief from mounting Government costs and increasing surpluses. Courageous experimentation with the TALMADGE plan (call it the Brannan plan, if you will) might be worth an early try. At least it deserves earnest study, if only to get congressional thinking out of the mental straightjacket which has bound it to rigid parity and control concepts for so long.

Visit of Soviet Deputy Premier Mikoyan

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thought-provoking article entitled "We Are Deeply Disturbed," written by Milton Berliner and published in the Washington Daily News of January 17, 1959. The article deals with the visit to the United States of Soviet Deputy Premier Mikoyan. What the writer has to say in this article is most important. I thoroughly and completely concur in what he has to say.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE ARE DEEPLY DISTURBED

(By Milton Berliner)

In the poorly lighted corridor outside the Capitol's old Supreme Court chamber were four former members of the last Free Hungarian government.

Not far away, in the committee's handsome hearing room, waiters were prettying up the table for Chairman Theodore F. GREEN's luncheon in honor of one of Free Hungary's mortal enemies—Anastas I. Mikoyan.

The four Free Hungarians waited patiently for the meeting to end. They had what they called an "aide memoire" on the Mikoyan visit, and they wanted the Foreign Relations Committee members to read it before they joined the Red envoy at lunch.

"We are deeply disturbed by the exaggerated hospitality being accorded to Mr. Mikoyan in some American circles," the statement said. "Knowing the part played by Mr. Mikoyan during the Hungarian revolution of 1956 we can fully understand those who have been expressing their passions against him. * * * For us East Central Europeans, Mikoyan is a trader of raw materials and slave labor."

The statement begged the U.S. Government to let the Soviet Union know that without freeing of the subjugated nations no peace could be maintained.

One of the four who waited was Ferenc Nagy, Free Hungary's last Prime Minister who was vacationing in Switzerland when the Reds took over. In exchange for his resignation, they promised to send him his little son who was still in Budapest. The trade was made on the Swiss-Austrian border.

"I know Mikoyan from the Kremlin," Mr. Nagy said, keeping an eye on the old Supreme Court chamber door. "In 1946 I visited the Soviet Government. The occupying Red Army had presented the Hungarian Government with a bill for $15 million for repairing railroad lines.

"At the end of my official discussion with Stalin, I mentioned this bill. First of all we didn't ask the Red Army to repair our railroads. Secondly, the railroads enumerated were almost all in Czechoslovakia and Jugoslavia, not Hungary. Stalin said, 'Don't pay it.' The next morning I talked with Mikoyan. He said, 'If Stalin said "Don't pay it," don't pay it.' And we didn't."

Mr. Nagy said he believed that Mr. Mikoyan was more a politician than an economic man.

"That's why I feel his coming to the United States is first of all not for trade but for political arrangements," he said. "Probably he would like to prepare for a summit conference."

Mr. Nagy thought Soviet leadership was much more firm under Stalin; that now it wavers between liberalization and aggressiveness.

The Senators began to emerge and each was handed a copy of the Hungarian committee statement. Then they walked down the hall to the Mikoyan luncheon which consisted of fresh fruit cocktail, steak and mushrooms, baked potato, broiled tomato stuffed with peas, tossed salad, an oversized rum tart, and coffee.

The New Budget

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. MAGNUSON. Mr. President, the provisions of the President's budget for fiscal 1960 affecting the various phases of Government operations will be a main topic of discussion this week and for many weeks to come, we may be sure. And few of these provisions, I am certain, have been awaited with more interest and trepidation than those which have to do with Government's participation in the upbuilding and the operation of the American merchant marine.

As is so well pointed out in an editorial that appeared in the January 16 issue of the Journal of Commerce, the American merchant marine is one of the real and rare bargains the Government has come by in the years since it became official Government policy to foster and develop a merchant marine adequate to the needs of peace and war. The net costs of assistance to our shipping, as cited by the Maritime Administrator in his recent report, have been more than balanced, in my belief, by the savings to the Government and to our export industries in the lower freight rates made possible by the fact that we were not at the mercy of foreign shipping as we had been too often in the past.

I ask unanimous consent that the editorial from the Journal of Commerce be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NEW BUDGET

(By Edward P. Tastrom)

The American-flag steamship industry is awaiting with more than usual interest the budget message of the President for the coming fiscal year, which is due next week.

On the basis of grapevine reports, there seems to be considerable fear that the sums to be suggested for operating and construction subsidies for the merchant marine may either be short of actual needs or, at the very least, leave so little margin for reduction by congressional committees as to imperil the assistance program.

It is quite apparent that the battleground from the start at this session is to be the budget. The Democratic majority is not seeing eye to eye with the White House on balancing accounts, but is insisting on expanded defense expenditures even though another deficit results.

Industry feeling was expressed by Ralph E. Casey, president of the American Merchant Marine Institute, this week when he declared "too many times in the past the merchant marine has been treated as the most expendable item from the standpoint of governmental financial support."

As a matter of fact, the shipping industry is going to need more money this year to maintain its position than was the case in the 1958–59 fiscal period when $160 million was allowed for construction subsidies and $120 million for operating aid.

Many of the presently subsidized lines are well along in their fleet replacement programs, all of which hinge on the grant of construction aid. In addition, the Federal Maritime Board has on its docket several applications from American flag lines for operating subsidy contracts. In two instances, the applications cover several essential trade routes and would require substantial aid.

Assistance to shipping has not proved to be much of a financial burden to the Government since instituted in its present form back in 1937.

Figures just released by the Federal Maritime Board show that total cost for operating aid through June 30, 1958, was $808 million. Eliminating the five war years, when no Government subsidies were paid, this brings the average annual bill to the taxpayers to about $47 million.

The final figures covering this period, actually may be reduced, for, as FMB pointed out, they are subject to recapture where earnings have exceeded the statutory limit.

As for construction subsidies, the picture is complicated by the fact that some ships were requisitioned by the Government during the war and others sold to operators later under the Ship Sales Act.

Thus, while the Government's account shows a total amount paid out of $477 million, these offset credits bring the residual cost down to $183 million for the period, or about $10.7 million annually for the same 17-year period. This is just about the cost of one good cargo ship today.

Considering the fact that we now have a good competitive merchant fleet of some 300 ships operated in foreign trade by the subsidized lines, the investment can truthfully be said to have paid off handsomely.

This is not the time for Congress or the administration to take a pinchpenny stand

on shipping. The industry has proved its ability to competently handle aid funds, competition today is keener than ever and our merchant fleet under present high costs cannot operate without Government aid.

The International Significance of Alaskan Statehood

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. HUMPHREY. Mr. President, our colleague, the distinguished Senator from our newest State, Alaska [Mr. GRUENING], has recently written a most interesting article entitled "The International Significance of Alaskan Statehood," which appears in the winter 1958 edition of World Affairs. This article very ably illustrates the striking contrast that statehood for Alaska presents to the eyes of the world in comparison with the Soviet Union's treatment of its satellites. I commend to the reading of all Senators this splendid article.

Mr. President, I ask unanimous consent that the article by the distinguished Senator from Alaska be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE INTERNATIONAL SIGNIFICANCE OF ALASKAN STATEHOOD

(By ERNEST GRUENING, U.S. Senator from Alaska)

The admission of Alaska to the Union as a State has substantial significance in international affairs.

It demonstrates that the United States practices what it preaches. It proves that the United States, true to its professions and to its best traditions, does not practice colonialism. It augurs a corresponding treatment for the Nation's only other incorporated Territory, Hawaii, and for the maximum of self-government of all other of the remaining dependent areas, Puerto Rico having already been granted the status its people desired. It shows that the United States is willing to break other precedents in order to extend to a noncontiguous area—for the first time in history—the full equality and sovereignty previously conferred on 35 States subsequent to the formation of the Nation.

Statehood for Alaska advances the frontiers of democracy to the continent's farthest North and West. It extends these frontiers of freedom for the first time into the Arctic and into the Eastern Hemisphere—for the Alaskan terrain reaches into both these parts of the globe.

What is particularly striking about this liberating action is that Alaska was once Russian-America. But for the vision and wisdom of William H. Seward, Alaska might still be groaning under the tyranny of Moscow.

Historically, not only was Alaska once part of what now has become the most brutal totalitarian regime in modern times, but, geographically, Alaska lies within naked-eye view of the Soviet police state. Only 54 miles separate Alaska and Siberia across Bering Strait. The Siberian headlands which rise to 11,000 feet are clearly seen from the Alaskan mainland. They are visible also from St. Lawrence Island, an Alaskan island in the Bering Sea.

Two other islands, Little Diomede and Big Diomede, the former American, the latter Russian, lie within 2½ miles of each other. Thus Alaska is the nearest free country to the Soviet State and the contrast between these two adjacent systems of government and the two ways of life is revealed for the whole world to see.

This contrast and this difference may be specifically illustrated by what has happened on the two Diomedes. Both islands were formerly inhabited by Eskimos, there being a small village on each, both extant before the coming of the white man. The American Eskimos continue to live there, following their peaceable pursuits, enjoying the blessings of liberty, as loyal and patriotic a group of Americans as can be found under the flag. I was happy to enlist those who were not in the Armed Forces in our Alaska Territorial Guard in the early days of World War II; and they are now active members of the Alaska National Guard, enrolled in its scout battalions.

In contrast, Russia's Eskimos on Big Diomede have been uprooted from their ancestral homes and forcibly deported to the mainland of Siberia. With that deportation, the friendly visiting that had taken place between the inhabitants of the two islands for generations, ceased abruptly.

Thus we have in those far northern latitudes a striking illustration of contrasting freedom and serfdom. It is to be hoped that our Voice of America will make clear to the world the profound difference between Uncle Sam's treatment of its dependencies—for Alaska was such a dependency prior to statehood—and Russia's treatment of its satellites.

Alaska versus Hungary. Gaze on this pictufe and on that.

In the one case there is the grant of full equality. There is application by due process of law of that most basic of American principles, the principle of government by consent of the governed. In the other case we have, by a dictatorial exercise of power, forcible deportation and the suppression of freedom which in varying degree all Russian subjects suffer.

In the continuing struggle for the understanding and sympathy of the wavering and uncommitted peoples of the earth, Alaskan statehood should be of great value as a shining example.

"By their deeds ye shall know them." The deed of making Alaska the 49th State in the American Union speaks far more loudly than words could.

That the 49th State was once Russian-American, that it is, geographically, Russia's nearest neighbor belonging to the free world—for all Russia's other neighbors have been subverted to the Kremlin's rule—sounds a clarion call to all mankind.

Alaskan statehood exceeds the propaganda value of a dozen sputniks. It is a missile—an intercontinental missile suggests itself—which cannot be intercepted and carries its message to the ends of the earth for all time.

VHF Translator Facilities

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BERRY. Mr. Speaker, I am reintroducing with minor amendments a bill, designated as H.R. 1913 in the 85th Congress, which directs and requires the Federal Communications Commission to authorize VHF translator facilities under proper rules and regulations to be established by the Commission. The amendments in the bill I am introducing, which differs from H.R. 1913, are that I have incorporated the language of the Senate report providing that, in denying a VHF translator application, interference with other facilities is not to be assumed but must be proven and must be shown to be so significant that it cannot be permitted a license or cannot be permitted to continue.

Action was not taken on H.R. 1913 in the last session because of the fact that the FCC was in the process of holding hearings on the entire problem of translators, boosters, repeater stations, etc. About 3 weeks ago the FCC handed down their decision, a decision which is devastating to the western half of the United States. It declares VHF television boosters and translators to be illegal and gives communities 90 days from the time of the order in which to make application for a license under UHF.

In other words, Mr. Speaker, it makes illegal receiving television programs in 50 percent of the Congressional district which I represent. It makes law violators out of peaceful people because, since the distance is so great and the population so sparse, it is not possible for a large percentage of the peoples in towns and communities on the prairies of western South Dakota to receive television reception except by some kind of booster facilities. The FCC has failed to take jurisdiction of VHF boosters and at the same time, through lack of enforcement, have permitted, although not authorized, almost every community on the prairies of the West to spend several thousand dollars in installing VHF boosters. Under the new order these facilities would be completely voided and these communities would be required to spend three or four times the amount they have invested in VHF boosters in a UHF booster.

Another problem that apparently is of no concern to the FCC is the fact that UHF is a line-of-sight reception. A large portion of the West, including the Black Hills area of western South Dakota, is mountainous. The primary reason those communities need boosters is because of the fact that most of the population live in the valleys where line-of-sight television is not possible. They must have translators or boosters on a frequency which will permit reception on other than line of sight.

I should point out, Mr. Speaker, that the UHF boosters are, by far, the least expensive means of bringing television reception to these remote areas. They ordinarily consist of an antenna located on a windmill tower or sometimes on a grain elevator through which a normally weak signal from a distant station is picked up. It is then amplified and rebroadcast at low power on the same or another channel from an antenna many times located on the city water tower. In most towns and communities where such facilities have been installed, contributions are solicited in the community or memberships are sold in a television

club in order to finance maintenance and operation of this simple system. Because it is cheap and yet because it brings television to that community in this simple manner, thousands and thousands of communities throughout the West have availed themselves of television through this system. The signal goes out only a very few miles, but farmers living near the town get the benefit of television thereby.

Two or 3 years ago the Commission wrote to many individuals and mayors of small cities and towns, advising them that this type of booster was unauthorized and must cease. Although their action was proper under their authority, their inaction to authorize some other service or to authorize any VHF facilities, whether they interfere with any other facility or not, was unrealistic and stopped nothing. In other words, Mr. Speaker, the fact that the Commission failed and refused to step in and provide a sound scheme of regulation whereby communities so situated that VHF might interfere would be required to install UHF, and authorizing communities where there was no possible chance to interfere with anything, that those communities be authorized under VHF. In other words, they sought simply to stamp out the whole operation without provising any means for people of the West to have television service. Law-abiding residents felt that the good resulting from the booster systems was so evident and the alleged dangers so theoretical that they continued their operation.

It should be pointed out that the Commission is not unanimous in its thinking. After a thorough investigation of the problem in the West, Commissioner T. A. M. Craven dissented from the majority opinion, calling it unduly rigorous and unrealistic and based upon a narrow interpretation of the Communications Act. His statement is in part as follows:

Because the Commission failed to recognize promptly the overwhelming public interest factor involved in providing practicable procedures for establishing television service to small communities in the mountainous areas of the West, it is my opinion that this agency has failed thus far to discharge its statutory obligation to make available, insofar as possible, to all the people in the United States, a rapid, efficient, nationwide radio system. Apparently, the Commission did not recognize soon enough that these low-powered boosters are the only practicable way in which the people residing in those isolated areas can secure any television service whatsoever. We have been shortsighted in this connection, as remedial steps could have been and should have been taken long ago. If necessary, changes in legislation should be requested.

No hearings were held in the House Committee on Interstate and Foreign Commerce on this subject because of the heavy schedule of this committee, but the Senate committee did hold hearings making four very specific recommendations:

First. The Commission has a statutory duty to provide television service for as many of the people in this country as it possibly can.

Second. If VHF boosters are technically feasible, as seems demonstrated by their operations to date, the Commission should accept them as one available tool for achieving this end—which means authorizing such facilities under proper rules.

Third. The enunciating rules to regulate boosters, the Commission should go as far as is practicable in modifying its general rules to permit unattended installations incorporating the simplest possible equipment so that the service can continue to be an extremely inexpensive one within the reach of even very small communities.

Fourth. The Commission is not only entitled to insist that boosters not create objectionable interference, but is charged by statute to do so. However, it should operate on the principle that interference is not to be assumed, but must be proved—and must be shown to be so significant that it cannot be permitted to continue.

To me the decision of the FCC is unauthorized and unwarranted. The law makes it the duty of the FCC to authorize services which will provide television reception to the people of America. In many instances the only means of providing that service is through VHF translators. In many more instances the only practical means of providing service to thousands of communities is through VHF translators. Where VHF translators provide the service and cannot cause any disruption in other television or radio or commercial or radar or defense services, it seems to me to be not only a neglect of duty and of the law for the Commission to refuse to recognize and legalize through licensing these VHF facilities.

The bill I am introducing does direct and does require the FCC to authorize these small community translator facilities where they do not interfere, and provides further that the burden of proof shall be upon the FCC to show interference where application for such facilities is under consideration.

I Protest

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues a sermon delivered by Rabbi Leon A. Jick at the Free Synagogue of Westchester on May 16, 1958. Rabbi Jick's sermon will be of interest to all peace-loving freemen.

The sermon follows:

I PROTEST

(Sermon delivered by Rabbi Leon A. Jick at the Free Synagogue of Westchester, May 16, 1958)

Traditionally the Sabbath is and has been for our people a period of refreshment and joy. Sometimes the Sabbath which is above all a day for finding perspectives, a day for withdrawing somewhat from the immediate task and looking at the long-range objective becomes the opportunity for confronting a disagreeable reality.

Our tradition preserves the examples of many men who have had to speak of such realities. Perhaps the one closest to the mood and the problem of our own times was Jeremiah who lived in an age of dread and destruction—a time when the threat of a war hung like a heavy and oppressive cloud over the heads of his people—indeed, of all his world. Jeremiah warned his people against a short-range viewpoint which disregarded the danger. He warned them against greed and selfishness which could only doom them to destruction. He denounced the shortsighted, the apathetic, the smug, and the indolent in high places and low.

"To whom shall I speak and give warnings that they may hear? For their ear is dull and they do not attend," he cried. "Behold the word of the Lord is become unto them a reproach. They have no delight in it. Therefore, I am full of the fury of the Lord. I am weary with holding it in." (Jeremiah 6.)

"Woe is me. My bowels, my bowels, I writhe in pain. The chambers of my heart moan within me. I cannot hold my peace because I have heard the sound of the horn—the alarm of war. Destruction followeth upon destruction. The whole land is spoiled and suddenly are my dwellings gone in a moment." (Jeremiah 4.)

And so this man, Jeremiah, writhing with pain because of the foolishness around him went about preaching the message that peace could only come from righteousness. "Beware of war—beware of evil."

In the end, the message of the prophet, Jeremiah, was not heeded and his predictions were fulfilled. The state of Judea, together with large numbers of its citizens were destroyed just as he had said they would be destroyed. But the nation was not utterly destroyed. A remnant survived and this remnant remembered Jeremiah's warning and learned a painful and frightfully expensive lesson. And, therefore Jeremiah's idea of the primacy of justice and righteousness survived and the people survived.

Not much has changed since the times of Jeremiah. The plot is still the same and so are the characters. So is, indeed, the background and the whole framework within which the play takes place. There are still shortsighted statesmen immersed in the maze of their own folly, frantically racing around the same little goalless track. There are still apathetic masses—smug, sure they are safe—not listening, not heeding, unaware of what goes on around them. There are still lying prophets of all kinds with smooth and glib tongues who say, "Peace, peace"; say what people want to hear, and are not concerned with truth.

All of this is the same. But one factor has changed. One terrible factor has changed and this makes all the difference. Weapons have become so much more powerful and the stakes have become so much higher that mankind cannot afford the luxury of another lesson like the one the generation of Jeremiah learned. Now, war and the preparation for war threaten all human life with extinction. At this very moment forces which can cripple mankind are being unleashed and are dropping upon our planet in ever increasing quantity.

There are so many conflicting reports concerning the threat that it is difficult to know what to think, or whom to believe. Before beginning any analysis or offering any suggestions or even comments, let me simply review some of the facts which I have attempted to sift from the accounts which come to us from such diverse sources and with such differing content.

I wonder how many of us are aware of the facts? The first fact is that there are enough nuclear weapons in the world today to des-

troy all life that exists on this planet. Concerning this, there is no difference of opinion. Even if not another nuclear bomb is manufactured, there are enough bombs stockpiled to destroy all life on this planet of ours with possibly the exception of a few spores that are resistant to radioactivity. This is the first fact that we must keep in mind.

The second fact is this: Atomic weapons have now been developed and controlled to a point where they vary in size from small artillerylike shells, to 10-megaton bombs. One of these 10-megaton bombs represents fives times the explosive power of all of the bombs which were dropped on Germany during the 4 years of World War II and 100 times the power of those which were dropped on Japan, including the two atomic bombs which were dropped on Hiroshima and Nagasaki. Is such destruction conceivable? Can the human mind possibly grasp the extent of such disaster power? Such a weapon exists. Ostensibly it has been made for the purpose of possible use. This is the second fact.

The third is this: In addition to the fantastic destructive power of such bombs, power of sheer pulverization, each of these weapons fills the atmosphere with deadly radioactive poison. Concerning this, too, there is no difference of opinion. A 10-megaton bomb produces 1,000 pounds of radioactive materials as compared with 2 pounds produced by the atomic bomb which fell on Hiroshima and which killed and maimed hundreds of thousands of people.

Three nations today possess these weapons and have been testing them. The tests conducted to date by the United States, Russia, and Britain have caused a sufficient disturbance in the balance of radioactivity in this world so that within the last 2 weeks the Times reported that radioactive mud fell on the city of Rome and that there is now a measurable quantity of strontium 90 in the milk which is being drunk in New York and in the whole of the northeastern portion of the United States. The Atomic Energy Committee admits that the United States is, and I quote, "the hottest radioactive place in the world." This, too, is a fact.

Some of this poison persists in the atmosphere for 20 years, and will, therefore, continue to fall in small quantities even if no further tests are made. Everyone agrees that there is a threat to life from the amount of radioactivity alrady released. The only difference of opinion is whether 2,000 or 10,000 will as a result die this year of leukemia and bone cancer. This is due to the amount of radioactivity which has already fallen. How much more will fall in the next 20 years from the bombs heretofore exploded, we can only guess since, in such matters, we have no experience.

One final fact to keep in mind. The rate of technical advance is so great that to quote one responsible scientist, "In the next quarter of a century, there will be manned satellites, television and observation satellites, radar satellites, bomb carrying satellites and, as we are driven relentlessly into space, we will also be driven relentlessly into the oceans and there will be missile carrying submarines and underwater vehicles driven by remote control that will carry several nuclear explosives to the shores of any land in the world." These are the facts. About these, there is no question. Manifestly, because of these facts, we face a situation which man has never faced before in all of human history. We are called upon to make decisions that will have vastly greater effect upon mankind and mankind's destiny than those that have been made in all of human existence. No decisions in the past—no decisions made by Alexander The Great or Caeser or even by Hitler could possibly have determined whether mankind as a whole would live or die. These men could make decisions which could determine the destinies of their own cultures and their own civilizations. They could speed up progress or slow it down but they did not have the power of decision which could have excluded the possibility of the emergence of later civilizations. No decisions on their part could have resulted in the destruction of humanity.

Albert Gyorgi-Szent, Nobel Prize winner who heads the Marine Biological Laboratory in Woods Hole, Mass., has stated the problem for us. Where is the way out? Where shall we go? What is the political, economic and military structure in harmony with this reality? Nobody knows. Nobody knows, but there is a way to find out. First the question has to be asked. First we must recognize that the question is—How shall we find a way out? Then we must concentrate all of our energies and efforts and abilities to answering this question—not the question of how to build a bigger bomb. "The men to answer this question," he concludes "are the men who know more than how to be elected or how to make war." Alas, that our leaders are men who know "how to be elected—how to make war."

By contrast, the decisions made today can result in precisely this kind of cataclysm. A mistake—a rash move by some second line military commander somewhere around the Arctic Circle or in a North African base—a false reading of a radarscope, a meteorite that crosses an antenna somewhere—any of these kinds of technical errors in judgment can lead to a war—a war in which both sides possess enough to poison and contaminate the whole world and destroy all life. The capacity of both camps to achieve such destruction changes not just the stakes—it changes the entire nature of war—the entire nature of strategy. In the image which Robert Oppenheimer drew, "There are two scorpions trapped in a box—both poisonous and both capable of delivering a deadly sting."

This is the situation. Under such circumstances—war can no longer be a matter of advantage—a matter of gain and loss—a matter of winning or losing a campaign. Under such circumstances, I submit that there is one overwhelming question which confronts our Nation and mankind: Can we devise means of forestalling this terrible catastrophe which has become a real and living possibility? Can we find a way of ending the creeping contamination which defiles and despoils this earth? Can we find a way of preserving life?

The answer to such questions is infinitely difficult. I would not minimize all of the complexities—all of the social and political problems. I remember what the Russians are and what they have done in recent decades. But, in God's name, I protest that this question is not being asked. Let the question be asked. In God's name, I say, "Woe unto those who are wise in their own eyes and sure that they know the way—who are wise to devise violence but to do good they have no knowledge." Instead of considering how we can secure peace, instead of exploring how we can reduce the dread, we continue the rat race of missiles and antimissile missiles and explosives whose power is past the ability of comprehension.

Since World War II the United States and Russia have spent $1,000 billion on safety. One thousand billion dollars on safety—with the result that we have fear and jitters and the risk of mass extermination, that we are involved in an insane round of launchings and testings—all in the name of necessity. We have to do it—we have to keep ahead—we can't fall behind in the race.

Admittedly, the problem is complicated. Albert Einstein was humble enough to understand this when he was asked, "How is it that man could invent an atom bomb and then couldn't learn how to control it?" He answered, "This is because politics is more difficult than physics." He was right. Human affairs are more difficult than the physical conquest of nature. But there comes a time when politics and human affairs become so complex that they call for a new look—a long-range look which acknowledges that in the end the best new weapon is stupid, the best new force is dangerous. Such a new look must recognize that war is obsolete because any war means mutual annihilation and, therefore, war as a realistic vehicle or means of policy is out of the question.

In the second place, I protest that the immoral and insane process of poisoning the world continues without so much as a serious attempt to bring about a temporary halt. What enrages me is not so much what has already happened, as the callousness of the men who are responsible for it, men who are reluctant to admit that there is a danger or that contamination is serious or that it is despicable. If there is any hope of stopping this madness, man must first be filled with a sense of guilt and shame that great wrongs are being done. Only then can they find a desire to stop these wrongs. Men like Dr. Teller who, by all accounts, is very proud of being known as the father of the H-bomb, does not seem to have the sensitivity to acknowledge the problem. Would that Dr. Teller said, "Woe is me because of this radioactivity." Then I would say I am willing to entrust him with leadership. He does not say so. Instead, he acts as though he were living in the days of King Arthur and the Round Table and looks forward to a little nuclear sport.

Men like this tell us that only 2,000 will die of leukemia and bone cancer this year in the world and they sugar-coat this statistic in such a reassuring way. They say that only a few minutes will have been taken off the life of every human being. What a pleasant statistical way to conceal a horrible truth. Other scientists maintain that the toll will be 10,000. Whether it is 10,000 or 2,000, I would like to see Dr. Teller explain his complacency to Red Skelton who buried his child this week with leukemia.

Only when we think in terms of an individual can we begin to understand the magnitude of the misery which is being brought into the world. I protest this kind of callousness which disregards this misery. I protest the fact that such callous men—not elected, not chosen by us, not subject to any controls by us—wield power of life and death over us, indeed over all mankind.

We have to shake ourselves to understand what it is that is involved and what the real question is: Where can this race take us? What if we get ahead? What will we do then? Explode the bomb on Russia? Were we helped during those 5 years after World War II when we were ahead and had the atom bomb and they didn't? These were the 5 years of the biggest Communist expansion in the whole history of mankind, the years during which they consolidated their position in Eastern Europe and in Asia and in the Near East and everywhere else in the world. What then are we going to get ahead for? Where is the race to lead? What is it we are running after?

I protest the shortsightedness of leaders who do not ask, "Why?" but only run around the track which has been laid out by past error in a race to which there is no end—and no goal.

I protest too against the misinformation, the deception and the deceit which has been practiced by those who are responsible for our nuclear development program. Everyone should know that the Atomic Energy Commission deceived the American people concerning the possibilities of detecting underground explosions. Only when the facts were revealed through the congressional investigation, did the A.E.C. reluctantly admit that this underground explosion had been detected a thousand miles away.

We must be aware too of the distortion which takes facts and twists them in such a way that they say only what the people who give them want to say. This is unfair. This is indecent. The American people are being deceived and deprived of the knowledge which they need to make intelligent decisions about their own future.

And, finally, I protest against the slander which is being heaped upon those who are questioning government policies, and are raising the issues of survival in this nuclear age. Time magazine has fired the first salvo in the campaign by implying that those who signed petitions asking for a stoppage of nuclear testing are people with suspicious backgrounds, perhaps Communist sympathizers. Such tactics have been used to discredit men like Paul Tillich, Eric Fromm, Norman Cousins and Norman Thomas, men who, in Norman Cousins' words, "were fighting communism before Henry Luce opened shop." Admiral Strauss has joined in this campaign casting slurs upon the intention, the credibility and the patriotism of those who would speak out against government policy. Such slander must be protested vigorously and vehemently.

Let us now draw to a conclusion. I hope it is clear that I am not trying to underestimate the problem—not trying to underestimate the difficulties of dealing with a totalitarian government, which is, at best, not trustworthy.

And yet, if we want to preserve peace and at the same time, save freedom, we must define our goal clearly. Peace is our goal—the relaxation of tensions and not their intensification. This is the way that leads to peace. As a demonstration, to ourselves and to the world, that we are indeed a peace-loving and peace-pursuing people, let us volunteer to stop nuclear testing for a period of time while exploring means of controlling and checking the permanent stoppage of testing.

Can it be that the minds which could invent the atom bomb cannot invent means of detecting atomic tests? Can anyone really believe that if one one-hundredth of the effort going into the production of missiles and antimissile missiles went into means of perfecting a way of detecting bomb tests that such means could not be found? Let us, therefore, as a token of our belief in peace, volunteer to suspend atomic tests for a period during which means of control and means of detection would be explored and let this breathing spell be the first step toward a policy of disarmament—a policy of control—of coexistence—a policy which would lead us to explore every means to achieve settlements and to settle those scores which cannot be absolutely resolved on economic and political social fronts.

We Americans have little enough to be afraid of if we go forth with the banner of freedom and peace and democracy. There is ample evidence of weakness behind the Iron Curtain and in the Kremlin itself. There is ample reason to believe that the Iron Curtain could not stand up under a bombardment of peace and righteousness and democracy and hope for a new life and a new world which we alone can give to mankind.

This program is not impossible. It is not utopian. Indeed, it is the only practical and the only sane answer. The time has come in this world when the so-called practical men are pursuing an insane policy. And when the so-called idealists are holding up the only policy which is sane for mankind.

We, as intelligent citizens have as our first responsibility, to be informed, reading carefully, gathering information—thinking, observing, sifting all of the evidence which comes before us. Our second is to write to our Congressmen and our Senators and our President, to write to newspapers, to make our voices heard in the organizations to which we belong, to support the newly organized National Committee for a Sane Nuclear Policy, to seek out other human beings, other intelligent and concerned men and women in our community and to bring to them the question and the suggestion which may begin the sweep and the surge for the new understanding and a new way.

In a recent article in the Saturday Review, Norman Cousins, who is one of the cochairmen of this National Committee for a Sane Nuclear Policy, wrote an article in which he called for 2 billion angry men—2 billion angry men who will make it clear to their national leaders that the world does not exist for the purpose of being a stage for the total destruction of man—2 billion angry men can insist that the world's resources be utilized for human good.

Let us begin with 200—200 angry men and women, angry and zealous, zealous for life—which means for God and, incidentally, for country—200 angry men and women zealous for the fulfillment of the vision of the prophets, a vision which we have the power to fulfill in our day that "nations shall not lift up sword against nation, neither shall they learn war anymore but they shall dwell every man under his vine and under his fig tree and none shall make them afraid."

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Cecil B. De Mille

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. HIESTAND. Mr. Speaker, California and the Nation lost a great man last week.

Cecil B. De Mille, first citizen of Hollywood, came west from New York in 1913 to make the first feature-length motion picture. He stayed on to build an industry and a personal reputation that will survive him as long as men seek diversion from the cares of life in the motion picture theater; perhaps longer.

He was a pioneer in practically every phase of his industry, constantly developing, changing, adapting new ideas, many of them his own. But in his personal life he was a traditionalist, clinging to the morality, religion, and ethics taught at his mother's knee.

He once remarked that when he was a boy, there were no motion pictures, and that for entertainment his mother read each evening one chapter from the Old Testament and one from the New. His selection of religious themes for many of his productions reflects this early training. His "King of Kings," produced some 30 years ago, is still showing in far corners of the world. His latest of two "The Ten Commandments," it has been estimated, will play for 50 years.

Although his own success was seldom if ever in doubt, De Mille was never at ease when the industry was in trouble. He gave freely of his wise counsel and often acted as financier to companies suffering the stress of a young and sometimes erratic industry.

Young De Mille ran away from school at 15 and tried to enlist in the Army to fight in the Spanish-American War. In World War I he organized a company of the California Home Guard. During World War II he personally accounted for the sales of millions of dollars worth of war bonds, and millions more through bond-selling shows utilizing actors and actresses under contract to him.

His concept of patriotism extended beyond service in wartime. He was a leader of public affairs and political thought in peacetime as well. At the height of his career in radio, he was thrown off the air for refusing to pay a $1 union assessment which he found incompatible with his sure sense of freedom. The assessment was to be used by the union to fight right-to-work legislation. De Mille, who favored right-to-work, contended that the involuntary assessment forced him to support a belief contrary to his own. He lost the court battle but fought for the principle for the rest of his life.

Cecil B. De Mille was honored by his contemporaries. Industrial awards, including the coveted Oscar, honorary degrees, and organization and Government awards came his way, justly earned. He received one of the first of 9 great living American awards bestowed by the United States Chamber of Commerce in 1957.

I mourn the passing of Cecil B. De Mille. He was a great man.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following, my newsletter of January 24:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, Fifth District, Texas)

The 1960 budget, 1,275 pages, 2 inches thick, more than 4 pounds in weight, lists $77 billion in Federal Government expenditures for fiscal 1960 (July 1959 to July 1960). Comparatively, this is $3.9 billion less than this year, fiscal 1959. Receipts will be an estimated $77.1 billion, which is $9.1 billion more than this year. (However, total expenditures to the public are listed as $92.9 billion and total receipts $93.5 billion as distinguished from budgetary.) The President's 78-page budget message, a condensed explanation, discussed expenditures and receipts by Government departments, by military and civilian, and by specific legislative program.

Commendable, as I see it, are these thoughts: (1) We must have a balanced budget, live within our means, pay as we go; we must foster initiative and free enterprise, a sound economy and currency; (2) we need to review existing programs; (3) Congress, not the administration, is constitutionally responsible for the appropriation of money, and the size of the budget results from earlier congressional legislation; (4) Federal programs, wherever possible, should be shifted back to the States (along with tax jurisdiction); (5) we must assure maximum defense for each dollar spent; (6) research in many fields, particularly military, is continually being increased; (7) a better agricultural program is needed with less cost to the taxpayer and less control of the farmer; (8) Government whenever possible should sell surplus property; (9) more user charges and less subsidies are needed so that users, not the general public, foot the bill; (10) private financing, not Government loans, should be stimulated, through flexible interest rates.

Criticisms include: (1) Is a budget balanced and the Federal Government controlled when projects are deferred, rather than canceled; when 43,000 new employees are to be hired; when more money is to be spent in aid to education, vocational rehabilitation, public works, urban renewal, public housing, and almost every welfare program? (2) since 1955 the budget has grown two to one in welfare over defense needs, when we know military requirements are paramount; simultaneously politicians assure us budget growth results from defense requirements; (3) increased population (as reason for budget growth) puts more strain on local government (utilities, schools, etc.) than on Federal Government; (4) Congress is offered additional opportunities to lose control. Example: (a) Foreign aid development loan fund is a revolving fund outside Congress' direct control; (b) other revolving funds are proposed; (c) item veto would transfer to the President great new authority; (d) foreign aid and Public Law 480 (Food Disposal Act) each transfer jurisdiction to the President; (e) requested presidential blanket emergency funds take the purse strings from Congress. (5) The foot-in-the-door programs where great spending increases follow program inception include: (a) Defense education bill; (b) public assistance under social security; (c) urban renewal; (d) world loans through various international banks; (e) many others; (6) the Federal Government intends to foster local initiative by offering more Federal money and control; (7) built-in growth factors and fixed costs are skyrocketing costs without new programs. (Example: Public works will be at an all-time high without even adding any new projects.) (8) Tax incentives to encourage private investment abroad—isn't this tax bribery? Will this weaken investment at home as greater gains can be had in other countries? Is this fair or constitutional? (9) Non-service-connected disabilities of veterans are soaring.

The big question really seems to be, Has the budget gotten beyond all control? After all, it is almost $8 billion higher than the $70 billion budget of 2 years ago that precipitated a nationwide furor. And why the increase? Perhaps Budget Director Stans said it best—"Why is it that some business leaders join taxpayers' organizations to bring pressure on the Government to cut expenses, yet support industry groups seeking more Government subsidies? Why is it that some labor leaders press hard for wage increases to keep up with the cost of living, and then urge a massive program of legislative action which, if adopted, would lead to more deficit spending, higher taxes, and inflation—all of which could only demoralize the value of wages earned?"

Now the battle of the budget begins politically. (See CONGRESSIONAL RECORD.) Mr. CANNON, of Missouri, Appropriations Committee chairman, said, "All fiscal recommendations start with the President. Congress does not make the budget—he is at complete liberty to recommend a cut of $5, $10, $15, or $20 billion." Mr. JENSEN, of Iowa, said, "The President cannot spend one penny which the Congress does not appropriate. We all know that." Mr. HALLECK, of Indiana, said, "The chairman of the great Committee on Appropriations referred to the increase from $65 billion to $79 billion over the past 4 years. During those 4 years he has been chairman of that committee, and Congress holds the purse strings over expenditures." So it goes—expenditures are voted by Congress, Democrat controlled, whose leaders now try

to shift the blame to the President, who can only administer the law, which Congress passes. "The President proposes, but Congress disposes." We here know this, yet it is the people who are to be hoodwinked. True, the President could be a more forceful leader, but liberal Democrat spending critics offer only, "We must spend more." (First day of Congress, six Democrats put in bills with a 5-year price tag of $117 billion.)

Why not review all existing programs, as the President suggested we do in the military, to be sure we get maximum value received for each dollar spent in the Federal Government? For maximum value in the military, let's get the Defense Department out of business operations. Why not apply evaluation yardsticks to every Government program now? (1) Is this a function of Federal Government? (2) Can we afford it?

Mikoyan and Russian propaganda experts will now demonstrate over and over the reason for his visit and the gullibility of American people. Mikoyan will speak for American people as set apart and opposed to their Government. Let's review a few Russian comments. Khrushchev called Mikoyan to his face a professional traitor. Khrushchev, speaking of the United States and Russia, "We cannot coexist externally. One of us must go to his grave. We must push them to their graves." Khrushchev again, "We Bolsheviks are a ravenous people. What we achieved in the past is very little" (enslavement of half the world). "We want more and more." On Manuilsky, Russian instructor of political warfare, "War to the hilt between communism and capitalism is inevitable. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep, so we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fists." Need more be said?

The Thinking of One of Our Constituents

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, the following is copy of a letter received this morning. It is well worth reading:

BERRIEN SPRINGS, MICH.,
January 10, 1959.

Senator PAT MCNAMARA,
Washington, D.C.

DEAR SENATOR: Received your letter on your stand, and report to the people of the State of Michigan.

Regarding Federal aid to education: More and more some people are inclined to let the Government handle all our problems for us. But that destroys initiative and self-government, and freedom; besides entailing excessive taxation. Federal aid to education would involve adding more employees to the Federal payroll, adding office equipment and buildings or space, new printing forms, and redtape.

All this would increase the cost of building more schoolrooms with Federal aid than if done by local talent alone. The local talent are right on the job, know the community needs, and can better determine, alone and without Federal restrictions and redtape, what to do in solving the educational problems in a way least burdensome to the taxpayers.

From your letter I gather you favor big government, inflation, and more and bigger taxes.

The only advantage I can see in higher wages and inflation is to the Government in the portion of taxes it collects.

I think it's a shame and a crime for our Government to sell bonds by advertising a return of $4 (in 10 years) for every $3 invested. A buyer of bonds, over the 10-year period, loses one-half or more of the money he invested in Government bonds, because the dollars he receives after 10 years, due to inflation, are worth only half as much as the ones he invested. In other words, the borrower profits and the lender loses. Is that fair?

You seem so favorable to admitting Hawaii to statehood. I'm surprised you'd even think of such a thing as long as Harry Bridges (an admitted Communist) is in charge of things over there. Are you trying to enthrone communism?

Our Government is committing treason against its citizens by confiscating property (including bank accounts) of private individuals whose only crime is exercising their God-given right to grow what they please on their own property for the purpose only of feeding to their own flocks and herds.

"Oh, but they are disobeying the law," you may say. In free America the Government has no business passing such a law, and certainly no constitutional authority for so doing. It just makes my blood boil at what our Government is doing. I supposed the victory over that kind of injustice was gained back in 1776. The Yankuses and Stanglands are the real patriots and Paul Reveres and Patrick Henrys of today.

Government agents coming around to confiscate your property or to boss you around on your own property is barefaced communism in its rawest form. And to think our own Government is doing that.

The way our Government is trampling all over our Constitution (especially articles 7 and 8 of the amendments) and Bill of Rights, and our Supreme Court making decisions of "policy"; also the way our Government is throwing away our hard-earned money like a drunken sailor on shore leave—why, if the Spirit of '76 were still alive, we'd all rise up as one man and put our Government in its rightful place—as servant of the people, not the master.

Our State governments and Federal Government, when they discover they've overrun their budgets, their first idea is to levy more taxes—always more taxes. Instead of bobsting taxes, they should reduce their expenditures to fit the budget.

It's a very ominous statement you make in telling of your desire to close up the loopholes in taxes. This is merely a politician's way of saying you are out to levy all the new taxes everywhere you possibly can.

You men who have some say in the Government would do well to take a lesson from the Cuban revolt. It's the man in the street (whom you're supposed to represent) who is important, and not the Government.

Yours very truly,

AMERICAN FREEDOM FIGHTER
ALFRED MCCAULEY.

You and Your Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I am pleased to include for the RECORD a brief talk entitled "You and Your Chamber of Commerce," given by Leland H. Jones, president of the Phenix City-Russell County Chamber of Commerce, at their annual meeting November 7, 1958, Phenix City, Ala.:

YOU AND YOUR CHAMBER OF COMMERCE

(A brief talk given by Leland H. Jones, president of the Phenix City-Russell County Chamber of Commerce, at their annual meeting November 7, 1958, Phenix City, Ala.)

It has been said, the strength of America today is the sum total of the strength of its local communities, whether they be small towns or large cities, and to us a community is more than just houses, factories, paved streets or places of business. A community is people, people like you and me and others. People who live in these houses and work and operate these places of business.

Therefore, we believe for a community or a city to grow and become stronger people must ban together in an organized effort, and one effective way to have this organized effort is through a city's chamber of commerce. Here is where the business and civic leaders work together to make a better place in which to live and carry on your business in a safer and a cleaner city.

The chamber of commerce is a place where the businessman, the farmer, professional man, industrialist, educator, and others can pool their ideas around the table that make their city a challenge and a source of pride. A community with an active chamber of commerce not only promotes progress, but helps to dissolve discontent among its citizens, and tries to promote harmony, peace and good will among men.

A chamber of commerce, first, must have an active membership; second, it must have an adequate budget before it can carry on its work to help community improvement, help to encourage good citizenship and sound business development.

Some of their duties today are to help business expand, try to attract new industry, promote tourist trade, keep in touch with local, State and National legislation, encourage citizens to vote, work with 4-H Clubs, build closer relationship among all the people, and to help build the community socially, politically, and culturally. These are only a few. There are also public relations, which is very important, hundreds of meetings, and hundreds of letters. There are all kinds of phone calls for information on many various subjects.

The remarkable thing I see in a chamber of commerce is this: Whatever is achieved is through the democratic methods, with voluntary membership and financial support—also contributed time and effort.

Your chambers of commerce financial support comes solely from the business community. Unfortunately, we are lacking some in this respect. Too many of our people are not members. The chamber needs your support, your enthusiasm, your suggestions and your association.

It is known a chamber of commerce cannot achieve its usefulness if we do not maintain perspective, faith, and enthusiasm. Chamber of commerce effort is that way. Its work is not the result of machine, not the result of muscles, or the pushing of buttons. Chamber success is achieved in its finest form through constructive thought, compelling spirit, and convincing action by men and women who are willing to devote part of their time and effort to build a better town.

It is basically a local institution. It embodies as no other agency its urge for community progress. Its genius lies in organizing the energies of men in the community who believe their city has a place in the sun—remember before Man made us citizens, great Nature made us men. It gave us a place to live. Its progress is in our hands.

One chamber of commerce executive has said "as business prospers, this great country gains in strength," and as you know, business thrives from individual initiative and citizenship. You might say—I cannot do much alone—and this could be true, but by joining hands much can be done. Your membership in the chamber of commerce will be investing something in your business and your community where you might reap a better living.

As you know, all communities have lots of problems, and will always have problems. The problem of growth and the problem of development, but we must keep working at these to build the kind of community in which we would like to live.

Last year State and local development agencies are estimated to have spent $40 million trying to attract more industry—even so—some industrial executives say many towns are not ready. Communities may be seeking new industries mainly to gain new payrolls, but also industry last year paid $7 billion in taxes that otherwise the local citizens might have had to foot themselves.

Imagine, if you can, a city without a chamber of commerce, a community chest, a parent-teachers' association, improvement clubs, civic organizations, and others too numerous to mention. I'm sure this would not be to your liking.

What would happen to a city of this kind? It would soon die of dead rot. It would be a collection of buildings and people who would be existing, but not really living. Yes, my friend, the miracle makers of a community are its citizens. Live, wide awake people who are upcoming planners and builders.

I would like to add this tonight, if I may: the next 4 years may be the most trying times in Alabama's history. A time when the Federal Government is invading the sovereign rights of the States, and many other pressing problems, but let us be proud that the man who will be at the helm of our government understands the problems facing us today and is not afraid to act for a just solution. Tens of thousands of people over this State supported John Patterson so he could continue his battle from the Governor's chair, not only to carry the banner of this State, but to place its prestige back where it belongs in this Nation.

It would be well that Americans be warned today—not to water down our free enterprise system for a form of socialism, or have it completely destroyed by communism. And to help keep down these movements they need the backing of local chambers of commerce—the backing of local citizens. They are heavily depending upon men who have interest in their investments and the future of this State and this country.

Let us organize our efforts as citizens, as well as you do your business. Keep informed on politics, sift platforms, check leaders, especially those who are interested in their own personal interest and personal gain. Not only on a State, but also a local level, because if these United States ever lose their present form of government and become a Socialist, welfare state, we think the world will blame the American businessman because they are the most influential group in our Nation today.

And in closing may I say when all is said and done, a city needs a strong chamber of commerce or development board, because as it grows—a city will grow, but it is not created by subscription alone. It primarily exists upon good leadership, constructive thought, enthusiasm, convincing action, and the participation of strong men. Men who operate banks, grocery stores, factories, furniture stories, law offices, physicians, all kinds of businesses. They are the ones who must provide the leadership—people who believe their city has a place in the sun and will devote part of their time to its development as many of you are doing today.

Television Booster Stations Needed

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. McGOVERN. Mr. Speaker, television has become an important part of American life. It offers educational, recreational and entertainment values that are appreciated by millions of citizens. Although it is a comparatively new communications media, methods have been devised to bring television not only to the population centers, but to rural areas and to families living in mountainous, rugged terrain.

In my own State of South Dakota, it has been necessary to make use of low-power booster stations so that television could be feasible in the rugged Black Hills and in some of the more thinly populated sections of the State. The people living in these sections are equally entitled with other citizens to enjoy the benefits of television.

It is an established fact that the use of ultra high frequency stations in such areas is not feasible either financially or from the standpoint of effective operation.

It is thus a matter of great concern to the people of western South Dakota and many other communities that on December 31, 1958, the Federal Communications Commission ruled that all booster stations must apply for conversion to high frequency operation within 90 days or cease operation. This order, if allowed to stand, can only mean that many communities will lose their television reception entirely.

Mr. Speaker, I am joining a number of my colleagues in the House and in the other body in sponsoring legislation to bring about a reversal of this unfortunate decision by the Commission.

The South Dakota State Legislature has recognized the serious nature of the FCC ruling and has passed a bipartisan resolution calling upon the Congress to intercede. The resolution was offered in the senate by Senators Al Roesler and Art Jones and in the house of representatives Carl Furchner and James Jelbert.

Under unanimous consent, I include this excellent resolution of the South Dakota Legislature in the Appendix of the RECORD:

HOUSE CONCURRENT RESOLUTION 1

Concurrent resolution memorializing the Congress of the United States to take such remedial action as deemed necessary to preclude the closing of low power booster stations necessary for television reception in certain areas of the State of South Dakota

Be it resolved by the House of Representatives of the State of South Dakota (the Senate concurring therein):

Whereas there are many communities and farm areas within the State of South Dakota whose people depend upon low power booster stations as their only means of receiving television programs; and

Whereas the rugged terrain of the Black Hills region makes the use of ultra high frequency translator stations impractical, if indeed not impossible, according to the opinions expressed by competent and qualified broadcast engineers, as well as by certain members of the Federal Communications Commission; and

Whereas it is economically impossible for these communities and farm areas to support, construct, or operate any other form of duly authorized television service; and

Whereas there is ample proof that low power booster stations can be regulated so as to preclude interference with licensed television services or other services; and

Whereas the Federal Communications Commission did summarily dismiss, without formal hearing, its own rulemaking proceedings relating to repeater or booster stations operating in the VHF television band of frequency assignments; and

Whereas the Federal Communications Commission did on December 31, 1958, make formal announcement of its dismissal of petitions for reconsideration, all of which sought to procure reasonable rules which would permit the continued operation of said booster stations under the regulatory power of the Federal Government; and

Whereas the Federal Communications Commission did also announce on December 31, 1958, that all booster stations would be given a period of 90 days in which to apply for conversion to ultra high frequency translators or some other authorized television operation, and upon failure to do so would be ordered to cease operation: Now, therefore, be it

Resolved by the House of Representatives of the 36th Legislature of the State of South Dakota, That this legislature hereby memorializes the Congress of the United States for such remedial action within such 90-day period as the Congress deems fit through the exercise of its authority over the Federal Communications to insure the continued operation of low power booster stations, to the end that the people in the nonmetropolitan areas of the State of South Dakota shall not be denied their basic right to quality of access to the informational, educational, inspirational, cultural, and entertainment service of the American system of free television broadcasting; and be it further

Resolved, That a copy of this memorial be transmitted to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to the Senators and Congressmen representing the State of South Dakota in the Congress of the United States.

JOHN F. LINDLEY,
Lieutenant Governor.
D. K. HOLLAND,
Secretary to Senate.
ARCHIE GUBBRUD,
Speaker.
W. J. MATSON,
Chief Clerk.

Also under unanimous consent, I include the text of the resolution which I am sponsoring in the RECORD:

Whereas VHF television repeater of booster stations provide the least expensive and in many cases the only existing means of providing television service to many areas of the United States; and

Whereas the public in areas served by such stations is satisfied with the service provided; and

Whereas the replacement of such stations with other means of providing television service would involve considerable expense on the part of the public: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress that the Federal Communications Commission should (1) authorize the operation of VHF television booster or repeater stations in all cases where the operation of such stations is a public convenience and necessity and where such operation does not actually cause objectionable interference with other communications or does not endanger the public safety, and (2) modify such of its rules and orders as may be necessary to carry out the policy expressed in this resolution.

Bring a Soviet Crew to Lake Washington

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. MAGNUSON. Mr. Speaker, in the interest of easing international tensions in the cold war the State of Washington, the city of Seattle, the University of Washington, and civic leaders throughout our State have enthusiastically supported the program of conducting sporting events with the Soviet Union.

Last year our fine University of Washington crew accepted an invitation to compete against crews of other nations in London and Moscow. Although the Husky crew defeated the Soviet crews in Moscow, the contest was viewed in a true spirit of good sportsmanship by the Russian athletes. Because of the good will and better understanding which resulted from this sports rivalry, Greater Seattle, Inc., has proposed that the University of Washington reciprocate by inviting a Soviet crew to race on Lake Washington in August.

I should like to call to the attention of my colleagues a resolution, passed unanimously by the Washington State Legislature, calling upon the Secretary of State to give the greatest amount of consideration and cooperation to this proposal:

RESOLUTION BY REPRESENTATIVES WES C. UHLMAN, PAT NICHOLSON, AND CHARLES P. MORIARTY, JR.

Whereas the University of Washington is a recognized leader of the world in all phases of eight-oared crew racing, its oarsmen, coaches, shells, methods, its consistency in winning national, international and Olympic championships, all attest to its universal preeminence in one of the few remaining sports untainted by any touch of professionalism; and

Whereas in furtherance of this highly desirable sport, the University of Washington crew accepted an invitation to compete against the crews of other nations at London and Moscow and was accorded full hospitality by the governments of the host nations; and

Whereas officials of the civic promotional organization known as Greater Seattle, Inc., have proposed to the U.S. Department of State that the University of Washington reciprocate with a like invitation to crews representing the Soviet Union to compete with the University of Washington and other invited American crews as part of the 1959 Seattle Seafair celebration: Now, therefore, be it

Resolved, That the U.S. Government and particularly the Secretary of State of the United States consider and give the greatest amount of cooperation possible to the submitted plans and assist in bringing about the realization of this highly desirable international contest; and be it further

Resolved, That copies of this resolution be immediately transmitted to the Honorable Dwight D. Eisenhower, President of the United States, the Honorable John Foster Dulles, Secretary of State of the United States, the Secretary of the U.S. Senate, the Chief Clerk of the U.S. House of Representatives, and the Members of the U.S. Congress representing the State of Washington.

I hereby certify this to be a true and correct copy of resolution adopted by the House January 14, 1959.

S. R. HOLCOMB,
Chief Clerk, House of Representatives.

An Oil Grab in Utah

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. KING of Utah. Mr. Speaker, the Utah public is incensed over an injustice which they believe was dealt their State by the last Congress in the passage of Public Law 85–868.

The basis of their alarm is clearly and concisely explained in a recent column by Robert W. Bernick, business editor of the Salt Lake Tribune, and in an editorial in the Deseret News, in which the latter urged the Utah Members of Congress to make every effort to correct the injustice.

As these articles point out, the law may cost Utah millions of dollars in oil royalties which would possibly have accrued to the State but for the provisions of section 1(d), which is the focal point of the problem. In addition, the law may cheat the Federal coffers of even greater sums—sums which, ironically, would have been spent in large measure on reclamation and perhaps on the very project the bill was meant to help, the Glen Canyon development.

State officials have advised me that they had received assurances from the Department of the Interior, through the Senate, that the disputed section, which was slipped into the bill in the closing hours of the last session, would jeopardize neither oil-lease applications which then were pending before the Department, nor other State interests in the public domain. I have been told that the same assurances had been given the westerners in Congress who supported the legislation.

Utahans who are alarmed over this oil grab believe it behooves the 86th Congress not only to reexamine the law and the legislators' intent in passing it, but also to investigate the relationship between certain Interior officials and the Indians' legal counsel. The same Utahans suggest that unless a relationship of unwarranted closeness had existed, the Department likely would never have permitted such damaging provisions as those contained in section 1(d) to be enacted into legislation at such a crucial moment, at a time when the lawmakers, under the press of last-minute congressional business, were without means to weigh those provisions carefully.

The Deseret News editorial of January 13, explaining the problem reads as follows:

SAVE UTAH'S OIL ROYALTIES

Congressman DAVID KING has made a good start in representing Utah's interests by challenging the Interior Department's ruling on a complicated, tremendously important question of oil and mineral rights within the Navajo Indian Reservation.

The way this question is finally settled can mean upward of $9 million in oil royalties to the State of Utah, in addition to other benefits. We hope the entire delegation will join in a terrierlike effort to shake out a just decision on this point.

The problem arises because of "sleeper" language that was slipped into the legislation last year that authorized an exchange of land with the Navajos because of land necessary for construction of Glen Canyon Dam and filling of the reservoir.

That particular exchange, giving the Indian land in the McCracken Mesa area adjoining the northern edge of the reservation, created no particular problem, since mineral rights did not go with the exchange. But an amendment slipped into the bill and dealing with other lands can cause no end of trouble.

This amendment declares that all public lands, or lands in the public domain, within the reservation should be held in trust for the benefit of the Navajos. And it includes as public lands all original claims or withdrawals that have, over the years, been relinquished or abandoned.

Until the uranium-oil strike in the Four Corners area, ownership of those claims made precious little difference. It was land fit only for grazing, and little enough of that. But with one of the country's major oil booms developing in that area, ownership has become tremendously important.

If the lands are public domain, the claims filed by a number of Utah and other developers are valid; if ruled Indian lands, then the claims of two or three major oil companies take precedence.

Far more important from the State's point of view, if the lands are public domain, Utah will get 37½ percent of the Government's oil royalties, and other royalties will go into the Federal general fund and into the reclamation fund, from which Utah also benefits. If Indians lands, neither the Federal Government nor Utah will get a dime in royalties.

This dispute, it should be emphasized, has been developing for some time. As Congressman KING pointed out to the Interior Department the new law has the effect of deciding the dispute unilaterally, without a fair, just court decision. Utah's congressional delegation insists this was not the intention of Congress, as far as they could tell at the time.

The great bulk of the Four Corners oil and gas boom is centered on lands already part of the reservation. The Indians are doing fine. This new law, if allowed to stand, would have the effect of stripping away some of the relatively few benefits Utah expected to get.

As always in such cases, the issues are complex and neither the rights nor wrongs are all concentrated on one side. Certainly the morality as well as the legality of the issue is in enough doubt—and the matter is of such importance to Utah—that the law cannot be allowed to stand unchallenged. Mr. KING and others, keep hammering away.

Mr. Bernick's column from the Salt Lake Tribune, published January 21, reads as follows:

NAVAJOS' SUIT ASKS GAINS IN SAN JUAN

The Navajo Tribe Tuesday laid claim to all right, title, and interests the State of Utah has on State and other domain within the Navajo Reservation of San Juan County.

At immediate issue are two State school sections which in the last 16 months have poured nearly a quarter of a million dollars into the Utah school fund.

Ultimately, thousands of additional acres—much of it productive of oil—and millions of dollars of royalty payments to the State are involved in the action filed with the Bureau of Land Management of the U.S. Department of Interior.

The lawsuit is based on wording of a bill passed by the last (85th) Congress which had as its apparent purpose the indemnification of the Navajos for lands to be covered by the lake created by Glen Canyon Dam.

But the Indians apparently are getting more than 60,000 acres of additional ground in San Juan County.

Their counsel now maintains the law wiped out all interests of the State in these two school sections and transferred all public domain within the Navajo Reservation to Indian trusteeship.

Senator WALLACE F. BENNETT, Republican, of Utah, was active in sponsorship of the measure in the final days of the 85th Congress.

The Indians, in their process served Tuesday on Frank J. Allen, State land board director, also asserted that the State school sections were rightfully Navajo because the Indians trod the lands prior to admission of the State into the Union.

They cite a number of decisions of the Federal courts backing up this finding.

One other recently publicized effect of the Littell bill was to wipe out the claims of several Utahans who had filed Federal oil and gas leases on lands which had been made subject to a prior mineral entry before extension of the Navajo Reservation in March 1933.

NINETEEN THIRTY-THREE LAW BARRED NAVAJO SAN JUAN EXPANSION

(An interesting portion of this bill creating the Aneth extension north of the San Juan River was its assertion that nothing in the 1933 law would constitute liquidation of prior entry on what was then Federal public domain. That 1933 law asserted that in no case were the Navajos to be given any more land in San Juan County. A quarter of a century later, the Congress repudiated its pledge, enlarged the reservation, and voided the articles on prior mineral entry.)

The assertion as to trusteeship of the Navajo on Federal public domain within the reservation raises an important and as yet unsettled question as to ownership of the bed of the San Juan River which traverses the oil-rich general Aneth area.

The State of Utah has been pressing—without any noticeable reaction by the office of the U.S. district attorney at Salt Lake City—for a quiet title action involving ownership of the bed.

Originally, the Navajos had no interest in this suit. If navigable, the San Juan bed belongs to the State. If not navigable—based on history of travel—the river bed is Federal public domain.

But the new assertion of trusteeship apparently would turn the river bed mineral rights to the Indians.

The Tribune was advised that the section of Public Law 85–868 (the Navajo Glen Canyon indemnity bill) dealing with Tuesday's assertion of interests on the part of the Indians was prepared by Normal Littell, general counsel for the Navajo Tribe at Washington, D.C.

The Littell amendment apparently was accepted by Elmer Bennett, then Solicitor of the Department of the Interior, and western Senators, including the Utah delegation.

The Department of the Interior currently is resisting any change in this section by the present Congress on moral grounds.

Mr. Allen told the Tribune—and Roger Ernst, an Assistant Secretary of the Interior has stated—that the acceptance of the amendments by the Senate was a "package deal involving the Indians, the Department, and the State of Utah."

However, "the State of Utah has been no party to any package deal involving the Indians or anyone else which would wipe out our rights and interests—and the interests of our schoolchildren—in oil production in San Juan County or any other county," Mr. Allen declared Tuesday.

WALLACE WIRE ASSURED NO ADVERSE EFFECTS

Mr. Allen said that all he had received from anyone in connection with the so-called Littell amendment was a telegram signed "Wallace" that the proposed changes in the legislation would have no adverse bearing on Utah's rights in the oil area.

Mr. Allen Tuesday called for "immediate amendment of Public Law 85–868 so as to remove all doubt as to the title, rights, and interests of the State in its oil holdings in San Juan County."

He also asserted that the action of the Indian counsel before the U.S. Bureau of Land Management on the two State school sections would be vigorously resisted.

Specifically involved in this latest move by Navajo counsel are section 16, township 40 south and range 24 east (Aneth Pool), on which lease was granted to Shell Oil Co., and section 16, township 40 south, range 26 east (Ismay Pool), on which a lease was granted to Carter Oil Co.

Legislative Proposals

EXTENSION OF REMARKS
OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. WHITENER. Mr. Speaker, I have today offered seven bills for consideration by the House of Representatives. These bills, in my judgment, should be promptly considered by the appropriate committees and reported out for final approval at the earliest possible date.

The legislative proposals which I am making may be briefly summarized as follows:

I. EXCISE TAX REPEAL

One of the bills provides for the repeal of the excise tax on communication services and facilities, and another provides for the repeal of such taxes upon the transportation of persons.

Further collection of these excise taxes seems to me to be unwarranted in view of the fact that they were originally imposed as war-time tax-raising devices. These taxes constitute an undue burden upon individuals of small businesses. Repeal would result in very little loss of revenue to the Government and would serve as a stimulus to small business and individual savings.

In the 85th Congress we repealed the excise tax upon the transportation of property, and it now seems highly proper that we should do the same with reference to transportation tax upon persons.

II. ADDITIONAL INCOME TAX DEDUCTIONS AND EXEMPTIONS

One of the bills which I have offered will increase the amount which a taxpayer may deduct on account of expenses paid for the care of his or her dependents who are under the age of 16 years. The other measure would increase from $600 to $1,000 the personal income tax exemption of a taxpayer, including the exemption for a spouse, the exemption for a dependent, and the additional exemptions for old age or blindness.

The working mothers in our country are being heavily penalized under the present Internal Revenue Code by reason of their inability to deduct the costs of care for dependents while the mother is necessarily working to earn a livelihood for her family. To fail to give the consideration which this bill offers for taxpayers who must pay for the care of their dependents while gaining their livelihood will constitute the compounding of a wrong which has long been experienced by the working mothers of our country. I believe that this legislation is long overdue and entertain the hope that others in the House will concur with that thought.

An increase in the personal tax exemption for taxpayers from $600 to $1,000 will give tax relief to the lower income citizens and, thereby, should have a great stimulus upon business as well as personal savings by those in the lower income brackets. The increase in personal exemption which is envisioned will result in very little overall loss of revenue to the Federal Government and could, in the long pull, result in an increase in the revenue by reason of the stimulation which it will give to business.

III. SOCIAL SECURITY

Another bill which I am offering will amend title II of the Social Security Act by removing the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder.

This legislation is made essential by reason of the inflationary spiral in which those who are receiving benefits find themselves. Those recipients who are physically able to carry on gainful employment should not be penalized for their diligence and energy, but rather should be encouraged to continue to make their contribution to the business, economic, and industrial life of their country.

Those who have attained all eligibility requirements except the reduction of their own income should not be penalized but should be given the encouragement which this legislation proposes.

IV. WORLD WAR II AND KOREAN WIDOWS AND ORPHANS

Another bill that I am offering today provides that pensions for non-service-connected death shall be extended to the widows and children of deceased World War II and Korean veterans under the same conditions as apply to the widows and children of deceased World War I

veterans. This legislation, if enacted, will meet one of the real needs in the field of veterans' affairs in this country. Since 1934 the provision has been made for widows and children of deceased World War I veterans in the manner now sought to be extended to widows and orphans of deceased World War II and Korean veterans. Certainly it can be said that these individuals should receive the same consideration as now extended to those similarly situated by reason of casualties of World War I.

This legislation will mean a great deal to many needy and worthwhile widows and children in this land of ours.

V. SENATE AND HOUSE PAGES

I am also offering a bill to provide a residence for pages of the Senate and of the House of Representatives under the supervision of a Capitol Pages' Residence Board.

It has alarmed most Members of Congress that young boys are being brought from their homes throughout the country to Washington to serve as pages in the two bodies of Congress without having any provision made for their supervision and housing upon their arrival in the Nation's Capital.

This is a situation which should not be permitted to exist beyond the current session of the United States Congress.

To establish a pages' residence would not require any tremendous appropriation, particularly in view of the fact that it is contemplated that the pages will pay such rates and fees, as far as practicable, as are sufficient to make the operation and maintenance of the residence self-sustaining.

This residence idea is not a new one. It has been discussed with and by many of my colleagues, and it seems to be uniformly agreed that something should be done immediately to eliminate the failure of supervision which we now observe in the handling of housing arrangements for our splendid young boys.

Mr. Speaker, I again reiterate that I entertain the hope that the legislative proposals which I am today making will be seriously and promptly considered by the House of Representatives through the appropriate committees and that action may be taken upon them with the greatest possible dispatch.

Tribute to Representative Herman P. Eberharter

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. EVINS. Mr. Speaker, may I also join my colleagues from Pennsylvania, and other Members, in paying a brief tribute to the memory of the Honorable Herman P. Eberharter. He was a great Democrat and a most able representative of the people of his district and his State. He possessed a wonderful personality and served with great distinction as a member of the Ways and Means Committee. We miss him and will continue to miss him.

May I extend an expresion of my sincere sympathy to the members of his family.

A Problem Confronting the Indian People of South Dakota

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. BERRY. Mr. Speaker, it is my purpose today to bring before the Congress one of the most vexing problems confronting the Indian people of South Dakota, confronting the counties and the State of South Dakota.

The problem results from a policy of the Indian Department established at the Washington level, that when an Indian has been away from a reservation for 1 year, the Department is no longer responsible for him or his family, either for medical care, for relief, or any other benefits intended by Congress for the Indian people, including such benefits as trades training, on-the-job training, educational loans, and so forth.

These latter programs, however, do not cause too great disruption between Federal and local governments, they have only a detrimental effect upon the welfare of the individual Indian.

One of the serious problems, however, arises from the fact that most States, including the State of South Dakota, have a statute providing that an indigent person or an indigent family moving from one county to another may not become a resident of the new county, and, therefore, become a county ward or a financial burden upon that new county, if the new county into which the individual or the family moves, does, within a certain time, serve upon him a notice to prevent acquiring a legal settlement.

Such notice in South Dakota provides that the individual coming into such county from another county or another State who is likely to become a public charge, is thereby warned to depart therefrom, and that service of such notice shall apply to all members of such family.

Through the years, the law has been upheld and interpreted many times by the Supreme Court. Families have been returned to their original county several years after leaving that county, if they should attempt to become a public charge upon the new county.

The Indian Department, however, refuses to recognize the laws of the State of South Dakota. When an Indian has been off of the reservation for a year, the Department washes its hands of him, regardless of whether the county into which he has moved serves a notice to prevent acquiring legal settlement or not. Public Health follows the policy of the Indian Department. The result is that counties in South Dakota located near Indian reservations, where Indian people congregate for employment, find themselves in an unbearable position, with the Indian Department refusing assistance and the country unable to provide the assistance. The Indian finds himself caught in the bind.

One serious example is the hospitals in Rapid City, S. Dak., where many thousands of dollars of hospital bills each year go unpaid by either the county or the Federal Government. Indian people are brought to the hospital in serious condition, an emergency exists and they must be given treatment. Because the Indian is indigent and unable to pay, the hospital is required to carry the cost of treatment and hospitalization.

I would quote from a letter under date of January 19, 1959, from the St. John's McNamara Hospital of Rapid City, S. Dak., with regard to the hospital bill of one Bert Guy Eagle Horse, age 41, an indigent taken to that hospital for emergency treatment and hospitalization. Part of the letter follows:

> He was found lying in the street, a tire iron lying nearby and with severe lacerations about the head. A severe blow across the base of the man's head caused a state of unconsciousness requiring immediate attention. I called Dr. Sicher, the Indian public health physician, at the clinic in the city of Chamberlain, S. Dak., for authorization. This was refused. I explained that he had authorized treatment for the man for rattlesnake bite at a previous admittance, August 1, 1958, and that they had recognized him as being eligible for authorization. He advised me that this was true, but that he had discovered that this was a mistake and that he should not have given it.

When the hospital called Pennington County Welfare Office they were advised that Bert Guy Eagle Horse was not a resident of Pennington County and apparently was prevented from becoming a resident, because of the South Dakota law. The county in which the home reservation of Bert Guy Eagle Horse is located will, of course, not pay the bill.

This, Mr. Speaker, creates a no-man's land with the individual Indian and the hospital caught in the bind. The Congress appropriates millions of dollars annually in the belief that the Indian people are being cared for. The fact is, the policy of the Indian Department makes of these people, who are encouraged by the Department to leave the reservation, a man without a country and ineligible for any assistance. This, in my judgment, Mr. Speaker, is a field in which the Congress must act. It is unfair to the Indian people that a vacuum should exist in which these people now find themselves at the mercy of non-Indian hospitals located adjacent to an Indian reservation.

We are advised that the Public Health hospitals on the reservation will give service to Indian people regardless of the fact that they have left the reservation for a time, but there is no provision for their return and no provision for emergency treatment. Worse than that, there is no provision for any public assistance to these families who having been encouraged to leave the reservation in search of work and to integrate into the white society, then find themselves destitute in a county which has served legal notice upon them to prevent their acquiring a legal settlement.

Excerpts From an Address by Gen. Carlos P. Romulo

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include excerpts from an address given by Gen. Carlos P. Romulo, Philippine Ambassador to the United States, at the 38th annual meeting of the Philippine American Chamber of Commerce, India House, Hanover Square, New York, N.Y., January 21, 1959:

After having mentioned some of the efforts and achievements of the present administration in the Philippines, I wish to refer to recent newspaper articles published in this country about the Philippine Government which, to say the least, give a distorted picture of conditions as they are now in the islands. Regarding the lurid charges of graft and corruption, of shortages and inflation, of unemployment and low wages, of insufficient faith in government, I will not attempt to gloss over them. But I feel bound to declare in the interest of truth and fairness that most of these criticisms are made in disregard of the facts which condition the existing situation.

American correspondents who go to the Philippines seem to forget when writing about us that our country was twice ravaged and laid waste in the space of 4 years, that we were not unscathed by the ruthless acts of a brutal occupation, that while in true Christian spirit we are exerting every effort to forgive and forget, 15 years cannot completely efface the moral trauma that was the result of that occupation. A sense of proportion would seem to dictate that conditions in the Philippines be viewed in the proper perspective and that the faults of government be considered against the background of the almost total collapse and disorganization of Philippine life as the result of enemy occupation which, it must be stressed, was entirely different from the friendly and benevolent occupation of Germany and Japan by the United States and allied governments. Without condoning instances of corruption or incompetence, such an attitude would give praise or blame as the facts require. Judgment would be tempered by sympathetic understanding, and a nation that has been sick, no more than a man still recovering from the effects of his illness, would not be required to give performance equal to that of one who is entirely hale and sound.

We should not forget also that the inadequacies of Philippine life today are not peculiar to the Philippines. Most countries have them in a greater or lesser degree, including those that suffered no direct physical or moral damage from the war. There certainly is hardly any criticism now being leveled at the Philippines by visiting American newspapermen which cannot with equal justice be leveled also at Chicago or New York or Mississippi or Arkansas or Washington, and these latter without the partial justification which exists in the case of the Philippines.

Furthermore, the American correspondents would most certainly have a much sounder basis for judging the conditions in my country if they were to read up on the history of other countries, like the United States, for instance, say, 15 years after July 4, 1776. They will find that the picture was nowhere pretty at any time; certainly not of the United States, where there was great insecurity of life and property and where conditions became so intolerable there was a movement supported by respectable people to replace the Republic with a monarchy and make George Washington a king.

It is not my purpose to excuse the faults of our Government by citing the faults of another. My purpose rather is to show that we Filipinos are ourselves sharply aware of these deficiencies, and that our frank recognition of their existence is in itself a beneficent act of conscience, which constitutes the first step in the process of healing. We know these shortcomings to exist, we do not avert our eyes from them, nor do we wish to conceal them from the eyes of others. We are confident that the conscience of the nation, reacting to every evidence of negligence or incompetence, corruption, or abuse, will fashion the necessary remedies, as they in fact are now being fashioned, in accordance with our laws and constitution and in the interest of a more perfect democracy.

The present administration in the Philippines has undertaken a vigorous campaign against those accused of being guilty of malfeasance in office. The Manila newspapers are, therefore, filled with news about cases of graft and corruption because the evildoers are now being identified and exposed. As an earnest of his determination to eradicate this cancer from our body politic, President Garcia has proposed the creation of an anti-graft court to form part of our judiciary in order that it may be above the influence of both the executive and the legislative.

Rising from the wreckage of a destructive war, our people have wrestled with the problems of political reorganization, economic reconstruction, and social regeneration with high resolve and enthusiasm. The Government of our Republic is functioning on a sound constitutional basis. The will of the people continues to be expressed in periodic elections as provided by law. The basic civil liberties which are guaranteed to the citizens by the Bill of Rights are meticulously respected by the agencies of the state and by the courts. Freedom of speech, of the press, and of assembly remains unimpaired. We have a bipartisan system and we have a real party of the opposition whose existence is generally recognized to be essential to any genuine form of representative government.

Philippine economy is basically sound. What we need in the Philippines today is foreign exchange and the reason for the low level of our international reserves is simple: Five years ago we were supporting 150 industries; now we are supporting more than 1,000 industries. If anything can show the fundamental soundness of our economy it is these figures, aside from the fact that we have registered remarkable growth in our agriculture, in manufacture, and in our export trade. Inflation in the Philippines is quite low compared with that of other countries, our per capita income has increased considerably as well as our national production.

We had hoped we could get more American aid than what had been given us to help us bolster our economy. The general impression that we have been beneficiaries of extra-lavish American assistance must be corrected for, aside from war damage payments which were certainly due us who suffered incredible destruction from any enemy attack aimed at the United States—the Philippines was American territory at the time—the actual receipts of economic help are much less than those given to other countries in Asia, some of them former enemy countries, others neutral or uncommitted, certainly none linked by political, military, and economic ties as closely to the American people as we Filipinos are.

Here are the figures: According to the report of the U.S. Department of Commerce for the fiscal year 1958, the Philippines received during the postwar period a total of $145 million in mutual security aid from the United States. In contrast, Japan received a total grant of $2,897 million; Korea, $2,160 million; Formosa, $2,373 million, Vietnam, $795 million; India, $310 million; Pakistan, $343 million; and Indonesia $139 million. I do not include in the total Philippine aid the amounts given the Philippine rehabilitation, UNRRA, agricultural commodities, Red Cross, and others which were for relief immediately after the war since certainly they were emergency measures necessitated by the terrible destruction we suffered.

As the Philippine Ambassador to the United States whose every effort has been to foster closer Philippine-American friendship and who has all these years endeavored to present the case for my people and plead their cause, I feel it is my duty to make known to our American friends the feeling that is unfortunately growing among my fellow countrymen that Philippine friendship is being taken for granted here. It is necessary for America to make and cultivate new friends; it is wiser for her to keep and maintain old ones. We who as a people have cast our lot unreservedly with yours and have always stood up to be counted thus assuming all the concomitant risks of such a forthright stand, we who as a nation have refused, unlike others, to sit comfortable on the fence, or stand on the sidelines, my people feel they deserve a more sympathic understanding of their pressing needs and problems. The truth is that we have not asked for any handouts nor have we sought charity. We have claims against the United States amounting to $972 million and these claims had been officially presented to your Government on January 14, 1955, 4 years ago. To date, these claims remain unsettled.

Then again Congressman GEORGE P. MILLER of California, introduced in your Congress, only last year, a bill authorizing the appropriation of $100 million for additional war damage payments which is one of the items in our claims against the United States. Speaking on the floor of the House on May 19, 1958, he said:

"As we are all aware, to our embarrassment and sorrow, only slightly more than half of the amounts awarded to claimants in the Philippines for their war damage losses were actually paid, and even after reducing the amounts of the awards in excess of $500 by 25 percent as provided by the Rehabilitation Act, still 22½ percent of each award remains unsatisfied."

There is also the long-delayed payment to us of the gold devaluation fund amounting to nearly $24 million which the present administration is committed to redeem and which, we have been promised, will be submitted in a bill to your Congress at its session early this year.

The other claims are as follows: coconut oil processing tax, $173 million; sugar excise tax, $75 million; claims of Philippine customs duties of imports by the U.S. Army and Navy, $1 million; various military claims, $600 million.

If your Government can only see its way clear to settling these claims, we need no financial aid from the United States. It is not for me to make invidious comparisons. But if your leaders fear that the failure of democracy in certain countries of Asia would be a grave loss to the free world and for this reason you are giving them generous financial aid, would it not be a severe blow to American prestige if the democracy that was born under its aegis and which it helped create in the Philippines breaks down and turns out to be a tragic failure for lack of that economic support which America is granting to others with largesse?

There are two avenues which we can follow right away, through which the Philippines can be given a boost by the United States without extraordinary procedures or steps which call for anything but ordinary, sound business practice and equitable treatment.

First, in connection with the war damage

awards to Philippine victims of World War II provided by the Philippine Rehabilitation Act of 1946: Only 52½ percent of the awards allowed by the War Damage Commission have been paid whereas the law itself specifies that 75 percent of the fact amount of the awards in excess of $500 each should be paid. The holders of the awards have always felt that they were judgment holders against the United States and, in fact, the awards may well be considered the moral obligation of the United States. The payment of the balance remaining unpaid of 22½ percent on each award would constitute a substantial source of economic assistance for the Philippines which can be effected by the Congress without further consideration of new loans or assistance programs; only as a discharge, indeed, of an undertaking commenced in 1946 and long overdue in fulfillment.

Second, in connection with sugar imports from the Philippines: When the Sugar Act of 1948 was amended 3 years ago the excess amount of sugar consumption in the United States above a basic supply of 8,350,000 tons was apportioned between domestic sugar producers to the extent of 55 percent and foreign suppliers, 45 percent. But the Philippines was not included in either category. However, both the President and the State Department said at the time that in a further extension of the Sugar Act, which comes up in 1960, the Philippines should be considered.

A consideration of the Philippines to the extent of a portion of the excess United States sugar consumption will create necessary dollar reserve and bolster the whole Philippine economy in the direction of employment of labor, replacement of sugar machinery, and the like.

Since the President and the Secretary of State have already indicated approval of participation by the Philippines, all that needs to be done is for Congress to include the Philippines in the next revision of the Sugar Act.

Heretofore, the Philippine American Chamber of Commerce has been most helpful by sending telegrams to congressional committees requesting favorable action on such Philippine legislation as the chamber felt merited its support. These telegrams are usually inserted in the CONGRESSIONAL RECORD. Since the chamber specializes exclusively in the enhancing of trade between the Philippines and the United States, it would be much more helpful if we could enlist the assistance of your 134-member firms having financial, industrial trade, business or professional interest in either or both countries to write letters to the Representatives and Senators from the district in which their plants are actually located pointing out the writer's interest in the Philippines together wtih the amount of business they do annually in this area and finally enlisting the Congressman's and/or Senator's support for the legislation in question.

Thomas S. Gordon

EXTENSION OF REMARKS
OF
HON. ARMISTEAD I. SELDEN, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. SELDEN. Mr. Speaker, it was with great sadness that I learned of the sudden passing of our former friend and colleague, Thomas S. Gordon, of Illinois, who served with distinction in the 78th through the 85th Congress.

I was privileged to be associated with him as a member of the Committee on Foreign Affairs. During the 85th Congress, Tom Gordon, as chairman of the Committee on Foreign Affairs, made notable contributions of which we are all very well aware. As a Member of this great body he has diligently served in the best interests of his constituency, the Nation, and the free world.

Tom Gordon was a man of amiable personal traits and no one who ever knew him could fail to be impressed by his quiet modesty and sincere humility. He was a man of the highest integrity who stood firmly by his convictions. His sincerity of purpose and friendliness of nature compelled deep respect and enduring affection. Tom Gordon's untimely death leaves a profound impression on us. We shall miss him. I join my colleagues in extending my sympathy to his loved ones.

In the Quality and Integrity of Our Young People Lies the Strength and Future of America

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. NATCHER. Mr. Speaker, each year the Kentucky Junior Chamber of Commerce names its three outstanding young men and an outstanding young farmer of the year. On January 20 the selections for 1958 were made and it was with a great deal of gratification and pride that I learned that two of the four young men chosen for this distinguished honor are from the Second Congressional District of Kentucky which I have the honor to represent.

Thomas B. Hagerman, selected by the Kentucky Junior Chamber of Commerce as one of its three outstanding young men, is a native of Bowling Green, my hometown in Warren County. And William T. Roark, chosen as the outstanding young farmer, is from Franklin, Simpson County. These two men exemplify, in the truest sense, the tradition of selfless service to community and fellow citizens which has played such an important part in the growth of Kentucky and this great country of ours.

The choice of Thomas B. Hagerman is quite appropriate as the variety of activities in which he participates with excellence makes him indeed worthy of the appellation "outstanding." As an agent for Aetna Oil Co., in Bowling Green, Mr. Hagerman gives freely of his time, energy, and leadership to the various groups whose common denominator is the betterment of the community and the instilling of worthy ideals of service and integrity in the youth of that community. In these troubled times when the newspaper headlines scream of juvenile crimes, I would like to take this opportunity to express my personal appreciation for young men such as Thomas B. Hagerman. I can think of no better way to inspire the youth of our Nation with the ideal of service to their fellowman than by example. The emulation of men such as Thomas Hagerman cannot help but produce finer citizens of tomorrow.

Mr. Hagerman, who graduated from Western Kentucky State College, is a Jaycee, is active in church work, is a coach of the Small Fry Football Conference, a member of the Two Gallon Blood Donor Club, is a Warren County jury commissioner, a veteran participating in the Army Reserve program, and a high-school football official. The scope of his interests ranging from church work, youth direction, service to community as a jury commissioner, to Army Reserve activities indicates the fullness and maturity of character possessed by Mr. Hagerman.

As service to community enhances the facilities of our urban centers, so excellence in farming contributes to the productivity of our rural areas upon which this Nation was built. It is to men such as William T. Roark that we can look with pride and confidence to the further development of agriculture. During the past 11 years in which Mr. Roark has engaged in farming, he has increased the productivity of his 985-acre farm by 166 percent. He raises beef cattle and seed. In addition to his truly outstanding farm work, young Roark is active in his church, the Rotary Club, Kentucky Chamber of Commerce, Masons, soil-conservation work, county extension council, Simpson County Farm Bureau, and Simpson County Tobacco Association. When so many of our young men are leaving the land with the idea of quick success in the city, the example set by William T. Roark should serve as an inspiration to the youth who elect to remain on the farm and achieve a full and satisfying life in agricultural pursuits.

I am justifiably proud in being able to place in the RECORD a brief tribute to the accomplishments of these two fine young men from the Second Congressional District of Kentucky. In the quality and integrity of our young people lies the strength and future of America and certainly Thomas B. Hagerman and William T. Roark are worthy of the trust placed in them.

Thomas S. Gordon

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. CARNAHAN. Mr. Speaker, although we knew that Tom Gordon retired from Congress because he was not in good health, none of us recognized how few were the days left to him on this earth. Certainly I was shocked when I learned of his passing.

Tom Gordon had a long and honorable record of public service. He held several important positions in his native

city of Chicago. In those offices his devotion to duty and to the public welfare won for him a host of friends. Sixteen years ago his district first sent him to this House. Until he voluntarily retired he was returned in each election by large majorities.

Throughout his congressional career he served on the Committee on Foreign Affairs. He brought to his committee assignment an unusual interest in and knowledge of conditions in Europe, particularly in the countries of Eastern Europe. He had a deep sense of indignation at the treatment accorded the people in those countries under Communist rule and over the years became an acknowledged spokesman for them. Several times he engaged in lengthy study missions for the committee. His reports of these trips to his colleagues and to his constituents showed an understanding of the problems we faced in the countries he visited.

Tom Gordon's long service appropriately culminated in his election as chairman of the committee in the 85th Congress. Until overtaken by illness in late 1957, he provided the committee with a dignified, impartial, and objective leadership. I will always regard it as a privilege to have served with him for so many years.

Tom Gordon had many wonderful human qualities. He was quiet, patient, and understanding. He was a man with deep religious convictions, whose very devotion to his religion gave him a compassionate understanding of human nature that I much admire.

To his family I extend my deepest sympathy upon the passing of a wonderful husband and father.

Importation of Firearms

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. HOLTZMAN. Mr. Speaker, I am today reintroducing a bill which would prohibit the importation into the United States of certain firearms.

I had introduced similar legislation in the 83d and 84th Congresses, but these measures prohibited members of the armed services and their dependents from bringing into this country pistols, revolvers, and other types of small firearms. The Department of the Army had submitted an adverse report on this legislation, primarily due to the fact that they felt that the bill would discriminate against military personnel and their dependents.

Last year I eliminated the provision restricting the ban to members of the Armed Forces only, and have asked that the prohibition be extended to everyone—civilian and military alike—who would bring such weapons into the country.

I have been in touch with many law-enforcement officers throughout the United States, and the vast majority of them have endorsed this legislation and have agreed that any attempt to keep dangerous weapons out of the hands of criminals, potential criminals, children, and irresponsible individuals should receive the full support of all those interested in combating crime, and minimizing tragedy which results when some of these guns are accidentally fired. Our own district attorney, in Queens County, N.Y., one of the most heavily populated counties in the country, the Honorable Frank D. O'Connor, has agreed with me that the supply of illicit weapons should be stopped at its source, and fully supports the proposed measure.

Statistics have shown that as many as 50,000 of these contraband weapons have been brought into the United States on just one troopship returning from the European theater. Multiply that by the number of troopships and the number of civilians bringing such weapons into the country and we have an astounding figure.

I have been informed that in one county of New York City 75 percent of the crimes of violence have been and are being committed with these so-called souvenirs. Every day we read in the papers or hear over the radio and television of tragic accidents which occur, and of crimes which have been committed with these weapons. Just the other day Police Commissioner Kennedy issued a report indicating a substantial increase in crimes of violence in the city of New York.

The time has come to put an end to this potentially explosive situation. We simply cannot afford to wait any longer and must make a determined effort to prevent these crimes and mishaps at their source. I can think of no better way than by banning the importation of these weapons and by preventing them from getting into the hands of those who might be tempted to use them illegally or carelessly.

I urge my colleagues to give this legislation every possible consideration.

Five Fallacies About Spenders

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ASPINALL. Mr. Speaker, in a recent issue of the Denver, Colo., Post, there appeared a timely article by Roscoe Fleming, on the subject of taxation and spending. In the light of current discussion of budget expenditures and Federal spending I believe Mr. Fleming's analysis, "Five Fallacies About Spenders," deserves careful reading. Under leave to extend my remarks, I should like to have the article printed in the RECORD. The article follows:

FIVE FALLACIES ABOUT SPENDERS
(By Roscoe Fleming)

Senator JOSEPH S. CLARK, Democrat of Pennsylvania, former mayor of Philadelphia, recently addressed the American Municipal Congress in Boston, and made the case for a strong, forward-looking national policy as well as anyone has done.

It might be taken as the answer of the "yes-sayers" to the "no-sayers," who insist above all on a balanced budget and cutting Federal expenditures in all fields save defense.

The nub of Senator CLARK's argument follows:

"The election was not a mandate to stand still. It was a mandate to move forward. What stands in the way?"

The answer we always get—whether the issue is national defense, or mutual security, or education, or housing, or urban renewal, or social security, or the development of Asia and Africa—is: "We can't afford it," or: "We must cut costs and balance the budget."

Now let me admit that most, although not all, of the problems that confront us do cost money. And let me also state my own strong belief that governmental budgets at all levels, local, State, and National, should be brought into balance.

So the issue of whether we master our problems becomes, in concrete form, the issue of taxation and spending.

I want to enter that debate by chopping away some of the folklore that surrounds the subject of public spending. Perhaps no topic in our time has been the victim of so much nonsense.

There are five main fallacies:

1. That private spending is inherently good and public spending inherently bad.

This fallacy is assiduously cultivated by conservative molders of opinion. The word "government" is equated with other nouns having an evil connotation, such as "waste," "extravagance," "socialism," "bureaucracy."

This is a pernicious tendency. Taxation and public spending are the means by which we divide resources between the public and private sectors of the economy.

Those activities which are in the public sector are there not because they are naughty and ought to be destroyed, but because they are essential, and cannot be adequately performed by private enterprise.

2. That the Federal Government is crushing people and endangering the economy with a growing burden of taxes, expenditures, and debt—and that this endangers the health of our free enterprise system.

What is overlooked is of course that the ability to carry taxes and debt is related to income. Other things being equal, a man making $10,000 can pay at least twice as high taxes, and carry without hardship twice as large a debt as a man making $5,000.

The same is true of the country as a whole. And taxes, expenditures, and debts are actually less today—as a proportion of the gross national product—than at the end of World War II.

3. The notion that Government spending is inflationary.

Government spending is no more inflationary than private spending—provided the Government balances its budget.

4. That all Federal expenditures are alike.

If a private bank makes a loan, that is called an investment; if the Small Business Administration makes a loan, that is called spending.

It may be that for bookkeeping purposes, we must continue to lump all accounts of Government disbursement together.

But there is no reason why intelligent people, for purposes of public discussion, should not distinguish between operating expenses, loans which create accounts receivable, and

investments which are offset by created assets.

5. If the Federal Government shoves its functions back to the States and cities, this means economy.

There are good reasons for decentralized administration. But that does not mean that the financial burden should be thrown back on the States and cities, too.

The Federal tax system is far superior in justice and efficiency to those of State and local governments, and there is great merit in using it for urban functions.

The Federal tax burden falls evenly across the land, based in large part on ability to pay. There is every reason to use it in preference to State and local systems, where the choice exists.

Great Lakes Water Diversion

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. GRIFFIN. Mr. Speaker, several proposals have already been introduced in this session which would permit the diversion of additional amounts of Lake Michigan water into the Illinois Waterway.

No more graphic account of the damaging effects of such action has come to my attention than that contained in a letter written August 11, 1958, by N. G. Damoose, city manager of Traverse City, Mich., to Jay Smith, editor of the Traverse City Record-Eagle.

Under leave to extend my remarks, I include Mr. Damoose's letter:

CITY OF TRAVERSE CITY, MICH.,
August 11, 1958.

DEAR JAY: I just read that the Senate subcommittee approved the water diversion bill passed by the House. This just isn't right. I thought we had a chance in the Senate but I guess politics or something takes precedence over the preservation of the country's natural resources and the welfare of 50 million Americans and Canadians in the Great Lakes area. What a shameful and disgraceful sense of values.

I wonder if the politicians down there know or ever tried to figure out how much water 2,500 cubic feet per second amounts to? It's deceiving to talk about 2,500 cubic feet and stop there? Certainly, someone somewhere must have converted this innocent little figure to quantities that people can appreciate and visualize. If they haven't, it borders on subterfuge; surely it is not straightforward.

Look Jay:

1. 2,500 cubic feet of water per second is more than a million gallons a minute; 67.5 million gallons an hour and more than 1.6 billion gallons a day.

2. Under the new authorization Chicago will steal, every day, four times the water that Detroit used (about 400 million gallons), for all purposes, every day. In about 6 hours Chicago will waste as much water as all Detroit used in 1 day.

3. Five hundred thousand gallons of water will cover a city lot 60 feet wide and 120 feet long to a depth of 10 feet.

4. The amount of water Chicago will divert, in 1 day, will cover 3,240 lots of this size to a depth of 10 feet.

5. One billion six hundred and twenty million gallons of water per day will fill a trench 20 feet wide to a depth of 10 feet and extending a distance of 204 miles or the distance from Traverse City to 4 miles this side of Kalamazoo.

6. In 15 days Chicago's diversion of 216 million cubic feet per day would make a river 20 feet wide and 10 feet deep all the way across the United States (3,000 miles) in just 15 days.

7. Let's go a little further. We found that in 1 day we could build a river 204 miles long with Chicago's unique and unorthodox sewage treatment plan.

8. It's 25,000 miles around the earth at the equator. In about 123 days Chicago's daily diversion of Lake Michigan water would extend our imaginary river all the way around the earth (20 feet wide by 10 feet deep).

9. In 1 year—just 1 year's water grab—this river would wind itself around the earth three times. Or, if you prefer, we could have a river 60 feet wide by 10 feet deep by 25,000 miles long in 1 year. It's gotta be a leap year, though.

10. At the rate of 2,500 cubic feet of water per second, an area of 7.8 square miles would be covered with 1 foot of water in 24 hours.

11. In other words, the amount of water Chicago will swipe from Lake Michigan in 1 day, under the new authority would virtually cover the incorporated area of our city to a depth of 1 foot.

12. In 31 days, the amount of water diverted would inundate Traverse City to a depth of 31 feet, covering virtually ever home in the city and the downtown section to the height of the new street lights.

13. The whole Nation uses, for all purposes, in 1 day, only 143 times as much (231 billion gallons) water as Chicago will drain out of Lake Michigan in 1 day.

14. The Nation's entire industry uses 80 billion gallons of water per day which is only 50 times more than Chicago will chisel every day. Her water diversion for only 1 minute would process almost 19 tons of steel or rubber; 28 tons of craft paper pulp; wash 112.5 tons of laundry or test 22 aircraft engines—that is 1 minute of water diversion (1,125,000 gallons).

15. The amount of water Chicago will drain in 1 day would last Traverse City almost 1.5 years at our average rate of 3 million gallons per day. In 3 minutes they will take enough water to supply our city for 1 day.

16. The 1-day Chicago grab is equivalent to 8 times the average aggregate daily water requirements, for all purposes, of Michigan's 10 largest cities, excluding Detroit. Less than 3 hours of diversion would be enough to supply these 10 cities for 1 day.

17. The 1,620 million gallons of water Chicago will "rob" each day would weigh more than 13,500 million pounds, or 6,752,000 tons.

18. This weight (almost 7 million tons of water per day) translated into coal supply, would meet the requirements of the city light and powerplant for about 335 years, at its present rate of use.

Jay, 2,500 cubic feet of water per second is an innocent little figure as we read it and dismiss it without converting it into more familiar terms.

Most of the 50 million people in the Great Lakes area have expended millions upon millions of dollars to treat their sewage and return it to the public water in clean, safe condition. We've met our moral obligation. Why even a cat has enough conscience to recognize its moral obligation. Where is Chicago's sense of decency and duty?

As of 1955 it is estimated that 40 million Americans are face to face with water problems of either quality or quantity or both, and Chicago is going to pollute 7 million tons of it every day of the year. Nuts.

In one area I heard about (there may be others) an industry has to use sewage plant effluent (treated sewage) for its processing or cooling water—this is good and safe and it represents conservation in the finest and most commendable sense of the word, but Chicago is getting ready to pollute over a million gallons of beautiful Lake Michigan water every minute of every day of every year. Nuts.

I had to blow my top someplace with someone and you have always been so charitable as to give me your ear. Thanks—a million gallons worth every minute.

Respectfully yours,

N. G. DAMOOSE.

Justice for Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a statement made by me before the Committee on Interior and Insular Affairs in support of the admission of Hawaii as a State of the Union.

The statement follows:

JUSTICE FOR HAWAII

Mr. Chairman: In the last Congress, Alaska came of age; it is now long past the hour to end Hawaii's apprenticeship. It is an indisputable fact, that Hawaii met the traditional threefold test of eligibility for statehood.

Before analyzing Hawaii's eligibility, permit me to remind my colleagues of the three basic requirements demanded by tradition and precedent for admission. First, the people of the Territory must evince love for the ideals of American democratic government. Second, a majority of the electorate must express a clear desire for statehood. And third, the Territory must possess sufficient resources and population to support the cost of State government. I shall demonstrate that Hawaii has passed these tests with high honors.

The Hawaiian people have been drawn to America almost from the very dawn of their modern history. In 1820, 17 New England missionaries arrived in the archipelago; and before the passage of many years the natives in large measure were converted to Christianity and made familiar with the ways of the West. White whalers, traders, speculators, and sugar planters migrated to the islands in progressively greater numbers.

By 1842, five out of six ships calling at Hawaii were American; and Yankee cultural influence, despite strong British competition, rapidly assumed predominance. In 1842 a constitution modeled in part after that of the United States was adopted. Fourteen years later the people of this constitutional monarchy urged their king to negotiate for annexation to the United States. He complied, but the project was abandoned with his untimely death.

In 1893 Hawaii became a republic, and negotiations for annexation were immediately undertaken. A treaty linking the two republics was soon fashioned, but it was withdrawn from the American Senate by President Cleveland, who had not been in office when the Hawaiian revolution erupted and who disapproved of what he considered the unseemly haste by which the annexation convention had been drafted.

Four years later a new treaty of annexation was signed, but it, too, failed of ratification. Finally, sponsors of the treaty abandoned it in favor of submitting to Congress a joint resolution of annexation, the passage of which required only a simple majority vote.

The resolution was approved, and President McKinley signed it on July 7, 1898. Two years later, on April 30, 1900, the Organic Act for Hawaii was approved (to take effect June 14, 1900), and Hawaii thereby became an incorporated Territory.

Since 1903 the Hawaiian Legislature has petitioned Congress for statehood nearly a score of times; and from 1920 to the present time, approximately 50 bills providing for statehood have been introduced in successive Congresses. In 1947 substantive, if incomplete, action was finally taken. On June 30 of that year the House passed the statehood bill, but it died in the Senate. The same melancholy story was repeated on March 7, 1950 and March 10, 1953.

In 1954 the Senate saw fit to combine the Alaskan and Hawaiian statehood bills, and on April 1 of that year approved the dual measure. There are some who still maintain that passage was obtained only because assurance had been given the antistatehood bloc that the House would reject the joint bill, despite the fact that House support for Hawaiian admission alone was overwhelming. Whatever the reason, the prophets of disaster were vindicated.

In 1955, during the succeeding Congress, another dual bill was introduced, this time in the House. On May 10 of that year it was recommitted. This year there is before us only the single Hawaiian bill; let us pray that it will meet with a deservedly kinder fate.

Let us turn now from the representatives of the people in both Hawaii and the United States to the respective peoples themselves. In a 1940 plebiscite, the Hawaiian people voted 2 to 1 for statehood. A decade later they approved the proposed State constitution by more than a 3-to-1 majority. As for the views of mainland Americans (incidentally, the Hawaiians, of course, are just as much American as you and I), Dr. George Gallup has found that a decisive majority has supported statehood ever since pre-World War II days. More recently, the ratio of approval has jumped from 3 to 1 in 1946 to 8 to 1 in August of 1958.

We know that Hawaiians and their compatriots in the States want statehood. But are we sure that the islanders are loyal enough and Americanized enough to deserve such status? I say that the question was answered affirmatively long ago, and particularly so during World War II and its aftermath.

Immediately after the infamous assault on Pearl Harbor, rumors were rife, especially in the States, that Americans of Japanese ancestry engaged in the most heinous sabotage, even designating targets for the attacking planes. Mr. Robert L. Shivers, former special agent in charge of the Federal Bureau of Investigation in Honolulu from 1939 to 1943, gave the lie to such calumnies. He testified that all those rumors were false * * * and that sabotage and fifth-column activity was never engaged in at any time prior, during, or subsequent to the attack on Pearl Harbor.

Perhaps even more eloquently expressive of Japanese loyalty was the story of the 452d Combat Team and the 100th Battalion. The combined record of these units is probably the most remarkable one in all American military annals. Approximately 10,000 men, most of whom were Japanese from Hawaii, saw action in Europe with the famed outfits. Of these, 4,500 received Purple Hearts. The quantity, as well as quality, of other awards is equally impressive, particularly the 353 Silver Stars and 112 Army and division commendations. Crowning their glory was the fact that not a single one of these boys displayed the slightest cowardice. It's true that three of them went a.w.o.l.—from their hospital beds back to their foxholes.

The unmatched record of the Hawaiian soldier remained untarnished throughout the Korean conflict. Not a single case of cowardice or defection to the enemy was recorded. The battle-casualty rate for Hawaiians was three times as great as the rate per capita for stateside contingents.

One might well ask, in connection with statehood: So what? No one questions that the Hawaiians were brave, but does courage alone entitle a people to statehood? No, it doesn't; but it does prove that those "go for broke" Americans loved their county with an awesome passion. And certainly patriotism must constitute an integral part of any legitimate concept of Americanism.

Other manifestations of similarity with things American are widely prevalent. Despite the oriental heritage of large segments of its population, Hawaii's culture, for the most part, is American. And Hawaiians, regardless of ancestry, look to the west for guidance and emulation. Whether it be business, education, sports, politics, or mores, the pattern is always, and unmistakably, American.

Further evidence of the deep-seated Americanism of all Hawaiians—not merely the Japanese—lies in their chilly reception of the commonwealth idea. They refuse to trade what they consider their birthright for tax exemption. In other words, they insist on being recognized as first-class Americans, and demand the right to assume all the obligations that such a cherished condition would entail.

The Hawaiian people, I'm sure, are also aware that the imposition of commonwealth status would, in all probability, be unconstitutional. In *Downes* v. *Bidwell* the Supreme Court of the United States declared that "where the Constitution has been once formally extended [in all its parts, both fundamental and formal] by Congress to territories neither Congress nor the territorial legislature can enact laws inconsistent therewith." Mr. Justice Brown, in *Rassmussen* v. *United States*, another of the famous insular cases, asserted that "the exten[sion of] the provisions of the Constitution * * * once done, is irrevocable." It follows, then, that those who would remake Hawaii in the image of Puerto Rico are at least disingenuous when they extol the benefits Puerto Ricans derive from Federal tax exemptions. As an incorporated Territory, Hawaii is subject to section 8 of article 1 of the Constitution, which provides, in part, that "all duties, imposts, and excises shall be uniform throughout the United States." It is doubtful, to say the least, that Congress has the power, under the Constitution, to exempt the citizens of Hawaii from the applicability of this uniformity clause.

It might well be, too, that the Hawaiian people are cognizant that the promise of statehood—at least by implication—was tendered them long ago. Of the 31 incorporated Territories in our history, all but Hawaii have graduated to statehood. From a legal, or constitutional, standpoint, Hawaii is no different from its more successful predecessors. The Federal courts repeatedly have said that incorporation leads to statehood. In 1883 an incorporated Territory was defined to *Ex parte Morgan* as an inchoate state. About 40 years later, in *Balsee* v. *People of Porto Rico*, among many similar cases, the Supreme Court asserted that "incorporation has always been a step, and an important one, leading to statehood." Admittedly, the Organic Act establishing the Territory of Hawaii did not explicitly promise statehood; yet it must at the same time be conceded that precedent and judicial opinion, whether dicta or not, alike have considered Territories as destined for statehood after a reasonable period of tutelage. It would seem that 59 years is long enough.

It behooves us to heed the Hawaiian argument that statehood for the other 30 incorporated Territories has never resulted in failure. Almost without exception, these Territories experienced an immediate and marked expansion in population and in agricultural or industrial development following their admission into the Union. Above all, the people of those new States demonstrated that when they were their own masters, progress recognized no shackles.

The third requirement for statehood—the ability to pay for statehood—poses no problem for Hawaii. The islands constitute, in terms of financial solvency, the richest Territory ever to knock on the statehood door. The gross Territorial product of Hawaii for 1957 was about $1¼ billion, a figure twice as large as that of any other State at the time of its admission. In 1956 the per capita income exceeded that of 26 States, while the per capita tax burden was higher than that of 33 States.

Hawaii's population, estimated in 1958 to total 569,504, is larger than that of any one of five States, and is more than twice that of Alaska. It is also larger than that of any State at the time of admission except Oklahoma.

Now that it has been established that Hawaii merits statehood, it is in order to examine the principal benefits that would accrue to the people of Hawaii under statehood. They may be listed as follows—and no rights were ever more precious: (1) the right to full voting representation in both Houses of the U.S. Congress; (2) the right to vote for the President and Vice President; (3) the right to choose their own Governor and to carry on functions of government by their own elected officials instead of by Federal administrators; (4) the right to determine the extent of the powers of their own legislature; (5) the right to have their judges locally selected rather than federally appointed; (6) the right to have Federal and local jurisdictions clearly defined and separate; (7) the right to a voice in any proposed amendment to the Federal Constitution; and (8) the right to help write the Federal taxes. Can any reasonable person deny that these rights are basic to the American way of life; or that so long as they are withheld, no citizenship can be first class?

Benefits to the Nation as a whole would also be substantial. Among these would be (1) enhancement of national security; (2) favorable psychological effect on the peoples of the Pacific basis; and (3) inspiration to racial harmony on the mainland.

The strategic importance of Hawaii is obvious, especially so now that our Pacific military commands have been enlarged and moved to Oahu. Headquarters for the commanding general, U.S. Army Forces Pacific, are at Fort Shafter, in Honolulu.

Statehood opponents concede that Hawaii is stategically vital, but they profess to see no relevancy between military considerations and the statehood issue: Statehood, they argue, would have no effect one way or the other on our defense posture in the Pacific. Apparently they are all materialists; things of the spirit escape them. I say to them that the greater stability afforded local government and the greater popular pride in full citizenship under statehood would enable the Armed Forces to be supported materially in time of war more effectively from the twin standpoints of local economic assistance and local civilian cooperation. And the will of the people themselves to fight, should total war ever become our lot, would be immeasurably strengthened were they called upon to defend their own State—and not a colony.

I reply to the isolationists and the racists who sneer at world opinion and deny any need to impress the East with such a meaningful demonstration of the dynamism of democracy as the elevation of Hawaii to statehood would present, with the observation that the American people have indicated that in these parlous days it's a pretty good idea to miss no bets in the pursuit of friends.

Hawaii justifiably has been called the melting pot that melts. Although its people comprise diverse blood strains, the Territory has a unique record for interracial harmony and cooperation. With the closer association between the islands and the mainland which would accrue from statehood, continental Americans would become more acutely aware of the degree to which democracy is practiced in Hawaii. The example assuredly would have a salutary effect on race relations throughout the States.

The reasons for statehood as outlined above surely dwarf the importance of the opposition's arguments. Chief among these are the alleged dominance of communism in Hawaii, and the disproportionately large representation that Hawaii would enjoy in the Senate of the United States.

The communism scare is strictly a phony. The constitution of Hawaii, which the people themselves drafted a decade ago, disqualifies Communists from holding any public office. And dock strikes, which formerly were both embarrassing and damaging, have been rendered impotent by the enactment of a law enabling the Territory to seize and work the docks.

As for disproportionate representation, that question was resolved, legally and constitutionally, in the Connecticut Compromise of the Federal Convention of 1787.

Hawaii has met all the arguments, and they are hers.

I strongly urge the committee to act favorably on legislation to admit Hawaii as a State of the Union. I shall program the bill after it is reported for as early consideration by the House as is possible.

Foreign Aid and Other Factors Make Balanced Budget Unlikely

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. BROWN of Ohio. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and include therein an editorial from the January 21 issue of the Oakland (Calif.) Tribune, the Knowland newspaper. The editorial is as follows:

FOREIGN AID AND OTHER FACTORS MAKE BALANCED BUDGET UNLIKELY

"If we knew where we are and whither we are tending we could better judge what to do and how to do it," said Abraham Lincoln in his "House Divided" speech.

The challenge of the Federal budget shows that we have some tough decisions on "what to do and how to do it."

It is highly unlikely that the Federal budget will be brought into balance as long as over $3.8 billion is going into foreign aid.

Justified or not, the fact remains that this large sum triggers off demands for enlarged spending in all other Government activities.

It is time for the Federal Government to embark upon a program to terminate government to government loan and grant activities except perhaps for technical assistance to countries lacking certain "know how" in medicine, public health, agriculture and commercial problems.

These countries should seek to attract private capital not only from the United States but from other European, Asian or Western Hemisphere countries. The free enterprise system of the United States should not continue to carry heavy tax burdens to support public ownership and state socialism abroad.

To be sure this may be rugged for those countries that have come to look upon American foreign aid as an inexhaustible horn of plenty. But the issue has to be faced up to by them and by us.

Our Federal debt is approaching $285 billion. Interest alone amounts to over $8 billion a year, which is more than the total expenditures for all Government operations as late as the year 1938, and is greater than all receipts into the Treasury for governmental purposes as late as the year 1941.

In the opinion of this newspaper the administration has overestimated revenues and underestimated expenses. This is even more apparent when the reluctance of Congress to curtail appropriations or vote new taxes is taken into consideration.

The administration and the Congress together are the trustees of our future and should we become insolvent there is no country in the world that could or would "bail us out."

The time to put our house in order is now.

Four Chaplains Memorial Sunday

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. McINTIRE. Mr. Speaker, Dan Lambert, county commander of the Penobscot County Council, American Legion, and Theodore A. Johns, public relations director of the same organization, have provided me with the following announcement of an event which I feel eminently deserves the attention of my colleagues:

FOUR CHAPLAINS MEMORIAL SUNDAY AND AMERICAN LEGION RELIGIOUS EMPHASIS WEEK, FEBRUARY 1–8

On Sunday, February 1, 1959, our Nation will pause to honor the memory of the four military chaplains who perished on the troopship *Dorchester* in the North Atlantic during World War II. The courage and faith of these four men of God, representing all major faiths, should be an inspiration to us all.

As in previous years, the Penobscot County Council, Department of Maine, the American Legion, is taking the leadership in the promotion of the Four Chaplains Memorial Sunday. We call upon all members of the clergy in Maine and all posts and units of the Legion and Auxiliary to assist in the proper observance of this day of remembrance.

We urge that prayers be offered in all the churches of Maine for the spirit of freedom in our land and for peace with honor in our time. If we as Americans, take the shining example of love of God and country, as exemplified by our four chaplains then we shall have the strength to carry on the struggle for justice, freedom and democracy.

Coupled with the Four Chaplains Memorial Sunday, the American Legion is holding a special religious emphasis week during February 1–8. Theme of the observance will be the moral leadership and the part played by military service in building character. As veterans, we in the American Legion should be greatly interested in this program.

The National Broadcasting Co. (NBC) will air the American Legion's annual "For God and Country" telecast 2:00 to 2:30 p.m., Sunday, February 1, 1959. It will all be carried by the radio networks during the period of observance. We urge all to consult with radio and TV outlets in Maine for time and station. Following the program, we suggest you drop a note of appreciation to your local stations.

Never before in history of America have we had greater need for religious emphasis. Everywhere we turn, the forces of communism and materialism have religion under attack. Members of the Legion and Auxiliary began their meetings with the words "For God and Country," let us resolve to this pledge by contacting your local priest, minister or rabbi and acquainting him with the Legion's Back to God movement.

The sacrifices of the four heroic chaplains should bring to our minds that here in America there is no room for bias or prejudice in regards to race, creed or color. Any organization which uses bias or prejudice in regards to membership or activity is unworthy of the real meaning of the Four Chaplains Sunday and a discredit to our God, Flag, and Country.

The Four Chaplains Memorial Sunday and Religious Emphasis Week should also serve to awaken within our Legion posts and units the use and purpose of the post chaplain. All meetings should be opened and closed with prayer by the Chaplain.

Let us remember that religion is not something that can be fitted on like a new suit. One's real religion comes deep from within. Religion may be learned on Sunday but is lived in the weekdays, work. The torch of religion may be lit in the church but it burns brightly in the home, shop, and on the street. Religion seeks its life in prayer but lives life in deeds. It is planted in the soul but does its growing out in the light of the world.

Role of Business in Politics

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, January 23, 1959

Mr. KUCHEL. Mr. President, we are all aware of the increasingly active role being adopted by business and industry with respect to politics. There are hundreds of opinions on the relative merits of such participation. I recently read the opinion of one of our young industrial leaders which I believe will be of considerable interest to my colleagues and all who have the opportunity to read and evaluate it.

Henry J. Kaiser, Jr., vice president of Kaiser Industries Corp., stated recently in a speech before the annual conference of the United States Savings & Loan League in San Francisco:

Business must concentrate on political leadership, not political partisanship. Our job is one of education, not one of persuasion.

This young industrialist also called for more cooperation between labor and management. He stressed that it was "high time that management and labor realized they have a common responsibility, the American people." I submit that this is an enlightened and constructive approach to a problem that is causing business and industry considerable concern.

I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CITIZENSHIP RESPONSIBILITIES OF CORPORATE MANAGEMENT

Up until a short time ago—perhaps some of you out-of-staters may not know this—there were trains running back and forth across the Bay Bridge, between San Francisco and Oakland.

They were a part of the bay area—these trains—like the ferryboats used to be.

One day, about 6 months ago, they took the trains off the bridge, and put on buses instead. It was cheaper to do so. Well, we have a little boy, who's just turned six; and little Henry—this is a rather popular name in our family—had come to love those trains. He loved to ride on them, whenever he could. And he had set his heart on becoming an engineer, when he grew up, so he could gain permanent possession over them.

I explained why they had to take the trains away, and how they would have to charge the people a lot more money, for riding them.

A short time later, when he was riding across the bridge with his mother, he suddenly turned to her, and said:

"Mama, when I grow up, I'm going to be a bus driver."

Asked why he had decided on this career, he replied: "Because when I become a bus driver, I'm going to charge the people so much money that they'll have to take the buses off, and put the trains back on again. Then I'll be an engineer like I've always wanted to."

Well, when my wife came home and told me that story, I was floored. That's planning, I told myself. That's really looking ahead.

And I thought I'd like to tell that story here today, friends, because I think it illustrates, what we all like to do, when we have the opportunity. To plan. To think far ahead. To have a goal, and stick to it. Trouble is, when you're grown up, it's sort of difficult now and then, to look out over the breakers, and find out which way you're heading.

I think that's why we've gathered here today, to plan. That's why we have conventions, to find for ourselves a course of action.

I look at this gathering today—at all you men and women of experience, ability, judgment—and what do I see? I see a much larger convention, than the one assembled here. I see this as representative of the business community across the United States. You are asking the questions businessmen everywhere are asking. Where do we go? What is our relation to society, to labor, politics, government—the general public?

I don't think there's been a period in our history, when we've been asking so many probing questions of ourselves. And I say this is a good sign. Suddenly we are coming to life. Almost overnight as it were, we are catching up to our physical growth as a nation. We are becoming mature, perceptive, aware.

We turn to our educational system—we American people—and we say, "It is not strong enough." And we take immediate steps to improve the curriculum—deepen it.

We do the same with all other segments of our society. Not a single group escapes its share of analysis and criticism.

The business community is certainly no exception. On the contrary, I think we businessmen have been at the very center of this cry: "What's wrong with America?" The businessman is an easy target. He is a man who is concerned with material things: profits, capital gains, plant investments, production curves, tax carryovers. He borrows, and lends. He is powerful. He is also a stereotype.

The existence of this stereotype should concern all of us, deeply. For as long as this false picture of the businessman exists, just so long will we be looked upon as a special-interest group, whose interests run counter to those of the American people. And what is this picture, this stereotype? Unfortunately, it is almost always a negative one, and one which we ourselves, have helped to create. The businessman is pictured as someone who is antilabor, antigovernment, anti-free-trade, antiprogress, in any shape or form. He is a man who stiffens his back, the moment anything new comes along. And if he supports such things as the United Crusade, he does so only when he is given assurance that his gift is tax deductible. In short, he is a man who resists things.

Like it or not, this is the way we are pictured by a great many Americans. Is the picture a true one? Do we really resist change? Are we really against progress? Do we lend support to our communities only when we feel we can get something in return? No, of course not. The very opposite is true. Then why aren't we doing something to correct this picture?

I think we are. I think the business community today, is far more conscious of its social obligations, and community responsibilities than it has ever been before. We still have a long way to go, however. Too often, we are still substituting hopeful resolutions for quiet actions, ringing phrases, for simple deeds.

I have been asked to talk to you about the citizenship responsibilities of corporate management. Since there is always a danger in trying to say too much to a group of experts, I will merely examine this topic of ours quietly with you, if I may—and see what we can discover, together.

* * * * *

A "convention," says Webster, "is a meeting or assembly * * * for action on particular matters." I like this word "action." I think it is time for the business community throughout this Nation, to take action, not merely for its own benefit, but for the welfare of this country. And on what particular? On a very vital one, that of leadership.

A century ago, it may have been all right for a corporation to come along, and run its business with little or no regard for its neighbors. A century ago—less than that; only as far back as the twenties—many businesses were operating in just this way. Communications, transportation, machines, bigness, hadn't thrown us all together as yet. Our destinies as a people were still to be worked out. New land was yet to be discovered and developed. Mass production on the scale we now know it was something in the future.

Today, you can locate your plant on a hill, if you like, but you're really right down in the center of town, on First and Main Streets. And what you do—especially if you're a fairly large business or industry—affects the farmer, the realtor, the housewife, the banker, the school-board—everybody. Furthermore, because your marketing and sales area, may extend across this Nation, you've got to think of your "community" in exactly the same dimensions.

We've got aluminum plants in West Virginia, Louisiana, Washington, and in several other States as well. We've got a steel plant down at Fontana, Calif., a coal-mine in Utah, and more coal mines in New Mexico. We make Willys Jeeps in Toledo, and in several foreign countries as well. We produce cement up and down the Pacific Coast, and ship it to Hawaii and Alaska. And we produce parts for guided missiles here in California and back in Bristol, Pa. All told, we turn out 300 different products in 78 plants covering 17 States and Territories, and 5 foreign countries.

Eighteen years ago—in 1940—we had only five plants, all of them located right here in the State of California. Today, we've got 64,000 employees, 78,000 stockholders, and sales of more than one billion dollars per year. So we've known what it is to grow, and take on responsibilities. We've known what it is, to pioneer, too.

* * * * *

A short time ago, I ran across an article in a magazine which shocked me. The central figure in this article—a very successful businessman—was asked why he didn't engage in "community relations". His reply was something to this effect: "When the going gets rough, the community will only be thinking of itself. All this welfare stuff, and hoopla about 'improvement'—won't amount to a hill of beans."

This article disturbed me. For here was a seemingly intelligent man—with a highly successful business—whose attitude toward the community was: "What can I get out of it, by helping others? Where is the payoff? Show me how I can serve my own interest—and I'll do something about this community relations stuff."

To me, this attitude is not only thoughtless—but by being thoughtless—it is dangerous. For if all of our responsible leaders—our men of influence and standing—were to neglect their moral responsibilities in this fashion, we would not endure as a democracy. We would not deserve to endure. A community's strength is our strength. Who prospers in a strong community—if not the businessman? And who suffers when a community is allowed to fall apart, through negligence and indifference—if not the businessman?

For a concrete illustration of this community-business relationship, take a look at our urban renewal programs. No one will deny the enormous benefits to be derived from upgrading our cities—and eliminating unsightly slums.

Here's a real opportunity for our financing institutions. You savings and loan people, together with banking establishments, can play a major role in the rebirth of our communities. Together, you can provide the monetary means of transforming substandard dwellings, into liveable and valuable properties. You have done this already in Cleveland—and it's been a terrific program. Savings and loan firms in that city, have become corporate parts of their community. They have joined the family. More efforts such as these, will help us meet one of the major challenges, facing private enterprise. Namely, the challenge of initiative.

If we are to minimize the need for Federal support of such slum clearance, and urban renewal programs, we have to step in, and roll up our sleeves, and get the job done on a voluntary basis. Each of you would do well, on returning to your communities, to analyze your own needs for urban renewal. When you find that there is a job to be done you must accept such a challenge as a real opportunity.

* * * * *

We have a responsibility to our communities—farm and city alike. But particularly, we have a responsibility towards this private enterprise system. Nature helped build this system of ours. She gave us new land to work with, immensely rich resources, room to live in, and expand, and a chance to work out our individuality, in a frontier world. Now, all that is gone. From here on in, we alone are responsible for the continuance of democratic government. If we prove ourselves too self-interested in our goals and actions, we will lose every advantage we now possess. If, on the other hand, we recognize that these so-called responsibilities are really

blessings—wonderful blessings—we will prosper as never before. For to be responsible, is to be free. How responsible do you suppose you would be in Moscow?

You hear a great deal about how much corporations are doing in community affairs. And much of this is true. But there are also quite a few businesses—large and small—who are still trying to get by with the lipservice, of tax-deductible donations. Certainly, a businessman's first job is to run a successful business. Too often, however, he forgets that he is also a citizen, and a leader. If we, as businessmen, do not take the lead in community affairs—in education, industrial development, slum-clearance, welfare support—who will? Labor? Perhaps. Right now, it's doing a pretty good job along these lines. The Government? Very likely. And what do we mean when we say "the Government"? We mean "that organization which must step in, and do the job which we have failed to do."

Friends, the moment we all recognize, really understand in our hearts and minds, that "business" and "community" are merely two different ways of spelling the same word, our future will be more secure.

Business will advance according to the breadth of its viewpoint. This in turn will call for breadth of participation. And when do we assume responsibility? When it suits us? When we hope to gain something out of it? You can always gain something out of responsibility. To wait until a tit-for-tat situation develops isn't leadership; it is horse trading. Times have changed Times are tougher now. The laggard is not going to be tolerated. The freeloader will find himself unloaded, but fast. We will survive if we are fit to survive. And the test will be made in the area of intelligence. Horse trading is a thing of the past as far as survival is concerned. When you hold as many cards as we hold, you don't trade on them, you play them for the benefit of the entire house.

* * * * *

One of our firms—Kaiser Metal Products Co.—is located in Bristol, Pa. We have two plants there. One plant produces bathtubs, kitchen cabinets, sinks, and so forth, and the other turns out subassemblies for guided missiles like the Polaris and Minuteman. I went back there about a month ago to speak with our men and also with the men and women of the community.

In one of the talks I made I stated something which I would like to repeat here today. I said that I felt it was high time that management and labor put away their clubs and started working together at a round table instead of a long and narrow one, where labor sits glaring on one side and management glares back from the other.

I said I felt it was high time that labor and management recognize they have a common responsibility—the American people.

We've uncovered a few bad apples among labor unions. And we're getting ready to enact legislation which will help prevent such individuals from again seizing power and abusing that power. But this legislation, let us remind ourselves, is being introduced for what purpose? To curb, possibly to break, unions? No—to benefit and protect the working man. There's nothing wrong with unions. Unions are a strength in America. They insure against the abuse of power on the part of management. They are necessary to our industrial way of life. And some of our greatest patriots, our most sincere advocates of the free enterprise system, are to be found within the ranks of labor.

It was not so long ago, if you'll remember, that business had to undergo its own housecleaning. Legislation had to be passed to protect the American people from monopolistic practices, unfair trade usages—price fixing and the like. Was all business to blame? Not by a long shot. But loopholes had to be filled to prevent the unscrupulous few from engaging in practices which would wreck the economy.

So today, instead of joining in the popular hue and cry that all labor is suspect of racketeering, because of a guilty few, we should find a means of bringing about reform, quietly, sensibly, and in a spirit of cooperation.

In this election year, one hears a great deal about the need for businessmen to take a more active part in politics. You hear this each election year, and in many cases it's a good sign, and a necessary one. The business community can ill afford to remain aloof from politics. The legislation that is passed each week, and each month, on the local, State and Federal levels affects each one of us. And so we have to make sure our interests do not fall by the wayside, through default.

At the same time, however, I think business must beware of assuming a partisan role in politics. I do not think it is the proper function of business to march the streets with placards or to tour communities from one end to the other in support of such-and-such a candidate or proposition no matter how favorable the cause.

We cannot afford to place ourselves in the position of becoming a power bloc. This is just what the unions have been accused of doing—pressure politics. Indeed, union-supported campaigns are being looked upon with increased suspicion because they are politically obvious. Is the union really campaigning for the interests of the workingman? Or is it merely out to increase its own power? Reverse the picture. Put business in the campaigner's seat. And recall, if you will, the stereotype which we discussed earlier. Will the American people consider that such partisanship is truly in their interest—or will they feel that we are merely trying to augment our own power? Labor stands here—business stands there—they say. But what about the great huge public which stands in between?

My friends, we can't tell people how to vote. Our job is one of education, not one of persuasion. Let us become active politically, by communicating both sides of an issue to our employees—so that these men and women may more intelligently support that legislation which will mean good government for all people.

This is still a free country, friends. The American citizen still—thank heaven—enjoys the privilege of making up his own mind. It would be the height of impertinence for a corporation to gather its employees together in order to tell them how to vote.

No, where business must concentrate its powers and energies is in political leadership, not in political partisanship. Let us work to inform our employees, our own managers, of both sides of a proposition, reserving to them, the sacred right of deciding for themselves how they will vote. Business will do itself a grave injustice if it attempts to combat labor on its own terms. For this will only serve to prove to the general public that labor stands here, and business stands there, and that this position is an irrevocable one, nothing can change it.

Friends, I ask you, seriously, go outside now and stop the first 10 people you meet and ask them this one question, "Who do you believe truly represents the interest of the workingman, labor or business?"

You know what their answers would be as well as I. Labor has succeeded in identifying itself with the workingman's interests, and business has foolishly, thoughtlessly permitted this to happen.

So this is our challenge: To find a means of identifying the interests of business with the interests of the workingman—and by workingman I don't mean just the fellow with the lunch pail. I mean the people who are employed in business and industry, in any and all capacities, wage earners and salaried personnel alike.

And we accomplish this, not by words or slogans, but only through the sincerity of our actions. By supporting legislation which will benefit the majority of the people, whether it concerns our own affairs or not, we will conclusively prove that our true interest lies in the welfare of society in general. By taking the initiative in progressive measures which can benefit our employees, we, one and for all, will be taking a big step toward eradicating the stereotype which pictures the businessman as a self-interested profiteer. Actions, mind you, not words.

This should be the manner in which we business people answer this challenge to immerse ourselves in politics, not as partisan advocates, not as Republicans or Democrats, not as ax grinders for special interests, but as political leaders who intelligently communicate with our employees and the local, State, and Federal legislators who can use our support. We must prove that business is as close to the people, to the wage earner, emotionally and spiritually as the labor union.

Only in this way can we maintain the advantages of a free economy which, by its strength and purpose, can withstand the threats of socialism or supergovernment control.

What does the worker want which is so different really from the desire of the businessman? Security? That's what we are trying to build into everything we do. We want our plants, our businesses, to grow on firm foundations. Higher pay? We're not against higher pay, because higher pay means more security, more incentive for advancement, and higher production. Higher pay means higher living standards, greater purchasing power. What we are against are higher pay demands which are unrealistic and which will damage the security we are trying to build, especially the worker's security. Why? Because such demands will end by undermining our companies and the workers' own jobs. So why don't we tell our employees this? Why wait until the union tells them that here's that old stereotype at work again, the fellow who always resists things, the fellow who's antiprogress? We should be taking the initiative wherever possible. As long as we permit others to interpret our motives for us, we cannot hope to have the values we support made clear and reasonable.

We have a job of communications, then, and a job of education as well. And perhaps this is as far as our partisanship should go—to put forward, in clear light, the values which we know are essential to a prospering community. We should encourage our employees to thoroughly study the background of candidates and issues so that they may become better citizens. We should encourage them to make use of their own resources in order to arrive at their own political evaluations.

* * * * *

It does little good for the business community to buy full-page ads in a newspaper, bragging about how good our system is over another. The ads we buy must be our actions, and our ability and willingness to serve, as well as to make profits.

Speaking of profits, the best profit-sharing plan I know of is the one where all of us—business, labor, and general public, the community—work together to earn for ourselves, a share in freedom, prosperity, and continue high production.

So, to sum up, I would say that the citizenship responsibilities of corporate management should be these:

First, to actively work with, and support our community, locally, and on the State and Federal levels.

Second, to identify the interests, and objectives of business, with the interests and objectives, of the workingman, and workingwoman.

Third, to improve our communications, between management and employees, particularly in the political field. To acquaint our people with both sides of political questions, and to encourage them to exercise mental initiative as voters. I like to believe these people are intelligent—I know they are—and I think the most intelligent thing for us to do, is to operate on this principle.

Fourth, to seek the passage of legislation, which will benefit the community as a whole, regardless of selfish, or short-range interests. For through such action, we will help insure the continuance of free institutions, in this country.

Fifth, to take the initiative in finding a common ground, in which to work with labor and the community. To extend a hand to the working citizen, and the labor union, and to bring about a speedy resolution of our differences.

By doing all of these things now, I think we will find the means of withstanding not only the threat of foreign ideologies abroad, but the dangers of division and mistrust, here at home.

Thank you, friends, for this opportunity. Good luck, and God bless each and every one of you.

New Products Boost Economy

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the January 8, 1959, edition of the Roseburg (Oreg.) News-Review. Reporter Brad Slack recently visited a plywood manufacturing plant in my district which today is manufacturing a new product and helping bring to Oregon diversified production. An account of this process follows:

PACIFIC PLYWOOD FLOORING PRODUCT ATTRACTING INTEREST AMONG BUILDERS—SALES BOOM AFTER YEAR ON MARKET

Pacific Plywood Manufacturing Co. at Dillard has introduced a new idea with a new product in this area that may lead the way to an increased and more diversified production of wood products.

Long recognized as the Northwest's timber capital, the Roseburg area is known for the excellent plywood boards turned out here. However, while serving scores of needs in American industry, many of the plywood products are completed or finished elsewhere such as California, the Midwest, and even eastern United States.

Pacific Ply, with its new Par-Tile product scarcely a year old, is providing a major breakthrough in one respect. The tough but beautifully grained building board is a finished product when it leaves the sheds of Pacqua division at the company mill.

And it is beginning to sell. Since September 1957, when the first Par-Tile squares were packed in cartons for shipment, architects and contractors as far distant as Chicago, Dallas, San Francisco, Los Angeles, Phoenix, and Seattle have begun to recognize the product for its strength, durability, low cost, warm good looks, and simplicity of installation.

PRODUCT WITHSTANDS WEAR

Diversified, it has a soft, sound-absorbing quality that makes Par-Tile adaptable for wall paneling and flooring. Tough enough to withstand long and rough wear, it can be used in schools or office buildings, homes, and playrooms. It will stand up readily under the pounding of a basketball court, and is simple to maintain.

The president and general manager at Pacific Ply, Bill Forrest, thinks the company has something really good.

"What makes me happy," he said, "is the fact that we've found another use for the fine lumber in this area. Up to now we've been able to develop uses for only about 50 percent of the logs brought in from the woods.

"Development of Par-Tile shows that the Roseburg area can turn out a finished building product rather than sell just the board for completion by some other plant far away. I think this area could do more of this kind of manufacturing." Forrest added, "and be less dependent upon outside companies."

FINISHED PRODUCTS NEEDED

He is convinced, he said, that development of finished products would be a definite shot in the arm for the local economy.

Bill Gray, assistant sales manager for particle board and Par-Tile at Pacific Ply, reports enthusiasm everywhere for the new product, once it is tried. "Our biggest job," he said this week, "is to acquaint builders and architects with the product so they can write it into specifications. We have no trouble selling the material once people become acquainted with it."

A little over a year ago the first 250 cartons of the 9¼-inch-square Par-Tile products were shipped from the Dillard plant, 80 pieces to the carton. The squares are three-eighths of an inch thick and ready for laying upon arrival.

To protect the unique and versatile wood product Pacqua Division engineers, headed by Bill Cooke, manager, have patented a method of scoring the unfinished bottom of the board pieces into small squares. This not only provides manufacturing rights, but is a major feature of the product, according to Cooke.

SQUARES EASY TO LAY

"The scored underside of the material fits easily and quickly onto mastics used in laying flooring," he explained. "It is very good to put down on cement or concrete."

Called "Flexo-Grid scoring," it is a most important feature in the manufacturing, and done on a special machine with rotating, hard steel saw blades.

The product itself is made from small chips or slivers of wood, treated under heat and pressure after being mixed with a special resin formula developed in Cooke's laboratory. The manager first began experimenting with the idea 5 years ago at the Oregon Forest Products Laboratory at Oregon State College where Cooke was lab head for the State Board of Forest Research.

Particle board was an earlier product to be developed at the Pacific Ply plant. Par-Tile is similar, though subject to special treatment and considerably more pressure. About 15½ tons of pressure is applied in the process of preparing the board which is produced in sheets 8 feet long and 4 feet wide under hydraulic pressure.

OTHER WOODS UNDER STUDY

The company now is experimenting with other native Oregon wood such as oak and cedar, although manufacturing to date has been exclusively with Douglas fir.

Two weeks ago a night shift was added at the plant as orders for the new Par-Tile product built up. Soon about 5,000 cartons daily will be packed and shipped at Dillard. Thirty persons have been hired to turn out the product and the night shift has required four to five more on a regular shift. Forrest expects about 50 or more persons will be needed when other machines are delivered to speed production.

Under tests the Par-Tile product has nine times the wearing power of cork, and six times that of many floor tiles. It is considerably more durable than regular oak flooring, laboratory tests show.

Cooke explains that by using chips or splinters the product, under pressure, has greater density and uniformity of strength than some of the hardest woods.

ADVERTISING PROGRAM STARTS

Gray now has begun an extensive program for acquainting the public with the new product through newspaper, radio, and TV advertising from Chicago to the west coast. Just last week the company got an order, its first locally, for flooring a considerable part of the Winchester School north of Roseburg which is to be remodeled.

This is the way the product has been selling, and one reason why the Pacqua division material has a long backlog of orders.

Rumanian Freedom

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from a speech made by me Thursday evening, January 22, 1959, on the occasion of the dinner given by the League of Free Romanians in Washington, D.C., commemorating a century since the reestablishment of Rumanian independence:

Mr. Farcasanu, ladies and gentlemen, the event we commemorate this evening is indeed a historical one. It commemorates the 100th anniversary of the firm intervention of the Western Powers in order to reestablish the independence of Rumania's lands and thus stem the Russian invasion in Europe, suggests a definite similarity as to the basic facts of today's situation.

A century ago, Moscow imperialism was making aggressive inroads toward the heart of Europe. It was at that moment, after a long and bitter experience, that the Western Powers realized that asquiescing in Russian encroachment in Eastern Europe was not the proper method to insure the balance of power in Europe. The security of nations in Europe depended on checking the Russian advance, or peace in Europe would be in permanent jeopardy.

At the Treaty of Paris in 1856 a successful attempt was made to substitute collective action on the part of the concert of Europe for aggression by Russia. Today a greater alliance of free people is confronted by the recurring and intensified danger from Moscow under communism. This danger has spread from the relatively small area of Eastern Europe to the greater part of Asia. The problem which now faces all those who stand for freedom is to stop the expansion of a ruthless Soviet tyranny aiming at world domination. The dimensions and implications of this issue are far greater today. The new feature of this Soviet drive for world dominion is its implacable and universal subversive organization.

As chairman of House committee investigating the Katyn Forest massacres, I had the sad opportunity to go deeply into the ruth-

lessness of Soviet Communist schemes. The coldblooded killing of thousands of pro-allied Polish officers and civilians was done with the same cynicism and purpose as the wholesale murder of the Hungarian freedom fighters; the purpose being, by physically liquidating the fighting elite of these nations, as they did also in Rumania and elsewhere, to destroy the backbone of independence in the respective countries.

But in spite of it all hate for Soviet-Communist domination is deeper than ever. That is one of the reasons why, in Rumania for instance, the Soviets have organized the largest concentration camp in Europe, the Danube-Black Sea Canal and recently, after the Hungarian uprising, the Danube Delta slave-labor camp. It is reported that this Danube Delta camp is an international pool of slaves, where besides Rumanians there are Hungarians, Poles, Koreans, Germans, and others.

These are a few features of a situation on which the Soviets would like us to make new agreements implying fresh concessions either in the West or in the East. Such concessions would consolidate and augment the menacing strength of the aggressive Red bloc.

I am sure the American people now sense the inherent danger latent in any new concessions. Our own security requires, on the contrary, that we uncompromisingly follow a policy of restoring freedom to Rumania and other Soviet satellite nations.

The following is a statement by Rev. Father Eugene Lazar, of 1133 Madison Street, Gary, Ind., made at a dinner given Sunday, January 25 observing the 100th anniversary in East Chicago, Ind.:

THE CENTENNIAL OF THE UNION OF THE PRINCIPALITIES OF MOLDAVIA AND MUNTENIA UNDER ALEXANDER ION CUZA

Saturday, January 24, marks the observance of the 100th anniversary of the Union of the Principalities of Moldavia and Muntenia under Alexander Ion Cuza. The event is one of the most important in the history of the Rumanian people.

The 19th century was a time of flourishing idealisms and of realizations for the national state. Some of the most recent writings claim that the beginnings of such attitudes are to be found in the 16th century writing of Machiavelli. It took much time before it came to the attention of the political and spiritual leaders of Europe, that the people aspired for a free and independent national life. The completion of this movement commenced with the unification of Germany and of Italy in 1870–71. The principles of self-determination of President Woodrow Wilson and of the peace treaty of Versailles, which had adopted this principle, further solidified this world change.

A hundred years ago when Rumania was not to be found on the maps of Europe as it was known in later years, brothers of the same nationality and blood of the two principalities of Moldavia and Muntenia were forced to fight each other for the ambitions of foreign sovereignty. Rumanians decided to end this situation with the election of the same sovereign in both Moldavia and Muntenia in the person of Col. Alexander Ion Cuza.

During that period of time the peasants were exploited without any compassion by the lords, who in the majority were foreigners.

Alexander Ion Cuza, who himself was the son of a lord, understood the peasants' situation better than anyone else, and gave heed to the cry and aspiration of the peasants, and began to give justice to the people, and gave to the people some of the land that they had worked for their masters.

This certainly could not have been of any liking to the lords and therefore began to maneuver through the liberal and conservative party to force Cuza to resign. The first try at dethroning Cuza, the "lord of the peasants" was in 1865, during the absence of Cuza from the country.

To a great extent the parallel can be made between Lincoln and Cuza, each in his manner—unifying a torn country and freeing those that had been oppressed. Another Cuza will arise, not only in Rumania, but in other Iron Curtain nations, and destroy the Communist tyrant and restore liberty and self-government. Freedom-loving people throughout the world hope that day is not far distant.

Huntington, W. Va.: All-America City

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. HECHLER. Mr. Speaker, it is with great personal pride that I rise to announce that I have been informed that my hometown of Huntington, W. Va., has just won the coveted title of "All-America City," and will receive 1 of the 11 annual awards presented under the joint sponsorship of the National Municipal League and Look magazine.

For Huntington, this has been a dynamic decade of progress. The progress has been achieved through the unselfish cooperation, hard work, and good will of many dedicated Huntington citizens.

Mr. Speaker, the American city is now our frontier of progress. I am sure that municipalities throughout the country will draw inspiration from the example of Huntington, W. Va., and the other 10 all-America cities.

I ask to have printed at this point the main steps listed in Huntington's application for all-America honors, followed by an editorial in the January 22, 1959, issue of the Herald-Dispatch, of Huntington, W. Va., entitled "Go Ahead, Huntington."

The articles follow:

STAIRWAY TO HONOR—CITY'S ACHIEVEMENT LIST IS IMPRESSIVE

Here are the main steps in progress which were listed in Huntington's application for all-American honors:

Nineteen hundred and forty-eight: First of 4 successive 3-year school levies which provided improvements and the addition of 282 classrooms, 27 gymnasiums-auditoriums, 42 kitchens, 4 libraries, and 2 band rooms.

City-county health department formed.

Huntington Industrial Corp. raised $40,000 to purchase airport site.

Nineteen hundred and forty-nine: Tri-State Airport Authority organized under State legislation demanded by the citizens of Huntington.

Nineteen hundred and fifty: Excess levy voted for four municipal swimming pools.

Voting machines used first time following legislative action demanded by citizens of Huntington.

Nineteen hundred and fifty-two: $3 million bond issue voted to build 237-bed Cabell-Huntington Hospital.

Opening of $600,000 Huntington Galleries.

Central Ohio Valley Industrial Council formed with Huntington leadership.

Nineteen hundred and fifty-four: Opening of four municipal swimming pools.

Public subscription of $325,000 to equip Cabell-Huntington Hospital.

Purchase of permanent theater by Community Players.

Organization of United Fund with 27 participating agencies.

Nineteen hundred and fifty-five: $650,000 bond issue and supporting 3-year excess levy voted for 33-mile street resurfacing program.

Formation of Huntington production pool by small industries.

Organization of All Huntington Association to obtain council-manager charter.

Nineteen hundred and fifty-six: Citizens voted 12,005 to 6,130 for drafting a new charter and elected 10 manager plan proponents to 11-member charter board.

Excess levy voted to retire $940,000 debt against Memorial Field House.

Cabell County bond issue of $1 million plus Wayne County bond issue of $225,000 voted to obtain matching Federal funds for Tri-State Airport.

Twenty percent increase in property assessments and property reappraisal demanded for school purposes.

Nineteen hundred and fifty-seven: Council-manager charter adopted by vote of 9,577 to 5,330.

Election of seven All Huntington Association-endorsed candidates to seven-member council.

Nineteen hundred and fifty-eight: Transfer of $170,000 levy by county court to board of education for recreation and library purposes.

Public subscription of $51,696 to purchase 226 acres of additional park land.

In addition, there are listed dozens of projects of various organizations which were not citywide in their impact.

GO AHEAD, HUNTINGTON

Go ahead, Huntington.

The Herald-Dispatch not only desires that Huntington go ahead but urges the city to adopt "go ahead" both as a prevailing attitude and slogan.

This newspaper this morning rejoices with the community that Huntington has been signally honored by being named an all-America city, 1 of 11 so chosen by the National Municipal League and Look magazine because civic groups continually pressed for civic improvements.

We join in congratulating those civic leaders who worked so valiantly for those improvements for which Huntington is honored and those persons who so ably stated the city's case before the all-America city awards jury last fall.

We all may take justifiable pride in the fact that the name "Huntington" today is being recognized nationally as a community where accomplishment is possible.

But elation, however pardonable, must be tempered with the fact that we cannot and must not rest upon the laurels of past achievement. That way lies stagnation.

We can be proud, yes. But we have not reached the millenium of municipal excellence—far from it. The criterion for the award was not civic perfection, it was accomplishment through continuing citizen participation.

There is only one direction for Huntington to go today—"go ahead."

Our problems are still multiple and complex. But we, situated as we are in the everexpanding Ohio Valley, have an unrealized potential for growth in all fields.

Continued growth means continued citizen participation.

It means continued citizen awareness, continued citizen desire to have even a better community in which to live. As in the past, it shall be the welcome task of the Herald-Dispatch to keep the citizenry aware and informed of those goals toward which it should be striving.

When one follows a city's progress day by day it is easy to lose sight of long-range gains. For that reason we review briefly the accomplishments gained over the past decade, the merits of which led to Huntington's being honored.

We have a new hospital, a new tristate airport and memorial fieldhouse. A street resurfacing project was undertaken and municipal swimming pools were built; 4 excess school levies were approved by the voters and 226 acres of land added to the park system.

We achieved a 20-percent increase in property assessments and property was reappraised. A council-manager charter was approved.

These accomplishments did not come about overnight, and they did not happen by themselves. They were accomplished because someone cared enough to assume the community leadership. They were accomplished because the programs were worthwhile and had a broad basis of community action and underlying community support.

None of them were accomplished easily. All change, all expediture for change brings with it opposition—sometimes bitter and temporarily victorious opposition.

There is only one way for Huntington to go—go ahead.

Huntington receives more than an honor today. It has learned a valuable lesson.

And that is that any community improvement must have as its base concerted citizen action. It has to be wanted badly enough for representatives from all walks of community life to band together to see that it gets done.

Cabell County is making preparations for the celebration of its centennial. This is an event not totally divorced from today's theme of municipal recognition. The centennial itself should serve not only for a fond look at the past but as a springboard for future growth.

The nearness of the centennial further serves to remind that Huntington's growth and accomplishments did not transpire only in the past decade. It has been a long, continuing process and we today are in no small measure reaping the benefits planted by unsung community leaders of a century ago.

The Herald-Dispatch has great faith in Huntington and the tristate area which Huntington serves. But we gain nothing by denying or ignoring existing problems.

Huntington and this area need new industries. We need new and adequate highways to attract those industries. We need a new bridge across the Ohio River. Much remains to be done to make our present airport adequate for the jet age. We have a downtown parking problem. More street resurfacing is needed. The community has a great stake in an expanded Marshall College. Local schools face a financial dilemma. We need a modernized city market. A municipal wharf and expanded river terminals are called for if the city is to continue to grow. Urban renewal and zoning lie just ahead.

Any list aiming at community betterment could be endless.

Huntington has been honored primarily because of continuing citizen action.

Such citizen action must not stop with the award. Too much remains to be done. It can be done.

We do not pretend for a moment that it will be easy. There probably won't even be any prize for it. Its only reward will be headache, heartache, disappointment, delay, brickbats instead of honors. It will be done because a handful of dedicated people love Huntington. It will be done because the citizens of Huntington have the will to do it, and the good commonsense to band together to see that it gets done.

Go ahead, Huntington.

Sioux Falls, a City With a Heart, Lifts Her Mentally Retarded Children

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. McGOVERN. Mr. Speaker, America's most precious resource is the minds of our children. Aside from the humanitarian considerations at stake, we cannot afford to ignore the mental development of a single one of these young minds. This is true of the gifted child, the so-called average child, and the youngster whose mentality is retarded.

It was a genuine satisfaction to me in the last Congress to sponsor legislation that was enacted into law which is designed to assist mentally retarded children. There are approximately 1 million of these children in the United States. Unfortunately, only about 15 percent of them are being given the opportunity to learn under the direction of specially prepared teachers. The legislation passed by the 85th Congress will help solve the critical shortage of qualified teachers by providing a modest Federal grant to encourage the training of teachers to meet the problems of mentally retarded youngsters.

I am very pleased that citizens in my own State—South Dakota—are moving ahead in providing special education for mentally retarded children. A recent article by Mr. John Wooley appearing in the Sioux Falls Argus-Leader of January 11, 1959, relates some of the remarkable progress being made in this field by the Sioux chapter of the Association for Retarded Children, whose president is Mr. Bill Green. Under unanimous consent I ask that the article be printed at this point in the RECORD.

IGNORANCE, APATHY SEEN—SIOUX FALLS RETARDED BEING REHABILITATED

(By John Wooley)

Day by day, week by week, one step at a time.

Gradually mentally retarded children in Sioux Falls learn the habits and activities shared by their brothers and sisters.

But some retarded are still hidden in darkness of ignorance and apathy. Others are taught to be useful and happy.

Today, 1,800 Sioux Falls men, women, and children are mentally retarded, with 120 of that number becoming rehabilitated in private and public schools. But 16 years ago the number of persons receiving special adjustment training was almost nil.

Not until the early 1940s did Sioux Falls have a school for persons with mental deficiency due to impaired brain development.

Doctors say mental retardation may be caused by any one of a wide variety of diseases, accidents, or genetic deviations. In many cases the mental deficiency originates before or during birth or in early childhood.

Retardation plays no favorites, a fact prompting the late Mrs. Dorothy Hollister to start the first of the present four homes for mentally handicapped in Sioux Falls. Her child was retarded.

Later came to South Dakota Home for Speech Handicapped Children, Inc., 3901 S. Hawthorne Avenue; Hope School, 1909 East Sixth Street, and Shirley White School for Exceptional Children, 426 South Willow Avenue. The Hollister School is located at 1020 East 26th Street. The schools operated without group affiliation until 1954, when the Sioux Chapter Association for Retarded Children was organized by parents.

Associated with the State and national organizations, the Sioux chapter has helped secure funds and support for the schools, promote public understanding and secure favorable State and county legislation.

Bill Green, chapter president, said the past 5 years of organizational work with members has seen a significant step forward in the retardation field.

Like most of the other 85 members in the chapter, Green has a retarded child. He believes most mentally handicapped persons can master the three R's, or at least become a nearly normal citizen.

Among problems facing the chapter are securing sufficient funds, hiring qualified instructors—and educating the parents of a retarded child.

"Many parents think a mentally retarded person should be hidden in a closet, for he can never fit into society," the chapter president said. "Parents are amazed to learn we want to help their retarded children."

Unfortunately, not every retarded person in Sioux Falls and area can be helped by the chapter because of limited school facilities and employees. Consequently, the organization must be particularly interested in children of school age.

But, still, some Sioux Falls schools must refuse applicants because of crowded conditions.

In addition to the Sioux Chapter, schools have faced many problems in an effort to exist.

Mrs. George Sweeney, director of Hope School, was prompted by a retarded daughter to start a school in her farm home. Later she used a church basement, garage, and a truck terminal building for classrooms.

All the centers except the Shirley White School receive United Fund and other organizational support. Schools are paid $35 a month for each child from the individual's school district. In addition, some schools have parental support.

The South Dakota Home for Speeched Handicapped, which also has a school, is typical in that it has 20 retarded persons from ages 4 to 21 in its rehabilitation program.

Although enrollment and teaching methods have increased since the first school was organized in Sioux Falls, an existing problem is persons past school age.

Classrooms prepare students to be active and somewhat independent. But the retarded person must know a trade to be economically independent.

"We're attempting to develop workshops so retarded persons are not a burden to society," Green said. "Training of these persons in Sioux Falls has come a long way—but we have a long road ahead."

Tribute to Representative J. Harry McGregor

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. EVINS. Mr. Speaker, I should like to join my colleagues from Ohio, and

others, in paying a brief tribute to the memory of our late friend, Representative J. Harry McGregor, of Ohio, whose sudden and untimely passing during the recess of the Congress came as a great shock to his many friends in this Chamber and throughout the country. He was a friendly and most personable Member who represented the people of his district and State most ably.

May I extend my sincere sympathy to the members of his family.

Good Place To Start Economy Try Is Here

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an editorial which appeared in the January 20 issue of the Saginaw News. It is very encouraging to find a newspaper that supports the President's budget even though that budget does not include their own hometown Saginaw Valley flood control project. It would be far easier to us to practice economy if all newspapers who preach economy were willing to advocate curtailed Government spending even though it directly affected local projects:

GOOD PLACE TO START ECONOMY TRY IS HERE

The temptation to preach economy for others and to protest refusals to indulge our own wants is always with us. Hence there will be no critical comment here in the wake of the news from Washington announcing the U.S. Army Corps of Engineer's decision to exclude from its requests funds for two Saginaw watershed improvement projects.

In doing so, the Corps of Engineers is only pursuing a policy strongly urged by President Eisenhower in his economy budget message in which he ruled out appropriations for flood control and navigation which were not already under construction.

To have brought the $20 million Saginaw Valley flood control project to the construction stage would have called for $500,000 in planning funds. The Corps of Engineers has $300,000 on hand for a start on the Saginaw River navigation improvement project, but it would be pointless to undertake that much of a $5.5 million job at this time.

Aside from the fact that we believe as strongly as anyone that spending from Washington must be curbed if inflation is to be checked, there is reason also for citizens of this area to distinguish between the two projects which have been sought here.

The river improvement project is, when it can be afforded, a justifiable Federal undertaking. The Saginaw River is a navigable stream by every standard, including established usage on a commercial tonnage basis. It stands to become an increasingly important carrier of water traffic with the completion of the St. Lawrence seaway. As such, we need offer no apologies in seeking participation in what has long been accepted as a legitimate function and responsibility of the Federal Government.

We recognize, however, that legitimate requests must await priority of importance and urgency in keeping with the Government's limited annual commitments.

As for the flood-control project, we can hardly protest this watershed's right to consideration, simply because the 21-county plan has considerably more merit than did many others approved by previous Congresses and Presidents.

Nothing in the years of preliminary local studies and surveys demonstrated that the Saginaw Valley could not manage the financing from its own resources. Nor is there anything in this proposed project to suggest that it serves wide areas of regional scope far beyond the bounds of the project as defined. The farmlands, rivers, game sanctuary and communities along the way stand to benefit directly and exclusively.

We express this view, knowing that our Congressmen have been eager and alive in promoting something for the people back home, especially since precious little "pork-barrel" indulgence has been brought this way from Washington in many long years.

There are those who criticize pretty pointedly the Congressman who doesn't bring home the bacon. We do not count ourselves among them. Today, the best service a Congressman can render his constituents is, in our view, to stand as firmly as he knows how against the spenders who care not for deficits and inflation which has reduced the value of the dollar to a second-grade 42-cent coin in just 20 years.

In foregoing legitimate Federal spending here this year as well as the questionable variety we should, however, be entitled to demand that equally stringent rules of justification be applied everywhere else in the United States. If less than that is done, no administration or Congress can protest the disillusioned cynicism that leads the public to grab, before someone else gets there first.

A Petition for Continuation of the Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. TEAGUE of California. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include extraneous material.

The Santa Barbara, Calif., unit of Pro America has forwarded to me a petition urging that the House Un-American Activities Committee be continued in recognition of the past achievements of the committee and as a recognition of the continuing threat of communistic and other un-American organizations. I fully concur with these splendid citizens and join them in calling for the carrying on of the committee and its vitally important work:

THE COMMITTEE FOR CONTINUATION OF THE UN-AMERICAN ACTIVITIES COMMITTEE

Whereas it is an established fact that our concept of government based on the Declaration of Independence and the Constitution of the United States is under attack by an opposing ideology, despotic and godless in nature; and

Whereas the perpetrators of this ideology have ceaselessly proclaimed to the nations of the world their plans for subjugation of said nations; and

Whereas the U.S. Government has been designated as a major objective of aforementioned subjugation; and

Whereas one of the approved techniques of appropriation is the infiltration of the subversive element into policymaking levels of government and into strategic defense positions;

Therefore, the undersigned do petition the Congress of these United States for the continuation of the Un-American Activities Committee, the past achievements of which have been of inestimable value to our national security.

Barbara S. Whittaker, Ellen Hayward, Paula A. Chauvel, Florence C. Sounsen, Helen M. Wood, Pearl E. Harley, Mrs. Charles S. Stevens, Maude I. Long, Mary Elizabeth Thomas, Meriam E. Storey, Mrs. Flint H. Jones, Myrtle M. Crafts, Margaret Nixon, Marion B. Phillips, Roy A. Lippencott, Genevieve G. Lippencott, John K. Northrop, Chuck Northrop, Margaret C. Northrop, Santa Barbara, Calif.

I Want To Stand on My Own Two Feet

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Alfred Wilken, of Owego, N.Y., expressing his opposition to the many Federal Government spending programs. The views expressed in this letter from one of my constituents clearly reflects agreement with our President's determined stand for fiscal responsibility at the Federal level as the very least elected representatives owe the long-suffering taxpayer.

OWEGO, N.Y., *January 17, 1959.*
Congressman HOWARD W. ROBISON,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ROBISON: I have received my W-2 form, and what I see is that—

I have helped to stuff the mailboxes of other people with Government checks.

I have bought farm products that I, and probably no one else will eat.

I have bought irrigation in the American desert so that I can pay for more farm products I, and probably no one else will eat.

I have bought power stations and power for people living a thousand miles from here.

I am buying superhighways in sparsely settled areas halfway across the continent when we can't get the lumps chopped down on the road between Flemingville and Newark Valley.

I am buying plushier offices and appointments for an ever-expanding military and civilian bureaucracy, not to mention expense accounts, etc.

I am only a man working for a salary, as my receipt of a W-2 form would imply, but now it is proposed that I also pay for—

Somebody else's hospital and medical bills.

Junk real estate in the big cities all over the United States in the name of slum clearance and urban renewal.

Some other kid's college education, while I try to figure out how I can educate my own. Of course, in my day, I and many others paid for an education entirely ourselves, even without help from parents and scholarships, etc.

Of course, all the time I am expected to put up more and more money to guarantee more and more shaky mortgages, when I figure I can't afford to build a house myself.

I never have received 1 penny of compensation, either directly or indirectly from any government, except for 4 years and 5 months pay while in the Army in World War II. If anyone wants to say I have indirectly benefited from Government spending I dare them to give me something more than hypotheses, theories, and semantics. I dare them to trace it right into my pocketbook.

It would be to the interest of teh entire country if the Congressmen of the northeastern quarter of the United States joined together and stopped the march of Federal dollars across the Mississippi River.

To balance the Federal budget the Government should send a bill assessing each income taxpayers his proportionate share of the deficit, payment to be made in one lump sum in 30 days. Such a sudden and heavy blow to the household budget would be more educational of the evils of inflation than all the newspaper and magazine articles.

Of course, if the trend of Federal spending persists, about all the spenders will soon be able to do with fellows like me is to chop us up and fertilize the grassroots with us.

Yours truly,

ALFRED WILKEN.

New Civil Service Era

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an enlightening editorial by James A. Campbell entitled "New Civil Service Era" as printed in the Washington Daily News of Saturday, January 17, 1959:

NEW CIVIL SERVICE ERA

(Once a year, during National Civil Service Week, James A. Campbell, president of the AFL–CIO American Federation of Government Employees, takes over this column to talk about whatever's on his mind. This is the week—and the day.—John Cramer.)

(By James A. Campbell, president, American Federation of Government Employees)

The civil service is a sleeping giant.

Potentially the 2 million Federal employees and their families represent a might force in American life. If they should ever speak in a single voice, the merest whisper would reverberate through the corridors of Capitol Hill.

But this potential has never been fully realized.

Throughout most of the 76 years of the civil service, a majority of employees have been content to let a comparative handful of their colleagues carry the ball for them in campaigns for improved working conditions. Some were too timid to join a union. Some considered themselves above the fray, and some naively believed that improvements in their benefits somehow just happened.

It may be wishful thinking, but I am encouraged by signs that the civil service—this slumbering Goliath—is beginning to stir.

The signs of life became apparent last year during the pay raise campaign. At first it seemed to be merely hunger pains. The rumblings which followed the veto of the 1957 pay bill appeared to be merely the growling of an empty stomach which would subside when the immediate objective had been won.

RESULT

Perhaps it was, but one result of the resentment against an inadequate pay structure was a greater degree of engagement by the ordinarily docile Government employee in the campaign which led to passage of the 10-percent pay raise.

We were amazed at the turnout when we asked our local-unions to send delegations to Washington to call on Congressmen and Senators from their home districts. We found out that many of these delegates were able to make the trip through contributions by nonmembers to help meet expenses.

Everyone who wrote a letter, contributed a dollar, or attended a rally felt a sense of personal participation and victory in the success of the pay campaign. The logical conclusion was: "If we did it once, we can do it again."

Thanks to John Cramer and his colleagues who cover the Government news beat, Federal workers are gradually getting disabused of the idea that these campaigns for improved conditions are the result of spontaneous combustion.

Through the newspapers, employees are in on the picture from the time a resolution is introduced at a union convention to the strategy sessions of the Government Employees Council, the introduction of bills, open hearings, and even the inevitable compromises which are hammered out behind closed doors.

There's another factor which is gradually penetrating the fitful slumber of the uncommitted majority of Federal employees.

Many of the most influential Members of Congress—including such leaders as Senator OLIN D. JOHNSTON, chairman of the Senate Post Office and Civil Service Committee, and Representative JAMES MORRISON, ranking majority member of the House committee, have said in plain, forceful language that they favor organization of Government employees.

I have, perhaps, taken advantage of John Cramer's hospitality by devoting a "Civil Service Week" column to the problems of organization. But the Civil Service Act would never have been passed in the first place if it had not been for the organized protest of reform groups against the corruption of the spoils system.

Having been appointed to his job through open competitive examination and retained on the basis of merit, he was able to demand good wages and working conditions as a matter of right.

Considering how much has been accomplished by so few, the stirrings of the 2 million Government employees promise to make news for many years to come.

H. R. Gross Continues His Relentless Fight for Economy in Government

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. WEAVER. Mr. Speaker, it is reassuring to know that my good friend from Iowa [Mr. GROSS] is back at the old stand this year in his relentless battle for a return to fiscal sanity in the Federal bureaucracy. The gentleman is widely recognized as one of the stanchest advocates of economy in Government, and I have been proud to join him in many of his fights to cut extravagant and unnecessary spending proposals.

It is appropriate that he would be assigned the number "H.R. 144"—one gross—to his bill to provide that Federal expenditures shall not exceed revenues except in time of war or grave national emergency, and in this regard I desire to include as part of my remarks the following article from the Washington Post of January 18, 1959:

GROSS PROFIT

Iowa's Representative H. R. GROSS, Republican, whose charges up the hill against spending have become a part of Capitol Hill folklore, is back fighting the windmill again.

This year he's taken out a patent on a new bill "to provide that Federal expenditures shall not exceed Federal revenues except in time of war or grave national emergency declared by Congress."

How did he apply his trademark? By numbering the bill "H.R. 144."

This, in case you hadn't heard, is a mathematical pun.

GROSS's initials, of course, are H.R., the same as those on the bill. And it just so happens that the number coincides exactly with Webster's definition of "gross," which is: "The number of 12 dozen; 12 times 12."

Balancing the Budget Against Needs, We Are Hopeful, but Not Fearful

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an editorial that appeared in the Denver Post, Denver, Colo., on Wednesday, January 21, 1959, which analyzes the so-called balanced budget submitted by President Eisenhower. I am hopeful that all Members will take time to read this excellent editorial:

BALANCING THE BUDGET AGAINST NEEDS, WE ARE HOPEFUL, BUT NOT FEARFUL

We hope the $77 billion Federal budget President Eisenhower sent to Congress this week can be balanced. But if it is balanced, it will be through what now appears to be an unlikely combination of circumstances.

At least three major conditions would have to be fulfilled, if the amount the Government takes in and the amount it spends are to remain about equal, as the President proposes.

First, Congress would have to approve the President's new tax proposals or develop alternative tax measures to raise about $1.3 billion in new revenue.

Mr. Eisenhower wants to (1) raise the gasoline tax by 1.5 cents a gallon; (2) raise postal rates again; (3) raise the tax on aviation gasoline and impose a tax on jet fuel; (4) increase the tax on life insurance companies; (5) close a "loophole" in the taxation of cooperatives, and (6) extend present rates of corporation and excise taxes.

If Congress balks at any of these proposals—and it has already shown signs of doing so—revenues will fall short of spending and the budget wil be unbalanced.

Second, Congress would have to agree to abandon a number of proposed new pro-

grams and to impose cutbacks in a number of existing programs.

Budget Director Maurice H. Stans has acknowledged that the new Eisenhower budget contains fewer proposals for new programs than any budget in recent memory.

The President has asked for no new public housing starts; for an end after this year to the college housing program; for a sharp reduction in rural electrification loans through higher interest rates; for no new starts on reclamation and other public works; for reduced grants to the States for hospital construction, and for reduced military aid abroad.

On existing programs, the budget proposes a number of small reductions in areas ranging from the school-lunch program to the lending program of the Farmers Home Administration. No renewal is suggested on a number of spending programs due to expire automatically.

Congress is almost certain to insist on some of the new spending and to oppose some of the reductions. Any appreciable spending increase will quickly unbalance the budget.

Third, the American economy would have to follow the predictions of the President's economic advisers for the next year with a certain amount of precision.

If business doesn't continue to improve quite as fast as the Eisenhower economists think it will, then taxes will not produce the revenue the President expects. Again that would mean an unbalanced budget.

Unless all the contingencies are resolved in exactly the way the President would like them to be, the likelihood is that the Government will spend more money in the next fiscal year than it will take in and another deficit year is ahead.

The deficit will probably not exceed a few billion dollars, no small amount, but far less than the $12.9 billion deficit in the current fiscal year.

The President has warned us, quite properly, that a deficit would increase the pressures of inflation.

At the same time, his economic report to Congress indicates that at least three counterinflationary forces have been at work and should be taken in consideration:

Business expenditures for new plant and equipment declined $7 billion in 1958, net exports went down several billion and consumer credit failed to expand for the first time since World War II.

In general, the economy is experiencing a healthy recovery from the recession, perhaps in some measure related to the $12.9 billion deficit.

Inflation, meanwhile, has not gotten out of hand, despite the big deficit.

Should we, then, let fear of inflationary pressure from a new, though much smaller deficit, distract us from making sound judgments on other equally important considerations of national policy?

Balancing the budget is a wise policy in prosperous times, but it is not an end in itself. It has to be weighed against the needs and perils of a free society in a tense and unstable world.

If balancing the budget means shortchanging our missile program or allowing weaknesses to develop in the alliances that protect the world from Soviet aggression, then balancing the budget will have to be postponed.

If balancing the budget means neglecting the needs of our country for better schools and roads, decent housing, slum-free cities, and reasonable progress in the development of our natural resources, then it might well be better to do without a balanced budget.

In any case, if Congress decides to beef up the President's defense requests to some extent and to spend more than the President has asked on carefully considered education, housing, and reclamation measures, we won't look upon it as a tragedy.

Social Security Benefits

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. BENTLEY. Mr. Speaker, on January 7, 1959, I introduced H.R. 1221, a bill to amend title II of the Social Security Act to increase from $1,200 to $1,800 a year the amount of outside income permitted without deductions from benefits, and to provide that all types of income shall be taken into account in determining whether an individual's benefits are subject to such deductions. I have now requested the chairman of the Ways and Means Committee to ignore this bill and am today introducing another bill which would embody the first part only of H.R. 1221, that is, the increase of outside earnings or wages permitted without deducting from benefits.

As might be expected, Mr. Speaker, I have received a substantial volume of mail in protest against the second part of H.R. 1221 which would have included all forms of income, earned and unearned, for the purpose of determining outside income. Many of those who wrote me stated that I was in effect penalizing persons who by virtue of thrift have been able to invest in stocks, bonds, or various forms of rental income to supplement their social security benefits following retirement. I have replied to such persons that this was not at all my intent and that I did not actually seek to make this particular provision a part of title II of the Social Security Act. I rather intended to focus attention upon the entire question of limitations on outside income which, to me, completely destroy the insurance concept of the social security program. To my way of thinking, it is manifestly unfair to have the present low limitation of $1,200 per annum on earned income and no limit at all on unearned income and my introduction of H.R. 1221 was merely intended to point up this inequity. I am firmly convinced, Mr. Speaker, that an individual who has contributed to the social security program the required number of quarters should be permitted to draw his benefits without any regard to his earnings from other sources as is the case after he has passed age 72. What the present law does, however, is to force people to retire from gainful employment upon reaching their 65th birthday if they desire to avail themselves of social security benefits.

As a matter of fact, the entire concept of an arbitrary and fixed retirement age does not appear to me to be sound. I am sure every Member of the House knows many people who, both physically and mentally, are well qualified to continue gainful employment past the age of 65. I am equally certain that every Member of the House knows others who should be retired substantially in advance of that age. I must confess that at the moment I see no practical possibility of making the social security retirement age more flexible, but I do wish to voice my objection to it in principle.

What is the position of the administration on the question of raising the limit on outside income? I think this is best set forth by the following texts of two reports, one from the Secretary of the Department of Health, Education, and Welfare dated October 2, 1957, and one from the deputy to the Secretary of Treasury dated February 28, 1958, and both addressed to the chairman of the Ways and Means Committee. It will be noted that both Departments are opposed to the enactment of such legislation at this time:

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
Washington, October 2, 1957.

Hon. JERE COOPER,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in reply to your requests of May 8 and March 25, 1957, for a report on H.R. 4636 and H.R. 4828, bills which would amend title II of the Social Security Act to increase the amount of outside earnings permitted without deductions from benefits thereunder.

H.R. 4636 would increase from $1,200 to $1,800 and H.R. 4828 would increase from $1,200 to $2,400 the amount a beneficiary under age 72 may earn in a year without losing any old-age and survivors insurance benefits for the year. H.R. 4828 would leave unchanged the unit ($80) by which the total yearly earnings in excess of the exempt amount are divided to determine the maximum number of monthly benefits which may be withheld by reason of earnings. H.R. 4636 would increase the unit to $120.

The limitation on the amount of earnings a beneficiary may have and still receive benefits is necessary if the benefits are to be restricted to persons who have substantially retired from gainful work and to dependents of retired or deceased workers who do not themselves have substantial earned income. (For practical reasons, the same earnings test is used to determine whether the worker has retired and whether a dependent has substantial earned income.) Under present law a person can work enough to earn $2,088 a year and still receive at least 1 month's benefit. If he does not earn more than $1,200 in a year, he can receive all of his benefits for the year.

While it is difficult to determine the exact amount of earnings that most satisfactorily discriminates between retirement and nonretirement, the Department believes that the present exemption of $1,200 is preferable to the higher exceptions proposed by H.R. 4636 and H.R. 4828.

Even with the present test, some people can continue to work full time at their usual level of earnings and still receive benefits. For example, workers who have been earning at the rate of $2,000 a year can, after reaching retirement age, receive 2 months' benefits in the year without in any way changing their work activity. In 1955, 21 percent of the workers under ald-age and survivors insurance with earnings credits in all calendar quarters had earnings of $2,000 or less; many of these no doubt were full-time workers. Any increase in the amount of earnings exempt under the earnings test would increase the number of persons who could continue in their regular jobs and still receive benefits. If the exempt amount were increased to $1,800 and the unit used to divide earnings in excess of the exempt amount were increased to $120 as proposed in H.R. 4636, persons earning as much as $3,120 a year could continue in their jobs and receive 1 month's benefit.

If H.R. 4636 or H.R. 4828 were enacted, the cost of the old-age and survivors insurance program would be increased. The estimated

level-premium cost of H.R. 4636, on an intermediate-cost basis, would be 0.53 percent of payroll. The cost of H.R. 4828 would be 0.90 percent. The additional cost resulting from an increase in the amount of earnings exempt from the earnings test would be incurred for the benefit of only a small percentage of the old-age and survivors insurance beneficiaries and these would be persons who already had substantial income from work. The great majority of beneficiaries do not have substantial earnings.

We therefore recommend that H.R. 4636 and H.R. 4828 not be enacted by the Congress.

The Bureau of the Budget advises that it perceives no objection to the submission of this report to your committee.

Sincerely yours,

———, *Secretary.*

OFFICE OF THE SECRETARY OF THE TREASURY,
Washington, February 28, 1958.

Hon. WILBUR D. MILLS,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D.C.

MY DEAR MR. CHAIRMAN: This is in response to your request for the Department's views on H.R. 4636 to amend section 203 of the Social Security Act to increase the amount of outside earnings permitted without deductions from benefits, and to liberalize the provisions under which such earnings are charged for purposes of such deductions.

H.R. 4636 would increase from $1,200 to $1,800 a year the amount of income a beneficiary under age 72 may earn without losing any old-age and survivors insurance benefits for the year. In addition, it would increase from $80 to $120 the unit by which the total yearly earnings in excess of the exempt amount are divided to determine the maximum number of monthly benefits which may be withheld by reason of earnings.

Two aspects of this bill are of particular concern to this Department.

If enacted, H.R. 4636 would increase present and prospective benefit payments substantially without at the same time increasing social security contributions. Responsibility for the payment of social security benefits is vested in the Department of Health, Education, and Welfare and that Department has estimated that on an intermediate-cost basis the increase in the cost of the program would approximate a level-premium cost of one-half percent of payrolls. This would result in a corresponding weakening of the financial soundness of the insurance program. We concur in the opposition of the Department of Health, Education and Welfare to such increases in benefits and costs of the old-age and survivors insurance program.

Moreover, a liberalization of the earnings test for social security benefit purposes would have important implications for the retirement income credit allowed under the individual income tax. As your committee is aware, discrepancies between the tax treatment of social security benefits and other forms of retirement income have been a concern for a number of years. In the Revenue Act of 1954, the tax credit for retirement income was adopted to equalize the treatment of individuals receiving taxable retirement incomes with those receiving exempt social security benefits. In that connection, a deliberate effort was made to parallel the provisions governing the tax credit, including the earnings test, in the income tax with provisions in the Social Security Act. The amount of income which retired individuals could earn without reducing their retired income credit was fixed at $900 to parallel the annual earnings test of $900 which insured workers could earn without reducing social security benefits. In 1956, the amount of income which could be earned without reducing the credit was raised from $900 to $1,200 to parallel a corresponding increase in the earnings test provided under the 1954 amendments to the Social Security Act.

Enactment of H.R. 4636 would again unbalance the social security and retirement income credit provisions and stimulate pressures for a corresponding adjustment in the provisions of the retirement income credit. Such adjustment would not only reduce income tax revenues but raise additional questions concerning the relative income tax treatment of retired workers and other groups in the population.

In view of these considerations, this Department recommends against enactment of H.R. 4636.

The Director, Bureau of the Budget, has advised the Treasury Department that there is no objection to the presentation of this report.

Sincerely yours,

DAN THROOP SMITH,
Deputy to the Secretary.

The thing that both departments appear to overlook is the fact that over a period of time the steadily increasing cost of living has made many social security benefits completely inadequate to maintain a respectable standard of living. There are obviously two ways to solve this problem. One is to further increase the benefits and thereby incur the necessity of either higher payroll taxes or an additional increase in the income base for social security purposes. Having carefully studied the recent report of the advisory council on social security financing and the contemplated schedule increases in payroll taxes between now and 1969, a I would hesitate to upset this balance. The other way seems to me to give a little more ability to those past 65 but not yet 72 to supplement their social security benefits with outside earnings of their own. This is what I am interested in accomplishing.

I can appreciate the objections on the part of both the Treasury and the Department of Health, Education, and Welfare. Nevertheless, I regard this problem as an extremely serious one and it is my belief that the Ways and Means Committee should give it careful consideration. If hearings are held by that committee on amendments to the Social Security Act, I trust I will be given an opportunity to testify and further expound my views in this connection. But this time, however, Mr. Speaker, I have taken the floor for the purpose of reassuring those people who protested to me against H.R. 1221 that my sole purpose in originally introducing this bill was to call attention to this present inequity regarding the whole question of outside income under the social security program and not with any idea of penalizing those people who, through thrift, have been able to supplement their retirement income from unearned sources.

There follows the text of my letter to the chairman of the House Ways and Means Committee requesting that H.R. 1221 not be acted upon by that committee:

JANUARY 26, 1959.

Hon. WILBUR D. MILLS,
Chairman of the Ways and Means Committee, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is to request that my bill, H.R. 1221, which was introduced on January 7, 1959, be ignored and that no action be taken by your committee in connection therewith.

Sincerely yours,

ALVIN M. BENTLEY,
Member of Congress.

Teddy Roosevelt Centennial a Huge 1958 Success

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. DEROUNIAN. Mr. Speaker, the Nation has just concluded a year-long observance of the 100th anniversary of the birth of Teddy Roosevelt. Millions of Americans paid homage to a great American who will never be forgotten.

Thousands traveled to his home at Oyster Bay in my district to pay their respects.

The many persons who participated in the nationwide observance are to be congratulated for what is probably the most outstanding job done in this field.

I would like to insert in the RECORD two articles of interest along this line. The first is from the Albany Knickerbocker News of Wednesday, January 14. The second is from the Public Relations News of December 29 which selects the outstanding public relations campaigns of the year as case histories. The Theodore Roosevelt Centennial Commission was chosen this year for this high honor:

[From the Albany Knickerbocker News, Jan. 14, 1959]

TEDDY ROOSEVELT CENTENNIAL A HUGE 1958 SUCCESS

WASHINGTON.—The centennial celebration of Theodore Roosevelt's birth in 1958 is considered a striking success by its sponsors.

The 49-year-old Theodore Roosevelt Association, headed by Leslie C. Stratton, who retired as national public relations director of the Boy Scouts of America, spearheaded the celebration.

It assisted the Theodore Roosevelt Centennial Commission, created by Congress in 1955, to honor a great American and to revitalize the principles of responsible citizenship by which Mr. Roosevelt lived and which he exemplified.

Vice President RICHARD M. NIXON was chairman of a bipartisan committee. Senator JOSEPH C. O'MAHONEY, Democrat, of Wyoming, was vice chairman.

Local State committees were formed to add strength to the centennial and many chairmen were State Governors. Literature was distributed, including two books.

Outside public relations counsel, including Standard Public Relations, Inc., of Washington and New York City, headed by L. Richard Guylay, were brought in.

Congress paid part of the bill and private citizens paid part.

On July 4, the Theodore Roosevelt Island in the Potomac River, was dedicated as a historical shrine.

A special family day was held at Teddy Roosevelt's former home on Long Island. There was a citizenship day in September. Sermons were preached on T.R.'s exemplary life. A commemorative stamp was issued by the Postmaster General. President Eisenhower issued a proclamation stressing Teddy Roosevelt's awareness that freedom also carries responsibilities.

The Department of Defense produced a 28-minute film depicting highlights of T.R.'s life. It was televised nationally.

Theodore Roosevelt Distinguished Service Medals were presented to Gen. Alfred M. Gruenther and Vice Adm. Hyman G. Rickover with ceremonies and publicity.

The 129 mutuals savings banks of New York State used coin banks, circulars, window and lobby displays, and essay contests to tell the T.R story.

The U.S. Information Agency told the T.R. story through overseas posts. The Treasury Department, National Archives, and libraries set up displays.

The Theodore Roosevelt centennial year paid homage to a great American who will never be forgotten.

[From the Public Relations News, Dec. 29, 1958]

CASE STUDY NO. 694

Few centennial celebrations have received such diverse, sustained, and widespread support as that of the year-long program, just ended, which commemorated the hundredth anniversary of Theodore Roosevelt's birth.

Due to the efforts of the 49-year-old Theodore Roosevelt Association (a voluntary organization headquartered in New York and supported by members and contributors), the Theodore Roosevelt Centennial Commission was created in 1955 by an act of Congress. Stated objectives were to honor the great American and to revitalize the principles of responsible citizenship by which he had lived and which he dramatically exemplified.

Vice President NIXON accepted the chairmanship of a bipartisan committee and Senator O'MAHONEY, Democrat, was named vice chairman. The T.R. Association's Director (now director emeritus) Herman Hagedorn, became the committee's director and secretary and, with the aid of Assistant Director Sidney Wallach, energetically went to work.

One of the first steps was to organize a local subcommittee in each of the States; in many cases, the chairman of the committee was the Governor. To stimulate the efforts of these committee's, a variety of literature was distributed. This included two substantial books (the print order for each was over 50,000 copies): "The Free Citizen," a selection from the actual writings of T.R. (edited by Hagedorn), and "A Theodore Roosevelt Roundup," a compendium of excerpts from T.R.'s writings, comments about him by his contemporaries, and political cartoons of his era (selected by Wallach) with a biography (by Hagedorn).

The team was strengthened in 1957 by the addition of Leslie C. Stratton when he retired from his post of national public relations director of Boy Scouts of America. He became the T.R. Associations' director, deputy director of the T.R. Commission and general coordinator of the centennial activities. Outside counsel, Standard Public Relations, Inc., of Washington and New York City, headed by L. Richard Guylay, was retained. Its specific function, in addition to helping with general planning, was to stimulate the medium to bring dramatically before the public the record of T.R.'s contributions to the Nation. A series of fortnightly meetings was begun, with Hagedorn, Stratton, Wallach, and Guylay and three of his assistants attending.

Expenses for the first half of the program had been met by a congressional appropriation; but the association, due to an economy wave which hit the country, decided to provide the rest of the money from its treasury and pledges of additional contributions from members. To limit expenditures, meetings were restricted largely to Washington and New York. Other contacts were maintained by mail.

The state committees were kept informed by means of regular bulletins. Full background information on the centennial was distributed to industrialists, educators, labor leaders, clergy, and other opinion leaders and to service organizations and libraries.

There were several warm-up events. On July 4, the Theodore Roosevelt Island in the Potomac River, given by the T.R. Association to the Nation some 25 years ago, was dedicated as a historical shrine. A special Family Day was held at T.R.'s former home on Long Island, N.Y. There was a Citizenship Day in September.

On the 99th anniversary, a wide variety of kick-off activities was staged. Sermons were preached on the subject of T.R.'s exemplary life. A commemorative stamp was issued. President Eisenhower issued a proclamation stressing T.R.'s awareness that the privilege of freedom carries with it responsibilities which cannot safely be avoided.

The Department of Defense produced a 28-minute film depicting highlights in T.R.'s life. It was viewed widely on network and local TV and by the Armed Forces, schools, and other organizations. The Department of the Interior, in commemoration of T.R.'s pioneer efforts to conserve wildlife and natural resources, held a Hemispheric Conference of conservation authorities. Because T.R. had been Assistant Secretary of the Navy, that branch served a commemorative birthday cake to a group of Police Athletic League children visiting the U.S.S. *Valcour* and made special awards in his name. Theodore Roosevelt Distinguished Service Medals were presented to Gen. Alfred M. Gruenther and Vice Adm. Hyman G. Rickover with appropriate ceremonies and accompanying publicity.

The 129 mutual savings banks of New York State used coin banks, circulars, window and lobby displays, and essay contests to tell the T. R. story. Comic book publishers incorporated material on T.R. in their funnies. Teachers College of Columbia University prepared a 40-page handbook to help school teachers to develop centennial activities, and the presidents of more than 100 universities gave support to the program. (The T.R. Association has already awarded 1,000 certificates to schools for the excellence of essay programs and contests.)

Sinclair Oil Corp. included in its conservation series of ads (Public Relations News, March 11, 1957), a color photo of Theodore Roosevelt Memorial National Park (in North Dakota). There were special programs on the radio and TV networks pointing out that the principles laid down by T.R. are just as applicable to today's problems as they were to those of his time, and there were colorful interviews with surviving members of T. R.'s Rough Riders. The USIA told the T.R. story through its overseas posts. Displays were set up by the Treasury Department, the National Archives and Records Service of the General Services Administration, and in libraries (the latter activity being stimulated by a committee headed by L. Quincy Mumford, Librarian of Congress). The Financial Public Relations Association and other influential groups distributed centennial material to members.

Media coverage was superb throughout the 12 months of the campaign, highlights being a 10-page cover story in Time magazine, a full-page Life magazine editorial titled "A Man To Be Thankful For," a 26-page article in National Geographic magazine, and two editorials in the New York Daily News. (One, under the title "Americans To Remember," and accompanied by a cartoon, appeared in a Sunday edition reaching 3½ million readers.)

Stratton, who is continuing as director of the association, happily informs us that T.R. is now clearly recognized by the younger generation as well as oldsters as "America's fourth greatest President, overshadowed only by Washington, Jefferson, and Lincoln." And he agrees with Guylay's recommendation that Public Relations executives should keep selling T.R.'s concept of responsible citizenship—a concept which can be extremely helpful in the area of economic education.

Anniston Star Says Washington Post Betrays Its Creed

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. HUDDLESTON. Mr. Speaker, on Wednesday, January 21, 1959, the Anniston (Ala.) Star, an outstanding daily newspaper in our State, ran an editorial which was highly critical of the Washington Post. The editorial referred to the action of the Washington Post in refusing to accept the Putnam letter, which has received considerable publicity and attention the past few weeks, as a paid advertisement. Previously the Washington Post had refused to run this excellent piece of writing as a news item and as a letter to the editor. This was their privilege, although their judgment is questioned and manifests a very appalling and disturbing lack of objectivity on their part. As you know, the Putnam letter, written by Mr. Carleton Putnam of Washington, D.C., stated in a very forthright manner the South's position on the segregation-integration controversy.

The refusal of the Washington Post to run the letter even as a paid advertisement has been the object of criticism by editors and other thinking people all over the country. In view of the importance of this matter and the threat which it presents to the constitutional guarantee of freedom of expression by the American people, I am happy to insert herewith a copy of the editorial from the Anniston Star. I urge that the Members give it their careful study and attention. There is far move involved in this instance than any citizen's particular views on segregation.

Incidentally, Mr. Speaker, the Washington Evening Star has agreed to run the Putnam letter as a paid advertisement and the advertisement will appear in this evening's Star (January 26, 1959).

The editorial follows:

POST BETRAYS ITS CREED

Possibly never before in recent history have honest newspaper editors been so disappointed in a member of their profession as they have had occasion to be more than once in the last few years with the Washington Post, which had been looked upon as the exemplar of freedom of expression and the right of the people to know.

But for some strange and inexplicable reason, that great morning daily has seemed to lean overbackward in its efforts to keep its subscribers in other regions from knowing all the facts about the battle of civil rights, which has become one of the foremost issues before the American people in every State of the Union.

It is well known that there has been a considerable increase in crime since the great Negro migration to the Capital City began. But the Post, as do some other newspapers in the North, refuses to identify Negro criminals by race. Thus they deny criminologists, ethnologists, etc., the right of access to essential information.

But its most unpardonable deviation from honest journalism came to light just a few days ago when the Post refused to print even as a paid advertisement a letter that has been written to the President of the United States by an eminent author, scholar and airline executive of the city in which the Post is published, Carleton Putnam.

The letter in question was never answered, so far as we know, by Mr. Eisenhower, although it is written in even tenor and is by no means offensive. It was published voluntarily by the Christian Science Monitor and as an advertisement in the New York Times, which also censors its news columns against Negro crimes.

But possibly because it sets forth an argument against integration of the white and colored races so convincingly that its truth and logic cannot be refuted, it was rejected summarily by the Post, although its sponsors was one of the most eminent citizens of Alabama, a leading Birmingham corporation lawyer and fore State senator.

And what makes the strange conduct of the Washington Post so deplorable in newspaper circles is the fact that members of its editorial staff have led the fight against censorship in the National's Capital. J. R. Wiggins, executive editor of the post, has ably headed the committee on freedom of information of the American Society of Newspaper Editors.

But we hope that the editorial staff of the Washintgon morning daily had no voice in the denial of the subscribers of that honored paper the right to know the other side of the so-called civil rights battle. But be that as it may, the Post has betrayed the ethics of its profession, and that is something to be deplored.

The Late Thomas S. Gordon: Truly a Fine Gentleman

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. COLLIER. Mr. Speaker, through no fault of my own, I was unable to be on the floor last Thursday when several Members of this body paid tribute to the late Hon. Thomas S. Gordon, my friend and former colleague from our home State of Illinois. I would be remiss to my own deep sentiments if I did not take this moment to express my condolences and I ask unanimous consent to revise and extend my remarks accordingly at this point in the RECORD.

From each friendship we cultivate in our many associations as Members of this Congress, we take something that we value as part of our own personal lives.

My colleagues paid fitting tribute to the late Thomas S. Gordon following his death last Thursday. What was said by those who knew him best is a fine and deserved memorial. I shall add only that in my 2 years' association with him, I enjoyed the friendship of one who was a real gentleman by any definition of the word. Our society would benefit with many more men of his character and general mannerisms. Our world would be better for more of Tom Gordon's kind of understanding and attitude toward his fellow man.

He will be sorely missed, though his family should find rich solace in the human and material contributions which he made to so many during his lifetime.

A National Recreation Area on the Current and Eleven Point Rivers

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include Resolution No. 19 adopted by the Missouri House of Representatives to establish a national recreational area on the Current and Eleven Point Rivers as proposed by the National Park Service and the U.S. Forest Service and to declare the Current and Eleven Point Rivers national streams and to provide for the acquisition of the necessary land without exercising the power of eminent domain:

HOUSE RESOLUTION 19

Memorializing the Congress of the United States to establish a national recreational area on the Current and Eleven Point Rivers as proposed by the National Park Service and the U.S. Forest Service and to declare the Current and Eleven Point Rivers national streams and to provide for the acquisition of the necessary land without exercising the power of eminent domain.

Whereas there exists, in the valleys of the Current and Eleven Point Rivers in Missouri, five springs of the first magnitude and many hundreds of smaller springs which provide a constant supply of clear, cold, sparkling water for these rivers; and

Whereas the phenomenon of such large volumes of clear, cold water issuing as springs amid rustic and picturesque surroundings, make places of wonder and rare natural beauty, which offer a lure and inspiration to those who come to view these extraordinary manifestations of nature, and to play, rest, and to refresh themselves in a peaceful and inspiring environment; and

Whereas these springs make a valuable contribution to fish-life in these streams by providing favorable sites for fish hatcheries, and by discharging large quantities of crystal clear water, they become the controlling factor favorable to the propagation and maintenance of game fish and other aquatic life natural to both streams; and

Whereas the State of Missouri and the U.S. Forest Service own vast acreage adjacent to these streams suitable for recreational development and other improvements for the public use; and

Whereas the Current and Eleven Point Rivers are nationally famous for their "John Boat" float fishing trips through this Ozark scenic wonderland; and

Whereas the Arkansas-White-Red Basins, interagency committee, recognizing the unique natural qualities of the Current and Eleven Point Rivers of Missouri, and their importance to present and future generations, recommended that appropriate State and Federal agencies prepare a plan to preserve and enhance the natural qualities of this region; and

Whereas a plan was prepared by the National Park Service in cooperation with Missouri State agencies, and was published by the Division of Resources and Development, to preserve and develop the Current and Eleven Point River country, without the exercise of the power of eminent domain; and

Whereas the U.S. Forest Service has indicated a similar interest in the preservation and development of lands adjacent to these streams by recommending the creation of a National Forest Recreation Area in a National Recreation Plan prepared and adopted in 1936: Now, therefore, be it

Resolved, That the Missouri House of Representatives, in its 70th General Assembly, request of the Congress of the United States, that it establish a National Recreation Area along the Current and Eleven Point Rivers of Missouri, and that it declare the Current and Eleven Point Rivers as national streams; and be it further

Resolved, That this assembly request that the Congress enact the necessary legislation providing for the purchase and development of the National Recreation Area as heretofore described, lest the great scenic and recreational values of the Current and Eleven Point Rivers in Missouri, be lost forever to public use by manmade encroachments; and be it further

Resolved, That the chief clerk of the house be instructed to send copies of this memorial to the President of the U.S. Senate, to the Speaker of the U.S. House of Representatives, and to the Missouri Members of the House and Senate.

National YMCA Week, 1959

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ROBISON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I would like to call attention to the fact that the week just past was National YMCA Week.

During last week, millions of Americans affiliated with nearly 2,000 Young Men's Christian Associations across the country celebrated one more year of fine service to our youngsters, teen-agers, young men, and to our family groups also.

Since 1844, the YMCA has been a pioneer in the cause of brotherhood and development of our youth—the spirit and mind of youth as well as physical well-being. The Y has become also a unique and vital part of virtually every American community.

The YMCA has served our fighting men during every war since the Civil War. It has contributed mightily to health and physical fitness programs and has contributed much to American sports and athletics, creating such games as basketball and volleyball.

The Y has also sponsored organized camping, water-safety instruction, youth and government programs, and boys' work.

The YMCA has also pioneered in night-school education, short-term community finance campaigns, and many other advances.

I am certain that all of us will join in a sincere "well done" to this excellent and growing organization and, we might also add, "Please keep up the good work."

IMCO Cool to Panama and Liberia

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. WAINWRIGHT. Mr. Speaker, several weeks ago the Inter-Governmental Maritime Consultative Organization, a U.N. organization, refused to recognize Liberia and Panama as major shipping nations. The American Merchant Marine feels particularly bitter about this due to the fact that our foreign-aid program subsidizes, to a great extent, many major projects in those nations which opposed us. The story is ably reported by William J. Humphreys in the New York Herald Tribune Bureau:

IMCO COOL TO PANAMA AND LIBERIA—NEITHER SEATED ON SECURITY UNIT

(By William J. Humphreys)

LONDON, January 15.—Overriding objections from the United States and Latin American countries, the Inter-Governmental Maritime Consultative Organization (IMCO), an affiliate of the United Nations, refused today to recognize Liberia and Panama as leading shipping powers.

But Liberia, again with United States support, wants to test the legality of the decision, in which Britain was a spearhead, by referring it to the International Court of Justice. An important ballot on whether an appeal should be made to the court in The Hague is expected to be taken tomorow.

Today's decision against Liberia and Panama in 28-nation IMCO was regarded as an important manifestation of growing resistance in Britain and elsewhere in Europe to the liberal ship registration laws of Liberia and Panama. These laws have attracted vast numbers of vessels to the Liberian and Panamanian flags.

On this account, the failure of Liberia and Panama to be elected to the IMCO's Maritime Safety Committee—today's issue—appeared to have implications ranging far beyond the scope and importance of the technical work that will be done by the committee.

IMCO turned its back on the flag-tonnage listings of the authoritative Lloyd's registry in denying that Liberia and Panama belonged among the world's eight largest ship-owing nations. To preserve Germany with a large number of its NATO allies on this matter, the United States had urged a decision be postponed until 1961.

The eight nations elected from a list prepared by the conference secretariat rather than chosen from Lloyd's Registry listing, were the United States, United Kingdom, Norway, Japan, Italy, the Netherlands, France, and West Germany.

Later six others were chosen from a list of nominees: Argentina, Canada, Greece, Pakistan, the Soviet Union, and the United Arab Republic.

Although nominated in this second group, Panama refused to be a candidate. Nationalist China and Israel, both nominated by the United States, received only 9 and 7 votes, respectively, when the minimum number required for election under the preferential system of voting was 15.

SHIPPING MEN HERE INDIGNANT

American shipping men indignantly described the defeat suffered by this Nation's delegation to IMCO as "another foreign attempt to scuttle the American merchant marine." They noted that Britain, Norway and other European nations that ganged up on the United States, Liberia and Panama are the same nations whose ship owners oppose the American subsidy program and the Cargo Preference Act which requires that at least 50 percent of all government financed relief cargoes be sent abroad in American flag ships.

"They would deny us subsidies, our share of aid cargoes and now our right to sail our ships under flags of necessity," one said. "Perhaps we should begin some denials of our own."

He suggested that one might properly take the forming of barring foreign aid cargoes to the ships of any nation which allows its merchant vessels to trade where American ships are not allowed to sail. This was obviously a reference to the fact that Britain and Norway permit their ships to trade with Red China.

Tom Kitayama—Union City Councilman

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, one of the most rapidly growing areas in California is southern Alameda County. In the last 5 years three areas have been incorporated into new cities. The last came into being early this month when the people of the Alvarado-Decoto district decided to incorporate into Union City.

Under California State law this can only be done by referendum. The proposition to incorporate Union City carried better than 4 to 1.

At the same election 15 citizens of the area submitted their qualifications to the voters by seeking 5 nonpartisan city council seats. The man who topped the ticket was Tom Kitayama, a 35-year-old prominent nurseryman.

Councilman Kitayama is probably the first northern California Nisei to seek an elective post as city councilman. His election is indicative of the respect with which Californians hold their fellow countrymen of Japanese ancestry.

Kitayama's younger brother, Kee, is the newly elected president of Eden Township Japanese-American Citizens League. Another brother, Ray, is a past president of the Freemont JACL.

The Kitayama brothers operate one of the largest carnation nurseries in the country. Tom is president and coowner of the firm and also director on both the northern California Carnation Growers Association and the American Carnation Society.

Tom is married to the former Hideko Horikawa, both Seattle-born Nisei, and they have four children.

Foreign Trade Policy

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. BOGGS. Mr. Speaker, for the past several years the administration in Washington has been paying lip service to a liberal foreign trade policy.

Unfortunately, being all things to all men sooner or later comes home to haunt us. Last year I pointed out that many of the difficulties existing between our country and our nearest neighbors—Canada, Mexico, and the republics to the south of us—were the result of our vacillating trade policies.

The hostility generated against Vice President NIXON, in my opinion, could never have come about had it not been for many of our own stupid mistakes about trade matters with our friends in Latin America.

Now comes another episode involving a bid on a project in Arkansas. Despite the fact that the OCDM had ruled on several occasions that this type of machinery had no particular national defense implications, our Government has now decided to spend a quarter of a million dollars that it would not have to spend in order to give a contract to a bidder who was almost 20 percent higher than an English bidder.

This comes at a time when administration officials are pointing with alarm toward inflation and asserting the need for a balanced budget. It also comes at a time when responsible administration officials are saying each day that the free world must prepare itself for the continuing Soviet economic and trade offensive.

It is no wonder such such policies, or shall I say lack of policies, cause consternation among our friends.

Mr. Speaker, under leave to extend my remarks I include herewith an editorial which appeared in the Washington Post on January 24, 1959, and also a reprint of a news story in the New York Times for January 25, 1959. I hope that Congress will soon have a full look at these developments.

The editorial and article follow:

[From the Washington Post, Jan. 24, 1959]

DOUBLE STANDARD

A strong odor of fish emanates from the denial of a turbine contract to the English Electric Co. on national security grounds. English Electric's bid on machinery for the Greer's Ferry Dam in Arkansas was 19 percent below that of the Baldwin-Lima-Hamilton Corp., which received the award. No matter how elaborately the rejection of the low bid is disguised, it still smells.

What smells the most is the prostitution of the country's trade policy for political reasons. On the eve of the election last fall, Senator HUGH SCOTT, of Pennsylvania, announced that the White House had assured him that the contract would go to Baldwin-Lima-Hamilton, which has a plant in Eddystone just outside Philadelphia. This was confirmed the other day when the Director of the Office of Civil and Defense Mobilization, Leo A. Hoegh, announced that nations' security interests outweighed other considerations.

Under the Buy American Act, a governmental contract must be awarded to a foreign firm when its bid is more than 6 percent below the lowest domestic bid, except when domestic producers are in a situation of serious unemployment. In that circumstance, a domestic bid up to 12 percent higher than a foreign bid may be accepted. Clearly the English Electric bid qualified under either criterion.

That is what makes particularly interesting the finding of Mr. Hoegh—that unless Baldwin-Lima-Hamilton received the contract certain domestic production capacity would be irretrievably lost. Inasmuch as the machine tools involved—"elephant" tools, they are called—cost in the neighborhood of $1 million each, it is hardly conceivable that they would be junked.

The incident arose at a time when the electrical manufacturing industry generally was pressing OCDM for a ban on turbine and generator imports for national security reasons. This request in itself was curious, for the market for heavy domestic electrical equipment has been extraordinarily stable, and the backlog of orders has expanded. The case of Baldwin-Lima-Hamilton was taken out of context, however, before an interdepartmental committee has passed upon the larger issue.

Now, unquestionably Baldwin-Lima-Hamilton has been hard hit by the recession. The company has received only a very limited amount of defense business. Senator SCOTT cannot be blamed for wanting to help his State. But if it was desirable to throw a crumb to this employer, as a practical matter this could have been done through a negotiated defense contract without disrupting the country's good relations with Britain.

Philosophically the worst part of the situation is that it makes a sham of American trade policy and belies the Administration's word. English Electric went through the same disappointing procedure several years ago over its bid on the Chief Joseph Dam. The same excuses have been found on bicycles and other goods. In this instance the company was put to the expense of justifying its case for several months after the political decision had been made.

The time has long since passed when it was realistic to expect this administration to stand up for principle in this area. But in deference to the country's reputation for fair play at least it might end the double standard. If the intention is to wriggle out of foreign trade commitments in the face of political pressures, it would be far less damaging and more honest to say so frankly in advance.

[From the New York Times, Jan. 25, 1959]

HOUSE MAY STUDY CURBS ON IMPORTS—TRADE PANEL PLANS INQUIRY AFTER LOW BRITISH BIDDER LOSES TURBINE CONTRACT

(By Richard E. Mooney)

WASHINGTON, January 24.—The House Subcommittee on Foreign Trade Policy may soon investigate the whole question of curbing imports on national grounds. The group will pay particular attention to this week's award of a turbine contract to a Philadelphia company despite a lower British bid.

Representative HALE BOGGS, Democrat, of Louisiana, and chairman of the subcommittee, will propose an inquiry when the group is formally established in the new Congress.

Congress asked the Office of Civil and Defense Mobilization last year to report by February 1 on its experience which the national security clause of the Reciprocal Trade Agreements Act.

That clause—inserted in the law 5 years ago in place of a proposed protectionist amendment on oil imports—authorizes the President to apply restrictions whenever he finds that the importation of an item is a threat to national security.

NATIONAL SECURITY INVOKED

The national security issue was raised this week by the Army Corps of Engineers selection of the Baldwin-Lima-Hamilton Co. of Philadelphia, to make two turbines for the Greer's Ferry Dam in Arkansas.

In competitive bidding last summer, Baldwin offered to do the job for $1,757,210. The English Electric Co., which has fought this issue before, bid $1,450,700 but failed to get the contract on national security grounds. The Mobilization Office found that if Baldwin did not get the contract it could mean the loss of heavy machine tools and labor skills needed in a war emergency.

The finding was made under the Buy American Act, but the national security issue here is closely related to the issue in the trade law. Under the Buy American Act, the low English electric bid had to be rejected for being less than a certain amount lower than Baldwin's or the mobilization office found national security threatened.

Because Baldwin was in an area of high unemployment, the English electric had to bid at least 12 percent less than Baldwin. It bid 17 percent less, thus ruling out the unemployment issue.

"It looks to me as if it's some political thing to bail out some industry that's in trouble," Mr. BOGGS said. Referring to Senator HUGH SCOTT, Republican, of Pennsylvania, he said, "If Mr. SCOTT wants to testify we'll be glad to hear him."

On October 31, Senator SCOTT—then a Representative campaigning for the Senate—announced in Pittsburgh that he had information from the White House that Baldwin would get the contract. That was 6 weeks before the case was even referred to the mobilization office for a national security ruling, and almost 3 months before the ruling was made.

AGENCY DELAYED RULING

The agency tried to delay its Greer's Ferry ruling until it had decided a broader case it is pondering under the national security clause. In that case this country's electrical equipment industry is seeking restrictions on imports on a variety of items, including turbines.

After delays in the broader case dragged on—it was initiated last February—the agency felt forced to act on Greer's Ferry. The Agency insists that the Greer's Ferry opinion cannot be interpreted as an indication of how the broader case will turn out.

The essence of all national security cases, under either the reciprocal trade law or the Buy American Act, is whether a domestic industry that is deemed vital will wither or die if it does not get some business that is going to foreign suppliers.

The Eisenhower administration has consistently held that the non-Communist world's strength depend in part on liberalization of trade.

Thomas S. Gordon

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. KLUCZYNSKI. Mr. Speaker, I want to join the gentlemen from Illinois and my other colleagues who have paid tribute to our beloved former colleague, Thomas S. Gordon, of Illinois.

Our friend, Tom Gordon, was a man of great ability. He was sincere and forthright. His integrity was such that his word was his bond. We admired him for these sterling qualities, but more than that we loved Tom Gordon because of his great capacity and friendship.

Tom Gordon was a success. He was a success because he was a man of solid integrity. He was a success, because he was willing to give unselfishly of his fine talents to help make a better world.

His life was one of inspiration and encouragement, for it was in the fine American tradition. He was a poor boy who achieved much and gained honor for what he did, through hard work and a constant reaching out for more knowledge and a lifelong striving to find ways to serve those less favored than he was in abilities and personal assets.

During his recent illness my prayers for the restoration of his health and strength were with him, but God, in His infinite wisdom has ruled otherwise, and now I join with my colleagues in a fervent prayer for the restful repose of his beautiful soul.

Mrs. Kluczynski and I extend our deepest sympathy to Mrs. Gordon and the children in the loss of their loved one.

Resolution 9, Senate of Texas

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. THORNBERRY. Mr. Speaker, under clause 4 of rule XXII of the House of Representatives I respectfully submit the attached resolution adopted by the Senate of the State of Texas, expressing opposition to House Resolution 53, which would abolish the House Committee on Un-American Activities and transfer jurisdiction to the House Committee on the Judiciary.

SENATE RESOLUTION 9

Whereas the Un-American Activities Committee of the United States House of Representatives was established some 20 years ago to expose and halt the infiltration of subversive elements in our country; and

Whereas, because of its great work in ferreting out the enemies of our American way of life, this great committee was given a permanent status by the U.S. Congress; and

Whereas the House Un-American Activities Committee has worked closely with J. Edgar Hoover and all National and State agencies in fighting communism and other un-American activities; and

Whereas the Honorable Martin Dies, of Texas, was the author of the legislation that set up this great committee, was its first chairman and worked untiringly and unceasingly for over 20 years to expose and stop each and any form of un-American activity; and

Whereas the House Un-American Activities Committee through Martin Dies, its members and staff, has rendered permanent and invaluable services to our Nation; and

Whereas there has been introduced in this session of Congress, House Resolution 53 to abolish this great House Committee on Un-American Activities: Now, therefore, be it

Resolved by the Senate of the State of Texas, That the senate voice its opposition to House Resolution 53, and urge each Member of the U.S. Congress from Texas to oppose its passage; and, be it further

Resolved, That a copy of this resolution be sent to Speaker SAM RAYBURN and to each Member of the U.S. House of Representatives from Texas.

BEN RAMSEY,
President of the Senate.

I hereby certify that the above resolution was adopted by the senate on January 19, 1959.

CHARLES SCHNABEL,
Secretary of the Senate.

Letter to Washington Publisher Criticizes Paper

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. HUDDLESTON. Mr. Speaker, in this morning's mail I received a carbon copy of a letter which Mr. William F. Monogan, Sr., of 15–C Council Street, Charleston, S.C., addressed to Mr. Philip L. Graham, publisher of the Washington Post, on January 23, 1959. Mr. Monogan, in his well-phrased letter, criticizes Mr. Graham and the editors of the Washington Post for their action in refusing to run the Putnam letter, which has received much publicity of late, as a paid advertisement in their newspaper. As you know, the letter, written by Mr. Carleton Putnam, of Washington, D.C., a prominent businessman of this city and presently a member of the board of directors of the Delta Air Lines, states the case for the South on segregation. The Washington Post, a few weeks ago, refused to run the letter as a news item or in the letters to the editor column.

This was their privilege, of course, but their action indicated an appalling and disturbing lack of objectivity on their part. However, a few days ago they refused to accept the letter as a paid advertisement and it was this development which caused Mr. Monogan to write Mr. Graham.

Because of the importance of this matter and the threat which the refusal of the Post to run the letter even as a paid advertisement presents to the constitutional guarantee of freedom of expression it is a privilege for me to insert Mr. Monogan's letter in the CONGRESSIONAL RECORD herewith. I urge that every Member of Congress give it his careful study.

Incidentally, Mr. Speaker, the Washington Evening Star has stated that they will be pleased to run the Putnam letter as a paid advertisement and the letter is scheduled to appear in that paper this evening, January 26, 1959.

The letter follows:

JANUARY 23, 1959.

PHILIP L. GRAHAM,
Publisher, Washington Post,
Washington, D.C.

DEAR MR. GRAHAM: This letter is by way of an endorsement of the statements of the Honorable GEORGE HUDDLESTON, Jr., U.S. Representative from Alabama, regarding the failure of the Washington Post to print the Putnam letter as a paid advertisement.

Regardless of your personal views or that of your editors, you could and should have given this letter space on a paid basis. You had the right to state in an editorial that the views as expressed by Mr. Putnam were not those views held by the paper you publish, and you could even have ignored the letter in your news items as not being newsworthy, but as long as an advertisement is not immoral or indecent you should have accorded it full respect as a business item, fully and honestly paid for. It will be a pretty pass in this world when men such as you can ignore your readers and the business public.

Just to set the record straight so that you will not think I am a dyed-in-the-wool southern rebel, completely blind and prejudiced to all the rights of the Negro, may I say that I was born in Massachusetts, the seat of the abolitionist movement, and cut my eye teeth on many false tales about the southern brutality toward the Negro. Now being past 65 years of age and having lived in the South since I was 25 years of age, I have found that the Negro is treated much better here than he is in the North. Until your NAACP became so active we had very friendly relations with our local Negroes. I had many of them I could call friend. Can you say that? Also, do you personally have Negro neighbors or are you doing as you do merely to court business for your paper?

Very truly yours,

WILLIAM F. MONOGAN, Sr.

Shining On

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I am submitting for inclusion in the RECORD an article entitled "Shining On," written by Capt. P. A. Horton, a resident of the 24th Congressional District of California, which I represent.

I know Captain Horton to be a sincere patriot and a true American, and feel the article he has written will be of interest to the Congress.

The article follows:

SHINING ON

(By P. A. "Dick" Horton)

One of our national heroes who seemed to best represent the common man of America was Abraham Lincoln. His birth in a hand-hewn log house; his modest and frugal childhood; his guidance from a kind and understanding mother and his own determination to educate himself were character moulding factors that have always appealed to the American people. His life, more than any other American has given hope and inspiration to the youth of our land. That, regardless of social or economic station in life Americans all have equal opportunities to reach the highest position of trust in our land.

During Lincoln's day our people held a deep respect, loyalty, and gratitude for Washington and the knowledge that he was more responsible than any other person for the winning of our freedom, for the adoption of our Constitution and for the building of the first Nation on earth dedicated to the religious and political freedom of mankind.

Lincoln's reverence and respect for Washington are revealed in his statement, "To add brightness to the sun, or glory to the name of Washington, are alike impossible. Let none attempt it, and in its ageless, deathless splendor leave it, shinning on."

The Nation was at that time less than a century old. Many were still alive whose fathers had been companions of Washington. Our people were proud, very proud of the accomplishment of both of these two noble Americans. Loyalty, integrity, patriotism, and faith were the guiding words, spirit and conduct of Americans. The most odious word in the English language was treason.

OUR CHANGING WORLD

Following World War I, the world was aflame with the hatreds built up by centuries of turmoil, strife, plottings, trickery, and ambitions of European politicians. New tryants had arisen in Italy, Germany, and Russia. Each of these tryants were determined to conquer the world or destroy it. Propaganda or brain-washing became an advanced art.

The old Grecian method of appeasing the masses was used under the banner of socialism and the false promises of equality, position and goods. Hitler called his socialism, Nazism; Mussolini called his socialism, Fascism; Stalin called his socialism communism. While the approach differed slightly, the objective was the same in every instance, to enforce conformity under the iron rule of dictatorship under the penalty of death or even worse.

Serene in our belief it could not happen here, our people were aroused by diligent members of patriotic societies and particularly the American Legion. One piece of evidence after another was furnished by patriots who found plottings, schemings, and propaganda of the agents of these foreign groups. Most of this material was received with a shrug. Veterans, patriots, Americans were crucified for daring to suggest that there were those among us that worked for our downfall. Treason is an ugly word.

Patriotic members of the American Legion and other groups realized that unless we could soon obtain an official Government body with its cloak of authority to investigate and expose these traitors in our midst it would soon be too late to save our beloved America.

The national Americanism commissioner, Homer Challiaeux, and the united efforts of the members of the Legion in every State in the Union, and including the writer in the State of California, pleaded with our Congress individually and collectively until we had at last obtained the appointment of a committee in Congress, known as the Un-American Activities Committee. Enemies of this committee have attempted to destroy it ever since its organization. But year after year patriots have risen to its defense.

History will write of the noble work it has done and how it has exposed the traitors in our midst. How it exposed the machinations of the Remingtons, the Harry Dexter Whites, the Alger Hiss's, and those thousands of men and women of foreign ideals who have come to our shores determined to destroy all that those two noble men, Washington and Lincoln, had worked so diligently to obtain.

The need of this committee is greater now than any other time in our Nation's history. It is stated that the Civil Liberties Union and other organizations whose loyalty to our country has long been submerged by their sympathy for Communist causes intended to file a petition of 2 million names demanding a discontinuance of the Un-American Activities Committee.

We must all ask ourselves, are we less loyal than our fathers; is conformity and slavery a good substitute for liberty? Do we lack the energy to defend our country or protect it from the fanatics that would destroy it?

Our Congress is now in session; how deeply are you interested in your country's future? Write to your Congressmen. Write to your Senators and express your views on this matter.

When the shades of night have fallen and you are nestled in the bosom of your family secure in the rights guaranteed you under our Constitution, take time to pray to God that we may continue the America of Washington and Lincoln and that the light of liberty be kept shining on.

Fidel Castro and the New Cuba

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. PORTER. Mr. Speaker, whether Cuba's new climate of freedom lasts depends largely on Fidel Castro. Castro defends the necessity and fairness of the military trials of accused war criminals. Many important voices have been raised in the United States to protest the trials as drumhead court-martials and the executions as a blood bath. These procedures are far from ideal, but how significant are these shortcomings?

Many who loathed Batista are sickened by the thought that Fidel Castro, perhaps in spite of himself, may end up just another Latin American strong man ruling for an interval by terror and tribute. This is by no means impossible.

Because I had long admired Castro as a brave fighter against Batista and because I want to do whatever I can, however little, to help the new Cuba to be democratic, I accepted an invitation from Fidel Castro and the Cuban News Reporters Association last week to visit Havana. My distinguished colleague, ADAM CLAYTON POWELL, was also visiting Cuba at this time and will make his own report to the House of Representatives. His deep interest in the Caribbean area is well known.

I was there Wednesday and Thursday. I attended the mammoth rally. I spoke with Fidel Castro, with President Urrutia, whom I had previously known and respected as a determined and democratic anti-Batista man, with cabinet ministers whose merits I had read about in a State Department dossier I read on my way down to Habana; with our top embassy officials; with 26th of July leaders, with seasoned Latin American newspaper reporters, and with ordinary Cubans both rich and poor.

Of course it is conceded that some people feel they can fly through the stratosphere over any country and immediately become qualified as experts in all aspects of the country's political, economic, and social affairs. I confess that my 2 days on Cuban soil, though very busy days, may not have qualified me fully to advise Castro, our State Department, and United States citizens generally on this delicate, crucial period in Cuban history.

Whatever my credentials, here is my report:

It has been my good fortune to visit Colombia, Venezuela, Honduras, and now Cuba within the past 2 years in each instance after the ousting of a dictator. My interest in hemispheric affairs no doubt exceeds my information. I am still learning and there still are several countries in this hemisphere for me to visit.

WARM ABRAZO OR FORMAL HANDSHAKE?

If Castro's Cuba is in fact an emerging democracy, then the newly adopted policy of our Goverment requires our rendering a warm abrazo. If this is not true, then a cool, formal handshake only should be proffered in our relationships. This follows Dr. Milton Eisenhower's recent proposals which the President has endorsed.

My good friend and respected mentor, the senior Senator from my State, is deeply respected in Cuba as elsewhere in the world for his unflinching and aggressive liberalism. Senator WAYNE MORSE has referred to the executions in Cuba as a "blood bath" and has stated that "the Castro regime shot many Batista people without a semblance of a fair trial," although he adds, "I haven't any doubt that a fair trial would have found them guilty."

Senator MORSE is chairman of the Senate Foreign Relations Subcommittee on Inter-American Affairs. He has always been an outspoken foe of dictators.

Another friend whose qualifications and motives are above question is John O'Rourke, distinguished editor of the Washington Daily News and immediate past president of the Inter-American Press Association. On January 23, 1959, he editorialized in his paper as follows:

> Few will deny that Bastista was an evil man—and good riddance. But Fidel Castro's determination to proceed with "rebel justice"—drumhead trials, mob juries, and arbitrary executions—cannot avoid stirring second thoughts among those who hoped the revolution signaled the end of tyranny.

Here also is a friendly voice which cannot be ignored.

Another hardworking and sincere friend of Latin America, Senator GEORGE SMATHERS, of Florida, has urged his colleagues and the public to reserve judgment on the Cuban revolution until events more clearly show what has happened there. He believes it is too early to tell whether the revolution was a victory for freedom or simply a change in dictatorships.

WIDE EDITORIAL CRITICISM

Editorial comment in Oregon and throughout the Nation has been adversely critical for the most part. An article by S. L. A. Marshall, January 21, 1959, on the editorial page of the New York Herald-Tribune refers to "Cuba's new strong man harvesting vengeance in the name of the revolution" and to "swift, farcical trials and firing squads working as callously as if they were slaughtering beeves."

The Louisville Courier-Journal recently made an editorial comment that "the demand for vengeance is still short-circuiting the orderly processes of democratic justice."

My own hometown newspaper, the Eugene Register-Guard, approved Senator MORSE's words "blood bath" as accurate and states that the world wishes Castro well but that "he cannot keep the favor of decent people around the globe if he sanctions the same terrorist tactics that the world deplored in the deposed dictator, Batista."

What about these charges?

Are they true?

Are Fidel Castro and the new Cuba fast returning to the same old "strong man" situation?

No, I do not believe that there has been any blood bath in Cuba nor do I believe that Castro and his 26th of July movement are denying fair trial to accused war criminals, although I believe their procedures should be much improved.

My opinion is based on 2 years of observing the Cuban situation.

What is a blood bath?

I would say it was irresponsible, indiscriminate killing of persons. As for drumhead trials or lack of elementary due process, I suppose that means the accused not knowing exactly the charges against him, not being confronted with the witnesses against him, and not having a proper opportunity to defend himself.

Persons critical of the trials and executions are not, in my judgment, fully informed, often through no fault of their own. They do not realize the magnitude and high morality of the revolution.

Before Batista's frantic flight to Trujillo's haven for defeated dictators, I had met many Cuban revolutionaries in the United States and elsewhere in the hemisphere. Manuel Urrutia, the provisional President, Ernesto Betancourt, the Washington representative of the movement, Tony Varona, former president of the Cuban Senate, Dr. and Mrs. Santos Buch, and many others were well known to me.

NOT A RABBLE IN ARMS

These revolutionaries were devout, not fanatic; humble, not arrogant; angry, but not bloodthirsty. Last week I met many who served in the ranks. My impressions square with those of impartial observers who lived with them in the mountains. The Castro men are restrained, disciplined, and dedicated to their task. They are not a rabble in arms.

The rebels tortured no one. They shot no prisoners. Even after victory there is no report of looting or violence by them. Theirs is a crusade for an honest and terror-free Cuba, not a conquistadorial drive for wealth and power. Priests and protestant ministers were attached to the rebel forces. Batista's army had no chaplains at all.

In short, and I invite you to ask anyone who knows Castro and his men, the 26th of July movement is not made up of men who would indulge in or allow irresponsible, indiscriminate killing or, if you will, a blood bath.

Since Castro took over in Cuba there has been respect for civil liberties. The press has been entirely free. Many journalists have roamed all over the island with notebook, taperecorder, and movie camera. Whatever else the revolution may or may not be, it is newsworthy.

I have followed these reports closely and I have yet to see a specific allegation

that even one accused war criminal was denied elementary due process or that a particular one of them was unjustifiably executed. I asked veteran newspapermen in Habana if they knew of any such instance. They did not. They were convinced that the men executed deserved conviction and that they had had a fair opportunity to defend themselves at their trials.

During Batista's years of terror there was censorship. "Official" acts of cruelty and murder were kept out of print. Huge sums of money were spent by the Government to bribe both publishers and reporters. It is no wonder that many persons in the United States thought Castro's insistence on the continuance of these trials harsh and ominous.

"There is hardly a family which has not felt the brutality of the Batista police," a Life correspondent reported—Life, January 26, 1959. Time magazine for the same date reports:

Many of the Batista cops who faced the firing squads last week were proved killers whose twisted minds drew pleasure from pain. To extract secrets from captured rebels, they yanked out fingernails, carbonized hands and feet in red-hot vices. Castration was a major police weapon.

Bodies were left in sun-speckled streets as police warnings. One Santiago cop of the Batista regime, trying to break down a rebel woman, brought one of her brother's eyeballs on a platter to her cell. Other rebels were forced to watch their wives raped by cops. A U.S. resident of Santiago, who chanced upon Police Chief Rafael Salas Canizares shooting 4 young rebels dead in the street, reported:

"He was in a state of maniacal ecstasy—face flushed, eyes bright, breathing hard."

CASES CAREFULLY PREPARED

The cases against the accused war criminals were not hastily concocted on the say-so of some hysterical woman who might or might not be telling the truth. The movement had many spies. Almost every Cuban was against Batista.

Vehicle movements of Batista men were carefully checked. Pictures were taken. Batista's policy was to allow pictures of torture victims to become available widely. He wanted to terrorize the rebels and their friends.

Dossiers were prepared by the rebels. Many of Batista's murderers and torturers escaped when the Government fell. Those who did not are being tried by military courts under war criminal laws similar to those the Allies employed in Germany after World War II.

"If I allow just one man to be killed unjustly, I destroy my whole movement," Castro told me very seriously when I first talked with him. We were jammed together with his chiefs and with journalists from all over the hemisphere on the speakers' platform at the rally last Wednesday.

This was the rally where he asked those who supported the continuance of the trials to raise their hands. Of course I deplore such tactics and others he has used. Let me make it clear, however, that I believe in the good faith of Fidel Castro and the new Cuban Government. These men are not vengefully killing people, nor are they harvesting vengeance or giving swift, farcial trials, or allowing firing squads to work callously as if they were slaughtering beeves.

If wanton murder and inhuman torture are capital crimes, and they are in the rebel war criminal code, those executed deserved to die and were permitted to do so far less painfully than their victims.

We fought a war to make the world safe for democracy but the fact is that a Democrat in Latin America in the past several decades has lived a precarious life and often died a painful death. The recent overthrow of a number of dictators gives reason to hope that the hemisphere may become unsafe for tyrants and their menials.

CASTRO, NOT THE MOB, RULES

At his gigantic press conference last Wednesday, which included almost 400 newsmen and lasted 5 hours, Castro said that a public opinion poll showed that 93 percent of the Cubans wanted all the imprisoned accused war criminals executed. "But they will receive fair trials," he said. "I am not so radical as the people."

Senator MORSE's suggestion to Castro that he invite a United Nations observation team to Cuba to investigate the war crimes procedures is of course a good one. I strongly recommended its careful consideration when I spoke with the highest officials in the new government and with Castro. A committee from the Organization of American States or from the Inter-American Bar Association could serve the same purpose.

I personally do not need convincing as to the motives of Castro and the new government, but an outside group of ability and prestige could do much to reassure many Cubans and their apprehensive friends elsewhere. A minister of the new government assured me that these suggestions were being explored and considered.

When I sat next to Fidel Castro at dinner last Thursday evening I told him that I thought it was wrong to hold war crimes trials in the Sports Palace and to allow unrestrained press, radio, and TV coverage. A man's trial for his life, I said, should not be made a spectacle. The first—and I hope last—such trial was barely 2 hours old when I said this.

TOO LITTLE AND TOO MUCH

As I spoke I felt the irony of my words because a few days earlier I had been urging the new Cuban Government to invite newsmen and various opinion leaders to observe for themselves the war-crimes procedures. I cabled President Urrutia that the new Cuba had nothing to hide. Castro had a right to feel baffled about an outside world that apparently did not know its own mind.

I pointed out the middle way: A small courtroom, spectators and journalists limited in numbers; dignity yet no hint of star-chamber proceedings.

I predicted the outcry that did in fact ensue. The following day he radioed from Caracas to stop the trials in the Sports Palace and take away the TV and radio coverage.

I shall refrain from claiming credit for this move. Many others no doubt were saying the same thing to him. It does demonstrate, however, his ability to learn and his wish to do what is right.

Castro is not infallible. He is 32 years old and without broad experience. He makes mistakes. I think he is entitled to a few mistakes considering his accomplishments and his great responsibilities.

Operation Truth brought almost 400 newsmen from every country in the Hemisphere except the Dominican Republic. They came at the expense of the new Cuban Government and were in addition to the journalists already there. They rightly criticized the circus quality of the trial in the Sports Palace but they also agreed that the legal procedures used were fair.

"Better understanding abroad of the provisional government's aims was foreseen as a result of the public trials," said an Associated Press story, January 24, 1959, in the Washington Evening Star. Better understanding can come without boisterous public spectators, TV and radio coverage. Press coverage, on a pool basis if need be, is of course essential.

If Castro had been after power and money he could have much of both firmly in his grasp by now. Instead he set up the Provisional Government under President Manuel Urrutia. Neither Urrutia nor his Ministers are men who would act as puppets for Castro or anyone else. The State Department prepared a notebook with their biographies for me to read on my way down to Habana. I was impressed by the fine qualifications of these men.

AMATEURS IN POLITICS

Of course, like Castro himself, many of them are amateurs in politics. They will need help and forbearance until they learn how Cuba can be governed effectively in conditions of honesty and human freedom.

Castro now governs Cuba but the signs are that he will soon turn over his great powers to the new government. He drives himself relentlessly but manages to keep his sense of humor and humility. His remark about 200,000 gringos dying was a flippant sally in answer to a newsman's flippant query as to what would happen if the United States sent the Marines to Cuba. The U.S. press solemnly printed this as a bragging threat and called him a demagogue. He is wryly rueful about the incident, but I think certain reporters have more to answer for than Castro. I am certain that he is not anti-United States at all.

Fidel Castro can mean democracy at long last for Cuba or he can mean disillusionment and another strong man government. His present reign is characterized by confused disorganization but much good will and dedication in preparing for a democratic Cuba. One of his young bodyguards, a U.S. citizen from Brooklyn, told me, "Fidel uses C.S.T., Castro Standard Time—6 hours late."

He needs counsel from experienced Latin American democrats like Governor Muñoz-Marín of Puerto Rico, Costa Rican ex-President Jose (Pepe) Figueres, Colmbian President Alberto Lleras Camargo and Venezuelan President-elect Romulo Betancourt.

These men can tell him much he needs to know about relationships with Cuba's immediate neighbors, the United States, and Soviet Russia. Fidel Castro has it within his power to win a place in the history books as a great builder of Latin American democracy as well as a guerrilla leader of a highly popular revolution.

TIME TO SHAVE THE BEARDS

If this is to come about, he will have to seek solitude and to allow the provisional government to rule Cuba and to set the stage for free elections in 18 months. This will be hard to do, but it must be done.

I told him, with my usual tact and omniscience, that he and his followers should now shave or trim their beards and that they should discard their characteristic fatigue uniforms for the regular Cuban military uniforms. Nothing would mark more dramatically the passing of the combat phase to the civilian phase of the fight for a democratic Cuba.

Castro made a mistake in naming his brother Raul as his successor in case of death. Successor to what? This is the move of a strong man, not a man who wants an orderly lawful government to rule in Cuba. Upon reflection I think he will want to remove the mantle of succession from Raul's shoulders—and then destroy the mantle.

His demand that the United States return Cuban war criminals and the money they stole is another indication of his incomplete education in public affairs. It is up to Cuba to indict these men and to invoke reciprocal treaties providing for extradition.

The trials should be slowed down. Cuba is at peace, and civil judges, not military judges, should sit on the bench. More time should be allowed for the preparation of defense cases, although I have yet to hear or read of any protest on these grounds made by an accused war criminal or on his account. I urged these changes in policy in writing before I went to Cuba and personally when I was there to President Urrutia, Castro, and Secretary of Justice Angel Fernandez.

SENATOR MORSE'S FRIENDLY ATTITUDE

I agree entirely with Senator MORSE'S statement:

It is not too late. We want to be friends of the new leadership of Cuba. I believe the leaders are democratically motivated. When a wrong develops, steps should be taken to correct the wrong.

Senator HUBERT HUMPHREY, speaking in the other body January 20, 1959, and commending Senator MORSE's stand for better judicial processes in the war criminal trials, said that Senator MORSE "has been principled in his comment and stand and, at the same time, considerate and tolerant."

Senator HUMPHREY continued:

I hope the people of Cuba realize that the remarks which have been made by Members of the Senate, and in particular by the chairman of the Senate Foreign Relations Subcommittee on Latin American Affairs [Mr. MORSE], were made not in a spirit of hostility, bitterness, or antagonism, but rather in a spirit of understanding, friendship, advice, and kindly admonition. They were made in a sincere effort to maintain wholesome, respectful, and cordial relationships between the people of Cuba and the people of the United States.

Castro needs rest. He needs time to ruminate, time for contemplation and study, then consultation with others and travels in Cuba and elsewhere. If he does not withdraw, he will inevitably diminish, then destroy, the authority of the new government. This will make the transition period difficult and perhaps impossible.

Many Cubans will protest his withdrawal into the wings at this time. They will cry, with understandable concern, that Cuba needs him. More than Castro, Cuba needs a functioning government, honest and mindful of human freedoms. Castro has no desk, no organization for government, and no time or ability to decide the many and often complex issues brought to him. Most important of all, he has no business trying to do what the provisional government was established to do.

"NOT UNDER MAN"

As a thoughtful lawyer Castro can recall Coke's famous proposition, inscribed in Latin on the pediments of Langdell Hall at Harvard Law School, "Not under man, but under God and the law." This proposition, in addition to being right and just, is the only feasible way to run a government today and to maintain human freedoms.

As I said goodby to him Wednesday evening he said I had given him things to think about. My bet is that he will find time to think. Cuba's emerging democracy will be realized without still another bloody detour.

What about our Government's policies now?

In my opinion they are excellent, both in theory and practice. Last Wednesday morning in Habana I conferred with the Chargé d'Affaires, First Secretary Dan Braddock, and the top Embassy staff people for about an hour. Our various programs are all set to resume operations, awaiting only necessary organizational moves of the new Cuban Government. Our men there have the right attitude about extending the warm abrazo to this Government of honorable and democracy-minded men.

After two sorry experiences with amateurs, we are now sending a first-rate career Ambassador to Cuba, Philip Wilson Bonsal, a man who, according to the New York Times, January 22, 1959, "does not strive to conceal his strong preference for democratic governments."

In my opinion much credit must be accorded to William Wieland, the State Department's director for Cuba, Mexico, Haiti, and the Dominican Republic. He is highly competent and conscientious. Mr. Wieland was a United Press reporter at the time of the dictator Machado in Cuba. He was jailed for his activities against that tyrant. His sympathies are unchanged. However, he dealt honorably and correctly with all Cuban factions, winning the respect of all those who themselves were respectable.

ADDITIONAL AID IS AVAILABLE

We have further aid available for Cuba. All the new government has to do is ask. The request will receive careful and favorable consideration. This is also a bit ironic, for our official governmental policy is far more friendly to the new Cuba than are many vocal opinion leaders and many editorial writers.

Often the reverse has been true.

My explanation is that in this case the Government is better informed as to the character of the men who threw Batista out and as to the nature and extent of the crimes of the accused war criminals and as to the procedures by which these men are being tried.

Fidel Castro and his friends who seek to bring democracy to Cuba need and deserve our sympathy, our forbearance, and support. Our condonation for acts of cruelty is not solicited because, so far as I have read the record made by the free and active press, they are not guilty of any such acts.

Democracy is not won by vanquishing a tyrant. It is won by fostering human freedoms and basing the government on the results of free elections. Democracy is an equilibrium. Once attained, it has to be retained.

Expediency and indifference can destroy democracy. This is why the United States must concern itself with the development of democracies in other lands, and particularly with respect to a close neighbor like Cuba. To the extent we encourage democracy elsewhere we help maintain and strengthen our own standards of human freedom.

Faith without works will fade. The more faith in democracy we export, the more we have.

I hope that many of my colleagues and other fellow citizens will have occasion soon to visit Cuba and to see for themselves what a tremendously significant revolution has taken place.

This, then, is the report of a recent tourist about his 2-day trip to Cuba, a freed and freedom-loving Cuba, a pro-American Cuba, a peaceful and law-abiding Cuba, a Cuba that needs and deserves our help in its historic opportunity.

Mr. Speaker, under leave to extend my remarks, I would like to include the following items: A letter to the editor of the New York Times of January 25, 1959, from my colleague, the gentleman from Connecticut [Mr. BOWLES]; an editorial from the Times for January 23; and a column by Drew Pearson as it appeared in the Miami Herald for January 23:

[From the New York Times, Jan. 25, 1959]

OUR CUBAN POLICY QUERIED—PRESENT ANTI-AMERICANISM DECLARED RESULT OF OUR SUPPORT OF BATISTA

(The writer of the following letter, formerly Governor of Connecticut, was U.S. Ambassador to India from 1951 to 1953. He is now a Member of Congress.)

To the EDITOR OF THE NEW YORK TIMES:

Millions of Americans have been shocked at the brutal manner in which the new Cuban Government has been disposing of many of its adversaries and the bitterness of its attacks on the United States.

Although our disappointment and resentment are understandable, it is important that we appreciate the extent to which our own policies have helped create the antagonism with which we must now contend.

According to the narrow view of many of our policymakers, any dictator who tells us he is against communism, regardless of how hated or corrupt he may be, deserves American support. This has led us time and again

to place American dollars and American prestige behind reactionary, rightwing governments which ruthlessly exploit their people and which sooner or later are doomed to fall.

SOURCE OF ARMS

For nearly 3 years the now victorious Cuban revolutionaries were hunted like animals through the mountains and jungles by Batista's armed forces. Many of the Government tanks, planes and small arms which brought death to their families were manufactured in American factories, paid for by American taxpayers and shipped to Cuba by the American Government.

Our Government cannot be held responsible for the brutal behavior of the fallen Cuban dictator. But it can and should be held responsible for the damaging effect which some of our policies and personnel have had in producing the anti-American resentments unleashed by the Cuban revolution.

Our last arms shipment was landed in Cuba scarcely 9 months ago. If the victorious leaders of the new government did not now resent the official support and comfort we gave the vanquished Batista, they would be less than human.

Although this experience has cost us heavily, not only in the respect of Cubans but in that of other non-Communist peoples in all parts of the world, there is scant evidence that we have taken it to heart. On the very day that Castro's revolutionary forces were entering Havana through cheering crowds we announced that a Marine Corps training mission would be sent to Haiti to bolster a government that since last summer has been forced by public opposition to rule by decree.

REVOLUTIONARY PRACTICES

All thoughtful observers regret General Castro's drumhead courts, mass shootings, and his demagogic raving about a "gringo" invasion. But our disappointment should not blind us to the implications of our own failure to live up to what the world expects of us.

The truths which our Declaration of Independence held to be self-evident are still providing the inspiration for non-Communist revolutionary leaders who are challenging dictators in Latin America, Africa and Asia.

Whether the Cuban revolution succeeds or fails in its effort to provide freedom and dignity for the Cuban people will depend largely on what Castro does with his victory in these first few weeks. But this and much more will also depend on our capacity to remember our own revolutionary origins and to bring our policies into focus in a world of revolutionary change.

CHESTER BOWLES.

WASHINGTON, *January 21, 1959.*

[From the New York Times, Jan. 23, 1959]

HABANA AND WASHINGTON

A new and what must be a happier chapter in Cuban-American relations is about to begin. Our Ambassador, Philip W. Bonsal, is a splendid choice and Cuba's new Ambassador to Washington, Prof. Ernesto Dihigo, an educator and diplomat of the highest caliber, is certain to represent the revolutionary regime with distinction.

It is time to put aside arguments and recriminations on both sides. There is much constructive work to be done. Cuba has to get her sugar crop going, her roads and railways repaired, and her governmental structure reorganized all the way up from municipalities to the capital of Habana.

Cuba is being reborn. She has the greatest opportunity ever offered in her history to construct a new, free, honest, democratic government. The men now in control have fought, and many of their fellow Cubans suffered torture and death, just for that.

There is a major work of repair to be done in Cuban-American relations. The harsh fact has to be faced that the resentment and bitterness of Cubans against the State Department and American policies rose to a crescendo under the ambassadorships of Arthur Gardner and Earl E. T. Smith. Now a distinguished career diplomat with a splendid record is to take over. Philip Bonsal has every qualification that could be asked for the difficult and gratifying task he is taking on.

Dr. Dihigo, the Cuban Ambassador, is professor of Roman law at the University of Habana, the author of a number of books on international law, a jurist, a former Ambassador to the United Nations, and a former Minister of State. In addition he knows the United States and likes Americans. It is to be hoped that both Ambassadors will get to their posts as soon as possible.

[From the Miami Herald, Jan. 23, 1959]

EXECUTION OF TERRORISTS NECESSARY ACT BY CASTRO

(By Drew Pearson)

WASHINGTON.—Though not condoning kangaroo courts and quickie firing squads, Latin American diplomats returning from Cuba report that if Fidel Castro had not proceeded at once with the trial and execution of Batista's chief terrorists, he would not have been able to maintain order in the country.

Continuous censorship during the last year of Batista's reign kept newsmen living there from giving even an approximate picture of the slaughter that was taking place.

As a result, U.S. readers got no real idea how Batista's agents—military and police—operated against suspected civilian sympathizers of Castro's July 26th movement.

On one occasion, for instance, the bodies of 17 university students were thrown on the capital's streets from speeding police cars.

One of the first common graves located in Oriente Province on January 6 contained 183 half-burned corpses.

Impartial medical inspection showed that the majority had been pushed into the hole alive, gasoline poured over all, and the torch applied. There have been half a dozen other similar graves discovered.

As one observer put it: "Castro landed from Mexico on December 2, 1956, with 81 followers. Four months later, after the first skirmishes with Batista's forces, only 12 of that original group were still alive.

"If he hadn't had volunteers flocking to him from the farms and small towns all over Oriente, he would have been finished.

"Relatives of those volunteers—especially brothers and sisters—paid for that support by the thousands, with their lives, their sight, their fingers, or toes, or genital organs, their virginity.

"By the time Castro was ready to start his final big push, early in December, he had 8,000 men and women fighting for him, and one family in three all over Cuba was giving active aid to the rebels.

"There are only a little over 6 million people in Cuba. In every town and city, all the people—whether they were helping Castro or just keeping out of it—knew the names and faces of the Batistia men in their areas who were carrying out the torture, rape, and murder.

"In order to hold his army together and maintain its morale, Castro had to promise that every such agent who was positively identified would be tried by the revolutionary forces, as soon as they won, and shot if convicted.

"If he had reneged on that—failed to seize the terrorist, or held them indefinitely for civilian courts to be reorganized—there would have been a wave of mob lynchings all over Cuba, with at least 2,000 or 3,000 dead by now, instead of 200 or 300, without trial of any kind.

"It's a grim, bloody business, of course, but this was a real civil war, with practically every Cuban involved on one side or the other—not just another one of the palace guard coups that so often pass for revolutions in Latin America."

They're Stealing My Dollars, Robbing My Children, Grandchildren, and Great Grandchildren

---

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, my parents and my grandparents never had a dollar they did not earn through manual labor—except what the latter left to the former.

Whatever the grandparents, by practicing thrift, were able to save, they gave to my parents. My parents lived simply, frugally, and one of the principal objectives of their toil and their thrift was to give my sister and me a better start in life than they enjoyed.

The wife and I have been endeavoring, throughout our 59 years of married life, to follow along the same path. From time to time, out of my earnings as a lawyer and because of our frugal living, we were able to purchase a little life insurance, a few securities, put a little money in the bank, buy a home and a little additional real estate; but, for the last 20 years, the purchasing power of our investments—except those in real estate—has been shrinking. And the taxes on the real estate have become so high that it no longer pays its way, returns a profit. Nor has the actual purchasing value of real estate—except in development instances—increased.

The result is that, because—as the days roll by—the purchasing power of his resources is less than when he denied himself, attempted to securely invest any surplus, there is today little inducement for the average citizen to work, attempt to practice thrift, to accumulate property or a bank account.

The present situation is learnedly, factually set forth in an article printed in the January 1959 Reader's Digest, which was condensed from the Saturday Evening Post of November 22, 1958. It reads:

DO YOU WANT A 10-CENT DOLLAR?

The United States presents a curious spectacle today. Here is the richest country in the world either unwilling or unable to raise enough money in taxes to pay its current governmental costs. Our Federal deficit this year is expected to be about $12 billion—considerably more than the total expenditures of the Federal Government 20 years ago.

For the first time in our history, and just when we are trying to prove that our economy will outperform that of the Communist states, Congress has had to raise the total debt limit twice in the same year: first to $280 billion, then to $288 billion. Senator HARRY F. BYRD has estimated that in 5 years, at expected spending levels, the debt will reach $350 billion. This is a fantastic $6,250

for every American family—more than the average family's annual income. Are we headed downhill on the slippery road to disastrous inflation that so many countries have traveled before: the road that leads to a 25-cent, 10-cent, 1-cent dollar?

In 20 years the value of the dollar has been cut in half. Just since the end of World War II the dollar's purchasing power has been reduced by 23 cents. If fumbling governmental fiscal policy should encourage that deterioration to continue, in 25 or 30 years our present 48-cent dollar might be worth only a dime.

What can be done to get the Government back on an even fiscal keel?

1. Should we increase taxes?

Many citizens, convinced that they are overtaxed already, cry for tax reduction. The present tax burden, including all hidden and direct taxes, takes about one-third of the average person's income. He works 12½ hours of his 40-hour week just to pay for Government. On a daily basis, the tax burden is even more depressing. The Tax Foundation has shown that in an 8-hour day the average $4,500-a-year man must work for the Government 2 hours and 29 minutes. By contrast, to pay for food he works 1 hour and 39 minutes; for housing, 1 hour and 25 minutes; for clothing, 37 minutes.

A major difficulty is that our principal taxes cannot be raised to produce much more revenue without wrecking the economy. Our tax system is like an old rubber band, which has been stretched so long and so often that there is no stretch left in it. Since enactment of the income tax in 1913, our system has consisted fundamentally of: The income tax, which now produces 79 percent of total Federal revenue; a series of special excise taxes, producing 6 percent of total revenue; taxes at very high rates on sales of liquor and tobacco, producing 7 percent; and taxes on transfers of property by gift during life, or at death, producing 2 percent.

To raise an additional $12 billion (the amount of this year's deficit) from the present Federal income tax would require the confiscation of everyone's taxable income in excess of $4,000, or an increase in the corporate rate from the present 52 percent to 82 percent. The result of income taxes of that magnitude would be economic chaos. They would destroy all stimulus to risk-taking, new investment and business expansion—the most potent forces in the economic development of our country.

A few hundred million dollars could be raised by increasing gift and estate taxes. Since the taxes on liquor and tobacco already approximately equal the cost of the product, they cannot be used effectively to produce much more revenue. The rates of our existing special excises could be raised a little, but we have found that some excises, such as the taxes on freight and passenger transportation, so discourage activities we want to foster that Congress has had to repeal them. The latest revision of the excise tax laws resulted in an estimated loss, not a gain, in revenue.

So, raising taxes is not a very acceptable solution.

2. Can we solve the problems by reducing governmental expenditures? Just what expenditures can be cut?

In the current fiscal year ending June 30, 1959, the Federal Government will spend almost $80 billion. Although defense spending, estimated at $46.8 billion, is obviously the largest part of the budget, it is by no means responsible for the recent big increases. In the last 5 years nondefense spending has jumped by a startling $12½ billion—from $20 billion to more than $32 billion. The biggest increase in this area has been in the farm programs, which have risen $3¾ billion and now amount to $6½ billion per year. Federal spending on housing and commerce has gone up $3 billion; labor and welfare expenditures, up nearly $2 billion; veterans' services and benefits, up $900 million.

Now these civil expenditures do not represent pure congressional wastefulness. When, for example, Congress increased the social security payments (and the taxes to pay for them), Congressmen had an eye on the forthcoming elections: they calculated that the number of citizens who wanted to see larger payments was greater than the number who would resent the increased taxes. We are a big Nation of enormous wealth; why shouldn't we live the good life? Let's have guns and rockets, but let's have butter, too—lots of it.

And let's have lots of roads. The cost of the Federal highway program, not now included in the budget, jumped from $586 million in fiscal 1954 to an estimated $2½ billion this year. Last year Congress suspended the pay-as-we-go feature of this program, ensuring even greater costs in the future. We all want good roads; but do we have to have them so quickly that we must pile up more debt to get them?

Furthermore, is it essential that we have some 2,250,000 civilians on the Federal payroll at a monthly cost of about $1 billion? Is it necessary to pay Federal employees an average of $90 a week while the average in private industry is $78? This kind of spending has increased the cost of Federal payrolls in the past 10 years from $162 per American family per year to $255 per family. Isn't it time for us to distinguish essential expenditures from desirable?

Under present world conditions, it is hard to justify a reduction in military spending. But we might be able to hold national security costs at the present level. This would require that money for new programs and weapons should come from cutbacks in expenditures for other military projects. A sizable sum was saved this way in the present budget.

It is primarily in the area of nondefense spending that Congress might make real cuts. There is nothing inevitable about the $6½ billion to be spent for agriculture this year, nor the nearly $4 billion for housing and commerce. The farm price-support program (changed for the better in 1958) has piled up unnecessary surpluses at the taxpayers' expense. There are now in storage, government-owned, for every American family, 24 bushels of corn, 19 bushels of wheat, 4¼ pounds of dried milk, 3½ pounds of cheese and 2¼ pounds of butter.

This is just not reasonable. Nor is it reasonable that more than half the patients in veterans' hospitals are being treated for nonservice-connected disabilities. Nor is it reasonable that the Federal Government should continue to add to the 100-odd Federal-aid programs to States that can better finance and administer their needs locally.

The President in his budget for the current year made a series of recommendations which held hope for lower expenditures. Mainly, his proposals were of three types: reduction in some of the Federal-aid programs, largely by the transfer of entire programs to the States; limitations on the extent of Federal loans and loan guarantees; curtailment of direct-spending programs.

In general, Congress ignored these proposals. In some instances it moved in the direction of greater Federal participation in local projects. Thus, instead of eliminating a program of Federal aid for local sewer systems—certainly a subject of local rather than national concern—Congress voted to enlarge it.

By accepting the President's proposals for cutbacks, and adding some of its own, an economically minded Congress could bring expenditures down to $70 billion. That is probably a spending minimum. It is not impossible to attain. In fact, presputnik, it was the administration's target.

3. Do we really want to continue as we have been doing: borrowing what is needed and passing along the cost of today's government to our children to pay tomorrow with, say, a 10-cent dollar?

The Federal Government has paid much of its way by borrowing ever since 1931. In 7 of the past 11 years we have had to pay for a budget deficit by borrowing. Have we found this to be a satisfactory way of life? We have not.

When the Government does not collect enough taxes to pay current expenses, it issues governmental promises-to-pay to cover the difference. Such promises may be called savings bonds or certificates of indebtedness or long-term bonds. Whatever the name, we accept them at their face value so long as we believe that the Government will live up to its promises.

Since the Treasury has issued so many, however, and since Congress is obviously reluctant to levy enough taxes to pay currently for the steadily increasing governmental costs, the value of these obligations has gradually declined. This is what is behind the decline in the purchasing power of the dollar over the past 25 years.

The resulting inflation has rightly been called the cruelest tax of all. Just because of taxes and inflation the person who earned $5,000 in 1946 would have to earn $7,343 today—nearly 50 percent more—simply to be as well off as he was before. It is plain to see what happens to the retired man, the widow on a fixed income, the insurance policy or annuity payable in a fixed number of dollars.

The best way to weaken America as a nation is to convince our citizens that our governmental promise to pay, our currency, has lost its integrity. There would not be much use in saving if we suspect that the dollars which we put aside with such difficulty won't be worth a dime in purchasing power at the time we need them—to raise a family, to send our children to school, to pay our own way when we retire.

Hence, it looks as if the Government had better take the other fork of the road, uphill and stony as it may be: reduce expenditures, and levy such taxes as are needed to pay for current costs.

An immediate objective might be a $75 billion budget for the next fiscal year. This $5 billion reduction of the present budget would require the utmost effort of both the President and Congress. It would also require strong support from the individual citizen, who might keep in mind that every reduction of $1 billion in Federal spending is the equivalent of a $20 bill in the pocket of the average family.

Since Federal, State, and local taxes are all so high, Congress will need to make an extraordinary endeavor, in levying any further taxes, to damage our economy as little as possible. It is vital to permit and if possible to encourage our economy to grow. If private enterprise flourishes in this country, if plants are steadily renewed and improved through investment, "plowing in," of profits, the U.S. Treasury, now more heavily interested in corporate profits than all private stockholders put together, will reap increasing revenues, even though tax rates remain constant.

Finally, Congress must face the tremendous task of looking deeply into the problems of tax structure and fiscal policy. The most promising solution might be the creation of a Commission on Federal Tax and Fiscal Policy, organized along the lines of the Hoover Commission, whose recommendations have led to savings of billions of dollars through improved efficiency and reorganization of the executive branch. Proposals to set up such a special nonpartisan group of the highest distinction have already been made in Congress. They deserve careful attention.

A nation such as ours cannot concede that its fiscal problems are insoluble. We must

apply our best brains to the project and stop trying to patch up an inadequate, archaic system. Surely American intelligence can be mustered to provide the Government with a sound fiscal system, to match a sound economy and a sound defense organization.

Willford I. King, long an active opponent of overspending, points out that at the end of 1957 there was $725.8 billion of public and private debt in the United States. Since then, the Federal debt has grown by some $8 billion. Probably, therefore, the total net debt at the end of 1958 was $734 billion, plus paper currency and demand deposits held by Americans amounting to $230 billion. If inflation reduces the value of the dollar by three-fourths, American creditors—as a rule the older and thriftier of our citizens—may be fleeced out of some $723 billion.

The real cause of our present trouble is not the inability of the people to pay any reasonable justifiable tax, but the insistent demand of pressure groups that the Government do for them the things they might well do for themselves, and that it adopt and follow a paternalistic policy under which the Federal Government attempts to treat the healthy, strong individual, able to care for himself, like a nursing baby.

The net result is that, as individuals and as a Nation, we are becoming soft, dependent, too shameless to take care of ourselves, bear our just burden.

We are becoming a bunch of softies, as far from the courageous, independent, industrious, thrifty individuals—as were our forefathers—yes; even our own parents—as it is possible for us to be.

About the only decoration we merit is one for shameless lack of willingness to carry our every day burdens. To our everlasting shame it can be said that those burdens we are passing on to our descendants.

Listening, one is forced to the conclusion that everyone desires that the Government live within its income. Watching, one realizes that the people back home, as well as the Members of Congress and of the State legislatures, are willing to drift along, continually spending more than is received.

If you are interested in the viewpoint of Roswell Magill ask for up to 10 free copies of this statement. Send one copy to each of your Senators and to your Congressmen expressing your viewpoint regarding the Roswell Magill article.

Every Peter, robbing some Paul, through appropriations and taxation, ignores the fact that his turn to be robbed is at hand.

Poison in Your Water—No. 1

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. DINGELL. Mr. Speaker, the Wall Street Journal of Friday, January 16, 1959, had an article "Waterway Woes: The Pollution Problem Grows, Bringing Public Clamor for Stiffer Laws." That article by Mr. Cal Brumley told about some of the problems created by pollution, characterized by these words from Mr. Gordon McCallum, Chief of the U.S. Water Pollution Control Division of the U.S. Public Health Service: "Pollution is costing us at least a billion dollars a year."

I hope this article and the others I intend to put in the CONGRESSIONAL RECORD will serve as a basis for understanding the need for Federal action and for full Federal water pollution control and construction grant appropriations in the amount of $50 million rather than $20 million, as included in the administration's budget:

WATERWAY WOES: THE POLLUTION PROBLEM GROWS, BRINGING PUBLIC CLAMOR FOR STIFFER LAWS—INDUSTRY LIFTS SPENDING ON WASTE CONTROL, BUT SOME TOWNS REJECT NEW PLANTS—TOP TROUBLE SPOT, THE SOUTH

(By Cal Brumley)

DEMOPOLIS, ALA.—When Gulf States Paper Corp. opened its big new $25 million pulp mill here on the banks of the Tombigbee River a little more than a year ago, the people of west central Alabama couldn't say enough nice things about the company.

Public officials exponded lengthily on the significance of the new plant: What it would mean to the community in added payrolls, growing bank deposits and new jobs.

Today, this warm regard has cooled. Not long ago, a valve stuck at the mill. Within 4 hours, 5 million gallons of blackish sodium lignite and other wastes poured unchecked into the Tombigbee. For 13 miles downriver, fish—bass, bream, buffalo, spoonbill, drum and catfish—died almost instantly. In all, more than 200,000 pounds of fish perished.

A COSTLY BLOW

Gulf States' president, youthful-looking, dark-haired Jack Warner, winces as he recalls the incident. "People get pretty emotional when fish are killed," he says. What ensued after the mishap not only was a mighty embarrassing public relations problem for the company but a financial blow as well. State water officials moved in immediately and closed down the plant for a week—costing $235,000 in lost production. Then the State wouldn't let the mill reopen until it promised to install new precautionary equipment—another $200,000 item. These extra expenses come on top of $250,000 the company spent originally on waste control equipment, which up to the accident had cut waste flow to 40 percent of normal for a mill of this size.

The Tombigbee incident points up growing pollution problems along the Nation's waterways—and the mounting public clamor for stiffer antipollution laws. Fearful communities, in some cases, are beginning to cold-shoulder prospective new factories because of the amount of wastes they discharge. Private companies, in turn, are installing millions of dollars of waste-control equipment in an effort to ward off public criticism.

"Our people want to clip the coupons of industrialization during the week, but when they go fishing or boating on Saturday or Sunday, they want their rivers clean," says William Weir of Georgia's Department of Public Health.

A BILLION-DOLLAR LOSS

These two desires aren't always compatible. Gordon McCallum, Chief of the Water Pollution Control Division of the U.S. Public Health Service, estimates: "Pollution is costing us at least a billion dollars a year." Untreated industrial wastes now pouring daily into streams are equal to the sewage produced by 110 million people, double the 1920 rate. And although many municipal sewage systems have installed elaborate waste-treatment equipment, such equipment has not kept pace with pollution growth. Those systems which still do not treat wastes now serve areas with a total population of 55 million, an increase of 37 percent over the 1920 total.

It's not just a question of fish welfare, either. "Along many miles of river frontage in Tennesse it is impossible for industries to locate because of the amount of pollution entering these streams from the headwaters in other States," says Harold V. Miller, executive director of the Tennesse State Planning Commission. He ticks off four textile firms, a paper plant and a chemical company which turned down eastern Tennessee sites because of a lack of the fresh, pure water needed in their operations.

Few areas of the country are completely free of the problem. Regional conferences in the last 2 years have been called concerning pollution in the Big Blue River in Nebraska and Kansas; the Potomac at Washington, D.C.; the Lower Columbia at Portland, Oreg., and the Bear River in Idaho and Utah. The Missouri is plagued with pollution at St. Joseph, Mo., at Omaha, Nebr., and Council Bluffs and Sioux City in Iowa.

These regional meetings were held under the rules of the Federal Water Pollution Control Act passed in 1956, which gives the U.S. Department of Health, Education, and Welfare the authority to force waste-control action if voluntary efforts fail.

TROUBLE AT CORNEY CREEK

What might be termed "the trouble at Corney Creek" has given the Department its worst moments so far. The stream, running from Arkansas into Louisiana has served as a dump for oil-well wastes. Corney Creek, in turn, carries impurities into the much larger Ouachita River, which serves as a source of drinking water for fairly sizable Louisiana towns. It took the threat of Federal prosecution to get some of the oil-well operators to clean up their operations, and even today, mayors of some of the Ouachita River cities aren't entirely satisfied with its purity.

Concern about pollution has been growing faster in the South than in other parts of the United States. For one thing, the region's industrial growth in the past 10 years has outpaced the rest of the Nation. Also, one of its key industries—paper production—is subject to more than its share of waste-control problems.

"Most of the early paper mills in the South located near the seacoast so pollutants could be dumped into large bodies of water. Now, new mills have to go inland and their pollution problems are much greater," comments an official of St. Regis Paper Co. Moreover, southern paper output has nearly doubled in the last 5 years.

Other industries which have been accused of fouling the streams of the South are the phosphate mines and citrus-processing plants of Florida, the chicken-processing plants in northwestern Georgia, the coal mines of Alabama, and textile mills and chemical plants throughout Dixie.

According to the Izaac Walton League, a national conservation group, severe problems also exist in the North in New York and Wisconsin, where dairy processors have dumped wastes into streams, and in the West and Southwest, where sugar-beet factories have been offenders. The Government, itself, has not been completely blameless in the handling of radioactive wastes at atomic plants, according to the league. Even steel companies and other industries which add nothing to water but use it solely for cooling cause trouble.

"Every industry which uses water from a stream and returns any portion of that water changes the character of the stream. For example, water that is heated is altered, usually

becoming unfit for fish life," says Frank Gregg, executive director of the league.

THE BRUSHOFF

Fear of pollution has caused some communities to have second thoughts about greater industrialization. Frontier Refining Co., an oil firm with a yen to build a new refinery on Florida's east coast, has tried unsuccessfully for 5 years to find a welcome at a spot the company considers suitable. It got a not-so-polite "no thanks" from Fort Lauderdale, Fort Pierce, and West Palm Beach.

Currently, Frontier hopes to build on Merritt Island, near the town of Cocoa on Cape Canaveral where it has acquired a 160-acre tract. But even there, in the heart of missileland, the company is meeting opposition. Bird and fish lovers, property owners and conservationists have organized "the Committee Opposing an Oil Refinery on Merritt Island," with Gary Bennett, mayor of Cocoa, whose business is fish bait and fishing tackle, as chairman.

"The fishing industry on our marine estuaries (Banana River and Indian River) is worth $7 million a year to Brevard County," says Mr. Bennett. "I'm very jealous of what we have and I don't want to see an objectionable industry, such as a refinery, pollute, contaminate, and destroy it."

M. H. Robineau, Frontier's president, says the company is embarking on a campaign to convince Floridians that refinery wastes are not harmful. In fact, he says, Frontier dumped wastes into oyster beds as an experiment; not a single one of the sensitive bivalves suffered any ill effects.

More trouble for industry looms. Sportsmen in Florida, detecting what they consider an overlarge decline in fishermen's luck recently, are planning to ask the legislature for a full-scale investigation. "We want to find out how many spawing beds are disrupted, how many shell fish are poisoned, and how many fish are killed by pollution," says Dr. H. R. Wilber, president of the Florida Wildlife Federation, a highly vocal group with some 20,000 members.

Georgia passed new laws last year and Alabama has begun to enforce its existing antipollution laws for the first time. North Carolina is surveying pollution in all its river basins, and dozens of plants located in the eastern part of the State already have been ordered to clean up wastes which flow downriver into Tennessee.

DAM JUMPING GULLY CREEK

Private companies, of course, are going to enormous expense in an effort to solve the problem on their own. National Container Corp., a division of Owens-Illinois Glass Co., has spent $450,000 damming up Jumping Gully Creek into a series of ponds for its paper mill at Valdosta, Ga. These ponds, which cover nearly 450 acres, hold mill waste (or effluent, the more elegant name preferred by engineers) for up to 5 months before allowing it to trickle into the Withlacooche River.

Champion Paper & Fibre Co., too, is getting ready to spend several million dollars to wrestle with the waste now pouring out of its mill in Canton, N.C. The goal: To purge the Pigeon River of pollution. "We feel a moral obligation to do the job," says a Champion official.

The U.S. Public Health Service estimates that 5,700 new waste control systems are needed urgently to treat industrial plant outpourings throughout the country. The price tag: About $2 billion. Cities, the Government agency adds, need to spend about the same amount improving their sewerage systems.

Contributing to the pressure on many companies to clean up is the loud hollering of downriver communities. "We have to deal with fanatical fishermen, pompous politicians, water skiers, boatmen, health officials and nature lovers who don't want the smell or looks of their favorite stream changed," says the harassed manager of one southern pulp mill.

MISPLACED BLAME

Sometimes a company gets blamed publicly when it isn't at fault at all. In the uproar over a fish kill on the Altamaha River in Georgia, Rayonier, Inc., wound up with a consent injunction providing that Rayonier will shut down its mill at Doctortown if its waste kills any more fish. Later, it was established that the fish really were killed by an unknown source upstream from the mill's effluent discharge pipe.

Nevertheless, a Rayonier spokesman observes, "We have this injunction hanging over our heads."

(Pollutants seldom actually poison the water. Usually their decay uses up the stream's dissolved oxygen, causing fish and other aquatic life to suffocate.)

Rayonier has another public relations problem at its Doctortown mill. Two suits were brought against the company because of a grayish, slimey river growth—with the tongue-twisting name of "sphaerotilus"—which seems to thrive on Rayonier mill waste. The slime floats downriver, fouling the nets of shad fishermen and frightening away the prized roe fish.

Although both suits were dropped when the company showed good faith trying to control the slime, Rayonier isn't out of the woods yet. "We've spent $45,000, but so far we still don't have the answer," says a company spokesman.

INTERSTATE COMPACTS

Rivers that flow through several States pose difficult control problems. Currently seven States—Tennessee, North Carolina, Mississippi, Alabama, Virginia, Kentucky, and Georgia—are working to establish an interstate regulatory commission.

The model for such a body is the Ohio River Valley Sanitation Commission which was organized about 10 years ago with the backing of industry as well as public health and conservation officials. In this year's annual report, the commission claims that 8,095,000 people, or 79 percent of the population of the valley, are now served by sewage treatment plants either operating or under construction. Ten years ago less than 1 percent had such service. Also, 70 percent of the 1,459 industries discharging wastes directly into streams in the Ohio Valley are complying with minimum requirements established by the agency, compared with only 30 percent a decade ago.

However, the river that has made the most progress, according to conservationists, is the Schuylkill, which flows through the heart of downtown Philadelphia.

"It was nothing but a flowing sewer a few years ago, but today residents can swim in it or fish for bass," a leading conservationist says.

Inaugural Address of Hon. Ernest F. Hollings, Governor of South Carolina

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, I deem it a high privilege and great honor to have inserted in the CONGRESSIONAL RECORD the inaugural address of His Excellency Ernest F. Hollings, Governor of South Carolina, delivered at Columbia on January 20, 1959:

INAUGURAL ADDRESS OF THE HONORABLE ERNEST F. HOLLINGS AS GOVERNOR OF SOUTH CAROLINA, COLUMBIA, JANUARY 20, 1959

This, the most honored day of my life, I want to speak to you not of parties or politics, but of governments and men. I want to speak of the future.

I have just sworn before God and before you, my people, that I will preserve and defend the constitution of South Carolina and the Constitution of the United States. The constitution of the State has been amended so many times that it is difficult to recognize the original—but it has been amended legally. The Constitution of the United States has been amended illegally by the Supreme Court and today we struggle to recognize the original. This "noblest document ever penned" has been defiled by careless men of less nobility. Our United States Constitution, like all great things, finds its greatest strength in its permanency—and when that permanency is casually handled, its greatest strength suffers, and weakens, and perishes.

I feel particularly solemn this day as I take the highest office in our State, which is one of the few remaining citadels of belief in the traditions and principles upon which our Nation was founded. With clear conscience, and clear convictions, I reaffirm to the world that we are a government of laws and not of whim—that our deep sense of civic responsibility demands a respect for the law—that if the slightest law is to be respected, then the greatest law is to be hallowed. We recognize that the United States Constitution is an inspired document and a great gift and hope to mankind—but when the form and letter and spirit of that Constitution is ignored, a gestation period of chaos erupts into a miscarriage of conscience and propriety. We find a U.S. Attorney General pledging economic blackmail against our Southland. We see both political parties competing to hurl the greatest insult and defamation at our door. And worse, we find a confused and petulant Chief Executive assuming command of a marching army, this time not against Berlin, but against Little Rock. This same commander admonishes the southern governors that in taking the oath to support the United States Constitution, they swear allegiance to the Supreme Court and the Court's version of "the law of the land." Or to be specific, he and others insist that the governors are sworn to integrate the public schools.

The law of the land, my friends, is the same today as it was the day this Nation was founded in 1787—that is the Constitution of the United States. As Mr. Charles Warren, eminent historian of the Supreme Court, stated: "However the Court may interpret the provisions of the Constitution, it is still the Constitution which is the law and not the decision of the Court."

The men who assembled and drafted our Constitution and those who have subsequently lawfully amended it made it apparent and definite that the individual, the State, and the Nation, were all to have rights. As a matter of course the rights must be different in scope since the needs are different in scope. Note carefully, I have emphasized "in scope"—they are not different in degree, for the National Government can no more take away a man's life or property without due process of law than can that same individual refuse to serve in our Armed Forces. Equally true is this with regard to the powers of a sovereign State over the individual. While some States allow 18-year-olds to vote, other States forbid it, and the individual citizen of 18 in a forbidding State is not denied equal protection of the laws because he can't vote.

Paramount among these powers reserved to the States, therefore, is that of regulating elections, and equally paramount is the power of providing and regulating public

education. Both of these powers remained undisturbed by the 14th amendment. The right to vote without regard to race was not guaranteed until 2 years later by the 15th amendment. It is clear both by law and intent that the 14th amendment did not disturb the fixed boundary between the right of the individual and the power of the State in providing public education. Both the Congress that framed the amendment and the States that ratified it continued to operate segregated schools. When the doctrine of "separate but equal" was sanctioned by the Supreme Court of the United States in 1896, neither Congress nor any court or State protested. On the contrary, everyone understood this doctrine as the basis upon which the States could conduct public education. The correctness of this understanding was confirmed repeatedly by the highest State and Federal courts in an unbroken line of decisions. The boundary line remained fixed. There is today no law and no provision of the Constitution requiring racially integrated schools. Until the Constitution is lawfully amended and the boundary line changed, the South stands on this boundary and on this principle. Until the Constitution is lawfully amended, my refusal to integrate our people during the next 4 years will not conflict with the oath just taken.

In fact, the contrary is true. I cannot conscientiously take this oath to protect and defend the Constitution of the United States and not object to the Supreme Court usurping the amendatory power that constitutionally is vested in three-fourths of the States. To do so would give us a government of men and not of laws. This danger was foreseen by our forefather in the founding days of this republic, for it was George Washington who said in his Farewell Address:

"If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates, but let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

Nevertheless, the danger grows and members of the Court claim for it the function, and even the duty, of amending the Constitution at will. In his dissenting opinion in *Green* v. *United States* in March 1958, Justice Hugo Black, with the concurrence of Chief Justice Earl Warren and Justice William O. Douglas, said this:

"Indeed, the Court has a special responsibility where questions of constitutional law are involved to review its decisions from time to time and where compelling reasons present themselves to refuse to follow erroneous precedents; otherwise its mistakes in interpreting the Constitution are extremely difficult to alleviate and needlessly so."

In other words, when these Justices disagree with earlier and longstanding interpretations of the Constitution, such interpretations are mistakes and should be corrected by the Court, because the amending process is extremely difficult, and needlessly so when the Justices can so easily take the place of the constitutional three-fourths of the States.

The Supreme Court of our land was established to decide litigation in the light of past decisions and not in spite of past decisions. It is not the Court's function to lay down the law of the land by judicial fiat. It is the Congress under the American system that makes law. Flagrantly, baldly usurping the amendatory power of three-fourths of the States, the Justices of the Supreme Court apparently take their gospel from Richard III, whom Shakespeare caused to say:

"Strong arms shall be our conscience, swords our law.
March on, join together to pell mell,
If not to Heaven, then hand in hand to Hell."

It is distressing that the Justices are trying to force us, but it is even more distressing that they, like Richard, apparently don't care.

I shall not dwell on the subject of segregation as it affects race relations. We all have heard too much on this subject and there is too much to be done in the days ahead for us to waste our energies and arouse our tempers over a subject upon which we in South Carolina are in essential agreement. We are fortunate in having a well nigh boundless store of good will and understanding among all races and beliefs in South Carolina. In South Carolina, in our schools, peace patrols the school corridors; unlike New York, we do not need armed guards. The Negroes of our State feel as all of us feel, that schools are intended for education. They feel that their Governor and general assembly are doing everything possible to provide them the best educational program and the best opportunity to succeed on an individual basis. Let alone, we shall continue to do this. As a practical matter, this can only be done in the segregated pattern, and for those who would by integration destroy the education, culture, opportunity, and friendship of both races, I simply state that our position of determined resistance remains unchanged.

The segregation stand of the South is symbolic of the stand of our forefathers against the oppression of government when this great Republic was founded. This Nation was founded on a desire to avoid government. The unconditional surrender making possible the Constitution, the Supreme Court, and the Government in Washington, was obtained by an army of the Colonies or States, and are not of a national government. The difficulty of establishing and maintaining such an army gave the basis for the primary need and function of our Federal Government—that of national defense. While today this fiscally remains the primary function, all powers for all purposes have been preemptorily assumed so that rather than the Government defending the citizen, the citizen feels a need for being defended from the Government.

While everyone cites segregation as a point of argument with respect to race relations, I cite it as a challenge which faces South Carolina—and all of the other 48 States. South Carolina and the South stand in the critical role of fighting against a tide which would sweep us into national mediocrity, crush the States and their citizens into national molds, stifle the views and rights of minorities, and destroy the original constitutional balance of power among the individual States and the Federal Government.

This is a continuing threat, and it runs deeper than most persons realize. Americans who live in other parts of the country and who are not presently faced, as we are in the South with an obvious and alarming onslaught against our rights, have no understanding of the fundamental at stake. The federal system of checks and balances, America's unique contribution to the science of government, is at stake.

South Carolina and the South are standing firm against this national attempt to wipe out the boundaries which were designed to preserve this system. Because we do so, we are labeled reactionaries by those so-called liberals who seek to force their own idea of the centralized state upon all of the United States. It must be admitted that we do react against their scheme to subvert the basis of American government as we have known it through the years. We also admit that we are conservative, in the sense that we seek to conserve those principles of government, and of free enterprise, which have been tried and proved, and which have made this Nation what it is today. We in South Carolina see no conflict between such conservatism and progress; indeed, we think they go hand in hand toward bringing us a better life, and it is our mission to put forward a dynamic conservatism as an asset, not a liability.

When we speak of such conservatism and the free-enterprise system, we speak of the right to work and make a profit as compared to the power of the Government to interfere and to take the profit. The only reason free people on this earth work is to make a profit from their labor. If they work for other people, their reward is called a wage or salary. If they work for themselves, it is called a profit. If they work only for an oppressive central government, it is called communism. Without the hope of a wage or profit no person would ever work or no business would ever be established, except as slave or regimented labor. Without the realization of a profit no business could continue to live, and without an adequate profit no business would be able to grow. The opportunity to profit, to live, and to grow is fundamental to the American system of free enterprise. When the Federal Government through its taxing power and other policies kills this incentive to work and profit, to live and grow, then the boundary of the purpose for government as we know it is exceeded by the power of government and we are lost. History is well marked by civilizations which have collapsed following the loss of that basic strength inherent in the initiative of the individual citizen.

We make no apologies for this conservatism; indeed we proclaim it as evidence that we in South Carolina have resisted—and will continue to resist—the dictation of a power-happy Federal Government. Both our State and our people have maintained their self-respect and are pledged to continue fighting to retain their self-government. We are susceptible neither to threats of Federal pressure nor to promises of Federal aid.

A great South Carolinian, Robert Y. Hayne, whose plaque appears at the entrance to our State Capitol, once had this to say to a colleague in the United States Senate:

"Sir, let me tell that gentleman that the South repudiates the idea that a pecuniary dependence on a Federal Government is one of the legitimate means of holding the States together. A moneyed interest in the Government is essentially a base interest; and just so far as it operates to bind the feelings of those who are subject to it to the Government—just so far as it operates in creating sympathies and interests that would not otherwise exist—it is opposed to all the principles of free government and at war with virtue and patriotism."

South Carolina no longer stands simply as the geographic center of a defeated South. We occupy the larger and more compelling role as the stronghold of traditional thought in America. Let it not be believed for a moment that we, or our southern neighbors, stand alone in our resistance to Federal encroachment on those rights which, by every rule of common sense and by every rational constitutional interpretation, should be exercisable by the States alone. In this respect, millions all over the Nation stand with us, realizing as we do that the last of our prerogatives in local self-government is imperiled.

The businessman of our country realizes that our free enterprise system is not founded on the excesses of northern pressure groups. He appreciates his heritage and seeks a region where the people are willing to defend that heritage. With all the charges of preju-

dice and bigotry, with all the talk of illiteracy and backwardness, with all the fears of school interruption and disorders, the American businessman continues to flow south. He comes not just for markets and climate, but because of the character of our people and State government. Public office is still a public trust. We are a stable people and we have a stable government. We believe in living within our means. We refuse to increase taxes unless absolutely necessary. Our legislature will not enact an appropriation bill and I, as Governor, will not sign such legislation except within the expected revenue. The people themselves believe in individual rights and individual responsibility. We believe that the freedom to work is as fundamental as freedom of speech or freedom of worship. We believe in a day's work for a day's pay. We do not look for security but for opportunity. South Carolina is a good place to live and provide opportunity for our children. We recognize the indisputable fact that ours is the only way that we can give to our young people of every walk of life and of every section of our State the efficient public education without which our children will not be able to achieve the economic, social, and political future that their parents would want them to have. We are a law-abiding people and will not stand for violence against our churches and schools. There is tolerance and understanding and good will among all of our peoples. This is our South Carolina today.

We are a State of hope and dedication—a State touched by destiny. The battle for the Republic is truly at hand. On our shoulders ride the cape of leadership, the hope of free enterprise, and the dignity of truth. On my shoulders rests the burden of presenting the case for South Carolina, but it is you who have supplied the evidence, and it is you who are the witnesses. I will not desert your cause, nor will I fail you. I recognize the problems, but they only give me enthusiasm for the solutions. With a humble prayer for God's blessings and guidance I assume this task with a vigorous pride that while South Carolina and our Southland 25 years ago may have been the Nation's number one economic problem, today we are the Nation's number one hope for the survival of the free-enterprise system. Today we are the Nation's hope for the survival of constitutional government. Today we are the hope for the future.

Poison in Your Water—No. 2

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting in the CONGRESSIONAL RECORD a résumé of the effect of water pollution on fish and wildlife by Mr. William E. Towell, distinguished director of the Missouri State Conservation Commission:

A RÉSUMÉ OF THE EFFECT OF WATER POLLUTION ON FISH AND WILDLIFE[1] BY WILLIAM E. TOWELL, MISSOURI STATE CONSERVATION COMMISSION

The objective of the conservation commission is to protect the fish and wildlife resources and under sound management to provide for the greatest use of these resources by the people of Missouri. In pursuing this objective, we feel that water pollution is a serious obstacle and we believe that in future years it could become increasingly more difficult to overcome. We are reminded often of an increasing population and the need for added waste treatment which this alone brings with it. Beyond this, added industrial development is being vigorously encouraged. These advancements, which will increase the need for waste treatment, should carry with them a stern responsibility to maintain clean water. We feel that this is essential in providing for anticipated demands upon the fish and wildlife resources.

We know from records of permit sales now that one out of five persons in Missouri is interested in fishing and hunting. This does not include the thousands who are interested in the out of doors purely for the aesthetic value. Regardless of the particular interest, clean water is always a center of attraction in out-of-door enjoyment. Whether we admire it for its beauty or regard it as a producer of bass and ducks, we are invariably attracted to clean water. Our love for water in its natural state seems universal.

With this in mind, we remember that only about 1 percent of the total surface area of Missouri is in water. This means that we are entertaining one-fifth of the people on 1 percent of its area, and this includes only hunters and fishermen. We have no accurate record of the thousands who seek outdoor recreation who do not wield a rod nor shoulder a gun. Together all of these must reach an enormous total. This, in our opinion, is significant in demonstrating the need for maintaining clean water. The importance of out-of-door recreation is confirmed further by the fact that in Missouri expenditures related to hunting and fishing alone amount to an estimated $69 million annually. We arrive at this estimate by the application of the Crosley formula for appraising the value of the hunting and fishing resources which was developed in the U.S. Fish and Wildlife Service.

We in wildlife conservation are grateful for the effort and interest of all who took part in creating this water pollution board. We feel that the function of this board is essential to us in fulfilling our commitment to the people of Missouri.

Water pollution (1) kills fish and other aquatic life, (2) lowers the fish supporting capacity of water for the more desirable fish species, and (3) renders water unfit for recreation. These effects and their severity depend upon the kind and extent of the pollution. All occur in Missouri every year.

The conservation commission conducted a statewide survey of pollution in 1949. This showed that over 900 miles of stream in 69 counties and the city of St. Louis were polluted, and by mid-1957 these values had increased to more than 1,200 miles of stream in 74, or, roughly, two-thirds, of Missouri's 114 counties and the city of St. Louis. This represents an increase of 300 miles of polluted stream in 8 years. We recognize the limitation in using stream mileage as a measure of pollution, but we feel that this is a graphic expression of its extent. We find that many sources of pollution are not always limited to a defined reach of stream in which they might be considered more or less chronic. One bad day can wipe out a fish population for miles, as it did in the James River following a freshet near Springfield in 1954. In that instance fish were killed for many miles down the James River, even though chronic or permanent contamination in Wilson Creek precluded a normal fish fauna for a relatively short distance. The same can be said of Cedar Creek in Boone and Callaway Counties. This stream is permanently contaminated and devoid of fish in its upper reach, but during heavy runoff the fish populaton is often destroyed in the entire 40-mile length of the stream between the source of contamination and the confluence of this stream and the Missouri River. This is possible because this stream, as do others, tends to become repopulated with fish between the flushes of contamination. The source of pollution, therefore, is a potential which under appropriate conditions can be extended over many miles and can destroy great quantities of fish and other forms of wildlife.

Pollution is caused by many substances which vary in their effect upon fish and other aquatic life. Some pollutants which are lethal to fish directly include industrial chemicals, acid-mine wastes, lead, zinc, iron, brine, insecticides, lime, plating liquor, and water-treatment compounds. Others remove dissolved oxygen from water. These include sewage, dairy, corn products, canning, and meatpacking wastes. Some of those listed have both of these properties and still others impart off-flavors to water and fish.

Other kinds of pollutants blanket the bottom of streams, ruining them as spawning and feeding grounds for fish. These include sediments resulting from washing barite, iron ores and gravel, oil, sawdust, glass fiber, coal washings, trash, wood fiber, and varnish.

The extent of some pollutants is more widespread than others, and the effect differs with the type and volume of the pollutant. Thirteen streams in 16 counties and the city of St. Louis are affected by industrial chemical wastes. These consist mainly of the complex wastes of industries which include acids, alkalies, oil, ammonia, phenols, and others. A serious effect of this type of pollution is the foreign flavor imparted to fish. Although fish are not always killed, this condition renders them unfit for use. The commercial fishery in the Mississippi River from St. Louis to Cape Girardeau has been practically ruined by industrial wastes which enter the river in the bi-State area surrounding St. Louis, and their effect has been reported downstream for at least 300 miles. Industrial wastes from Kansas City area have a similar effect on the commercial fishery in the Missouri River in the 56-mile reach from Kansas City to Lexington, and during low flow, off-flavored fish have been reported at Boonville, about 180 river miles below Kansas City.

During the 10-year period from 1947 through 1956, the number of licensed Missouri River commercial fishermen operating below Kansas City in Clay, Jackson, Ray, and Lafayette Counties declined 62 percent, and in the Mississippi River below St. Louis the number of these fishermen declined by 64 percent in the reach of the river bordering Jefferson, St. Genevieve, Perry, and Cape Girardeau Counties. The reported commercial fish harvest in the latter 4 counties declined 71 percent during the same period.

More investigations have been made on pollution by coal mine waste than on any other kind. Forty streams in nine counties are contaminated by this waste. Acid water formed in coal mines probably kills more fish and aquatic life than any other single pollutant. This water contains sulfuric acid and iron compounds formed by the action of air and water upon coal exposed during the mining operations. Usually, there is some lag in time between the exposure of pyrites and the formation of the acid. Consequently, abandoned strip mines are serious potential sources of pollution. If corrective measures have not been followed, these mines cause trouble indefinitely, depending upon the amount of pyrite-bearing coal exposed. Although some pits whose spoil banks contain little or no sulfur are supporting fish life, many others are highly acid in character. A creek in north-central Missouri which was seriously polluted by acid coal-mine wastes in 1940 still flows acid water. Fish mortality resulting from this is

[1] Presented to Missouri Water Pollution Board, June 3, 1958.

most serious after heavy rains in the mined area which cause abandoned pits of acid water to overflow, and strong wastes are carried far downstream.

The harmful effects of coal-mine wastes are many. Not only do they kil fish, fish food organisms and plants, they also render the stream unfit for stock watering and other purposes. Acids kill fish by coagulating the mucus of the gills resulting in the complete stoppage of the flow of blood. Fish mortality from this source of contamination has been frequent and extensive. We are pleased, indeed, to note that some mines have adopted corrective measures, but pollution by coal mines remains a serious problem in the north central, west central, and the southwest portions of the State.

Raw or poorly treated sewage pollutes streams in many parts of the State. Thirty-eight streams in 30 counties and the city of St. Louis are affected. It affects fish in several ways, most importantly by using up the dissolved oxygen in the water. None but the most tolerant fish can live in water whose oxygen levels are subject to the demands of organic decay, and these fish are not the kinds preferred by the angler. Sewage also contributes to fish disease, and sludge is ruinous to spawning grounds and to fish foods used by the kinds of fish which occur in clean water. Heavy rains have carried decomposing sludge far downstream where reduction in dissolved oxygen has killed fish for many miles.

Increased public interest and the consistent effort of the division of health and cities throughout Missouri have resulted in the construction of numerous sewage treatment plants since World War II. This has reduced the pollution load considerably but an increasing population and the lack of efficient operation in some sewage treatment plants continue to be a problem.

The washing of clay from barite ore has caused sedimentation in 10 streams in 3 east-central Missouri counties. Heavy sedimentation and high turbidity result from this operation and the accumulated sediment is carried downstream with increased discharge following rainfall. Generally tiff mill operators construct settling basins to impound the silt, but often the banks are too low or too unstable to withstand water pressure during heavy runoff. Often this has resulted in overflow of silt-laden water, or complete breakthrough in settling basin dams. As a result, streams have been blanketed with sediment for miles. In one place a heavy layer of red-colored tiff silt was found 5 miles below the nearest tiff mill.

This causes the destruction or deterioration of fish habitat by destroying spawning grounds and fish food organisms and by reducing the transparency of the water to the extent that sight feeding fish are not able to feed properly. In some instances fish have been killed by the clogging of their gills.

Oil pollution is quite widespread, affecting 19 streams in 16 counties of the State. The sources are refineries, leakage from barges and tank cars, waste from industrial users of oil, aircraft overhaul bases, service stations and others. Refinery wastes contain phenols and other substances which impart an off-flavor to fish. Often oil kills fish by clogging the gills or it destroys eggs and kills fish food organisms. An oil film on the surface prevents normal aeration of the water and oil sometimes blankets the bottom of a stream for miles. This is particularly true of the Mississippi River below St. Louis where oil deposits are found on the bottom for 83 miles downstream from the source.

Pollution in this reach of the Mississippi also has an important influence on waterfowl movement. The conservation commission's waterfowl counts between 1936 and 1955 show that for many years there has not been a measurable number of migratory birds in the reach of river between St. Louis and St. Genevieve. Repeated observations of oil slicks have been recorded, and waterfowl specialists have observed thick bubbly oil on the surface of the water. Contamination from oil has had a similar effect on waterfowl concentrations on the Missouri River. Pollution on this stream has been observed consistently in routine aerial censusing during the fall migration since 1937. After 1943 oil slicks became continuous in the Kansas City area and frequently were observed as far as 26 miles downstream. By 1954 oil was seen 50 miles downstream. Within the last 3 years it has been observed regularly as far as Napoleon which is 44 miles below Kansas City and occasionally as far as Waverly, 80 miles downstream. Over a 20-year span covered by the commission's observations, we believe that waterfowl habitat in the Missouri River has gradually deteriorated for a distance of 50 miles below Kansas City. Waterfowl specialists report few birds in this part of the river. Oil is particularly harmful to waterfowl because their feathers become saturated and the birds cannot fly. The effect of oil on migratory birds is highly significant because the Mississippi and Missouri Rivers lie within the midcontinent waterfowl flyway. In view of increased hunting pressure in recent years this is a matter of vital concern.

Salts of zinc, lead, and other heavy metals half caused fish kills in the east and southwest sections of the State. Six streams in four counties are affected. In southwest Missouri, this contamination resulted from pumping out inactive lead mines while in the eastern Lead Belt region it results from the escape of water used in processing ore. The salts of lead and zinc are directly toxic to fish and are lethal in low concentration.

Most organic wastes have an effect on fish similar to those described for raw or poorly treated sewage. These include dairy, meatpacking, canning, and corn products wastes. As they decompose, all have a high demand for oxygen which renders water unfit for all but the most tolerant species of fish. Dairy wastes alone contaminate 23 streams in 18 counties. These wastes have a particularly high demand for dissolved oxygen.

Wastes of the meatpacking industry affect seven streams in as many counties. This includes extensive contamination of the Missouri and Mississippi Rivers. Decay of the organic matter in these wastes rapidly depletes the dissolved oxygen. This is also true for the 12 miles of 3 streams in 2 counties affected by canning wastes. The operation of canning factories is seasonal. Consequently pollution from this source is not continuous. The waste of an out-state corn-products industry affects 25 miles of the Mississippi River in a 3 Missouri counties. This has a high demand for dissolved oxygen and commercial fishermen report that it clogs their tackle.

Sawdut, glass fiber, mine, gravel, coal and iron ore washings, varnish, and wood fiber wastes are others which cover the bottom of the stream, ruining it as a spawning and feeding ground for fish. Some of these create intense water turbidity. Sawdust affects about 18 miles of 7 streams in 7 counties, mostly in the Ozarks. It also has the property of giving off organic acids and lowering dissolved oxygen. The washing of ore at several recently developed iron mines has caused sedimentation and high turbidity in a number of streams in southern Missouri. More contamination from this source is anticipated if means to prevent the escape of wash water are not used.

In recent years, insecticides have killed fish in several streams throughout the State. Toxaphene, DDT, aldrin, benzine hexachloride, chlordane, and others are extremely toxic to fish. Several of them kill fish in concentrations as low as 1 part insecticide in 100 million parts of water. The mere runoff from vegetation sprayed with aldrin recently killed many fish in a nearby slough and some insecticides are believed to be toxic to warmblooded animals. The use of these preparations merits serious consideration by fishery and wildlife management authorities. Needless to say, great care should be used in handling and applying them.

This describes briefly the influence of water pollution on fish and wildlife and points out the value of recreation in the form of hunting and fishing. We often refer to pollution as the cancer of fresh water. I believe this is a reasonable analogy because pollution is the dark side in the future of fishing and other recreational uses in which the waters of Missouri are involved. If it were to continue to increase as it has in the past 10 years, pollution would soon make a serious inroad on fish and other forms of wildlife at a time when there is a greater demand for this resource than at any time in Missouri's history.

The Late Honorable Thomas S. Gordon

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. ZABLOCKI. Mr. Speaker, it is with profound sorrow that I learned about the untimely death of my dear friend and distinguished former colleague from Illinois, the late Honorable Thomas S. Gordon.

His sudden death, which came so swiftly upon his retirement from his body after the completion of the legislative work of the 85th Congress, brought a deep sense of loss to his family and to all of his friends in various walks of life.

I had the privilege of serving with Tom Gordon on the Committtee on Foreign Affairs since my first election to Congress in 1949. As a member, and later as chairman of that committee, he participated and presided over some of the most important deliberations that have come before us. His outstanding work in this and in other legislative fields has earned him a lasting place in the history of our Nation. He was a distinguished legislator, who always placed the interests of his District, and of our entire Nation, above all personal matters.

I respected Tom Gordon for his experience, his understanding of the issues, and for his integrity, and I had deep affection for him as a friend. His gentleness and consideration for his colleagues was one of his outstanding characteristics—and one that endeared him greatly to all of us who knew him, and who worked with him. He was patient and understanding in controversies, soft spoken in his counsel, and loyal to the principles which he held.

Certainly the district which he represented for so many years in this House had a faithful and devoted public servant. Even the failure of his health during his last years did not deter him from his unstinted service to his constituents. No request was too small; no interest was too obscure to escape his undivided attention.

Such a man was Tom Gordon. And in his death, his State and our Nation have lost a trusted and outstanding public servant.

My wife, Blanche, joins me in extending our deepest sympathy to his widow, Cele, to his children and his grandchildren. May they derive some small measure of consolation from the knowledge that we share their grievous loss—and from the thought that our Lord has called Tom Gordon to be among his very own.

How Concerned Are You?

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including a sermon by Dr. Ewart G. Watts, pastor of the First Methodist Church, Topeka, Kans. It is entitled "How Concerned Are You?" It is a forthright statement dealing with one of the difficult problems of our day. I believe Members of the House will be interested in reading it.

The sermon follows:

HOW CONCERNED ARE YOU?

Today, we are to think together about one of the most delicate but desperate problems of our day. With 55 to 60 percent of the American people drinking beverage alcohol more or less regularly, it is obvious that anyone who questions the morality of this habit is in the minority. It is also clear that strong words of denunciation from the pulpit may create the impression that the minister is a fanatical bigot who has no real compassion for people who are struggling to control a habit which is wrecking their lives and their homes.

Another thing that makes a discussion of this subject difficult is the fact that there is no clear-cut and unequivocal stand for total abstinence in the Bible. Since the books of the Bible were written over a period of at least a thousand years and by many different authors, both the man who drinks and the one who does not can quote verses to support their positions. But when you consider basic issues, there is no doubt where the Bible stands. There should be no doubt where the Christian stands.

There are three basic axioms or standards of the Bible which should guide us on this question. First, the Bible proclaims the ultimate worth of the individual. It says that each person is of value in God's eyes. Anything which blocks or retards the physical, mental, or spiritual life of a person is wrong. From the primitive days when the prophet Elijah denounced King Ahab for killing Naboth in order to gain possession of his vineyard down to the time when Jesus drove the money changers out of the Temple for cheating the common people who came to worship, the books of the Bible magnify the importance and the worth of the individual. Jesus gave this principle a startling reality when he said: "Are not two sparrows sold for a penny? And not one of them will fall to the ground without your Father's will. But even the hairs of your head are all numbered" (Matthew 10: 29).

A second principle which is clear throughout the Bible is that God expects us to have a sense of compassion and concern for the weak and the afflicted. We are expected to be like the Good Samaritan. We are to love our neighbors as we do ourselves. We are to have the spirit of the Christ who said: "Those who are well have no need of a physician, but those who are sick. Go and learn what this means, 'I desire mercy, and not sacrifice.' For I came not to call the righteous, but sinners" (Matthew 9: 12, 13).

The third ethical standard the Bible gives is the insistence that God expects men to make a firm commitment to the right, no matter how many support the wrong. From the days when the prophet Amos, opposed by all the religious and political leaders of his nation, declared, "The Lord God hath spoken, who can but prophesy?" to the time when the Apostles said to the Jewish authorities who forbade them to preach, "We must obey God rather than man," the Bible makes it clear that right is not to be determined by a Gallup poll. And it calls men to see that one man on God's side is a majority.

Now, let's take these three basic standards of the Bible and see what help they can be in facing this difficult problem created by beverage alcohol. First of all, if each person is of ultimate worth in God's eyes, what do we find? Well, we find that many people's lives are being destroyed by beverage alcohol. Here in our country alcoholism is rapidly becoming our major health problem. With over 5 million confirmed alcoholics, this disease is five times more prevalent than cancer, three times more prevalent than tuberculosis, and 100 times more prevalent than polio, even before the Salk vaccine. Dr. Karl Menninger says that the alcoholics in the United States constitute our largest single mental health problems.[1] In 10 years, the number of alcoholics has almost doubled and there are 17 times more women alcoholics than there were 10 years ago. Throughout the country, judges, marriage counsellors, and ministers report that 3 out of 4 broken families have drinking as a major trouble source. And what is more, the National Safety Council reports that drinking drivers are involved in at least 30 percent of all fatal highway accidents; while during holiday periods, this climbs to at least 50 percent. This means that during the recent Thanksgiving holiday 227 people were killed because drivers were under the influence of liquor.

But figures are cold and impersonal. To understand what beverage alcohol does to destroy persons, you need to look beyond the figures. Think about the people you know whose life or home has been wrecked by beverage alcohol. A few years ago, Upton Sinclair set out to compile a list of the drinking people he had known. He recalled 40 or more geniuses he had known who, as he said, "went to their doom" as a result of this habit. Their story is graphically told by Sinclair in his book "The Cup of Fury." He tells of John Barrymore, Jack London, Eugene O'Neill, Sinclair Lewis, Edna St. Vincent Millay, and others. I wish this book could be required reading for the young people in our schools. It might help to counteract the deceitful and distorted picture which they get from the $400 million advertising program of the liquor industry. And then, it would help if they—if all of you—could be with ministers, with psychiatrists, with judges as we struggle to help the victims of alcohol. Believe me, when week after week and month after month you see the terrible things that alcohol is doing to homes and to little children, it's hard to keep calm and objective.

But, this is the point where the second great standard of the Bible comes into the picture. There must be a genuine compassion and concern not only for the innocent victims, but also for the alcoholics and the problem drinkers who are enslaved by alcohol. Dr. Caradine Hooten, who heads our Methodist board of temperance, says, "Until churchmen learn to love alcoholics as much as they hate alcohol, they can never fulfill a redemptive mission in this area of human need.' 'Jesus said, "Those who are well have no need of a physician, but those who are sick. Go and learn what this means, 'I desire mercy, and not sacrifice.'"

This word should call us to our knees. It should make us see that as churches and as churchmen, we have too often allowed our self-righteous disgust to keep us from being a redemptive fellowship for those who desperately need our help and our understanding love. They must not feel that Alcoholics Anonymous is the only place they can go for understanding help. Recently, our Methodist board of temperance put it this way:

"Only abstinence can be the real answer and preventive tot he problem of alcoholism. But we must try to understand the compulsive drinker and keep our communications open with him so that there will be no feeling on his part that he is rejected by the church."

The church is beginning to realize that it has much to learn from Alcoholics Anonymous and from psychiatrists about redemption. And if we can learn, there is so much we can do. Only 200,000 of the 5 million alcoholics belong to A.A. What a tremendous thing it would be if our churches could provide the strengthening fellowship and moral support which is so desperately needed by these alcoholics. This is one of the things that was done by the early Methodists through their class meetings. John Wesley's sermons may have converted many drunkards; but, in the long run, it was the prayer fellowship of the Methodist Class and the class leader meeting with them each week which really saved them. Wesley Memorial Church in Atlanta, Ga., is providing such a fellowship as it works with Municipal Judge James Webb and the Helping Hand Society which is provided for Alcoholics who are brought into his court. This group which meets 3 times every week there in the church has already helped to restore 50 of these men to their families and their jobs.

This does not mean that the church should try to compete with Alcoholics Anonymous. I agree with one counselor who says, "In all the dark history of the handling of the problem of alcoholism, the brightest ray of hope and help in Alcoholics Anonymous!"[2] But this group cannot do it all. There are about 142,000 new alcoholics each year and the total membership of A.A. is only 200,000. It is obvious that more help is needed. We can help because we represent the same principles that have proved so effective in the program of Alcoholics Anonymous. The 12 points of A.A. are so deeply spiritual that they might well be accepted as guides for new members of a Christian church.

Listen to some of them:

Believe that a power greater than ourselves can restore us to sanity.

Make a decision to turn our will and our lives over to the care of God as we understand Him.

Admit to God, to ourselves, and to another human being the exact nature of our wrongs.

Seek through prayer and meditation to improve our conscious contact with God.

Try to carry this message to alcoholics, and practice these principles in all our affairs.

You see, here is dependence upon God, confession of sins, giving oneself in service for others who need help. This is the very heart of Christian living. Now, if Alcoholics Anonymous can help men and women by bringing them to live by these principles, surely our churches should be able to do

[1] Clinebell, H. J., "Understanding and Counseling the Alcoholic," p. 35.

[2] Clinebell, op. cit., p. 110.

it, too. Let's be humble enough to admit that we have something to learn from this organization. Let's be concerned enough to become an ally and coworker in this great task of human redemption.

But the great principles of the Bible and of our faith call us to take one more step. We must not only be concerned to help and to redeem the alcoholic; we must also be committed to those individual habits and to those forces in society which stand against this evil thing that is wrecking so many lives. Trying to help and to redeem alcoholics without standing against the liquor traffic which does so much to create alcoholics would be like building a rescue station at the bottom of a cliff to help those who have fallen over, without working at the top of the cliff to keep others from falling.

Now, this is the point where it is up to each one of us to decide just how we are going to take our stand. As I have pointed out, the Bible makes it clear that God expects us to stand for the right, regardless of what others may think or say. Wendell Phillips, the great opponent of slavery, who stood out against this evil force when most of his contemporaries were simply closing their eyes and ignoring it, said: "We must each learn to feel, in determining a moral question, as if there was no one else in the universe but God and ourselves." This is the thing I would ask each of you to do this morning as you consider what stand you are going to take on this moral question of the drinking and distribution of beverage alcohol. Face it as if there was no one else in the universe but God and yourself.

As you know, I believe that total abstinence is the stand which God wants me to take. As I try to look at this question with the mind and the spirit of Christ, I cannot find a single good that can come from drinking beverage alcohol; but I can see innumerable dangers and evils. The one benefit which is usually argued is that moderate drinking relieves tensions and heightens sociability. But I am convinced that drinkers who are honest will admit that the ultimate tensions which are created are worse than the tensions which are relieved. One moderate drinker who decided to quit, wrote: "No doubt alcohol removed my tension. But it acted like a spot remover that takes the cloth with it. I came to see that I should do something more intelligent about the tension than to pour jiggers of rum over it."[3]

Briefly, then, let me tell you why I believe that total abstinence is the only way I can be true to the mind and the spirit of Christ.

First: even moderate drinking retards those parts of the brain which have to do with moral judgments and discrimination. In other words, it dulls the voice of conscience, and draws one just a little farther from God and a little closer to the animal. Dr. Robert Dovenmuehle, professor of psychiatry at Duke University Medical Center, writes: "The conscience is the latest and most highly complex of the developments in human personality, and it is the part of the organized personality that shows most markedly the effects of the depressive action of alcohol."[4] Now, I don't know about you, but I believe that the voice of conscience is something sacred. And I cannot believe God would approve my doing anything that would dull or distort that voice.

Second: I do not drink because by so doing I would be placing my stamp of approval upon an industry which breeds crime, wrecks homes, pollutes government, and causes thousands of unnecessary highway accidents and deaths. And on this last point, let me say that safety engineers report that moderate drinking causes more highway accidents than heavy drinking. Just this week, Mr. Claud McCamment, who heads the safety division of Kansas State Highway Department, told the Topeka Rotary Club that those who drink just enough to grow talkative and careless are the most dangerous drivers on our streets and highways.

Third: I do not drink because even my moderate drinking might bring me or someone influenced by me to become a problem drinker or an alcoholic. The doctors and scientists say there is no way to determine in advance whether a person might become an alcoholic or not. All we know is that of every hundred men who drink, nine and one-half become alcoholics; and of every hundred women who drink, two and one-half become alcoholics.[5] So, there is always the danger that any moderate drinker, under proper conditions of stress, may change from the casual drinker to the compulsive drinker. And I would hate to feel that my example had led one of my children or one of my friends to become an alcoholic. Paul wrote: "Take care lest this liberty of yours somehow become a stumbling block to the weak. If food is a cause of my brother's falling, I will never eat meat, lest I cause my brother to fall." Bishop Hazen Werner somewhere in one of his books suggests that the moderate drinker is the most dangerous carrier of the terrible disease of alcoholism. He is like the boy with a slight case of scarlet fever who is not very sick and so he goes to school. He is not sick but he infects others, some of them fatally. I have seen it happen and I am sure you have too where a father who drank moderately infected his son who, in turn, drank fatally.

This is a desperate problem which confronts our Nation and our society. It is one which leaves no place for neutrality. Jesus said, "He that is not with Me is against Me"; and I know He must be calling on each of us to stand where He would stand on this problem. It may not be right where I stand. I would not argue that with you. All I ask is that you ask yourself as seriously and as honestly as you know how: "What would Christ want me to do on this matter?"

With that question in your mind, will you join me in looking at the commitment check list which you received as you came into the service today. Please notice that this a secret ballot. There is no place for you to sign your name. No one but God will know how you vote.

A Letter From President Garcia

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of a letter written by the President of the Philippines, Carlos P. Garcia, to my good friend Mr. Max Abelman, sometimes described as Brooklyns' ambassador of good will.

The text of President Garcia's letter to Mr. Abelman is as follows:

MALACAÑANG PALACE,
January 8, 1959.

Mr. MAX ABELMAN,
Brooklyn, N.Y.

DEAR MR. ABELMAN: I am returning herewith the copy of our picture which you requested me to autograph. While writing my personal greetings on it, I had in mind our cordial exchange of correspondence even before I had the opportunity of visiting the United States and meeting you in person.

You informed me in your letter that you were for some time confined in bed. I sincerely hope that your health has improved by now. After a festive holiday season, I also take this opportunity to convey to you and your family my best wishes for a prosperous and happy new year.

With warm regards and prayers for your good health, I am,

Truly yours,

CARLOS P. GARCIA.

Poison in Your Water—No. 3

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. DINGELL. Mr. Speaker, an article appeared in the American Legion magazine for October 1958 by Robert and Leona Rienow telling how we are filling our waters with raw sewage, rotting vegetable matter, corrosive chemicals, industrial oil, dead fish and animal matter, acids, germs of a thousand kind, including viruses, dysentery, cholera, typhus—some authorities include polio—also deadly dyes, grits, canning filth, slaughterhouse leavings, the effluvia from hospitals and mortuaries and, of late, small amounts of radioactive wastes from atomic fission installations. This goes into the water that you and I and the citizens of this United States drink and bathe in. The article is as follows:

THEY CALL IT DRINKING WATER

(By Robert and Leona Rienow)

"The water that you drink today may once have quaffed Caesar's thirst." So reads the caption for a cast iron pipe ad picturing a Roman in war togs with a beaker to his lips. What a romantic thought. Yet a couple thousand years of nature's purifying water cycle—evaporation to rain to evaporation—take the curse off the secondhand drink. The pipe company has safely made its point that water is indestructible.

But when the Public Health Service points out that the "water you use may have been flushed down somebody else's bathroom"—perhaps yesterday or the day before—the romantic thought loses its glitter. Of course, in this newly crowded country of ours, we are going to have to accustom ourselves to using rehabilitated water for household as well as for industrial purposes. Crowded people can't be squeamish.

The issue in America now is not how to get enough pure, nature cycle water—it is how to get enough potable water for all of us and our industry. The steadily mounting deluge of pollutants which we are discharging into our once clean streams, ponds, and lakes is doing more than adding an increasing menace to the public health. In many places it has become so bad that it is curtailing industry.

Unless we clamp down drastically on our present pollution rate, we won't even have enough of this secondhand, rejuvenated water. Already Wheeling, W. Va. is throwing its dry sponge on Ohio River water; it just can't purify it.

When our tap water becomes so rank that it affects the flavor of our coffee and our beer, then we shall have a home demonstration of the social crime of pollution. Yes, 90 million

Americans depend on rivers and lakes to slake their thirst; so 90 million Americans can be wronged.

Ironically, this is the 10th anniversary of the Water Pollution Control Act of 1948 which, presumably, was to be tried for 10 years before more drastic steps were taken.

How do we stack up after 10 years? Here are the facts: We have one-tenth more domestic sewage in our rivers than ever before. Why? We made a fair try, but it wasn't good enough to keep up with the increased population. Before the act, 82 percent of our municipal sewage poured untreated into our public waters; now only 58 percent spills into our streams raw. If we went in for Russian statistical methods, these percentages might satisfy us. But the truth is, we are falling behind.

Industry unloaded 81 percent of the wastes into streams untreated before the act; the figure has now come down to 40 percent. Again, that looks fine until you note that the smaller percentage represents twice the total industrial pollution of a quarter century ago.

Even good water is filled with life forms. We stopped in at the filtration plant for the city of Albany the other day to take a look at a drop of water under the miscroscope. With a roster of 64 kinds of algae and bacteria at our elbow we tried to take the roll of this teeming liquid. It was like trying to identify a friend at the Army-Navy game. But this was the finest water drawn from a woodland reservoir.

What are some of the less tasty items which are glutting our watercourses, poisoning our fish and waterfowl, befouling our sources of drinking water? There is raw sewage, rotting vegetable matter, corrosive chemicals, industrial oil, dead fish, and animal matter, acids, germs of a thousand kinds including viruses, dysentery, cholera, typhus (some authorities include polio); also deadly dyes, grits, canning filth, slaughterhouse leavings, the effluvia from hospitals and mortuaries and, of late, small amounts of radioactive wastes from atomic fission installations.

Altogether we have 22,000 sewage and industrial outlets into our once clear streams. Of these, 11,800 drain municipal sewage systems; they serve more than 92 million people. Now hold your hat (and perhaps your nose); the wastes from only 54,500,000 of these people have undergone any treatment at all.

When the Ohio River is low, 1 quart out of every gallon of water in the stream has been belched into it by a sewer. Go out to the South Platte River below Denver in the dry season and you will find four-fifths of its contents is effluent from the sewage treatment plant.

But in our highly industrial Nation 60 percent of the waste that burdens our creeks and rivers comes from industry's 10,400 outlets. The National Association of Manufacturers tells us that four out of five plants do nothing to their wastes.

Industry has increased by 700 percent since 1900. It will double again by 1975. Already the combined industrial and municipal discharge into the streams of America equals the raw sewage of 150 million people. It is going to be increasingly difficult for Tin Pan Alley to find a river to get romatic about.

Silt: American rivers were once deep, swift, and leaping with game fish. Today they are sluggish and much shallower, clogged not only with wastes but with huge cargoes of silt which eroded off the watersheds after the land was stripped of its thick tree and plant robe. Swift-flowing rivers decontaminate themselves by the purifying action of sun and air. These silt-choked water courses cannot begin to handle the overload of excreta, offal, bilge, and filth we pour into them.

Sewage: It is only in the last 200 years that municipal sewer systems have been constructed. Much of our sewage is concentrated at a few outlet points; more of it is inadequately treated. The need is for new sewage treatment plants at 6,600 places.

But these additional facilities are only the beginning of our needs. We must contend with the projected population figure of 200 million people by 1975, most of them urban. Nor should we overlook the little towns big enough to hang their houses on a sewer line but too small to buy a disposal plant.

Industrial wastes: If we had enough pride and wanted to spend the money, we could handle municipal sewage. We know how to treat it. But industrial wastes are increasing so fast disposal know-how can't keep up with them. A recent Merck index of chemicals lists 8,000; 2,900 of these did not appear in an edition only 12 years earlier. Since all chemical and most manufacturing plants have great quantities of wastes to get rid of, industry is alarmed. The Manufacturing Chemists Association is spending millions yearly on pollution research.

But paper mills, slaughterhouses, woolen mills, and all industrial and governmental installations have their pollution headaches. Our laughing waters are laughing no longer; they are in their death throes.

Oil dumping: Not only is our waterfowl poisoned by our evil inland waters, but many thousands of them succumb each year to the oil slick which oil-burning vessels continually pour out over the waters along our coasts. In spite of the law passed in 1924 which forbids jettisoning of oil in coastal areas, sea captains, barge captains, and even United States naval commanders defy the law with impunity. They rely on the snide provision in the statute which demands that the Coast Guard patrol must witness the actual dumping before making an arrest.

An observer for Audubon magazine (January-February 1957) counted, on Long Island, more than "400 oiled gannets, loons, grebes, Bonaparte's gulls, razor-billed auks, dovekies, and ducks on the beaches between Montauk Point and Coney Island. * * * The worst offenders are the great aircraft carriers. * * * I have seen dead ducks by the hundreds washed up in the seaweed at high water mark."

Moreover, oil sludge dumped into the River Rouge at Detroit has been known to destroy thousands of ducks and other waterfowl. It is a grimy story all round.

We are already paying a big price in water scarcity. We will pay more. Water reclamation is much costlier than waste treatment at the source. Our growing water scarcity problems are directly related to our growing recklessness in waste disposal.

Living in the midst of a network of open sewers is hazardous enough. But the scientifically guarded border we have set up between sewer water and drinking water is a precarious one. We live on the edge of a human or mechanical failure that might bring pestilence down upon us. This danger becomes more imminent every year.

At the same time, as crowds increase and leisure time lengthens, spots for recreation—breathers from the crush—become more precious. But who dares swim in our rivers any more? Turgid and oil-begrimed, our once scintillating rivers slink past the dump heaps and around the back doors of our towns. Gone are the canoes, launches, and rowboats. For the hardy who insist on river recreation, speedboats, and yachts (no dangling of hands) are the only recourse.

Yet what delights we forgo at our doorstep because of the misuse of our waterways. Rather than spend the money and effort to retrieve them for the joys of boating, fishing, swimming, and picnics, we doggedly pack into the car and buck the traffic for 50 miles or more as we join the hordes in feverish search of a clear lake. We fondly believe we are saving money; yet it is hardly economic to pollute the old swimming hole and then mortgage the community to build a chlorinated swimming pool for our children. Scarcely a community in the United States has not squandered its recreational heritage because of a penny-wise sanitation system.

Besides the loss of good water, of trout fishing, recreation, and fun—besides the constant menace to health—there are other disadvantages to our sewer-stream network. The shad and mackerel runs that once made our eastern rivers wriggle with life are now only a legend. Where once the salmon take in a western valley was $5 million a year, the sewage cut it down to less than $1 million.

But commercial fishing is only one industry that has paid the price. Today industrial water is at a premium. Once almost a free commodity, it has become an important item in production costs. Communities without supplies of acceptable water obviously cannot attract new industries. Their development is at a standstill.

Under the Pollution Control Act of 1948, the Federal Government: (a) Works out pollution programs, (b) underwrites research on industrial waste treatment, (c) gives technical aid to the States, industries and regions, (d) offers financial assistance to the States, to industries, and to the interstate bodies, (e) helps along the idea of interstate cooperation, and (f) disseminates information.

To date, the act may be called something of a failure. It was slow in getting off the ground. Congress, which had committed itself to a $135 million outlay over a 5-year period, had coughed up but $8.4 million in the first 4 years of the act, most of it for research. Only as the tenth disappointing anniversary approached, in 1956, did Congress unlatch its purse with a 10-year authorization of $500 million for municipal sewage systems and treatment facilities. At length a little hard cash started to spill on the counter—$38 million, in fact—and nearly 500 projects are underway. "A pittance," cried some. "Interference" snapped others.

But the truth is, the financial support offered by the Federal Government is little more than an incentive for local communities to pitch in themselves. The community itself must pick up the chit.

And the price is high. Roughly, the removal of 35 percent of the pollution effect of sewage costs about $35 a person a year. Raise the removal percentage to 75, and the price doubles—to $70 a person a year. Do the best possible job of 90 percent removal and the annual per capita cost zooms to $110.

Of course, what is paid out to reduce the pollutant content of sewage is saved by the next user in treating the water supply. It is just that people are less likely to change oil in the car they are about to trade in.

Before 1956 we were spending $230 million a year on abatement works. We spent in the vicinity of $340 million in 1957. Yet the official estimate calls for an outlay of $500 million a year for the next 10 years if we want to catch up with the backlog and meet the growing needs.

All this is only the story of municipal sewage. Add the industrial wastes to this municipal sewage and what is the price of cleaning up our streams? Say the experts with a sigh: "About $10 billion over 10 years."

We will never begin to restore our inland and coastal waters—to experience again the healthful activities and delights of sparkling streams and clean, spring-fed lakes—until we arouse public opinion. It is true that the water scarcity—which will worsen every year—will jar some smug thinking out of the rut. But unless our thinkers and leaders—service organizations, town and city officials,

editors, and educators—raise the white flag of clean streams and start the parade, we are doomed to spend the rest of our lives in the stench of our open sewer network.

Some communities have fought through to victory. When the citizens of Cumberland, Md., were shocked by the withdrawal of a large glass company's proposal to build in their city because of the pollution in the Potomac River at their site, they acted—and fast. A $1,500,000 appropriation for a new sewage treatment plant brought a lucrative new payroll to town.

The clogged and poisoned Schuylkill River of Pennsylvania has been redeemed. The Kansas River has been relieved of much of its sewage indigestion. Because of the fine teamwork among the cities of Athens, Lancaster, Logan, and Nelsonville, the Hocking River in Ohio again runs clean and sweet-smelling. With the facelifting of these rivers came a soul lifting of the people on the banks.

The cost of operating a treatment plant may run as high as $90 per million gallons in a small plant. But this charge can be cut to $15 per million gallons in a large installation, such as one of those built by Los Angeles. Unit construction costs are also reduced when many small communities band together on disposal. Most important advantage, of course, is that joint sewage disposal for a densely settled section imposes the same standards on all and gives the same protection to all in that area.

Seattle, Wash., offers an example of sectional cooperation. Greater Seattle had been spilling 20 million gallons of raw sewage and effluent into its beautiful Lake Washington every day. The lake is—or was—a major recreational attraction, not only for the natives but for tourists.

When, therefore, in 1957, the lake threatened to be a pestilence rather than a joy, the aroused citizens pushed an act through the State legislature, which, subject to approval by the citizenry at the polls, creates a general water council. This council, nicknamed "Metro," will not only build great sewage-treatment plants for the entire area of 200 local councils, but it will coordinate all area-wide problems of water supply, parkways, parks, and the like. The treated effluent will be piped far out into Puget Sound.

Sewage and treatment costs for the smaller areas will plummet, as will upkeep. And, best of all, a premium comes with the purchase—a clean and respectable Lake Washington.

What is more, pollution control by industry is bound to take its cue from aroused public opinion in a district, and fall in behind the band. Rochester, N.Y., recently witnessed the construction of a $1,500,000 industrial waste treatment plant. Industries near Houston, Tex., are working at the pollution problem with organized fervor, and the Niagara River industries are spending millions on pollution research. Industry is in desperate need of more and more water—clean water. Foul water is not industrial water.

We have learned a good many things in our first 10 years of playing around with water pollution control. We have sheaves of blueprints of our sick river basins—blueprints which the Public Health Service has painstakingly drafted for every area in the Nation. They are waiting for communities to pick them up to study. We have the know-how when it comes to processing sewage for greatest river protection. We have Uncle Sam's promise of active help.

All that we need now is more pride in ourselves and in our communities as Americans. Once that pride gets its back up, we will find the cash.

Fair Workload for Douglas Aircraft Needed—Airlift Issue Points a Way

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. HOSMER. Mr. Speaker, the following editorial carried on January 20 by the Santa Monica Evening Outlook points out a lack of workload situation that should be high in the consideration of Air Force contracting officials:

A COMMUNITY APPEAL FOR DOUGLAS

In the last week an extraordinary thing has happened in the Santa Monica Bay district, caused by an extraordinary situation. Labor organizations have joined with the Santa Monica Chamber of Commerce in urging the Defense Department, and particularly the U.S. Air Force, to give more consideration to the Douglas Aircraft Co. in big defense contracts. Repeatedly in the last 18 months this great company, with a record of plane and missile building second to none in the United States, has been passed over in the award of such contracts.

Apparently the chief reason has been the success of other areas in claiming a local unemployment situation. To distribute defense contracts with a view to relieving unemployment has been an admittedly paramount concern of the Eisenhower administration, and a most proper one. On this ground, and because of its economic importance to Seattle and the State of Washington, the Boeing Co. has secured more than one big defense contract, which should rightfully have gone to Douglas, had other factors been allowed to govern. As a result, Douglas now is threatened with a shortage of big defense orders which will work great hardship on its entire labor force, and on every community having a Douglas plant, unless it is soon remedied.

In the last week union members working at the Santa Monica and El Segundo plants have written nearly 3,000 letters to Congress, protesting the decline in work at the two facilities. And the Santa Monica Chamber of Commerce has addressed a strong appeal to the U.S. Air Force, that the Douglas Co. be given favorable consideration in the forthcoming award of a big defense contract for early warning and interceptor aircraft. Representatives of southern California in Washington, notably Congressman DONALD L. JACKSON and Senators KUCHEL and ENGLE, are lending their efforts to convince Defense Department and Air Force officials that the Douglas Co. must no longer be slighted.

We call this an extraordinary situation, when the company which has led all others in developing and building both military and civilian aircraft is denied its rightful share of defense orders. Relieving unemployment in the aircraft industry is a most desirable purpose, but it should not be carried to the extent of robbing Peter to pay Paul. Not only is the Douglas Co. preeminent in the aircraft industry, but its contribution is essential to the success of our U.S. missile program, and to the ability of our civilian airlines to compete with rapidly growing and largely subsidized foreign lines. The threat to the Douglas Co. is a most serious one, and it is a threat to the Nation as well.

Mr. Speaker, partly responsible for the situation outlined in the editorial is another factor which many feel should not have come into being. Some 18 months ago the Air Force canceled its contract with Douglas for development and production of the C–132 aircraft. This was to be a very large, fast, long-range airlift workhorse. It would provide massive mobility to our Armed Forces, particularly the Army, in limited war situations and the deterrence thereof.

Since this is a service-type operation performed by the Air Force for other branches of the military, some felt Air Force officials canceled the C–132 more in consideration of financing its own primary missions than in a regard for executing its service operations for other branches. This, of course, may not be the fact, and it is not my intention hereby to level criticism at the Air Force. I relate this only because it does illustrate that careful and intelligent thinking must be applied to determine what kind, how much and how fast and airlift cability is necessary for the proper protection of the Nation and to the problem of financing it and maintaining it in being.

The November 1958 issue of News Front magazine contained the following informative article and chart dealing with the airlift issue:

HOW MUCH AIRLIFT?

Three times in the past 6 months the U.S. Armed Forces have shown that they can "get there fustest."

In May, within 14 hours of President Eisenhower's decision to extend armed protection, if needed, to Vice President NIXON during the final stage of his South American tour, the Air Force had acted. It had flown 498 paratroopers with full equipment to Caribbean bases close to mob-threatened Caracas, Venezuela.

In July, on the very day the United States announced it was sending troops to Lebanon at the request of then President Camille Chamoun, a composite air strike force flew to Adana, Turkey, to back up marines landing south of Beirut.

In August when the Chinese Communist bombardment of Quemoy and its tiny neighbors seemed to presage an attempt to invade Formosa, another composite air strike force was flown across the Pacific to the Nationalist stronghold.

But inability to complete Confederate Gen. Nathan Bedford Forrest's strategic formula, to get there by air not only "fustest" but "with the mostest" is perhaps the gravest of current United States military weaknesses.

The force flown to the Caribbean by the 314th and 63d Troop Carrier Wings at the time of the Nixon incident was intended—and strong enough—merely for police action.

The composite air strike force which flew to Adana was drawn from troops in Germany, not from Tactical Air Command units in the United States which had received special "brush-fire" training for just such eventualities.

The reason, it was reported at the time, was that enough airlift was not available in the United States—and thus the risk of temporarily weakening West Europe NATO forces had to be taken.

The Formosa flight was but the spearhead of a still continuing Formosa buildup and, like the Adana venture, was primarily important to show United States will and military capability.

Gen. O. P. Weyland, chief of the Tactical Air Command, recently stated that "we are

unable to transport and air support a force of much more than division size on a single lift."

The Army Information Digest said:

"The United States should be able to airlift a decisive limited war force to any place in the world in 4 or 5 days. * * *

"But there is an alarming lack of modernization in our troop-and-supply carrying air fleet."

The first full bitter cost of airlift inadequacy was paid by Great Britain and France, not the United States.

Had the island-hopping Mediterranean airlift which brought their forces to Suez in the fall of 1956 been completed even 1 day faster, most experts believe, the entire canal area would have been occupied and Egypt's President Nasser toppled before the U.N., prodded by the Soviet Union and the United States, could have intervened.

But, for lack of transport planes, the Allied troops were late, the two nations were forced to beat an ignominous retreat—and Soviet prestige in the Middle East soared at the expense of the West.

Suez emphasized what was first demonstrated in Korea, when the airlines and commercial charter companies were pressed into service with the Military Air Transport Service to do the airlift job with planes which, mostly, were neither designed nor suited for it. As Donald Douglas, Jr., president of the Douglas Aircraft Co., recently pointed out, "Korea was a lesson in the lack of proper airlift preparedness."

An airborne division contains 11,486 men; to move it, with supplies and equipment, means airlifting 7,000 tons. (A standard infantry division has 13,748 men, with more—and heavier—equipment.) By the 10-ton-per-plane estimate used as a working rule of thumb, 700 planes would be needed to airlift an airborne division.

To meet an airlift emergency, the Armed Forces can call immediately upon some 1,725 planes, more than 2½ times, on paper, the number needed for a division lift.

But many of these, including the 368 airliners of the Civil Reserve Air Fleet, are primarily passenger planes, although the greater need is for cargo capacity. Besides, abruptly pulling airliners out of civilian service would cripple vital domestic schedules.

The 600 planes of the Air Force Reserve, manned by "weekend warrior" crews, are slow C–119 transports with only 3 tons' capacity.

Out of the 1,725 available planes, less than 200 are jet-prop powered, the rest have piston engines.

Ideal for transporting the streamlined pentomic division are the Lockheed Hercules C–130 and the Douglas Cargomaster C–133, both turbine-powered (jet-prop) aircraft.

The C–130 can carry 92 percent of the different items needed by an airborne division—and carry them 4,000 miles without refueling.

The Tactical Air Command estimates it can load 12½ tons into each C–130 for deployment to Europe or Africa, and 7½ for a Far East flight. (More space is needed for fuel.)

But the Air Force has only about 160 C–130's (96 in TAC), and to support for a month a Composite Air Strike Force Wing would require continuous use of 49. Sustaining a division would require some 150.

The Douglas Cargomaster C–133 has a capacity of almost 50 tons, but the Air Force has only a handful.

Why is U.S. airlift capacity low?

Primarily, because defense emphasis has been placed on nuclear deterrent rather than tactical potential, on a bigger bang for a buck.

Airlift, in comparison with such more glamorous and publicized military activities as the Strategic Air Command and missile development, has received very low budget priority.

But there is another problem; just how much airlift is enough? How many "brushfire" crises will erupt on the free world periphery, and how far will they be from the continental United States? Will two or more occur at the same time?

Should the United States develop, now, airlift capacity for a full-scale, multifront global war?

There is, industry and the military agree, no perfect solution.

But the most practicable approach the experts also agree lies in combining modernization with flexibility and capacity for rapid expansion.

Douglas engineers assert that a fleet of 107 turboprops (such as the C–133) could, with more efficiency and economy, replace the entire present MATS fleet.

Dr. Allen R. Ferguson, research director of Northwestern University Transportation Center, proposes that the Air Force lease, not buy, its turbine-powered transports.

He claims that this would greatly increase flexibility, and that "it should be possible to compute a rental less than the cost of operating the existing (MATS) piston fleet and still be enough to provide an adequate return for the lessors."

For actual combat conditions, the Stroukoff Aircraft Co. is developing an attack transport, the YC–134, which can land almost anywhere. But it is still experimental.

Not only is flying troops abroad to trouble spots, as needed, cheaper than permanent garrisons, but world developments are making it more desirable. A leading authority writes:

"It is only a matter of time before we will find it better diplomacy to bring our troops home from West Germany, Italy, and South Korea than to leave them there. The ideal arrangement would be to have only token forces abroad and the bulk ready to fly in at short notice."

But as Maj. Gen. Robert F. Sink, commander of the 18th Corps (Airborne), stated recently:

"If we don't have the means of getting transportation * * *why, hell, we stay at home.

U.S. military airlift planes

Company	Type	Pounds	Capacity (cubic feet)	Troops	Cruising speed	Range (nonrefuel)
Lockheed	Hercules turboprop C-130	36,900–40,000	4,300	92	370 miles per hour	4,000 miles (maximum range); 1,750 miles (maximum payload).
Do	Constellation C–121 or R–7V	40,000	5,500	58–94	334 miles per hour	4,447 miles (maximum range); 2,837 miles (maximum payload).
Douglas	Cargomaster turboprop C–133	41,700–95,000	13,500		315 miles per hour	4,000 miles (maximum range); 1,750 miles (maximum payload).
Do	Globemaster C–124	74,000		200	250 miles per hour	4,000 miles.
Do	Liftmaster C–118 or DC–6			54–89	315 miles per hour	5,000 miles.
Do	C–54, R–5D5 or DC–4	6,300–13,000		50	177 miles per hour	2,415 miles (maximum range); 1,150 miles (maximum payload).
Do	C–47, R–4D7 or DC–3	7,500		21–30	167 miles per hour	2,200 miles (maximum range); 1,440 miles (maximum payload).
Stroukoff Aircraft Co	Assault transport YC–134	30,000			250 miles per hour	4,750 miles (maximum range); 600 miles (maximum payload).
Boeing	KC–135		6,660		Over 600 miles per hour	4,000 miles.
Do	Stratocruiser C–97			130	Over 300 miles per hour	4,300 miles.
Convair Division, General Dynamics	C–131			48	200 miles per hour	2,150 miles.
Fairchild	Provider C–123B	16,000–18,000		60	186 miles per hour	3,450 miles (maximum range); 1,150 miles (maximum payload).
Do	C–119	6,850	3,150	62	175 miles per hour	3,480 miles.

Putting Our Surpluses to Use

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. COAD. Mr. Speaker, in keeping with my great desire and hope that this Congress take affirmative action toward finding a workable solution to our farm problem, I submit as an extension of my remarks, the following editorial entitled "Putting Our Surpluses to Use," which appeared in the January 18, 1959, issue of the Des Moines Sunday Register. The editorial follows:

PUTTING OUR SURPLUSES TO USE

John H. Davis, former U.S. Assistant Secretary of Agriculture and now a professor at Harvard University, has recommended that the program for distributing American farm surpluses overseas be placed on a long-range basis.

Davis made a study for the Eisenhower administration of the operations of Public Law 480. This is the law which permits the sale of farm surpluses for foreign currency, as well as barter trades for strategic minerals.

Davis believes the program has been working fairly well, but he argues that both the United States and recipient countries could make it work better if it were set up on a 5-year plan.

Davis believes the sales for foreign currency could be gradually cut back if the program were on a 5-year schedule, instead of year-to-year operation. He thinks countries using the surplus farm products could prepare for a tapering off of these low-cost imports. At the same time, he believes United States could make needed adjustments in farm production.

It makes sense to establish the farm export programs on a long-range basis. But we doubt very much that it will be possible to taper off in 5 years. The lack of success in

adjusting farm production in this country in the past suggests that Mr. Davis is unduly optimistic about the future.

It is more probable that the United States will have still larger surpluses of farm products in the years ahead. At any rate, a long-range plan for use of these products in foreign economic development programs would be a good thing to have on hand.

The United States cannot operate in this field most effectively on its own. It should attempt to bring Canada, Australia, Argentina, and other surplus-producing countries into a joint program for using food surpluses to aid economic development in the poor countries. Controls need to be set up to prevent these donations or cutprice sales from interfering with normal commercial trade. International cooperation is needed to avoid charges of dumping or unfair usurpation of markets.

The Davis report deserves serious consideration by the administration and Congress. It would be a start toward a more sensible policy for utilization of farm surpluses.

Address by AFL–CIO President George Meany to a Joint United States-Canadian Labor Education Conference at the Statler Hilton Hotel in Washington

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. METCALF. Mr. Speaker, in spite of herculean efforts in the past few years, the local school districts have not been able to cut into the backlog of our classroom shortage. We still need more than 130,000 classrooms to educate our children. Of equal importance is the shortage of trained teachers. The following address by Mr. George Meany, president of the AFL–CIO, to the joint United States-Canadian Labor Education Conference held here in Washington on January 14, calls for immediate Federal assistance to the States to alleviate this crisis. He eloquently sets forth some of the reasons Congress should pass my bill, H.R. 22, which would provide for grants in aid for school construction and assistance in the payment of teachers' salaries.

Mr. Meany's speech follows:

Permit me to express my appreciation to the trade union representatives who are taking part in this conference on the urgent problems of education.

It seems you have come to the right place at the right time. The 86th Congress has just begun its sessions. Last Friday it listened to a message on the state of the Union which did not contain a single mention—not a single word—about the critical classroom deficit that exists throughout our country.

What we have to say at this conference about the shortcomings of our educational system may therefore serve to fill the gap. It may prove educational even to our highly educated Government officials and lawmakers. And let it not be considered presumptuous for labor to point the way, because it was our own trade union movement at its first national convention in 1881 that started the ball rolling for universal free education for the Nation's children.

Even if America's educational retrogression were to be considered in a vacuum, the picture would be disturbing. But looking at it, as we must, in comparison with the enormous strides taken by Soviet Russia, our retreat becomes alarming.

Last year an on-the-spot study of the amazing educational progress achieved by Soviet Russia was made by 10 leading American educators. In his report on that survey, one of our honored guests, Lawrence G. Derthick, U.S. Commissioner of Education, said:

"We are today in competition with a nation of vast resources, a people of seemingly unbounded enthusiasm for self-development and fired with conviction that future supremacy belongs to those with the best-trained minds, those who will work hard and sacrifice."

Commissioner Derthick called the turn. Recent occurrences in interplanetary space have made it painfully clear that Soviet Russia has outstripped us in certain scientific and technological fields, at least.

Just think of it—a nation whose people only two generations ago were almost wholly illiterate, today is turning out more scientists, engineers, and skilled technicians than we are.

We cannot consider this development with passive equanimity. It is not merely a blow to our national pride, but a distinct menace to our national safety. We are under no illusions as to the Kremlin's immediate policies or ultimate aims. The Communists are seeking and will never stop seeking world supremacy. America is the only major power which stands in the way of that goal. The cold war we are now enduring will inevitably become a hot war whenever the Kremlin is convinced it can win it. No other considerations count with Khrushchev and his associates.

Let me emphasize that I am no admirer of the Kremlin's educational concepts. The needs of humanity, on both sides of the Iron Curtain, can never be satisfied by chemical, electronic, or rocket exploits. Higher education will be truly high only when it enhances both the spiritual and material values of humanity—when it secures freedom, social justice, and enduring world peace. From our point of view, no education is complete or worthwhile unless people are encouraged to think for themselves, instead of being forced to follow the narrow channels ordained by a dictatorship.

But that doesn't take away the threat to our national security posed by Soviet Russia's educational advances. That threat is ominously symbolized today by the Lunik, the sputniks, and by Russia's acknowledged superiority in long-range missiles and rocket engines.

Since these are the products of the Kremlin's educational thrust, let us beware. The very fact that Soviet Russia's educational progress has become a potential weapon in her arsenal of international aggression compels us to give priority to improvement of our own educational system as a vital part of our national defense program.

It is not enough to attempt to make up lost ground by giving Federal scholarships for advanced study to scientific and technological students. Our school problems begin where the child begins—in the elementary school—and they exist all the way through high school and college. We must undertake a complete overhaul.

Toward that end, let us first consider the acute shortage of classrooms that afflicts even our more prosperous States. According to conservative estimates, we will need at least a quarter of a million new classrooms in the next 5 years to accommodate higher enrollment and to replace obsolete, rundown firetraps. How are we going to get this construction job done? There is no point in further talk of meeting this problem at the school district level, or even the community or State level. Their tax well has run dry.

The responsibility of rebuilding our school plant to regain the advantage we have lost to Soviet Russia is not a local problem. It is not a State problem. It is clearly a national challenge and we can meet it only at the national level.

Two years ago the administration proposed a Federal program of aid for school building involving the expenditure of over a billion dollars in 4 years. There was no follow-up and nothing happened. Last year no program of any description was advanced to meet the classroom shortage.

The second educational problem which is causing growing apprehension is the poor quality of teaching many American children now receive. Surveys all over the country have found that our elementary schools are sending to high school students who have not absorbed the basics of the three "R's"; that the high schools are sending to the colleges and universities young people who manifest not only obvious educational inadequacies but who do not even like to learn.

To meet this problem, President Eisenhower last week proposed a study by a representative citizens' committee. He told Congress: "We must have teachers of competence. To get them and hold them, we need standards."

If by this statement, the President means we need higher salaries and better working conditions for teachers we of labor agree with him fully. But why is another time-wasting study necessary to corroborate this simple fact? Can anyone doubt that most teachers in America today are grossly underpaid? According to the Government's own figures, they receive less pay per child than the average baby sitter.

Every study so far made shows that thousands of high-grade teachers have quit the profession to take over jobs in industry at which they can earn a better living. Likewise, not enough qualified young people are attracted to teaching because it offers a dead end instead of an economic future. As a result last year—and undoubtedly the same condition still prevails—more than 90,000 full-time teachers who held substandard certificates were employed on an emergency basis.

There is only one way of effectively ending that emergency—to establish higher salary standards for teachers, a move that is long overdue. Here again, our Federal Government must assume the responsibility for action because we can look to no other source to assume the financial burden.

Our third major educational problem involves enforcement of the Supreme Court's ruling against racial segregation in the public schools. While the Supreme Court directed that its decision be carried out with all deliberate speed, it has met with all deliberate obstruction. In two States, the Governors have even closed schools rather than comply with the law of the land.

This is unquestionably a difficult problem but it cannot be solved by nullification of the law. Nor can it be solved by abandoning responsibility to the States. Already college presidents are faced with the necessity of refusing admission to high-school seniors who were deprived of the opportunity to complete their courses last year. This waste of time and human resources cannot be tolerated by American parents any more than by their Government. The time has come for Federal authorities to bring about compliance with law and order and to accord Negro children throughout the country their right to equal educational opportunities.

There are two auxiliary educational programs of prime importance that I will mention only briefly because they have been discussed by other speakers at this conference. I refer to the need for improved vocational education and for Federal scholarships

to permit the great number of talented students who now have to quit school prematurely for economic reasons to continue with their educational development.

All these programs, of course, will cost a great deal. There is no getting away from it—somehow or other, now and in the years to come, we are going to have to raise much more money and spend much more money for education.

The decision can no longer safely be avoided. It must be faced courageously and effectively.

Unfortunately, the educational crisis has come to a head at a time when Washington has suddenly become preoccupied with budget balancing and fiscal economies.

The American people are looking for bolder and more forward-looking leadership.

We have had budgetary deficits before without disastrous results, but an educational deficit of the proportions that will soon pile up can never be overcome.

Congress should take the President at his word when he said, "We can afford everything we clearly need, but we cannot afford one cent of waste."

For the sake of survival, for the future well-being of humanity, we clearly need and we can easily afford the funds necessary to rebuild and revitalize our educational system. By the same token, we cannot afford, in the name of false economy, to waste the heritage and the opportunities of our children

Let us meet the educational challenge of our time as "one nation, under God, indivisible." That is the only honest, the only practical, the only available solution.

The Problem of Access to Public Lands

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ULLMAN. Mr. Speaker, a recent article in the January 15, 1959, issue of the Conservation News, a bimonthly publication of the National Wildlife Federation, contains some valuable information on our public lands.

The problem of access to public lands is a critical one. It is, however, an equally complicated problem. Yet as long as access to these lands is difficult or impossible, we fail to achieve the goal of multiple-use development. I am in complete agreement with the Conservation News in its statement that "perhaps the time has come for a reappraisal of public benefits to be derived from public lands and the administration of these properties." I am hopeful that such a reappraisal will shortly be forthcoming.

I think this article will be of great interest to all of my colleagues and ask that it be inserted in the RECORD immediately following my remarks:

THE PROBLEM OF ACCESS TO PUBLIC LANDS

Something of a furor was raised in central Oregon this past fall over advertised plans of a group of ranchers to permit deer hunting on a fee basis over some 1 million acres of land. Many sportsmen's groups and the Oregon Game Commission went on record in opposition to the system, partly because it failed to recognize the right of all citizens to share equally in utilization of the State's wildlife resources and, in addition, because some public lands in Federal ownership were interspersed among the privately owned territory being advertised for fee hunting.

Reports indicate the fee-hunting plan was something less than a spectacular financial success, yet the incident does serve to point up a major problem, right of the public to enjoy access to, and use of, public lands for lawful recreational purposes.

The situation, largely concentrated in the 11 Western States but applicable to some degree all over the Nation, perhaps is best illustrated in Colorado. A survey just completed by the game and fish department and submitted to a State legislature interim committee reveals that 1½ million acres of public land in Colorado is controlled by private interests: farmers and ranchers, lumbering and mining companies, resorts and even municipalities. Members of the public can reach this land only by going across private property (sometimes for a fee, sometimes free, sometimes access is totally denied) or by detouring around at a considerable distance. Some Federal property is completely encircled by private holdings.

The final report covered 149 separate areas in 28 Colorado counties. The total public acreage controlled by private groups came to 1,462,738 acres, or 12.7 percent of the total public land area in the counties surveyed. From another angle, the study involved 10,788,402 acres, or 78.7 percent of Colorado's national forests. Of this total, 80 percent (8,695,357 acres) was considered to provide good hunting and/or fishing. There were 120 separate areas where the public was denied access to 1,038,190 national forest acres, or 12.1 percent of the total.

Public land access problems in Colorado are applicable, to a considerable extent, throughout the West.

In all, the Federal Government has some 406 million acres of land, exclusive of extensive holdings in Alaska. This huge area is broken down for administration into: National forests, 161 million acres; national parks and monuments, 17 million acres; national wildlife refuges, 10 million acres; military reservations, 25 million acres; and public domain, including grazing districts, 193 million acres. National forests, administered by the U.S. Forest Service Department of Agriculture, are dedicated to multiple use, including recreations such as hunting and fishing. National parks, administered by the National Park Service, Department of the Interior, are dedicated to recreational and educational use, except hunting. National refuges, administered by the U.S. Fish and Wildlife Service, Interior Department, are dedicated to the preservation of wildlife and some provide recreational possibilities, including hunting and fishing. Military reservations are administered by the Department of Defense and offer limited public recreational opportunities, including hunting and fishing, depending upon the type of basic activity and national security. Public domain, administered by the Bureau of Land Management, Interior Department, comprises the Federal properties which were left after the other lands were withdrawn for special uses.

The public access problem primarily concerns national forests and public domain lands. Each type of land has its own particular problems.

Speaking in generalities, many national forests are located in scenic but rugged mountain territory. Public domain lands constitute desert lands, plateaus, mountains, and odds and ends of Federal real estate, including huge tracts in Alaska.

Public domain property perhaps offer the most acute access problems. Whereas national forests were usually withdrawn or purchased in blocks, they are somewhat more easily administered than the public domain properties which often are widely scattered among more valuable land which was homesteaded, mined, or claimed for other purposes. Many public domain lands are rocky outcroppings, canyons, and gulches, or other unwatered areas of little or no value.

Access to public domain land and national forests is a thorny problem. The areas are so widely scattered and isolated that it is uneconomical to mark boundaries or to fence the properties. Even though State wildlife agencies are providing access to some areas, all cannot be opened in this manner. The Federal agencies understandably are reluctant to resort to condemnation procedures to insure public access to public property but this approach may, in the final determination, offer the only possibility. The Federal Range Code prohibits "interference with licensed hunters or fishermen to enter, and to hunt and fish on the Federal range covered by such license or permit" but many access roads are on private lands.

Admittedly, hunters and fishermen sometimes create damage and dismay for private landowners, but there also is another side to the coin. Denying entry prevents application of good wildlife management practices. It does not allow for proper harvest of such big game animals as deer and elk. When these animals come down to lowlands during the winter, they damage both public and private lands and, by their excessive numbers, create added problems.

Another problem resulting from denied access is one common to all posted property. Whenever hunting and fishing areas are withdrawn from use, greater and greater demands are made upon those still open. In some parts of the West the hunting and fishing pressures for certain forms of wildlife are not so great that, if scattered equally over larger areas, they would be harmful. The concentration problem, however, becomes more acute each time another area is blocked out from proper use.

As an expanding population gains more and more leisure time, increased demands will be made for recreational areas as well as for livestock. Problems of conflict over use of public lands are bound to result. Perhaps the time has come for a reappraisal of public benefits to be derived from public lands and the administration of these properties. Such a reappraisal may reveal the need for basic land-use law revisions.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. DOLLINGER. Mr. Speaker, I join with the many friends of freedom who are paying tribute to the brave Ukrainians on their 41st anniversary of their independence.

After years of oppression, they were able to throw off the yoke of Russian rule. Despite Russian attempts to wipe out Ukrainian nationalism, their love of freedom and high ideals prevailed, and when, in 1918, they regained their independence, they proclaimed the Ukrainian Republic. They adopted a democratic form of government, and, with vigor, courage, and hopeful hearts, they began to rebuild their war-torn country. Their liberty was short lived, for in 2 years the Russian Communists, by dint of their tremendous forces, again annexed the new Republic to the Soviet Union. Ever since 40 million Ukrainians have been bowed under Soviet rule in captive state; the freedom for which they sacrificed so much has been lost.

It is well that we commemorate the independence and freedom of the Ukrain-

ian National Republic; the people of the Ukraine are not allowed to recall the great day or celebrate by any outward sign. We who cherish liberty and democratic ideals can express our sympathy over their loss and also convey our good wishes that the day will come when their prayers will be answered and their and our hopes fulfilled—the day when a free and independent Ukrainian National Republic is again established.

We commend the Ukrainians now in our country for the splendid contributions they have made to our Nation in the fields of culture, science, and industry, as well as for their participation in our Government as splendid citizens.

Seventy-sixth Anniversary of the Civil Service Act

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, my good friend and a tireless champion of Federal employees, the senior Senator from South Carolina, made the principal address at a banquet on January 17, 1959, celebrating the 76th anniversary of the Civil Service Act.

The American Federation of Government Employees sponsored the banquet under the sage and mature leadership of Mr. James Campbell, its national president. Toastmaster for the occasion was the genial and witty Thomas Walters, operations director of the Government Employees Council.

There were many dignitaries present including the Honorable Arthur Flemming, Secretary of the Department of Health, Education and Welfare, and the Honorable Barbara Gunderson, member of the Civil Service Commission. General Melvin Maas, a former member of this body and a distinguished member of the Marine Corps whose work among the handicapped is well-known, was present as Chairman of the President's Committee To Employ the Physically Handicapped.

Senator JOHNSTON delivered a stirring address in which he pointed that the vitality of the Nation depends in great measure on the strength of our Federal civil service.

I am honored and privileged to make his remarks a part of this RECORD:

SPEECH BY SENATOR OLIN D. JOHNSTON, DEMOCRAT, OF SOUTH CAROLINA, BEFORE THE AMERICAN FEDERATION OF GOVERNMENT EMPLOYEES AT THE 76TH ANNIVERSARY OF THE CIVIL SERVICE ACT

President Campbell, Secretary-Treasurer Johnson, Secretary Fleming, distinguished guests, ladies and gentlemen, I am delighted to join with you in observance of the 76th birthday of the Civil Service Act. I always look forward to and enjoy these meetings with you my fellow workers in the Federal service. Meetings of this kind are richly rewarding. They give us a chance to exchange ideas and to develop new ones.

New ideas and fresh thinking are needed today. We cannot afford to become sterile or stale in our thinking or in the way in which we act.

Our way of life depends on our national strength and vitality.

The vitality of the Federal civil service will remain strong in the future on a balanced diet of improved public opinion, purpose and progress.

I long have held to the belief that our civil service has been the victim of undeserved bad publicity. It has been the victim of an unfortunate lack of understanding by the public of what it is and of what it does. If the man-in-the-street knew it as we do, there would be no need to concern ourselves with the problem of public opinion.

Unfortunately, that is not the case today. Neither will it be tomorrow unless positive steps are taken to bring it about. As for my part, I propose to do all in my power to help mold a better and more realistic public opinion of the Federal service.

You, here tonight—the organization to which you belong—others like you—should consolidate your efforts on ways and means of acquainting the public with the virtues and accomplishments of our Federal service and our civil service system.

I doubt that the public gives proper credit to our civil service. It contributes so much to making this Nation strong and great.

How many know that much of our once fertile land is tillable today only because of farsighted and well-executed programs of conservation conducted on a national basis.

Is the public aware that our rivers have been harnessed bringing flood waters under control; that our forests have been created, extended, and improved; that game and fish have not been allowed to become extinct as the result of national planning and programs.

Does the public know that the foods we eat are clean and pure; that the medicines we take are safe and up to standard; that the cosmetics we use are free of harmful ingredients because of federally administered programs.

Does the public realize that our progress in providing a network of better roads; faster and safer transportation by land, air, and water; more effective prevention and cure of disease; maximum safety of bank savings; old age and disability benefits; greater protection to the honest and innocent against crime and fraud; and, improved communications result from Government interest in and attention to our national social problems.

Even if the public had such an awareness—and I think we can agree that it doesn't—there would still be the problem of getting across effectively that each of these varied and complex programs are only as good as the people who carry them out.

The mere recognition and identification of a national problem of itself does not provide a solution. That is only the first step.

Enactment of legislation—no matter how well concerned and designed—does not assure solution. That is merely a second step.

The most important ingredient is the human element. Let me make that point clear. Generally, the results are better with a bad piece of legislation in the hands of good people than a good piece of legislation in the hands of bad people.

Our Nation is and has been fortunate in many ways. We are blessed with abundant natural resources, rainfall, and sunshine, an industrious and honest citizenry and a government run for and by the people. This concept of government gave birth 76 years ago to the enactment of the legislation from which our civil service merit system is derived.

The Nation is fortunate that the legislators of that day had the wisdom and vision to look so well into the future. Without the benefit of that act, I fear we would not have attracted and could not have retained the high type of personnel needed to effectively carry out our many and varied Federal programs.

A good public opinion will not come our way easily or quickly nor will it remain with us long unless it is deserved. Unless we serve well and faithfully we do not deserve nor should we expect a good public opinion. To the end that we continue to warrant a good public opinion, we should reexamine our purpose in being where we are and in doing what we are doing.

We should each dedicate ourself to the task of giving the public better service by doing our job as efficiently, effectively and economically as humanly possible.

Whatever our field—whatever our assignment—the world of today is a challenge to each of us to do our best that tomorrow may be better.

I think every position in the Federal service should have a purpose. If it doesn't, its existence can't be justified. Every employee should know fully the purpose of his position and periodically renew his dedication to the fulfillment of that purpose.

You, Congress, and the leaders in the executive branch must be alert to the needs for maintaining the kind of civil service system in which you can be proud to serve.

I am sorry to say, this administration has not been alert to those needs during the past 6 years. Some of the appointments it has asked Congress to approve as leaders of this civil service system have left much to be desired.

I am happy to say, it looks as if Rip Van Winkle has finally awakened to needs of the service. The recent appointment sent to the Senate for Chairman of the Civil Service Commission leads me to believe they are at long last taking a proper look at this important post.

I sincerely hope they follow up this appointment with a good legislative program to make the service more attractive and to reward you for a job well done.

Maybe this is too much to hope for; maybe this new found respect for the civil service system is still in such infancy that they do not have a bold new program to submit.

As for me I took the Democratic majority leader's recent words very seriously—when he said to the administration—"Lead or be led." He was endorsing my actions for the past 6 years. I think you all are aware of the accomplishments I refer to.

As for the future, I will offer a bold new program. I hope the administration will join with me. If they do, the task will be made easier. If they don't, I will do it anyway.

I have already introduced legislation to:

1. Create a Federal employees health insurance program: As chairman of the Committee on Post Office and Civil Service, I am going to recommend to the committee that this be the first order of business. If we receive any kind of cooperation from the administration, this bill should become law before this session adjourns.

I am grateful to the subcommittee of the Government Employees Council for preparing this legislation. I know it represents many days of hard work.

2. Modify the Group Life Insurance Act to permit employees to purchase two times the amount of their salary; many employees have expressed the desire to be able to increase the amount of insurance they are allowed to purchase under present law.

3. Increase the per diem and travel allowance: I believe the present allowance is completely unrealistic. It was set in 1955. Revent surveys show the cost of travel has increased greatly since that time.

4. Allow persons convicted of an offense not involving the national security to draw the annuity they have earned, paid for, and are entitled to.

5. Preserve the rates of compensation of wage board employees whose positions are reduced in grade; and

6. Give employee organizations the right to represent their members and participate more fully in the formulation of personnel policies and practices.

During a recent trip to several European countries, I was impressed with the fact that the governments of most of these countries maintain a splendid working relationship with leaders of employee organizations.

These, then, are some of the things I hope to accomplish, to help insure for you a brighter and better tomorrow.

I say, thank you, for a job well done.

Good luck and God bless you all.

Success of Pan-American Games Vital to Nation

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Leo Fischer which appeared in the Chicago American on January 19, 1959, entitled "Success of Pan-American Games Vital to Nation":

SUCCESS OF PAN-AMERICAN GAMES VITAL TO NATION—UNITED STATES PRESTIGE AT STAKE AS WHOLE WORLD WATCHES

(By Leo Fisher)

Whether we like it or not, prowess in sport in recent years has become tied up with national prestige. Maybe it's a byproduct of the cold war with Russia, but the fact remains that success on the athletic field is a mighty important matter these days when everything we attempt is looked upon with a critical eye to the rest of the world.

This summer, for the first time since the Olympics at Los Angeles in 1932, the United States will have an opportunity to act as host for a big segment of the world's athletes in the pan-American games.

Many of them will be making their first visit to this country—and a good portion of these firstcomers not only will be interested in winning laurels, but also in seeing how much of the anti-American propaganda they have heard is actually true.

The games, to be held in Chicago August 27 to September 7, will bring some 2,000 contestants from Canada, Central America, and South America. They will participate not only in track and swimming, but also in gymnastics, tennis, wrestling, water polo, yachting, weight lifting, baseball, basketball, riding, fencing, shooting, cycling, boxing and many other competitions.

Leaders of these athletes and teams are among the most important and influential citizens of their countries, especially in Latin America. Their treatment, their accommodations, the conditions under which they compete and every other phase will make an impression that goes for beyond the realm of sport.

Chicago, of course, will do its share. The city figuratively already has rolled up its sleeves and gone to work with zest and enthusiasm. Mayor Daley and his committees will go as far as they can to provide the finances and the background to make the pan-American games as successful as any meet ever held.

But this is a project that goes far beyond our city limits. It is a showcase not for Chicago but for the entire United States. It is an event of hemispheric and worldwide importance which must have the backing of every American citizen.

That is why the success of the bill introduced in the House by Representative SIDNEY YATES is so vital. It provides for an appropriation of $500,000 to be used toward the transportation, housing and feeding of the visiting athletes. It specifies that none of the money is to be used for permanent facilities, which is as it should be. Chicago can handle that phase of it as part of its continuing growth and its contribution toward the community's welfare.

A similar bill was passed by the House last year but was held up in the Senate committee until adjournment. With arrangements for the pan-American games now in high gear, speed is essential. The money is vitally needed to insure the finest of everything for our guests.

It is a nonpartisan project, just as was the appropriation of more than $3,000,000 passed last year and signed by the President to help the State of California provide facilities for the 1960 winter Olympics at Squaw Valley.

The Nation's civic, industrial and political leaders in every region should forget partisanship and get solidly behind the Yates bill to insure its quick passage. As appropriations go these days, $500,000 is hardly a ripple in the budget—but its importance is immeasurable in one phase of world affairs.

It should be looked upon not as a gift to Chicago, but as a small investment in the bettering of relations with our neighbors to the north and south of us. It will pay big dividends for many years to come.

Permanent Certificates for Helicopter Airlines

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House I include the following editorial published in the December 1958 issue of Flight magazine:

PERMANENT CERTIFICATES FOR HELICOPTER AIRLINES

Scheduled helicopter air services in Los Angeles, Chicago, and New York have proved beyond the shadow of any doubt that they should become permanent arms of our domestic air transport system. The only way to do this is to provide them with permanent certificates of convenience and necessity, following the precedent established 2 years ago when Congress passed legislation ordering the Civil Aeronautics Board to certificate the local service airlines on a permanent basis.

It won't be necessary for the Civil Aeronautics Board to certificate helicopter routes into every nook and cranny of present areas of operations. It would be sufficient simply to provide permanent certificates for their major routes such as interairport runs and leave the other routes and future expansion on an experimental basis. For example, Los Angeles Airways is presently certificated to serve any point in an area of a 50-mile radius, which leaves the carrier enough latitude to find out by trial and error what service can be justified.

The three helicopter carriers have a combined operating experience of some 30 years. Surely the documented statistics are available to determine on what basis to provide the hardy pioneers with permanent operating status. They have gone just about as far as they can go as experiments. Bob Cummings, president of New York Airways, recently pointed out we must move immediately into the era when helicopter transport is a conventional business instead of a laboratory. Permanent certification of the major routes of the three operations is certainly the first step to this desirable goal.

It's all well and good to get excited about the jet age and the coming supersonic age of air transport. But the low and slow business of helicopter airlift is just as necessary and exciting.

The coming of the jets means that the air traveler will spend a larger percentage of his origination-to-destination time on the ground than he does now with reciprocating craft and unless he can hop a helicopter or some other type of VTOL flying machine to and from the jet airport he wastes a lot of time he saves by the new long-range jet transports. So the helicopter either as a shuttle air taxi or a short-haul intercity bus must be developed simultaneously with the jet services if all the promises of the jet age are to be fulfilled.

It certainly is encouraging to know that the Civil Aeronautics Board as now constituted is perhaps the most progressive Board we've had in many years. The recent enunciations of several members in public addresses and the realistic approach to local service airline problems in mail rate cases and route extensions may be taken as an indication the Board will show the same brand of enlightenment toward the helicopter air transport companies. If and when permanent certificates are granted the Board should then begin to consider and adjudicate the many applications on file for similar services on a temporary certificate basis in other metropolitan centers.

The Supreme Court and the South

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a most learned and appropriate article written by Mr. W. A. Langley, Laurel, Miss., on the question of the Supreme Court and integration. The article was printed in the August 28 edition of the Laurel Leader-Call. I believe that thoughtful readers will agree that Mr. Langley has correctly analyzed the situation. This able statement is but another argument for the bridling of this runaway Supreme Court.

The article follows:

PUBLIC FORUM

Sir: Since I have some firsthand knowledge of the school situation as well as an intimate understanding of social customs and taboos in the South, and having been educated partially in the East, I can grasp to a very limited degree something of the problems facing our Chief Executive.

Most southern schools and all of most Southern States are not going to integrate to any noticeable degree, immediately. If this be "anarchy," then it has been made so by outside inteference and not by southern volition.

It is easy for anyone to conceive of any number of situations, which could make even our present executive rebel against a Supreme Court order. If by some coincidence the Supreme Court became controlled by the Communists and it ruled against the exercise of private enterprise, the present Executive would be first to lead a rebellion with all his might. The South would laud him for such action.

The North resisted, with all its might, the Dred Scott decision of 1857. President Buchanan tried very hard to enlist the sup-

port of all sections to the decisions; but the North would not listen to him any more than the South is listening to the present President. At that time the North quoted Thomas Jefferson as saying: "To consider the judges as the ultimate arbiters of all constitutional questions is a very dangerous doctrine indeed, and one that would place us under the despotism of an oligarchy."

Mr. Lincoln fought the decision. He said: "The candid citizen must confess that if the policy of the Government, upon vital questions affecting the whole people, is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made, in ordinary litigation between parties in personal actions, the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that imminent tribunal."

Was the North made up of anarchists when it resisted the Dred Scott decision?

Was Jefferson an anarchist when he said that the Court was not the ultimate arbiters?

Was Lincoln an anarchist when he said that when the people allowed the Court to become an oligarchy they had ceased to become their own rulers?

It just happens that the Court has become dominated by those who disregard States rights. To the South, integration is just as brazen a disregard of its customs as communism would be to the Chief. Legislation by no court will change the southern way of life, now. The future is unpredictable. Its changes will not be known until it becomes the past. However, one thing is certain, agitation by the courts will retard the future progress of good race relations rather than speed integration. If there is to be future tantalizing action by the courts, and other branches of the Government, future historians will write that the gravest error of the Eisenhower administration was race agitation.

Name calling cannot settle this or any other dispute: if so, the epithets hurled at certain branches of the Federal Government following the Army's occupation of Little Rock, would have amply achieved the desired ends. Southerners, sir, are not anarchists any more than the President would be an anarchist if he resisted a Communist-controlled court. Is it anarchy to disagree? It was in Hitler's Germany. It was in England in 1876.

The same Constitution which guards the rights of the individuals also guards the powers of the States and limits the power of the Federal Government. There is no provision made in the Constitution regarding education or social customs. If so, why does the court not so cite? "Powers not delegated to the Congress are reserved to the States." Integration is clearly then a State matter. Besides no Negro in America is denied education sufficient to meet the requirements of his ambitions.

The court has erred in projecting itself into the field of legislation. As authority for this statement see the report of the State chief justices now in session in California. The court's error leaves our chief some degree of latitude to correct the error partially. The phrase "with all deliberate speed" places the responsibility for the speed of enforcement directly on the Chief Executive. In the last analysis whatever errors are made in the speed of enforcement belong to him.

There is an unbiased and unprejudiced doctrine on American Government which touches directly this subject of legal and social coercion. To show that this opinion is unbiased, it was written decades before the race issue arose in our schools. The author was not from the South, nor from the North, nor from America. Lord Bryce in "The American Commonwealth" teaches that any American custom cannot become a successful American law unless it enjoys the overwhelming support of the population of a given area; that any present law that does not have the support of the great majority should be repealed; that local customs in one State might become successful laws there and be failures elsewhere. This unbiased document by a great British stateman is still held up to college students as perhaps the highest authorative treatise on the U.S. Government.

The great experiment of prohibition is here cited as an example that bears out the Bryce doctrine.

To show further that Bryce's law prevails here in Mississippi we have the most rigid prohibition laws of any State in the Nation. As a whole the State is technically totally dry; but in practice this is far from the truth. Certain counties and other government subdivisions do not subscribe to the State's liquor laws. Therefore, in these subdivisions liquor is sold openly across the counter.

Similar instances of local disregard for State or national laws can be cited in any of the States where the present Chief Executive has at times held his citizenship. Disregard for higher law then is not solely a characteristic of the South. It is characteristic of any American community where such a law does not enjoy the overwhelming support of the population. The supergovernment is not supposed to usurp the power of the supporting governments except under very limited circumstances as directed literally by the Constitution. If this usurpation does occur, then disregard of the courts legislation can be expected.

If the southern way of life had been let alone; and if as much progress in successful race relations had occurred during the next 50 years as has occurred during the last like period of time, the integration problem would have resolved itself through social development and change in the folkways. But the present turmoil has perhaps retarded solution for a hundred years. The South is simply not ready to integrate and integration cannot be successfully legislated without social acceptance by the affected locality.

The court and the Exeutive have made brave efforts; further forced attempts will be grave errors.

Any further attempts at integration should be done in conjunction with the local community. Wisely, a Commission has been set up to handle matters of integration. The only way the efforts of the Commission can succeed is with the cooperation of the community involved: Defiance of the wishes of a majority of any governmental unit by the Commission will mean ultimate failure in that unit. Cooperation with some units with no coercion, no threats, no force, no Army, no bayonets, no police action, no reprisals, no combination of these may achieve some degree of integration in some governmental units cooperation not coercion should be the motto of the Commission.

If demands for integration are made of any school board, then a petition to that effect should be signed by at least 10 percent of the bonda fide patrons of the schools of the area concerned. This petition should then be submitted to the Federal Commission. In turn the Commission should hold an election of all the school patrons of the area (both white and colored) to determine the wishes of the majority. After the election the Commission would know whether or not any further efforts would be advisable according to Bryce's law. This would also answer the Court's directive relating to "all deliberate speed."

The success of your Commission will depend upon its tolerant understanding, its thorough investigation, its deliberate action, its willingness to give a little here and there, its ability to see a community as one who has spent his life there, its willingness to seek the advice of those in the community who are wise and fair, its awareness of social structure, historical background, and some sympathy with local taboos.

If the commission approaches this problem in this manner and not in the manner of a police investigation, then on some distant day in a somewhat dim future, total integration will have a slim chance to succeed.

In the meantime the South goes along, unperturbed and fearless of the big bad wolf of integration, knowing that its bark is much more disturbing than its bite, believing that the administration should spend more of its energies in the solution of some of its foreign problems, rather than dissipating its energy and dividing our country—pitting one section against another—by dwelling upon a problem so impossible as the immediate integration of the races of the South.

W. A. LANGLEY.

Many Happy Returns

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the January 15 issue of the Hillside (N.J.) Times, commenting on the 10th anniversary of one of the most unusual, constructive, and valuable civic associations I know of.

I have watched their activities over this period of time and I have no hesitation in recommending to our colleagues that the Hillside Industrial Association could be a most inspiring pattern for community-minded efforts throughout the country:

MANY HAPPY RETURNS

The 10th anniversary of the formation of the Hillside Industrial Association will be observed at a dinner next Thursday evening and Hillside residents could hardly be censured for pointing with considerable pride to this bouncing youngster.

For looking around us in all directions, we know of no other community, large or small, which can boast an organization quite like this one. Many municipalities have their chambers of commerce, but Hillside is the only community we know of where the industries have banded together to create better understanding not only by word but by deed.

Perhaps the most outstanding accomplishments of the association during the 10-year period was organization of the Hillside Industrial Foundation. In the short space of a few years it has contributed sizeable sums to a number of worthwhile civic projects, including a recreation fieldhouse, the building funds of two religious groups and several other endeavors.

All are familiar with the Ford Foundation and others on a national scale, but Hillside is probably unique in the entire Nation for having this foundation devoted exclusively to local projects.

During its 10-year life span the Hillside Industrial Association has initiated other projects which have been of benefit to the general public as well as its own members. These have included the second postoffice on Hillside Avenue, Youth-Industry and Teacher-Industry Days honoring Little League champions, and so forth.

The association's activities have won the commendation of two Governors, Alfred E. Driscoll and Robert B. Meyner.

On reaching its 10th anniversary, the entire community, we are sure, joins in wishing the Hillside Industrial Association many happy returns.

Appendix

Victory for America

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. ANDERSON. Mr. President, last Saturday was a red letter day for the Democrats in New Mexico. They had a huge victory dinner at Albuquerque and were honored by having as their speaker the distinguished majority leader, the Senator from Texas [Mr. JOHNSON].

Senator JOHNSON drew the largest crowd that has ever attended a political dinner in New Mexico. By actual count 1,105 people sat down in Albuquerque's huge civic auditorium to hear the majority leader. In addition, hundreds more were in the gallery to hear him.

They were not disappointed. The senior Senator from Texas was in rare form, not only in the formal address but in the friendly asides during the delivery of that address and in the stirring conclusion of his remarks.

I ask unanimous consent that his address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

VICTORY FOR AMERICA

(Address by Senate Democratic Leader LYNDON B. JOHNSON at Democratic victory dinner, Albuquerque, N. Mex., January 24, 1959)

Mr. Chairman, fellow Democrats, it is a special pleasure, as a Texan, to be here in one of the few States that outlie Texas.

As you know, of course, Texas suffered a little embarrassment recently. We used to be the largest State in the Union. Then we were knocked over by an iceberg.

DOWN, BUT NOT OUT

We are down—but not out. That is why we sent a Texan out here to take over as your Governor.

You know Colorado used to have a Texan as Governor. Oregon had a Texan as Senator. The Nation has a Texan as President.

Unlike John Burroughs, of course, these others are Republicans and that is one of our chief exports in Texas. We don't mind when they leave—in fact, we encourage it. We don't usually let the good Democrats like Burroughs get away.

CHERISHED FRIENDS

A special pleasure for me is the opportunity to be in the home State of two of my most cherished friends, DENNIS CHAVEZ and CLINT ANDERSON.

The Nation is fortunate that you have sent them both to serve in Washington.

DENNIS CHAVEZ holds a vital role in our national life as chairman of the Committee on Public Works and the Subcommittee on Military Appropriations. I congratulate you on his reelection and, personally, I thank you for it.

I thank you also for CLINT ANDERSON. Several years ago, I asked a senior Senator to stand aside so that he might serve as chairman of the Joint Committee on Atomic Energy. At this session, he again assumes the important chairmanship of that committee—and the job could not be in more responsible hands.

TWO GREAT SENATORS

You have two great Senators. You have, also, two of the most able young Congressmen in Washington—my friends, JOE MONTOYA and TOM MORRIS. Keep your eye on these two. They are on their way to positions of high responsibility.

These victories—and many more—we have come to celebrate.

THE GREAT CRUSADE

We are meeting tonight in the lingering twilight of the great crusade.

The noble slogans are muted and still. The polished brass has tarnished and scuffed. The flying banners hang listlessly and limp.

It was just 6 years ago that all the world was young and gay.

The ship of state was destined for a firm hand at the tiller. Fiscal solvency was the pole star toward which our course was set.

We were to have strength without exercise; health without care; an assured future without investment.

THE THREAT OF VETO

And now there is nothing left but a desire for quiet—and government by the threat of veto.

Our country is torn by a great internal controversy.

Communism has declared economic war against our way of life.

The United States—which led the world into the atomic age—now lags in the exploration of outer space.

A BALANCED BUDGET

And we are told that there is just one issue before us—passage of an artificially balanced budget with a dot over every "i" and a cross through every "t."

The people gave their answer to that kind of government 3 months ago. They repudiated the concept of administration by inaction, procrastination, and delay.

All over the country—from Maine to California, from Minnesota to New Mexico—they cast their ballots for men of vigor. They asked for—and they shall receive—leadership in keeping with their own desires for progress.

WASHINGTON RUMORS

But the ink had scarcely dried on the headlines of victory when the rumors began to seep out of Washington. The informed sources and the reliable informants all told us the same thing.

The President was determined to exercise his veto powers to the hilt to check a wild spending spree.

There is no American who objects to the exercise of the veto power. It is a proper, constitutional function and one of the most important checks in our system of checks and balances.

WILD SPENDING

There are very few Americans who favor a wild spending spree by their Government. We all know that the end of such a spree would be fiscal insolvency.

But I think it is about time that somebody blows the whistle on threats to veto bills that have not been drafted and to cancel steps that have not been taken.

Perhaps I studied the science of government in an old-fashioned school that is now out of date. But I had always believed that the veto power was something that the President exercised after he had examined a bill.

It was only in Alice's Wonderland, I was told, that the rule was "verdict first, trial second."

And when the verdict is "veto," not only before the bill is passed but even before it is printed, it becomes little more than an instrument to blackjack Congress.

It is rather strange at this date to have the administration standing at the dyke to hold back the tides of spending. It is just 6 years too late for the role to be natural.

ADMINISTRATION BUDGETS

The present administration has drawn up, and administered, the largest peacetime budgets in history. And the last Democratic Congress clipped $5,600 million off those budgets.

To set the present administration up as the guardian of the balanced budget is in the same class as hiring a coyote for a watchdog over the sheep.

The last Democratic Congress did not embark on any wild spending sprees. And there is certainly no reason for thinking that the present Congress will do so.

A CONGRESS OF ACTION

But there is every reason to believe that this Congress will be a Congress of action. And it is the concept of action that brings us to the heart of the matter.

There are two ways in which a nation—or a man—can remain fiscally solvent.

One is to pull in, cut down, retract, withdraw, scrimp, and shrink from activity.

The other is to expand, produce, work harder, be more efficient, welcome opportunities.

THE REAL ISSUE

The real issue before the United States today is which road we will follow.

Democrats believe the budget can be balanced if we take advantage of our opportunities to increase the wealth of the Nation.

Republicans believe the budget can be balanced if we turn our back on opportunities and resign ourselves to the status of a second-class nation—weak, but thrifty.

THE DEMOCRATIC TIDE

It is no accident that the Democratic tide, while rolling strong everywhere, reached high-water mark in the West. It is here in the West that men have the greatest vision of the meaning of opportunity.

We know, as westerners, that this whole vast region—from Texas to Montana and from the Mississippi to the Pacific—is one of the tomorrows of our Nation.

Your own State is a land of enchantment—not for the legends of its yesterdays but because of the lure of its tomorrows.

Here, all across the West, tomorrow is everything.

The same is true in all the regions of our young land.

We must make provision for the support of the population of the 1960's and 1970's. We must enlarge our productive capacity.

We must multiply our job opportunities. Add more schools. Erect more hospitals. Build more roads. Construct more homes. Increase the output of our farms. Solve the problems of our human relations.

THE MUSTS—THE NECESSITIES

These are musts, no choices; necessities, not options.

Today's leadership will be adjudged responsible or irresponsible in terms of how tomorrow is served by the course we set now.

As a Nation, we stand at the very edge of the most demanding era of our economy's history. Yet, as we see the needs ahead, we find our cities blighted, whole regions depressed, key industries sick, vital links of our transportation system mortally ill.

ACCUMULATED DEFICITS

Search the history of the Nation and you will find few periods of the past in which so many accumulated deficits have pressed upon us—at one time—for action and resolution.

Yet, in the face of this, we are confronted by a deepening division in the directions of our national leadership.

On the one hand, the representatives of the people—most recently elected to serve them—say that the time has come to put tomorrow back into the mind and heart of government.

On the other hand, those who serve in the executive branch of the Government are serving notice that there is no room for tomorrow in their planning. And, furthermore, they go one step farther: the partisans of those with Executive power are openly threatening to use that power to veto tomorrow.

WORLD LEADERSHIP

We cannot expect to lead the world if we turn our backs on tomorrow. Yet, that is now offered as the chosen course of those with executive responsibilities.

They have turned their backs on New England.

They are silent to the needs of the northern manufacturing States.

They are totally insensitive to the economic potential of the South.

DISREGARD OF THE WEST

Most tragically, this administration has elected to disregard the West.

Let us look for a moment at your own State of New Mexico.

In less than 15 years, New Mexico has grown enormously—both in population, in manufacturing, and in importance. Much of this has come directly from the stimulus of an industry which did not exist 20 years ago—and barely existed 10 years ago.

I refer, of course, to your atomic industry.

Out of this one new industry has come a whole new world of opportunity for you and for your children. Because of it, whole new cities stand in your State where none stood a generation ago. Great new wealth is coming from your soil. New capital is being invested here. A new future is opening before you.

What has happened to New Mexico because of the atomic age is only a beginning—for in the space age opening before us now, this story will be repeated many times.

STORY OF THE NATION

It is—or it can be—the story of the West and of the Nation.

For the real impact and import of the space age will not come in the skies above us but in the West about us. Our scientists tell us that in the next decade our space technology will produce a flow of knowledge and understanding of materials which will revolutionize our industrial system.

Entire new industries will be brought into being.

New uses for unused resources will be found.

New metals and new metals technology will develop.

Every region in the Nation will benefit from this, but the Nation will especially need—in this era—the full capacity of its West.

THE WATER PROBLEM

Furthermore, you know and I know that the full solution of the water needs of the West is not going to be achieved piecemeal, nor is it going to be met by conventional efforts alone.

In my State, we have drawn plans to take the surplus water from regions with an abundance and channel it across great distances to supply regions with a deficit.

The feasibility is established.

The sole question is not the way—but the will.

I remember 20 years ago that when the survival of the free world was at stake the United States marshalled its resources into the Manhattan project—to unlock the secrets of the atom. Through such concentrated effort, we solved—in less than a decade—a challenge which many doubters thought could not be solved. And because of our effort, we opened for all of humankind a new age of hope which we are only now beginning to realize.

MANHATTAN PROJECT ON WATER

I express to you my belief that the time has come when we must cease our dawdling over the water problems of the West. It is time for us to commit our resources to another Manhattan project on water.

The solution of the water problem is far nearer than was the task to which the scientists at Los Alamos first addressed themselves.

We know, already, for example, that it is feasible to transform salt water into usable water for municipal, industrial and agricultural use.

At modest expenditure, we should be able—within 5 to 10 years—to perfect our methods sufficiently to make such water available at an economically feasible cost to the West.

PROBLEM CAN BE SOLVED

The point is this: the water problem of the West can be solved, insofar as engineering is concerned. The solution depends not upon the engineers but upon the decisions and courage of our political leadership.

Thus, the question is a question of political integrity—not technical capabilities.

I, for one, would express the hope that we may during this Congress lay before the executive branch this clearcut choice: hand to them a program for undertaking to find the solution to the water problem—then let them, with the eyes of the Nation upon them, make their choice.

Will they meet or will they fail the responsibility to tomorrow?

RESPONSIVE SERVICE

We of the Democratic Party have—for the past 6 years—served constructively in the Congress. We have not sought and we have not exercised a veto over progress—or even over Republican proposals that are in the interest of America. We have served responsibly and the elections demonstrate that the people approve.

Our sense of continuing responsibility does not permit us to follow blindly along a blind course—and this we shall not do.

DYNAMICS OF THE NATION

It is my belief—as I am sure it is yours—that the future of this Nation lies not in turning back to the past but in forging ahead to unlock the dynamics of our regions.

We do not propose to leave any region or any area or any city to stagnate amid the promises of these times.

We do propose to devote ourselves to the expansion and the growth and the confidence characteristic of America.

This is the spirit and the image of the Democratic Party.

By this approach, we shall make our victory of last November what it ought to be—and what we want it to be—a victory for the people of America and free men everywhere.

South Carolina's New Governor, the Honorable Ernest F. Hollings, Jr.

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. THURMOND. Mr. President, on Wednesday, January 21, 1959, I had the pleasure of attending the inaugural ceremonies for South Carolina's new Governor, the Honorable Ernest F. Hollings, Jr. The Governor delivered a very able address which represents the thinking of the people of South Carolina. This address was reprinted in the CONGRESSIONAL RECORD last week.

I ask unanimous consent to have printed in the Appendix of the RECORD edtiorials from several South Carolina newspapers which are very complimentary of the Governor's address, and which give further evidence of the fact that the people of South Carolina are standing firm for the principles of States rights and constitutional government.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Ridge (S. C.) Citizen, Jan. 22, 1959]

NEW GOVERNOR

Gov. E. F. Hollings, sworn in as Governor of South Carolina on Tuesday of this week, is at 37 one of the youngest men ever to occupy that position. And he is the 105th, we believe.

Mr. Hollings takes office in a critical time of the State's history. The coming 4 years of his term will find him confronted with a variety of problems, the like of which could not have been envisioned less than a generation ago.

The battle will continue and be intensified to preserve constitutional government because those who would destroy the Republic will intensify their efforts. The nature of his position as Governor of South Carolina will place him among the leaders of those fighting to preserve the American heritage of a government of laws rather than of men. The State's right to work law will come under intensive efforts to have it repealed. Preserving the system of public education in its accustomed peace and harmony will certainly be one of his main problems. The further industrialization of the State and preserving a climate favorable to industrial investment also will have a high priority.

These he has recognized and pledged to meet properly, as a reading of accounts of his inaugural address will show. There are these problems and more, including the $23-million deficit now facing the State, and it is to his credit that he accepted them in a spirit of challenge and proposes to meet them with confidence.

That he is a man of much ability is an impression we have had of him since we first knew him. That he also has ambition in ample supply we do not deny, nor do we find this a reason for criticism. Ambition that is made of Shakespeare's sterner stuff is a virtue, we think.

Our present impression is that his lack of years does not denote a lack of maturity. His inaugural address indicates a depth of understanding of the problems that will confront his administration. He is personable in appearance and popular with the people and with the legislature. In all, it's hardly possible to conceive of more auspicious circumstances under which to begin an administration.

We dare to hope that these good auspices will follow him throughout the next 4 years.

[From the Anderson (S.C.) Free Press, Jan. 22, 1959]

LOOKING AHEAD TO PROGRESS

Gov. Ernest F. Hollings, who was sworn in as South Carolina's new chief executive Tuesday, has sounded a call for progress in this State based upon conservatism and a rededication to constitutional government. We believe the new Governor has set a goal with which his fellow South Carolinians are completely in accord. It may well be that his 4 years in office will prove to be a period of unprecedented progress in the State.

The youthful Governor assumes his office with a wealth of good will on the part of responsible citizens. This is so not only because he is young, possesses a dynamic personality, and is temperate in his approach to political questions but also because the belief is widespread that he knows South Carolina and its business, that he will approach the State's economic problems realistically, and will effectively present South Carolina's case to the Nation.

Because he believes in his native State and possesses a great enthusiasm which will go far in helping him to convince others of its merits Governor Hollings may hold the key which will open a new era of industrial progress in South Carolina. He has promised to work unceasingly in this interest and citizens are confident that he has the ability to help the State take great strides forward.

During his inaugural address Hollings spoke on a general note rather than making any specific recommendations to meet the challenges before him. But in firm and ringing tones, he dedicated his term of office to the defense of States rights, continued resistance to racial integration, and preservation of the free enterprise system and those systems of government which have been tried and proved. He warned that South Carolina and the South stand in the critical role of fighting against a tide which would sweep us into national mediocrity, crush the States and their citizens into national molds, stifle the views and rights of minorities, and destroy the original constitutional balance of power among the individual States and the Federal Government.

He declared that because we stand firm against the national attempt to wipe out the boundaries designed to preserve the Federal system of checks and balances, we are labeled reactionaries by so-called liberals who seek to force their own idea of the centralized state upon all the United States. "It must be admitted," Hollings said, "that we do react against their scheme to subvert the basis of American Government as we have known it through the years. We also admit that we are conservative, in the sense that we seek to conserve those principles of government and of free enterprise which have been tried and proved, and which have made this Nation what it is today. We in South Carolina see no conflict between such conservatism and progress; indeed, we think they go hand in hand toward bringing us a better life, and it is our mission to put forward a dynamic conservatism as an asset, not a liability."

In spelling out a program of enlightened and progressive conservatism, Governor Hollings displayed a sureness of purpose and a calm determination that has inspired the confidence of his fellow citizens. Certainly he will need the support and prayers of us all as he turns now to the task of putting his beliefs into practice—that upon our shoulders may indeed, as he expressed it, "ride the cape of leadership, the hope of free enterprise, and the dignity of truth."

[From the Camden (S.C.) Chronicle, Jan. 23, 1959]

SOME WORTHY PLEDGES

Gov. Ernest F. Hollings' inaugural address yesterday was full of the common beliefs of a majority of the people he will govern: that the laws of the current Supreme Court are not constitutional laws; that both the white and the Negro races will be better served in segregated schools; that our battle for States' rights must be keenly pursued and intensified; that our beloved State has been touched by destiny to carry the hope of the South and the Nation in the continuing struggle for constitutional Government and States' rights.

Said the new governor of the Supreme Court's threatening attitude:

"The Supreme Court of our land was established to decide litigation in the light of past decisions and not in spite of past decisions. It is not the Court's function to lay down the law of the land by judicial fiat. It is the Congress under the American system that makes law. Flagrantly, baldly usurping the amendatory power of three-fourths of the States, the justices of the Supreme Court apparently take their gospel from Richard III, whom Shakespeare caused to say: 'Strong arms shall be our conscience, swords our law. March on, join together to pell mell, if not to heaven, then hand in hand to hell.' "

Governor Hollings, some believe, is a young man touched by destiny. He spoke potent words in his address—words which dittoed the feelings of a majority of Southerners. He pledged himself to fight for his convictions. He has the energy of youth and the mind of maturity to carry our standard tall in the saddle. And with the help of God we believe he will.

[From the Camden (S.C.) News, Jan. 22, 1959]

GOVERNOR HOLLINGS' INAUGURAL

The inaugural address of Gov. Ernest F. Hollings Tuesday gives patriotic South Carolinians assurance that this State will continue to resist any efforts of the U.S. Supreme Court to enact legislation affecting this State.

The new Governor took a bold and courageous stand. In taking the oath to preserve and defend the constitution of South Carolina and the Constitution of the United States, he made it plain that he planned to defend the Constitution of the United States as it was written and not as it has been amended illegally by the U.S. Supreme Court.

"I cannot conscientiously take this oath to protect and defend the Constitution of the United States and not object to the Supreme Court usurping the amendatory power that constitutionally is vested in three-fourths of the States," said the new Governor. "To do so would give us a government of men and not of laws."

Mr. Hollings said that "the segregation stand of the South is symbolic of the stand of our forefathers against the oppression of government when this great Republic was founded," and he gave assurance that our position of determined resistance will remain unchanged.

We liked the conclusion of his address when he said:

"With an humble prayer for God's blessings and guidance I assume this task with a vigorous pride that while South Carolina and our Southland 25 years ago may have been the Nation's No. 1 economic problem, today, we are the Nation's No. 1 hope for the survival of the free enterprise system. Today, we are the Nation's hope for the survival of constitutional government. Today, we are the hope for the future."

His message was a most heartening one.

[From the Columbia (S.C.) Record, Jan. 21, 1959]

GOVERNOR HOLLINGS' INAUGURAL ADDRESS

Governor Hollings has spoken in terms authentic, mature, and even majestic in giving his concept of the vulnerability of our Republic and the requirements for its protection.

South Carolinians can be proud that such a call for the defense of the Constitution arises within its own borders. And it can be reassured of the soundness and comprehension of a new Governor still in his late thirties.

While we, his fellow citizens, can take comfort in his words as the heralds of the basic policy he will pursue, there is no consolation in his address for those national disciples of centralism who seek one government and one design for this Nation.

There is encouragement in his exceedingly able exposition of the great American tradition which has been the exact opposite of those destructive trends of the times he so literately enumerated.

We recall no statement on constitutionalism more forceful, more logical, and so well supported legally. And we know of none more solidly based on the broad sustaining principles of the United States as contrasted with expositions grounded on outward manifestations of our difficulties rather than on the roots of the evil.

Mr. Hollings admirably submerged the manifestations and emphasized the organic lesions, and it is there that the whole country is sick. The problem which has been created for the South, by one of the departures from the Constitution, is just one of the multiplying misfortunes befalling the whole of the Nation.

We are living at a time when emphasis on manifestations, and neglect of basic causes, goes beyond the broad problems of the Republic. We believe we see it in many facets of our life today and even in the church. When Mr. Hollings, pitches his deploring on the higher and more fundamental plane of the sources of disrupture, he renders a service and demonstrates the deeper understanding which the times require.

There was a particular pause for us at the phrase, "oppression of government," in the governor's address, which was one of many striking phrases. There is oppression today as there was bound to be from the steady war of attrition on the American Constitution and tradition. There is not only direct oppression, but there is that oppression by indirection which pushes into subjugation those groups in the country so affected by governmental sponsorship and elevation of other groups. This is part of the general oppression deriving from what Mr. Hollings says is one to make the American into one mold.

The address of Mr. Hollings was that of the progressive conservative, not only as to his convictions on maintaining the original structure of our country as a union of sovereign States, but also as to the operation of his own State of South Carolina. He pledged that South Carolina would live within its means, that it would provide the freedom to work and the best opportunities within its means for its children. This is in the classic area of reasonable and advancing conservation.

And there was that singularly realistic and independent statement: "We do not look for security but for opportunity."

And if the oppression of centralism and nationalization can be warded off, there will

be opportunity and that species of security, coming from success, for the upcoming Commonwealth of South Carolina. It was to this sort of progress that Mr. Hollings pledged himself, as well as to the essential struggle to protect the rights of the States.

[From the Greenville (S.C.) News, Jan. 21, 1959]

OUR NEW GOVERNOR SETS A GOAL

Ernest F. Hollings in his inaugural address struck a note of dynamic conservatism that will ring true in the ears of a vast majority of South Carolinians.

It was a philosophical speech, with little in the way of specific recommendations to meet the challenges which now face the State. Those suggestions will be made to the general assembly in other addresses, beginning today. On yesterday, he expressed the firm conviction that the will and the ability to meet these problems exists and the calm determination to meet and overcome them.

Governor Hollings limited himself to two chief topics: racial amity and the economic prosperity and growth of the State. The two, he pointed out, are not unconnected. South Carolina, he said, will overcome the obstacles which now surround each of them by a rededication to constitutional government, firmly rooted in the wisdom of the past but with a vigorous confidence in the future.

The common source of the State's present difficulties, he declared, is the growth of the centralized state, dedicated to the extinction of the individual and the regimentation of the group. The South in general, and South Carolina in particular, are well suited by custom and inclination to resist that encroachment.

In the opening paragraphs of his address, the new Governor made clear his position on the question of State and Federal relationships. He noted that the oath which he had just taken pledged him to the preservation and defense of the constitutions of South Carolina and of the United States.

But he firmly declared that he did not interpret this oath as binding him to observe blindly the unconstitutional decisions of a misguided U.S. Supreme Court.

"We recognize," he said, "that the United States Constitution is an inspired document and a great gift and hope to mankind, but when the form and letter and spirit of that Constitution are ignored, a gestation period of chaos erupts into a miscarriage of conscience and propriety.

"When the doctrine of 'separate but equal' was sanctioned by the Supreme Court of the United States in 1896, neither Congress nor any court or State protested. On the contrary, everyone understood this doctrine as the basis upon which the States could conduct public education. The correctness of this understanding was confirmed repeatedly by the highest State and Federal courts in an unbroken line of decisions. The boundary line remained fixed.

"There is today no law and no provision of the Constitution requiring racially integrated schools. Until the Constitution is lawfully amended and the boundary line changed, the South stands on this boundary and on this principle.

"Until the Constitution is lawfully amended, my refusal to integrate our people during the next 4 years will not conflict with the oath I have just taken."

The threat posed by the Court's ruling in the school segregation cases runs deeper than this, however, as the Governor pointed out. It involves a none-too-subtle attack on our entire system of government.

The Constitution establishes checks and balances between the powers of the States and the Federal Government. If these bulwarks are destroyed, nothing stands between the individual and the soulless oppression of centralized authority.

Governor Hollings quite properly emphasized the danger to free enterprise involved in this totalitarian trend. He said:

"The opportunity to profit, to live, and to grow is fundamental to the American system of free enterprise. When the Federal Government, through its taxing power and other policies, kills this incentive to work and profit, to live and grow, then the boundary of the purpose for Government as we know it is exceeded by the power of Government and we are lost."

The new Governor contrasted the spectacle of the Federal Government with its inflated budgets, its apparently uncontrollable deficits and its incessant interference in private affairs with the stable, thrifty and less tyrannical government of South Carolina.

The assaults made by outsiders against our customs, he declared, are part and parcel of the greater attack on our liberties. If we ever surrender to regimentation over our institutions, the last hope for our economic freedom will vanish. If we cannot operate our schools as our experience and traditions dictate, then we cannot hope to operate our businesses or, indeed, our very lives.

"We are a State of hope and dedication," he said, "a State touched by destiny. The Battle for the Republic is truly at hand. On our shoulders ride the cape of leadership, the hope of free enterprise, and the dignity of truth."

In his address, Governor Hollings has, with the enthusiasm and vigor of youth, spelled out a platform of enlightened and progressive conservatism sorely needed in a nation and world beset with constrictive radicalism. The success with which he may be able to apply his beliefs to practical matters will mean much, and not only to the State which he will lead for the next 4 years.

He will have the support and the prayers of all South Carolinians in his attempts to that end.

[From the News and Courier, Jan. 20, 1959]

STATE LOOKS FORWARD TO PROSPERITY UNDER LEADERSHIP OF GOVERNOR HOLLINGS

Ernest Frederick Hollings, of Charleston, today becomes the 105th Governor of South Carolina with the confident expectation of his fellow citizens that his 4 years in office will be a period of unprecedented progress in this State.

Few administrations in the history of this State have taken office with such a wealth of good will on the part of responsible and serious-minded citizens.

The reason for this good will lies not simply in the fact that Governor Hollings is young, personable and temperate in his approach to political questions. That is all to his credit and to the advantage of South Carolina. The chief reason for the enthusiasm felt in this State is the widespread belief that he knows this State and its business, that he will come to grip with economic realities, and effectively carry the South Carolina story to the Nation.

In recent years, much effort has gone into programs to bring new industry to this State. They are the principal way in which the living standards of South Carolinians may be raised. Many new industries have located in South Carolina, but the State needs more plants and payrolls. A substantial increase in the prosperity of this State requires a more energetic approach to selling the Nation on the advantages of South Carolina.

Governor Hollings has pledged to tell the South Carolina story to industrialists who are considering building new plants down South. Citizens of this State believe in Governor Hollings' command of the facts and the effectiveness of his words and ideas.

A State, of course, is not a product. Nor is a governor simply a salesman who travels around the country promoting a brand name. The South Carolina story that Governor Hollings has to tell people in other States is not a mere listing of physical assets. South Carolina is not the only State that has vacant land, people who are eager to work in industrial plants, pleasant temperatures, and adequate supplies of water and electric power.

The telling points in the South Carolina story concern the climate of freedom in the State.

South Carolina is a State where business can do business without the dictation of thugs or leftwing union bosses and without continual raiding by thoughtless and greedy legislatures.

South Carolina is a conservative State from top to bottom. Only last week Rep. Solomon Blatt, speaker of the State house of representatives, called for continued conservatism in State policies. He pointed out that private enterprise is running away from radical States and localities.

South Carolina has a right-to-work law that protects individuals and helps promote labor peace.

South Carolina has a population with deep roots and loyalty to a free way of life. Agitators meet with no success in duping the people into radicalism.

In short, South Carolina is a State that intends to progress through the sound, traditional methods of hard work and careful management of resources. A dollar's worth of service is demanded for each tax dollar spent. State business is conducted with honesty and decency.

The quality of the people of South Carolina and of their government can be described with pride by Governor Hollings.

As he takes the oath of office today as South Carolina's chief executive, Governor Hollings should be heartened by the fact that his fellow citizens are fully confident that he has the ability to help this State take a great stride forward.

Governor Brown Presents Vigorous and Constructive Water Development Program for California

---

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. ENGLE. Mr. President, the Honorable Edmund G. Brown, Governor of California, has delivered a special message to the State legislature on the subject of water, which everybody interested in water conservation and development should read.

Governor Brown makes the imperative point that the State and Federal Governments must team together to accomplish the important work that has to be done on California's rivers. We have reached the place where the State government must assume positive responsibility in the financing and construction of water projects, along with its long-established responsibilities in water rights and water contracts. The time for the State to act on this is now. As Governor Brown says, "It is time to start moving dirt and stop throwing mud."

Furthermore, State participation in the program, says Governor Brown, is

to be in full cooperation and coordination with the Federal programs of the Bureau of Reclamation and the Corps of Engineers. The era of State-Federal competition in water development in California is past. I am mighty happy to endorse the new cooperative approach.

Governor Brown, incidentally, supports the San Luis, Auburn, Buchanan, and Hidden Reservoir bills which I have introduced, along with the senior Senator from California [Mr. KUCHEL], in this Congress. He also supports the Federal power program on the Trinity project.

But the Governor's message speaks well for itself. I ask unanimous consent to have the message printed in the Appendix of the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

WATER MESSAGE TO LEGISLATURE OF CALIFORNIA BY GOV. EDMUND G. BROWN

Mr. President, Mr. Speaker, members of the legislature, may I first of all thank you for your courtesy in arranging this joint session of the legislature. I have asked to come here today, under these extraordinary circumstances, so that we can meet together as the single voice of all the people of California. I have come to present a water program which I believe is rational, realistic, and responsive to the needs of all the people of California.

Our State is magnificently varied in its resources, its scenery, its industry, and its people. Providence, as I said in my inaugural message, seems intent on making us a great people in a great State.

Yet, in spite of our great endowment, it has become the fashion in recent years to dwell on our water problems as being awesome and impossibly complicated. We have brooded over the expense and become lost in a forest of fear. In prior sessions of the legislature, the result has been delay and frustration.

This stalemate must come to an end. If we take courage and put our fears behind us, we can replace narrow, sectional differences with confident, pioneering leadership. This the people of California demand and deserve.

It is not the lack of water which creates the problem we meet to discuss. Indeed, the average runoff exceeds our requirements by a safe margin.

The core of our problem is distribution. We do not have enough water when and where we need it. We have too much water when and where we do not need it. Thus, it is obvious that we must build dams to capture water which would otherwise escape, and we must build canals and aqueducts to transport the water we have saved to the communities where it is needed.

To accomplish these vital tasks, our State has a great natural advantage. The physical setting of the delta of the Sacramento and San Joaquin Rivers is a gift from nature that we have never fully appreciated.

Above the delta, we have both a supply of water and the sites to store it. Within the delta, we have the natural point of convergence. When we wish to export water to an area of need lying to the south, the delta can serve as the pool, or, if you please, as the tap from which the water can flow.

Every year there are 3 million acre-feet of water in the Sacramento-San Joaquin Delta which are not being used. At present, the water goes wasting out to sea through the Golden Gate. We must build the facilities for offstream storage and move this water to areas where it is urgently needed. Unless we save this surplus water, we waste a precious natural resource and fail the people of our State.

We should remember that we store water, not alone for future use, but also to avoid flood damage. To protect human life and valuable property, we must arrest our rivers in their headlong rush to the sea. Because the Federal Government contributes funds for flood control, we must impress the Congress with our urgent needs. We will also have to provide State funds to insure that flood control projects will be available for multipurpose use—not simply for flood control.

From our water development program, we should also create new sources of electrical energy. An ample supply of low-cost power is absolutely essential to our industrial future and to the needs of all our people. The State, too, will need an enormous amount of power to operate the pumps which are required to carry the water from areas of surplus to areas of need.

Fortunately, the extra cost of adding power facilities to our water projects is small in relation to the cost of the projects and small in relation to the resulting benefits. In addition, revenues from the sale of power enable us to furnish water and other benefits to deserving areas of our economy which cannot pay the total cost of water. As an example, I cite the Central Valley project, where the production of power has benefited our whole economy.

In planning our water projects we must give a high priority to recreation and to the development of our fish and wildlife resources. As our population grows and our leisure time increases, recreation requires added recognition as a beneficial use of water. Projects developed for recreational purposes provide our people with wholesome diversion and a happier and fuller life. At the same time, they stimulate the growth of portions of our State where recreation is the primary industry.

Against the background of these general observations, I propose the following program for water development:

First. I propose that this session of the legislature appropriate $38 million from the investment fund to start on a construction program. It is time to start moving dirt and stop throwing mud. This is the beginning of a positive program for water development. In considering this $38-million appropriation and subsequent expenses, I want to emphasize that the major cost of water development is eventually repaid from project revenues.

Second. I propose that we commit the entire investment fund to water development. This fund is unique in that it was built up through the depletion of a great natural resource, our offshore oil. I am determined that it shall be dedicated to the development of another precious resource, our water.

Third. I propose that in 1960 we authorize a general obligation bond issue in the neighborhood of $500 million to complete the program outlined in this message. To all of you, I pledge that I will fight to obtain adequate financing to complete the great aqueduct, south. And to all of you, I pledge that I will fight to obtain adequate financing to provide the other facilities throughout the State necessary to meet the needs of our people.

Fourth. We must encourage the Federal Government to finance water projects designed for navigation, flood control, and irrigation. Considering the condition of our budget, it is plain nonsense to resist Federal aid. I am glad to see that the old hostility to Federal funds is now mellowing. We should use Federal aid wherever we can, but we must also remember that we have our own responsibilities in the development of our water resources.

Fifth. We should undertake the development of our water resources on a comprehensive statewide basis. Local agencies, of course, must be encouraged to move ahead with those projects which have a primarily local impact. Yet, I am convinced that there must be an integrated statewide development of the massive works which affect many communities. Only thus can we prevent duplication and waste. Only thus can we avoid Balkanizing our State into competing water provinces.

Sixth. Many of the principles now applicable to the operation of utilities should guide us in the development of our State water resources. Thus, we should recognize our obligation to insure that water will be available to meet the proper demands of every part of the State. As in the case of a utility, we should be able to enlarge our facilities to bring more water into the delta pool and recover the cost from the system as a whole. Just as the first man to get a telephone does not enjoy a lower rate, so those who are first served by State water projects should not have a privileged status.

As long as the legislature guides our water development, we can be certain that the system will be completed and administered in fairness and equity. Those who would doubt this are questioning, not the water program, but rather the fundamental basis of democratic government.

In explaining this program, I have made no attempt to answer every conceivable question or satisfy all extremists. In addition, I have put to one side the question of a constitutional amendment. After long thought, I have concluded that an amendment is not necessary to an affirmative water program. Beyond that, I have found that there is no general agreement on what the contents of such an amendment should be. I am not hostile to an amendment and I am not closing the door on one. But I am convinced that our positive program of water development should not be delayed by further frustrating debate over the terms of a constitutional amendment.

Now let us look at the main points of the $38 million construction program which I propose for this year.

The great aqueduct system from the delta to the south is a key to pressing problems of water supply. By carrying water to southern California the aqueduct will supply the area where the human need is the greatest. On the way southward, the aqueduct system will also serve areas of critical water shortage.

I urge you to appropriate $10.7 million to enable us to start at both ends of this great aqueduct system. Of this amount $1.3 million would be for aqueduct rights-of-way from the delta to the San Luis Reservoir site; $3.8 million would be for the rights-of-way from San Luis to southern Kern County; and $3.3 million would be for rights-of-way for the aqueduct system into southern California.

The remaining $2.3 million would be used to complete the acquisition of the San Luis Reservoir site. This will provide an important portion of the State's share of the joint San Luis project. I am determined that the dam at San Luis shall be constructed to its full height so that we can store 2.1 million acre-feet in the reservoir.

In the past few days bills have been introduced by Senators ENGLE and KUCHEL and Congressman SISK and JOHNSON to authorize Federal participation in the San Luis project. I will do everything in my power to insure the passage of these bills. I see in them a reasonable compromise of the intrastate conflicts which have been a roadblock to this vital project. We must not allow disputes within the California family to delay us further.

There is also a vital need for a South Bay aqueduct to bring water from the delta to Alameda and Contra Costa Counties and portions of northern Santa Clara County. I am asking you to appropriate $7.9 million for

rights-of-way and for initial construction of this facility.

The units proposed for immediate construction will serve the Livermore Valley and the Niles Cone area where fresh water is urgently needed to prevent sea water encroachment into the underground basin. When Santa Clara representatives have completed their studies, the South Bay aqueduct can be extended to northern Santa Clara County.

The department of water resources has recommended that water service to southern Santa Clara, San Benito, and Santa Cruz Counties should be provided by a Pacheco Pass route. I will urge the Bureau of Reclamation to accelerate their studies as to the feasibility of serving these areas as part of the Federal Central Valley project.

The use of the delta as a collecting pool will require the construction of works to guard against sea water encroachment in the westerly portion of the delta. We are well aware of the hydraulic problems of the delta and the complex questions regarding water rights in that area. The department of water resources has been studying this matter for a long time and, remarkably enough, there appears to be a relatively inexpensive physical solution. By April 1, when these studies will be completed, I expect to ask an appropriation to begin the initial work for bringing fresh water to the threatened delta areas and thus also to permit increased diversions from the delta.

Let us now turn to consider facilities above the delta.

There are, of course, also areas in need of water which cannot be served from the delta. For example, Sierra Valley in Plumas and Sierra Counties is critically short of water necessary to support its agricultural economy. To provide service for this area, I will ask for $2.4 million for rights-of-way and construction of upstream features of the Feather River unit. The principal one of these would be Frenchman Reservoir.

I will also ask for the appropriation of $11.9 million for construction of the combination railroad and highway bridge over the west branch of the Feather River. The bridge will enable us to use the new high speed highway which is being completed this year.

A board of consulting engineers is conducting a study to determine whether construction on the Feather River should be started at Bidwell Bar instead of Oroville. On this technical question, I intend to accept the judgment of the department of water resources after it has had the benefit of the study which will be completed on February 1. I will then ask for funds to carry forward this major work on the Feather River which is vitally necessary for flood control.

Let me now turn to consider additional flood-control works. I will ask for $7.3 million as the State's share of the Black Butte project presently under construction on Stony Creek in Tehama County. I will also ask for $6.4 million for the State's share of the New Hogan Reservoir on the Calaveras River. Since the 1958 legislature appropriated $10 million of this amount, only $3.7 million in new money is involved.

These are multipurpose projects, which are urgently need for flood control, but are not immediately required for water conservation in their local areas. The flood-control benefits will be paid for by the United States. If the State will assure repayment to the United States for the conservation features, we can move forward with these construction projects. Since the State's entire financial obligation will be eventually repaid from the sale of water made available by these projects, I urge their approval now.

We must also bend our efforts to develop an economical means of obtaining fresh water from the ocean. Therefore, I request an appropriation of $1.6 million for use in cooperation with the United States in the construction of a sea water conversion plant. This plant, which will probably be located in southern California, will include a nuclear reactor as a source of energy.

Turning to Federal matters, I intend to urge the Congress of the United States to take the following action:

Authorize construction of the Auburn, Buchanan, and Hidden River Dams and the Folsom Canals;

Appropriate approximately $60 million for flood control construction and $70 million for reclamation in the State next year; and

Take the necessary steps to insure that water can be delivered in the Sacramento Valley canals area.

Further, I will urge the Federal Government to construct the power features of the Trinity Division and distribute the power in accordance with existing Federal law. The State itself will purchase a large volume of Trinity power to operate the pumps for its water projects. I am firmly opposed to the suggested partnership arrangement. Such an arrangement would deny to the State the preference that public agencies are now granted by Federal law.

I also intend to press for the enactment by Congress of the Engle-Kuchel bill which would permit low cost Federal loans for irrigation features of projects which are primarily municipal and industrial in character.

In this broad statement I have emphasized the first and immediate steps that we must take. But in our long-range plans for water development, we must and we will give thought to the future facilities that will undoubtedly be needed as our State grows. These will include additional local projects, expansion of the aqueduct systems, new works in the delta, master drains for the Central Valley, and, at the proper time, importation of water from the Eel River system and other streams of the north coastal area.

By all these recommendations, I have sought to bring the forward force of responsible liberalism to the specific problem of water. As I conclude, I would emphasize that our problem lies, not so much in the control and use of our rivers, as in ourselves. Let us resolve to prove that we are one State, one people, and that we can produce one good water program. Let us grow with the strength of unity, as we begin to fulfill our destiny of greatness.

The Recent Visit of Soviet Deputy Premier Mikoyan

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the script of a radio broadcast made by the distinguished commentator, Sam M. Jones, on Sunday, January 25.

Mr. Jones enjoys a national reputation as an experienced and well-informed observer on the Washington scene. His comments on the recent visit of Soviet Deputy Premier Mikoyan are revealing and penetrating. In my judgment, they merit careful reading not only by Members of Congress, but by all other Americans.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Good evening. This is Sam Jones reporting from Washington.

Our Government and our opinion-molders have been terribly concerned for lo these many years about what other peoples and other nations think of America and its citizens. In an effort to make other peoples and other nations think kind thoughts about America and its citizens, our Government has spent billions of dollars in giveaway programs. These programs were also supposed to insure military help from the nations we have befriended, in case of an enemy attack on the United States.

How many friends have we bought? And how many of them would come to our aid if we—the United States—were bankrupt, or under attack by Soviet Russia? Probably none, unless their own survival was dependent on ours. Should we, therefore, accuse our beneficiary nations of gross ingratitude? I do not think so. Good will is not for hire and a fool throwing money to the winds—whether it be an individual or a nation—sooner or later pays the price of folly—and there are no mourners at the funeral.

Wouldn't it be nice if our Government and opinion molders would become concerned with what we think of ourselves, and let other nations and other peoples think as they please about us? A self-respecting person, aware that he is far from perfect but doing his best, doesn't worry about what the neighbors think. And if he is blessed with commonsense, he knows that he can't buy friends, nor buy off enemies. And in these circumstances a nation is no different than an individual.

Some years ago I was talking to George Sokolsky in New York. He posed this question: "Have the American people lost their capacity for moral indignation." I had just driven in from Arizona—I had been refreshed by my own, my native land—west of the Hudson and south of the Potomac.

So I replied to Mr. Sokolsky. "Get out of New York, stay clear of Washington; listen to the average person everywhere. For in them our salvation lies. The people who never make headlines, who are slow to anger and sometimes easy to lead. But they are not sheep to be herded nor cattle to be driven." Mr. Sokolsky said; "I hope you are right."

I hope so, too.

Despite a generation where fools have walked with careless ease and traitors have overtly or covertly contributed to the destruction of this Republic—I still believe in America. I believe in miracles. I believe we can pull ourselves up by our bootstraps. But time is running out.

Our time.

Undoubtedly you are familiar with some of the highlights of the visitation of Comrade Mikoyan, the Armenian butcher, Comrade Khrushchev's right-hand man. He looked America over as a prospective buyer might, quite sure that he could buy, or that Russia could buy, come the day, on the buyer's terms. It would be silly to destroy the cities and the productive capacity of the United States with H-bombs or intercontinental missiles. Not when you can herd the sheep and round up the steers. A nation grown soft and fat and emasculated, a pushover.

Comrade Mikoyan is not to be blamed for his lack of depth perception. Superficially, his conclusions are right. The United States of America—our ship of state—is between the Scylla of bankruptcy and the Charybdis of conquest. And our skippers past and present—to say the best for them—knew little about navigation. Roosevelt, Truman, Eisenhower, they meant well. But they couldn't tell port from starboard; nor read a compass; nor discern the difference between

black and white. If they are to be blamed, so are we, you and I. In this Republic—usually miscalled a democracy—we, the electorate, choose our leaders; ballots, not bullets, put them in office. But when a country reaches the point where the voters flip a coin to decide which candidate for president is the lesser evil, it's time for all good men to come to the aid of the country, while we still own it. Sometimes it seems that we have forgotten that we are the sovereign people and that our officeholders hold office by and with the consent of the governed.

Let us return to Comrade Mikoyan—the No. 2 man of the Kremlin. This super Al Capone who crawled across corpses to win favor in the Kremlin is in a way a success story, not exactly in the Horatio Alger vein, not bootblack to president, but bootlicker to super-salesman and panderer in chief of the murderous mob in Moscow.

I am going to tell you about Comrade Mikoyan's visit to the National Press Club, but first I would like to recall a historic incident which occured some 20 years ago.

An Englishwoman en route from London to New York—a woman of wealth and position and questionable morals—was disembarked from a Cunard liner and held at Ellis Island on the charge of moral turpitude. Now the worst that could be said about this woman was that she was free with her favors—she had no intent to overthrow the U.S. Government or even to corrupt Hollywood. If that's possible. So what did we do in our righteous moral indignation? We shipped her back to England. Very righteous. I think she had written a book, nothing as pornographic as any teen-ager can buy in any drug store today, but we just weren't going to be contaminated.

So times change. Comrade Mikoyan pays his disrespect to the United States of America. His contempt, in fact.

Is he held at Ellis Island? Oh, no.

Is he deported because of moral turpitude? Oh, no. Suppose he did kill some people and order the torturing of others? What of it? "That's a mere matter of policy," nothing personal, so saith the Armenian butcher. So what do we do. We rolled out the red rug. We gave him maximum security.

The metropolitan and the State Department security police and the CIA and all other Federal, State, and local protective agencies had an around-the-clock mission to see that Comrade Mikoyan was not endangered or annoyed by the American rabble or the relatives of the victims of the Communist tyranny.

My office is on the 13th floor of the National Press Building, the same floor as the National Press Club. I stepped out of the elevator on Monday, January 19, and started for my office. Two policemen in uniform asked me if I had a pass.

I said, I didn't need a pass to go to my own office and try and stop me. They could have, of course, quite easily. I'm no match for a couple of well-trained, young, athletic police officers. But it was quite obvious that they didn't like their assignment, and it was equally obvious that slugging or shooting me in potential defense of Comrade Mikoyan went against the grain. Theirs not to reason why. Nor was it my job to spend the afternoon in jail. So I showed the police my card signed by the head of the Secret Service, entitling me to admission to the White House. That made the cops feel pretty sure that I wouldn't shoot Comrade Mikoyan, so they let me go to my office.

Maybe you think this is fantasy, something I made up. It isn't. It happened to other people pursuing their lawful occasions. The 12th floor of the Press Building was also blockaded. Many other members of the Washington press corps also met a roadblock of cops and were compelled to produce credentials to gain access to their offices.

We treated Comrade Mikoyan real nice. A few people with Hungarian and Polish backgrounds, and other victims of the Red whip, made minor demonstrations, but all went well. Our best people—like Comrade Cyrus Eaton—whose tangible quid pro quo was four white horses (out of the Trojan stud) extended the utmost hospitality. Nor were the executives of major industries, the creme de la creme of capitalism, laggard in their tribute to Mikoyan. Will they tell their grandchildren, "This is the hand that shook the bloody hand of the Armenian butcher"?

The Washington Post—bugle of left-wing liberalism in the Nation's Capital—rebuked Senator STYLES BRIDGES, Republican, of New Hampshire, in its editorial columns for raising his voice in protest against the luncheon given by the Senate Foreign Relations Committee in honor of Comrade Mikoyan. Senator BRIDGES' refusal to break bread with and share the salt with a killer who has achieved second place in the godless Communist conspiracy, shocked the State Department and provoked the Washington Post. I am quite sure, however, that the Senator's constituents in New Hampshire who, to the distress of the State Department and the Washington Post, are patriotic Americans—are not displeased with their senior Senator. And it may be noted in passing that when Senator BRIDGES ran for reelection in 1954, he received the largest majority ever accorded a senatorial candidate in his State—without a single word from Ike, and despite the covert opposition of Sherman Adams and the all-out attacks by big labor.

On the floor of the Senate, Saturday, January 17, STYLES BRIDGES made a brief speech (which I quote in part): "I cannot condone the activities of those who indulge in socializing with Deputy Premier Mikoyan. A few of our industrialists and Wall Street bankers have given him the 'red carpet' treatment as a matter of obvious self-interest. I wonder if these bankers and industrialists are aware of Lenin's statement: 'When we Communists are ready to hang the capitalists, they'll try to outbid each other for the sale of hemp to us.'" And Senator BRIDGES asked: "Why do we pay tribute and social adulation to a man who does not bother to conceal the fact that he despises us and our way of life? Only a few months ago an unarmed American transport plane, enroute from Turkey to Iran, was shot down by Soviet fighter planes over Armenia, Comrade Mikoyan's home base. Mr. Mikoyan's government, the U.S.S.R., was kind enough to return the bodies of four American soldiers. There were 10 others on that plane. Where are they? We do not know."

Well, Comrade Mikoyan is now safe in the Kremlin. By and large his American journey, from the Communist viewpoint, was very successful. No one took a pot shot at him. No one even spat in his face. His own observations, his regal treatment, provided good reason for his outspoken contempt for America and Americans. He didn't need Adlai Stevenson's assurance that we are soft and weak. That was a gratuity from Adlai.

But there is something that the Armenian butcher didn't see; there are intangibles that Comrade Mikoyan did not feel; there is history that this entrepreneur of our catastrophe has forgotten. We have our share of traitors and fools in high places, and the latter are more deadly, but their warning to the bear that stalks like a man: It isn't as easy as it looks. Remember the Kaiser; remember Mussolini; remember Hitler; remember the Japanese Empire. They sold us short, too. Where are they now? Think well, Comrades of the Kremlin. We gave you in our folly what you are today—a Frankenstein monster. But what we made we can destroy. And to us, to Americans, I would like to recall Abraham Lincoln's words:

"Shall we expect a transatlantic military giant to step the ocean and crush us with a blow? Never. All the armies of Europe, Asia, and Africa, combined with all the treasure of the earth (our own excepted), with a Bonaparte for commander, could not by force take a drink from the Ohio (River) or make a track on the Blue Ridge in a trial of 1,000 years.

"At what point, then, is the approach of danger to be expected? I answer: If it ever reaches us, it must spring up amongst us. It cannot come from abroad. If destruction be our lot, we ourselves must be its author and its finisher. As a nation of freemen we must live through our times or die by suicide."

This is Sam Jones speaking.

Chicago Wants More Lake Water

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a perceptive and thoughtful editorial from the Green Bay Press Gazette entitled "Chicago Wants More Water." The Press Gazette has an excellent reputation for careful and responsible expression in its editorial policy. I commend to my colleagues this persuasive reply to the advocates of Chicago water diversion bills which will be before this Congress later in the session.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

CHICAGO WANTS MORE LAKE WATER

The first bill introduced in the House at the opening session of the 86th Congress was a measure to permit Chicago to divert more water from Lake Michigan. The bill which will be known as H.R. 1 would authorize Chicago to increase its diversion from 1,500 cubic feet per second to 2,500 cubic feet per second. The increased diversion is asked for 1 year only as a part of a 3-year testing program.

Bill H.R. 1 is said to be almost identical with bill H.R. 2 which was adopted by the House during the 85th Congress. That bill authorized the Metropolitan Sanitary District of Chicago, under the supervision of the Secretary of the Army, to withdraw an annual average of 2,500 cubic feet of water per second from Lake Michigan for the Illinois Waterway during a 3-year period with the maximum direct diversion never to exceed 5,000 cubic feet per second. The Secretary of the Army was to report the results of the test to Congress. Since the President had vetoed two similar bills in previous sessions largely on the ground that Canada had objected to it, there was much discussion about Canada's interest in the bill at the last session of Congress. A big point was made over whether Canada had actually agreed to the test. The bill finally died under a filibuster staged by Senator WILLIAM PROXMIRE, of Wisconsin.

The diversion of water from Lake Michigan by Chicago has been opposed by all of the States bordering on the Great Lakes, by New York and in the past by Canada on the grounds that it would lower the level of the Great Lakes and reduce the flow of water over Niagara Falls. The Chicago advocates of diversion claim, however, that a diversion program within the limits of that asked by

Chicago could operate for 3 years without lowering the level of the lakes as much as 1 inch.

In spite of these assurances, people interested in shipping in the lake States have consistently and at great expense opposed all efforts of Chicago to divert water from Lake Michigan. The struggle began in 1900 when the city of Chicago and suburbs arranged to dispose of sewage in that area by reversing the flow of the Chicago River from Lake Michigan through the Chicago sanitary canal, the Des Plaines and Illinois Rivers, and eventually to the Mississippi. This began a heavy flow of water from Lake Michigan into the Mississippi basin and the fight was on. The fight has gone on for the 59 years since. Those opposing the diversion claim that the Chicago sanitary district has at times withdrawn as much as 14,000 cubic feet of water per second and that it had averaged 10,000 cubic feet of water per second in 1928.

The lake States finally brought an original action in the U.S. Supreme Court to enjoin Chicago and the State of Illinois from further diversion. After years of hearings and investigations the Supreme Court, in 1930, held that the Chicago water diversion had caused a lowering of 6 inches in the level of the Great Lakes. It declared that the lowering of the water had caused substantial damage in connection with fishing, hunting, beaches, summer resorts, and public parks. The Court then ordered a gradual reduction of the diversion of water from the amounts being taken for Chicago to provide means of disposing of the sewage in the sanitary district. Finally, the order fixed the amount of water that might be diverted permanently to 1,500 cubic feet per second plus domestic pumpage. Since that time the Chicago sanitary district has made great progress in sewage treatment but it has never given up its struggle to increase the amount of water taken from the Great Lakes.

In the beginning Chicago depended upon its claim that it needed the water to preserve the health of the millions of people in the Chicago area. In later cases, however, it rested its case upon the ground that navigation on the Illinois and Mississippi Rivers was impaired by low water due to drought conditions which had prevailed in the upper Mississippi Valley.

However, the opponents of diversion have never relaxed for a second in their continuing battle against what they call the Chicago water steal. At present they are opposing the diversion on the ground that it is illegal and improper to divert water from one watershed to another. It is pointed out, for example, that Wisconsin cities taking water from Lake Michigan in all cases use it and return it to the lake so that there is no change in the level of the water. On the other hand, Chicago would take water, use it for sanitary purposes, for navigation and for waterpower and then dump it across the watershed into the Mississippi where it is lost forever.

The reasons given for Chicago's wish to divert water are sufficient to explain the tremendous effort they make to gain their point. However the efforts by leaders in Wisconsin and the other Great Lakes States are purely in defense of the lake levels. It is unbelievable that they would carry on a campaign extending across half a century at tremendous expense if they were not convinced beyond all reasonable doubt that diversion would cause serious damage. There can be no doubt but that the people in the Great Lakes States are firmly convinced not only that they have a great asset in the Great Lakes waters for use in recreation and in commerce but that they also are certain, after years of study, of the conditions on the lakes, that shipping and shore property would be seriously injured if additional water should be diverted. They feel now that even the amount authorized for diversion is a concession to Chicago and not a thing that Chicago people are entitled to by any right. It must be clear to everyone that the waters in the Great Lakes basin belong there and the best public policy will be to have all such waters taken for use returned to that basin.

Congress Needs Facts

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Congress Needs Facts," published in the January 18, 1959, issue of the Columbia Missourian.

Because of my own interest in adequate freedom of government information, and also because of the interest of the Senate Constitutional Rights Subcommittee in continuing studies of the subject, I believe this brief editorial is most timely. I agree that Congress must have access to opinions and facts from Government officials to carry out its own serious responsibilities to the American people.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS NEEDS FACTS

Congressional hearings on President Eisenhower's proposed budget are starting off with a storm of controversy over an administrative letter reminding Government officials that it is a violation of the 1921 Budget Act to ask increases in appropriations without clearing through proper channels.

A Budget Bureau spokesman denied that this was intended as a gag on prospective witnesses, but if it was not this, just what was it?

It is known that many of the officials are sure to be dissatisfied with the amounts allocated their departments and bureaus by the President's budget. Army and Navy spokesmen are certain to protest huge cuts in their requests, for example.

It is the duty of the Congress to make appropriations, and in carrying out this duty, it must investigate all possible sources of information. The most natural sources of information are Government officials. Congressmen must try to find out whether their requests are justified or not.

What causes much of the concern over the testimony of Government officials is that their motives for increased funds sometimes are questionable. One of these, of course, is the mere wish to rise in importance, influence, and power. More money would give them this.

Who is to judge these men? Congress has the responsibility for making appropriations. It must have information to do this. So, it must have access to opinions and facts from Government officials and make decisions based on committee findings.

Defeat—A Famous Figure Reflects

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. KUCHEL. Mr. President, I have just completed reading a very interesting article in the Wall Street Journal under date of January 20, 1959, concerning our friend and former colleague, a distinguished citizen of my State, William F. Knowland, of Oakland, Calif. The article discusses former Senator Knowland in his retirement from the Senate and in his capacity as a publisher of a great California newspaper.

I ask unanimous consent that the text of the article appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFEAT—A FAMOUS FIGURE REFLECTS

(By Jonathan Spivak)

OAKLAND, CALIF.—The political tom-toms were still, the bitterness of the campaign long past.

He had come home as assistant publisher of the family-owned newspaper. In this industrial city, his name was admired and respected despite the final defeat.

As on those broiling autumn days of electioneering, he was shirt-sleeved and smiling. The cast of his bear-like shoulders, the deliberate power of his handclasp were unchanged. And yet there was a perceptible difference about the man.

Somewhere along the corridors of defeat Bill Knowland had shed his Senatorial robes. His simple and unpretentious desk was bare save for an open appointment book. There were no autographed portraits of famous figures along the walls. Only a wood plaque embossed with a few lines of poetry.

The office was an oasis. No phones rang, no eager secretaries bustled in with messages. Four flights down the presses roared, but in the room there was only the gentle hum of conversation.

Tanned and relaxed, he rocked back in his swivel chair, hands clasped behind his head. The stern belligerence of his features had mellowed. He no longer delivered speeches, but spoke as one newspaperman to another.

The causes of his defeat for the California governorship, and for the defeat of many other Republican candidates last fall, still perplexed him. "Some of the early columnists tried to oversimplify it," he said, "as a problem in one area or branch of the party. But on reflection that is not the case."

NO FIXED PATTERN

Pro-Benson and anti-Benson Congressmen were beaten. Republicans with good labor records and Republicans who were bitterly opposed by the AFL–CIO lost. "There was no fixed pattern or reason for it," he insisted.

As for his own campaign, one that probably cost him his political career, he had no misgivings. He spoke with the resignation of a man who had played for high stakes and lost. "I frankly have no regrets whatsoever in raising the issues I did and making the fight I did. I think that is what campaigns are for."

Then he added, with a touch of the crusader still, "I think it will help alert the people of California to some of the dangers ahead. History shows that the issue of slavery wasn't solved the first time Lincoln and Douglas debated it. Douglas won and Lincoln lost." He referred to the proposed right-to-work law which he vigorously supported as a union reform measure, but which was defeated along with him.

He had gained, however, a grudging respect for the political eeffctiveness of the unions. "Organized labor," he conceded, "certainly did give the Democrats a highly efficient, well organized in most cases, intelligently led and well-financed group able to do much more than the party could."

As a politician, the Senator rarely talked about himself in his speeches. As a private citizen he is much less reticent.

The single greatest change in leaving public life, he said, was that time was suddenly his own. At the Capitol his workday usually started with a 7:30 a.m. breakfast with perhaps members of the White House staff, or Cabinet officers, or other Congressmen. It rarely ended in less than 12 hours. In election years he campaigned through 12 to 14 meetings a day.

He plans to take a personal interest in the editorial department of his newspapers. "I've been associated with the paper for 30 years. I'll do some editorial writing from time to time as I feel the situation warrants it. I'll keep in constant touch with the editorial department, go over editorials, make suggestions," he said.

INDEPENDENT POLICY

Democrats and Republicans would fare alike. "There will be no carping criticism," he insisted. "I don't believe in it and never have." He said the Tribune will continue to do two things: first, cover the news and, second, comment on it constructively. "We'll be free to praise any Democratic official regardless of who he is. And if he happens to be a Republican who merits condemnation, we'll be critical," he declared.

The toughest question was saved for the last. "What of his future, did he plan to seek public office again?" "I have no present intentions," he replied firmly. "Right now I expect to be deeply involved in the newspaper business and my family. There is no appointment that I seek or would accept."

Then, for a fleeting moment, he gazed contemplatively out over the Oakland horizon. He mused: "Having been an active participant in history in the making for 13 crucial years, it will be very interesting to watch these events from 3,000 miles across the country."

And perhaps it will.

Brandeis on Unions

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. THURMOND. Mr. President, Louis D. Brandeis, regarded as one of the great American liberals, did not favor oppression of any kind in business and industry—neither by the ownership and management nor the unions. The able editors of the Charleston News and Courier have disclosed this in an editorial printed in their January 20 edition, entitled "Brandeis on Unions."

I ask unanimous consent that this fine editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRANDEIS ON UNIONS

Liberals and self-styled friends of the workingman are forever blasting monopolies. They are blind to monopoly by labor unions.

Citizens who favor right-to-work laws to protect the worker from union bosses are denounced as reactionaries. Yet Louis D. Brandeis, still one of the great names among American liberals, understood and approved of the principle of competition between union and nonunion members.

Brandeis, late Associate Justice of the Supreme Court, said:

"The ideal condition for a union is to be strong and stable, and yet to have in the trade, outside of its ranks, an appreciable number of men who are nonunionists. Such a nucleus of unorganized labor will check oppression by the unions as the unions check oppression by the employer."

If there is a right to organize, there should be a right to refuse to be organized by union bosses. That is the purpose of right-to-work laws. These laws are under constant fire.

Louis Brandeis may become reactionary in the eyes of those who talk of freedom but act like tyrants.

Way Down Yonder in Moscow

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Kansas City Star which deals with the U.S. cultural and scientific exhibition now planned for display in in Moscow next summer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WAY DOWN YONDER IN MOSCOW

Those in charge of the U.S. cultural and scientific exhibition in Moscow next summer are big with plans. The Russians are to be exopsed to our kitchen conveniences, paintings, photograph collections, hamburgers, and perhaps the Chicago symphony orchestra and a rodeo.

However, a special adviser, Norman K. Winston, now tells the New York Times that the U.S. Information Agency wants to send along a jazz orchestra but that the Soviets frown on the idea. "They're worried it might put on some rock 'n' roll and have a bad influence on youth," says Winston.

This stand illustrates beautifully the ignorance of the benighted Russians in such matters and their need of deliverance. Rock 'n' roll is not jazz.

In fact the Russians have more reason to resist jazz because it gives a picture of America they would like to deny. The music is one of the happy results of the collision of European and African cultures on American soil. Its enjoyment knows no racial or national boundaries. Traditional or modern, Louis Armstrong or Dizzy Gillespie, we doubt that the Russians have heard anything like it. And from it, they could learn a little more about America. Perhaps that is the influence that really worries Soviet officials.

Relations With Latin America

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three articles on the subject of our Latin American relations, by Edward Tomlinson which appeared on October 27, 1958, December 29, 1958, and January 5, 1959, in the Washington Daily News.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AID TO LATINS HIGH DESPITE CRITICISM

(By Edward Tomlinson)

Our relations with the majority of Latin American nations have improved considerably in the past few months, especially since the Foreign Ministers of all the 20 republics met here in Washington.

Most of the ministers went away enthusiastic about the sympathetic understanding and spirit of cooperation they found among our officials.

But some of their political leaders still think we are not doing as much as should to help strengthen the economies of our neighbors.

CRITICAL

Brazilian representatives in the United Nations, who sat in on the foreign ministers' meetings, have been particularly critical of us in the last 10 days. Senhor Augusto Federico Schmidt, a close adviser of President Juscelino Kubitschek, has attacked the State Department because one of its spokesmen suggested there is a limit to what we can do.

The Foreign Minister of Panama returned to the isthmus and said that the Department of State is obstructing President Eisenhower's desires to see that terms of the 1955 treaty revisions are carried out immediately.

The Bolivians have bought full-page advertising space in newspapers to appeal for more financial aid, and remind us that we will be the losers if communism takes root in their country. Haiti and several others which have been hit hard by inflation and low income are desperately pleading for more financial assistance.

RECORD

However, our record of assistance, and the machinery for maintaining a steady stream of loans and aid to every one of the republics in the future is quite impressive.

The Export-Import Bank has made more loans for the construction of steel mills, hydroelectric and irrigation projects, road building and other public works in Latin America than in any other part of the world.

The International Bank, in which we are the largest stockholders, has advanced over a billion dollars to the different countries, while the International Monetary Fund has earmarked huge sums to bolster most of those confronted with inflation and other exchange difficulties.

We have set up the facilities of the International Development Corporation to which any country may apply for long term loans for productive enterprise. We have agreed to help set up an Inter-American Bank, which has been near to the hearts of Latin American leaders. We have joined in helping to stabilize the prices of several of their chief commodities, including sugar and coffee, and agreed to discuss the possibility of

establishing regional or common markets in this hemisphere.

Our citizens have invested more than $8 billion in the 20 republics, and we still buy the bulk of all their products, paying for them in dollars on the barrelhead. All of which may not be as much as we should, or could do, but it is far from niggardly.

REDS OPEN NEW PUSH IN LATIN AMERICA

(By Edward Tomlinson)

The Communists are going all out to forge new bridgeheads in Latin America in 1959.

Voters in most of 20 countries have dealt the Reds sharp rebuffs in the past year and a half. Communist-supported candidates for the presidency in practically all recent elections south of the border have lost.

Diplomatic reports from key capitals indicate that Moscow's chief weapons in the coming campaign will be trade and propaganda. It will concentrate on the big countries that are inflation ridden and short of foreign currency, particularly those in which dollars are scarce.

Conditions in such countries as Argentina, Brazil, and Chile, where inflation has already reached catastrophic proportions, are made to order for the Kremlin. Soviet agents, diplomats, and special trade missions already are making headway in these three countries.

Last summer U.S. economic experts were pointing out what some of them insisted was the big drop in trade between these three countries and the Russian bloc.

But by early December American business firms were warning of a sharp upward trend in Communist commercial activities.

Dollars, pounds sterling and other sound currencies are so limited that they are compelled to barter with Iron Curtain nations for increasing quantities of machinery and other needed products.

The Argentine Government has announced the signing of a new trade agreement with the Soviet Union. Russia will supply Argentina with a variety of heavy machinery and tools for the state oil monopoly and receive in return Argentine wool, hides, tanning materials, and other products.

To facilitate the deal, the Soviets extended Argentina a 10-year $100 million credit. Both Argentina and Uruguay have been bartering wool, corn, and other commodities for Russian oil since the first of the year.

Brazil has been selling Russia cotton, chocolate, and coffee in limited quantities for some time. Now she has entered into a barter agreement by which she is buying Russian crude oil in return for coffee, cacao (chocolate), castor oil and other surplus Brazilian products.

Some 500,000 barrels of oil are now on the way and 3 million more are expected to be imported during 1959. The Brazilians had already bought 12 cargo ships from Poland for her coastal trade.

In the last half of 1958, Chile sold large orders of copper wire to Russia, East Germany and other satellite countries. Meantime, Soviet and Communist Chinese trade missions have been pressing the Chileans for further commercial agreements.

The Czechoslovakians are even offering cargo and military transport planes to all these countries in exchange for mineral and agricultural commodities.

THINGS LOOK UP IN THE AMERICAS

(By Edward Tomlinson)

Latin America and its 175 million people have started a new year with more political freedom, but confronted with bigger economic and social problems than at any time since World War II.

Meantime, our relations with these 20 Republics next door have taken a turn for the better. At least the Eisenhower administration has finally come up with a definite and generous economic policy toward our neighbors.

TRUJILLO, STILL

In the political field, dictators have been walking the plank in almost rhythmic succession. Backward Paraguay and Haiti still are in the hands of minor strong men. But among the major despots only Generalissimo Rafael Trujillo of the Dominican Republic survives.

In the majority of the Republics from Mexico to Argentina general elections have taken place in the past 12 months. Mostly middle-of-the-road candidates, some avowedly conservative, have been elected. The extreme nationalists as well as the Communists have lost ground everywhere.

Three or four of the current regimes are shaky, including those of Honduras, Haiti, and Bolivia. Cuba's political future now hangs in the balance and the newly elected government of Venezuela will not take office for another several weeks. Some observers agree that but for the backing of the military, Presidents Juscelino Kubitschek, of Brazil, and Manuel Prado, of Peru, would have difficulty maintaining their positions.

In nearly all the countries the governments are grappling with runaway inflation, mounting living cost, huge debts, and falling prices of their chief products.

BLIND SPOT

Until recently top officials in Washington, and for that matter the American people, had been so preoccupied with crises in Europe, the Middle and Far East, that they were apparently unaware of the alarming and in some cases desperate state of affairs in many of our sister republics.

But when Vice President NIXON ran into such angry outbursts of opposition in a half dozen of the capitals of South America last summer, everybody from the President down got busy with fence mending.

The flowering of a series of economic gains came after the new government of President Arturo Frondizi of Argentina broke away from the past and instituted some of the most drastic and unprecedented national reforms in the history of Latin America. It scrapped its fanatically nationalistic laws against foreign oil companies. As a result, more than $500 million of United States and other private capital is flowing in to help expand the petroleum industry.

The Frondizi government also knocked the artificial props from under the peso, so that it could find its real value.

Washington also indicates there are millions for other countries that are willing to face up to the facts of economic life.

Actually, when it comes to financial aid, the United States had not neglected the Latins. More North American loans and credits have been flowing into the 20 countries in the last decade than to any other area of the world.

What we have neglected is the human factor. For the most part, we had acted like a doctor with poor bedside manners. We extended a lot of healing loans and credits, but failed to exude a sympathetic understanding of the plight of our ailing friends and neighbors.

Who's a Reactionary Now?

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. THURMOND. Mr. President, present day parlance is replete with labels such as liberal and conservative and radical reactionary. It is refreshing to discover the correct usage of one of these terms by the press. An editorial in the Greenville News of January 26, 1959, entitled "Who's a Reactionary Now?" is illustrative of the correct way to apply the term "reactionary" as Webster defines it. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO'S A REACTIONARY NOW?

The union bosses like to call the right-to-work principle reactionary and say it is designed to break organized labor but they are woefully short on evidence to back up their claim.

In fact, many European nations, including some well down the road to outright socialism, have such laws on their books, with no noticeable diminution of union strength.

And the European counterparts of Reuther and Meany frankly say they like the open shop idea.

The February issue of Fortune magazine cites some examples of this somewhat surprising attitude. It notes that the British Trade Union Congress has a membership of over 8 million workers out of a total labor force of some 24 million. The closed shop exists only in parts of a few industries, mainly printing and mining, and the rest of the workers are completely free to join a union or not as they see fit.

The same general conditions exist in Germany, Italy, and France, all of whose governments are much nearer the welfare state form than our own.

The magazine quotes Charles Geddes, former president of the Trade Union Congress, as expressing satisfaction with the open shop. He said:

"I do not believe in a closed shop. * * * There is a fundamental issue here of the right of the individual to say whether or not he would become associated with other people. * * * I want the right to exclude people from my union, but that cannot be done on the basis that everyone must belong or starve."

For expressing sentiments such as these in this country, Mr. Geddes would be denounced as an out-and-out union-buster, We hate to think what he would be called by Mrs. Roosevelt who accused movie actress Irene Dunne of advocating slave labor in supporting right-to-work legislation.

So far the union bosses have been successful in arresting the trend toward open shops in the large industrial States. Why they should do so in the face of the position of their counterparts abroad with much more experience is quite another question.

It is probably just another manifestation of the fact that most of them are about 50 years behind the times. They are simply aping the actions of the robber barons of another era.

Juvenile Problem Types

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Cape Girardeau Southeast Missourian. It deals with juvenile delinquency and will furnish the Congress

with important statistics concerning the juvenile problem.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUVENILE PROBLEM TYPES

Not all schoolchildren are little monsters, according to the National Education Association, despite the impression that may have been created by the publicity given to juvenile delinquency. The NEA finds a higher percentage of those in school lead exemplary lives than do members of the older generations.

In a handbook for parents and teachers entitled "Juvenile Delinquency—Research, Theory, and Comment," the education association goes into some detail in analyzing the age groups of the most susceptible and the influence of schools on the problem. It even categorizes delinquency into two parts: Cultural and emotional delinquencies.

Less than 5 percent of school-age children were found to be other than normal, reasonably healthy and law-abiding citizens, and of this 5 percent a remarkably large number were found to be not in school. Of delinquents, 95 percent of those 17 years old, 85 percent of those 16 years old, and 50 percent of those aged 15 do not attend schools, according to the NEA's survey.

"The big stumbling block—for the general public as well as for teachers—is the scarcity of reliable information on the subject compared to the abundance of medicine-man prescriptions," complains the NEA. Despite the lack of material and proper guidance, the schools seem to have done a commendable job in promoting citizenship among their students.

In dividing juvenile delinquency into two parts, the educators have eliminated from the hard core of hoodlums the passively antisocial cultural delinquent. He is described as the otherwise normal child who shows antisocial tendencies only so far as is necessary to conform to the code of his gang.

The emotional delinquent is the bully, the sadist, or the violent hoodlum who is motivated by inner urges. He is the true delinquent, the menace to society, and the one responsible for the shadow of guilt cast wrongly on many of his youthful contemporaries. He is also the one in need of psychiatric or psychological help.

It is both gratifying and revealing to note the small percentage of youths who have earned themselves the label of juvenile delinquent. Even this small group, however, is responsible for some of the most heinous crimes and it is to the eradication of this element, and not the blackening of youthful reputations, that the fight against juvenile delinquency must be waged.

Deficit Financing and Unemployment

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. THURMOND. Mr. President, economy measures by the Federal Government are often pictured as the hobgoblin which brings unemployment and hardship to the average citizen. Such illusions are dispelled by an editorial in the Greenville News, Greenville, S.C., published on January 24, 1959. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFICIT FINANCING AND UNEMPLOYMENT

A typical Herblock cartoon published originally in the leftwing Washington Post and used in one or more South Carolina newspapers implies that, somehow, the President's proposal of a balanced budget and eventual tax cuts will increase unemployment and make worse the plight of those now unemployed.

Neither the balanced budget nor the promised tax cuts may come about. Defense urgencies may make them impossible, or so it may seem to Congress.

But the picture of a balanced budget bringing hardships on working people is a false one. It is the old delusion, long since dispelled in the minds of most reasonable men, left over from the heyday of the New-Fair Deal tax-spend philosophy.

Certain liberal economists still hold to the idea, of course. Their theory is that the way to offset depressions and provide full employment is for the Government to spend more, even if it has to go into needless make-work projects and finance these on a deficit basis.

The theory works, for a time, but experience has shown that eventually it defeats its own purpose. Deficit financing by the Government inevitably causes more inflation. The dollar is depreciated and wages and salaries buy less and less.

Actually, Government spending strikes the economy a double blow. The Government must tax the public to get the money it spends. The result is that the consumer has less money with which to buy things he wants and needs; business has less capital to put into improvements, expansions, new plants, and the development of new products. Thus, fewer jobs are created, and, worse still, many jobs are eliminated.

Along with this may come price increases. The net result is less consumer buying power and more unemployment.

We haven't tried it in a long time, but perhaps a different Government policy would produce the opposite—and more desirable—result.

A balanced budget, an end to deficit financing, and, perhaps, a reduction in the national debt would tend to peg the dollar at something like the purchasing power it still has left. The consumer could buy more goods, thus creating jobs. Tax reductions would give the consumer still more purchasing power.

Both factors would encourage business and industry to expand and create still more jobs. An expanding economy would enable the Government to maintain a healthy budget without reducing services, and the end result would be good for all.

Some, especially the tax-spending crowd, may call it fanciful reasoning, outmoded economics, or worse. But it might work. Who knows?

Senator Bridges and Mikoyan

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator Bridges and Mikoyan," which appeared in one of New Hampshire's leading daily newspapers, Foster's Daily Democrat, of Dover, N.H. on Saturday, January 24, 1959.

I believe this editorial comment, with regard to the wining and dining which Mikoyan received in this country, accurately reflects the attitude of the great majority of New Hampshire citizens.

This sound, well-written editorial merits the attention of all people in our country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR BRIDGES AND MIKOYAN

Have we, in our great preoccupation with material wealth and immaterial entertainment, lost our priceless heritage, the capacity for moral indignation? This Nation, which refused tribute to Tripoli, pays casual toll to labor racketeers; which two generations ago threatened a sultan with death rather than ransom an America (who was forthwith released), has within this generation paid ransom to or left prisoners in half a dozen third-rate Communist countries; which for 150 years stood for principles recognized and honored throughout the world, has recently wined, dined, and feted the murderer from Moscow.

Granted that it may sometimes become necessary to meet with such a creature over the conference table, it was an example of extremely poor taste and judgment for some leaders in American business and political life to roll out the red carpet. We are gratified to learn that our Senator BRIDGES was one of several prominent persons who showed both the sense and the courage to refuse social invitations where Mikoyan would have been present.

Independent View of U.S. Prestige Abroad

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA,
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. SCOTT. Mr. President, recently I saw on the CBS Television Network a very fine program of news analysis entitled "Years of Crisis." Participating were Edward R. Murrow, Winston Burdett, Charles Collingwood, Richard C. Hottelet, Peter Kalischer, Ernest Leiser, Paul Niven, David Schoenbrun, and Eric Sevareid.

I was particularly impressed with the fact that these able and experienced news correspondents felt that the prestige of the United States is higher throughout the world today than it was a year ago. This is timely recognition that our foreign policy is operating to strengthen the United States in its relations with the rest of the world. Since I believe my colleagues would be interested in this impartial judgment on our foreign policy, I ask unanimous consent that this material be printed in the Appendix of the RECORD.

There being no objection, the abstract was ordered to be printed in the RECORD, as follows:

Mr. MURROW. Gentlemen, most of you have spent the last year looking at your own

country from the outside. How do we look? What is our posture? Leiser?

Mr. LEISER. Well, Ed, I think our position and our prestige in Europe are considerably higher than they were last year at this time. Our allies always hope that we'll stand firm without being belligerant and we satisfied those requirements in Berlin, at least so far. And then there's something else to remember. Last year at about this time the beep from sputnik was the only sound in outer space and our earth-bound voice was one of outrage and fear. Now we're up in space, too, and in a pretty impressive way. In Berlin, the very day that a Soviet general was making specially belligerent threats to us, we shot our talking satellite up into the air. And the Berliners paid a lot more attention to that satellite than they paid to the Russian general's threats.

Mr. MURROW. Burdett, how do we look from the Middle East?

Mr. BURDETT. Well, in the Arab part of the Middle East, the United States still faces the profound instinctive mistrust of the Arab nationalists and we're still very far from overcoming it. We're still regarded as the country that refused to invest in an Egypt that was taking arms from the Russians, as the country that decided not to help build the Aswan dam when we discovered that the Russians were not interested in building it. I think we'll have to do something radically new to persuade the Arabs that we are not interested in them merely because we're afraid of the Russians.

Mr. MURROW. Kalischer?

Mr. KALISCHER. Well, Ed, in Communist China we're Public Enemy No. 1. In South Korea and South Viet Nam, the anti-Communist bastions we've erected, we look pretty good, particularly after Quemoy. In the neutralist countries, India and Burma, we look much better than we did last year, possibly because Washington has ceased to regard neutralism as a dirty word. In Japan, our military bases are looked on as the accommodation you must make to your best customer.

Mr. MURROW. Hottelet?

Mr. HOTTELET. Well, I think we look a good bit better in the Western Hemisphere, too. We've done some concrete things. We're encouraging regional development and the common market in South America and that's noted and very much appreciated. But we still somehow missed that meeting of minds that engenders real cordiality. Friendship is a two-way street that seems to be a pretty rough road. The South Americans expect us to bail them out of all their troubles, and we smile at their dreams. Up in the north, Canada feels penetrated and dominated by American capital. I think somehow it's a problem of communications more than anything else and we miss in a field in which we normally excel.

Mr. MURROW. Collingwood, how do we look as viewed from London?

Mr. COLLINGWOOD. Well, the British having accepted the fact of American dominance in the western coalition are not immune to the thought that perhaps they could manage these things better if they still had the leadership. Nevertheless, they think that we're doing pretty well lately, perhaps because we're doing a little more the sort of thing that they think that they would have done. An interesting development has been the way in which President Eisenhower has ceased to be the image of American leadership in Britain. When the British talk about American foreign policy, they tend to talk about it in terms of Dulles rather than of Eisenhower. When Vice President NIXON was there, the things he said, the things he did, made more impact than anything that's come from the White House. And the British tend to be a little skeptical about the tone and the style of the American image in the world. For instance, they were very impressed by the feat of getting the Atlas into orbit; but when the Atlas began to talk, the British thought it rather an odd thing to say from a military missile.

Mr. MURROW. Well, gentlemen, we began by talking briefly about the significant developments of the last decade. Let's go back to that. Schoenbrun, what would you regard as the most important development in Europe in the last 10 years?

Mr. SCHOENBRUN. Ed, the most important developments are not always the most spectacular. In my area the most spectacular development, of course, has been the rise and fall of the French Republic, but, although important, I don't think it was the most important. I think the most important has been the birth and the growth of European economic union, the hard core of which is the reconciliation of the French and German peoples—united for the first time in a millenium, economically, militarily. Now this unity of France and Germany has grown up behind the shield of NATO.

Mr. MURROW. David, are they united to stay, do you think, or is this just a personal relationship between Adenauer and De Gaulle?

Mr. SCHOENBRUN. Oh, no; I think they're united to stay. I don't think it has anything to do with De Gaulle and Adenauer at all. There are real factors involved in this, and I think the growth of Europe is a permanent thing. I think, also, just as important as the growth of Europe is the Atlantic alliance which has permitted Europe to grow. Ed, I would suggest that had there been a NATO alliance in 1913 or in 1938, the World Wars would never have broken out.

Mr. MURROW. I think we can all agree with that.

Parity Concept

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Missouri Delta Farmer, published at Portageville, Mo. The editorial deals with the parity concept, and makes an interesting comparison between this concept and minimum wage laws. I commend the editorial to the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COULD THIS BE SO?

The Secretary of Agriculture and a few professional followers have commenced a ballyhoo barrage designed to convince the Members of the 86th Congress that the farmer would like to abandon the parity concept. Rejection of the corn marketing quota is being cited by the Secretary in suport of this contention. In short, farmers are solidly behind the Benson theory of no supports and unlimited production, with the devil to get the hindmost.

Now organized labor is strongly contending for minimum wage laws to apply to every workingman. Minimum wages are supposed to supply the cost of living; the things the worker has to buy in order to live and work. In a real sense, established minimum wages set a standard of parity compensation for the workingman. The Secretary of Labor and leaders of organized labor have, so far, at least, raised no cry for the abandonment of the minimum wage. Why should they?

To a greater extent than any other worker the farmer is forced to buy materials with which his product is produced. Far larger than the mere cost of living is the investment he makes in implements, fertilizer, seed, motor fuel, agricultural chemicals, services and repairs. The return on his investment, the profit on his crop, even his daily wage, depend on the relation between what it costs to produce a crop and what that crop will bring. We see little difference in either principle or effect between the minimum wage for labor and the parity concept for the farmer. Wonder if we could get the Secretary of Labor to step across the hall and explain some things to Elder Benson.

D. W. Watkins, of Clemson

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. THURMOND. Mr. President, it is seldom that we recognize the contributions of servants of the public during their lifetime. An editorial published on January 23, 1959, by the Greenville News, a prominent newspaper in my State, illustrates that such is not the case with Dr. D. W. Watkins, the splendid leader of the Agriculture Extension Service in South Carolina. As the editorial points out, Dr. Watkins' contributions in the field of agriculture have been so outstanding they have merited the acclaim of his fellow citizens while he still lives. I ask unanimous consent that the editorial to which I refer be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WATKINS PORTRAIT SYMBOLIZES AN ERA

Across the history of the progress in agriculture in South Carolina during the last quarter of a century D. W. Watkins, of Clemson, casts a long shadow.

And because the U.S. Department of Agriculture's Extension Service is closely related to Clemson College's contribution to the State, Dr. Watkins stands tall in the annals of that institution.

Therefore, it was with pleasure that we learned that his portrait had been unveiled and appropriately displayed in Long Hall on the college campus.

Even more fitting was the fact that the portrait was painted by the beloved Dr. B. O. Williams, former professor of economics at Clemson who is now on the faculty of the University of Georgia. Dr. Williams, an accomplished amateur painter, left more than 15 years ago for a larger field of activity, but his heart has never left the Clemson campus, much less South Carolina.

For about a generation, the name of D. W. Watkins was synonymous with the development of agriculture in this State. He assumed leadership of the Extension Service, with its county agents and home demonstration agents in 1934, a time of crisis with the whole economy and an even more acute crisis with the farm economy.

It was the beginning of the period of mighty transition in the South. We shifted from the one-crop system to the dynamic idea of diversification and we began to bal-

ance agriculture with industry. It was the beginning of the era of experimentation with better crops, cattle, dairying and forestry. Soil conservation became a major objective of the whole operation.

Over much of this change, Dr. Watkins presided with a kindly but firm sort of leadership and he helped it along in many ways with a benign sort of missionary zeal.

It is well that this fine man has received homage while he is still able to enjoy it. By honoring him Clemson honors itself and its traditions.

It behooves the rest of us to think of him and the men and women who worked with him during his era and those who are following after them everytime we see a handsome rural home where once a tenant cabin stood, a green pasture with grazing cattle where once there were only weeds and rodents and fertile fields where once there were only gullied hillsides and silted bottomlands.

They didn't do it alone, but they provided the leadership.

We and the Russians; Let Us Not Be "Luniks"

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, from the magazine Iron Age, entitled "We and the Russians; Let Us Not Be 'Luniks.'"

Mr. President, it is heartening to me, in the face of the socializing and triumphal ovation activities of some of our industrialists, to see this editorial in a magazine which is a spokesman for the steel industry. This cool-headed, practical appraisal of Mikoyan's visit is in encouraging contrast to those who are emotionally blind or have unwarranted hopes of quick profit through liberalized trade.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Iron Age, Jan. 22, 1959]

WE AND THE RUSSIANS; LET US NOT BE "LUNIKS"

(By Tom Campbell)

As usual, many Americans, high and low, are falling for the soft-soap spread about recently by Mr. Anastas I. Mikoyan. Maybe some will soon be calling him Mike, thus making everything right with the world.

The picture that unfolded as this astute old Bolshevik charmed our business people, our actors, and our publicity seekers smacks of the early thirties. Then there was a reawakening in Russian friendship followed by a diplomatic recognition. This was followed by a long list of reneging on agreements, by power grabs, and by imperialistic moves by the Reds.

We can't blame Mr. Mikoyan if a lot of people who ought to know better act like babes in the woods. There is nothing wrong with putting out the carpet for the Russian mouthpiece. He has done a good selling job but he had help from our naiveness.

There are a few simple things for us to remember in dealing with the Reds. Russia is ruled by an iron dictatorship. The people do as they are told by the State.

We are in the midst of a struggle between communism and our type democracy. This fight extends to trade, to minds, to expansion, to agreements, to allies, to science—and possibly (we hope not) to war.

Now that the United States is strong and capable of protecting herself and helping her allies protect themselves, we can afford to be less jittery. But we can't be relaxed to the point where we actually give the Reds what they are prepared to fight for.

The expansion pattern of the czars has been adopted under a new banner by the Reds. Everything is directed toward the goal of world rule. We and our allies have no such goal. Thus all the talk about coexistence, friendship, peace, et cetera, is propaganda. We must keep our eyes, ears—and minds—open.

It may help our people to see more of the Russians. But it won't cause them to adopt our way of doing things. It won't hurt to sell Russia nonstrategic items but the truth is that if we do, it will produce something the Russians want and need without benefit to us.

Let the "Luniks" fly out in space. Let us keep a cool head about us. Let's not mix our genuine good naturedness with Red deception.

Claude Miller—American, Friend, and Fighter for Good Government

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. YARBOROUGH. Mr. President, the late Claude Miller, of Wichita Falls, Tex., retired from business life several years ago, but he never retired as an active and patriotic citizen. Right up until his untimely death at 82 in December 1958, Claude Miller kept working for the America he believed in.

A native Texan, born at Jonesboro in Coryell County, February 21, 1876, he later moved to the Oklahoma Territory. He settled at the small town of Altus and immediately began working for civic improvements. He led the movement which brought the railroad to Altus and was instrumental in the subdividing of Greer County to form three counties—Greer, Harmon, and Jackson.

Claude Miller worked to have the Oklahoma Territory become one of the United States, and was a delegate from Greer County—later Jackson County—to the statehood convention. He was active in the election of Charles N. Haskell, the first governor of the new State, and worked untiringly for the nomination and election of Scott Ferris to the U.S. House of Representatives. Mr. Ferris was the first Congressman from his district.

Later, Mr. Miller, himself, ran for Congress from the new State of Oklahoma, but unfortunately was not elected. He was a delegate from Oklahoma to a national Democratic convention.

He married the former Miss Daisie Kimberlin at Altus in 1903. They had three children, Tom Mike, who died some years ago, Joe Betsy, and Claude, Jr., who is now a surgeon in Washington State.

Mr. Miller took his family to New Mexico for a short time while he opened some stores there, then they returned to Texas in 1919 and he entered business at Wichita Falls.

There Joe Betsy married a young attorney named James V. Allred, who later became district attorney of Wichita County, then attorney general, and later Governor of Texas. Mr. Allred was appointed a U.S. district judge in Houston in 1940, but resigned 2 years later to run for the U.S. Senate. Losing by a narrow margin, he entered private law practice in Houston until 1950, when he was reappointed to the Federal bench. He is now judge of the southern district of Texas and lives with his family at Corpus Christi. In spite of the fact that times were hard in business, Mr. Miller was extremely active in all of Allred's political campaigns, traveling about the State distributing literature and speaking to the people.

Mr. President, I was an Assistant Attorney General under James V. Allred, and first came to know Mr. Miller at that time.

I am proud to say that through my three races for governor of Texas, when all of us knew the difficulties of defeat, Claude Miller was one of the most active workers, and one who never lost heart in our fight for good government. He was also one of the instigators and statewide organizers and leaders of the "draft YARBOROUGH" movement which elected me to the United States Senate in April 1957, and has always been a loyal friend and true adviser to me.

Claude Miller was a loyal, active Democrat. He was a precinct chairman in Texas and a delegate to county, State and National conventions.

Mr. Miller's motto was "Don't do anything which would disappoint your friends." I believe he never did.

Mr. President, as an indication of the honor and esteem of the Nation for this civic-minded American, I request unanimous consent to have printed in the Appendix of the RECORD the report of Mr. Miller's death which was published in the Wichita Falls Daily Times for December 13, 1958, and an article which was published in the same newspaper on December 15, 1958, under the heading, "Senator Pays Tribute to Claude Miller."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wichita Falls (Tex.) Daily Times, Dec. 13, 1958]

RETIRED BUSINESSMAN DIES AT HOME HERE

A Wichitan since 1919, Claude Miller, 82, father-in-law of Federal judge and former Texas Gov. James V. Allred, died at about 7 a.m. Friday in his home, 1009 City View Lane, after a sudden illness.

Funeral services will be held at 3:30 p.m. Monday in the First Methodist Church with Dr. Neal Cannon, pastor, and Dr. George R. Davis, pastor of the First Christian Church, officiating. Burial will be in Riverside Cemetery under the direction of Hampton-Vaughan-Merkle Funeral Home.

Miller, a native Texan, moved here in 1919 from Oklahoma City and went into business at Tenth and Indiana in the Miller-Ferguson ready-to-wear. He had been active in real estate, insurance, and other businesses before his retirement.

He had always maintained a keen interest in politics, making numerous talks in behalf of his son-in-law in his campaigns for State attorney general and later Governor, and in recent years had allied himself with campaigns of several Democrats seeking State offices, including Senator RALPH YARBOROUGH.

Miller was born February 21, 1876, at Jonesboro in Coryell County. He was a member of the First Methodist Church and also the author of a volume of poetry, "Texas Rhymes," published in 1940, which mentions many Wichita Falls people.

He was a business promoter during the boom years of Oklahoma's growth and worked closely with the pioneer builders of Oklahoma industries. Miller was active in numerous civic affairs of Oklahoma City while he lived there.

Previously, he and a brother had owned and operated Miller Bros. Dry Goods Co. at Altus, Okla., where he and his wife were married in the home of her parents, Mr. and Mrs. J. N. Kimberlin, November 8, 1903. Mrs. Miller survives.

Other survivors are a daughter, Mrs. James V. Allred, of Corpus Christi; a son, Dr. Claude K. Miller, of Wenatchee, Wash., two sisters, Mrs. E. R. McDaniel, 1903 Britain, widow of a Times Publishing Co. employee who served in the company's circulation department for many years, and Mrs. Patty Wisdom, Tyler; and seven grandchildren, Sam Houston Allred, Corpus Christi, James V. Allred, Jr., Austin, Dave Allred, a former Associated Press writer at Montgomery, Ala., now a member of the staff of U.S. Senator RALPH YARBOROUGH, and Kim Miller, Pamela Miller, Rad Miller, and Claudia Miller, all of Wenatchee, Wash.; and one granddaughter of Austin.

The family requests no flowers but asks instead that donations be made to the Heart Fund.

[From the Wichita Falls (Tex.) Daily Times, Dec. 15, 1958]

SENATOR PAYS TRIBUTE TO CLAUDE MILLER

"Claude Miller was a believer who translated belief into action."

So spoke U.S. Senator RALPH YARBOROUGH Sunday in eulogy to the 82-year-old lifelong Democrat who died at his home in Wichita Falls Friday.

The junior Texas Senator flew into Wichita Falls Sunday afternoon to visit the family of Miller. He was scheduled to go back to Austin late Sunday night.

YARBOROUGH said he was in Denver, Colo., Friday when notified of the Wichitan's death and immediately began rearranging his schedule so he could come here and pay his respects to the family.

He expressed regret that an unbreakable Houston commitment would not allow him to attend Miller's funeral Monday afternoon.

Miller was active in Senator YARBOROUGH'S gubernatorial campaigns and was one of the chief figures in the move to draft YARBOROUGH to run for the Senate in 1957.

"While I have lost a close personal friend, I feel that Texas has suffered the greatest loss because Miller was a dynamic believer in democracy for the people," the Senator said.

YARBOROUGH recalled that he first met Miller more than 25 years ago while serving as assistant attorney general under James V. Allred.

Allred, now U.S. district judge, is a former Texas Governor and attorney general. Miller was his father-in-law.

With YARBOROUGH Sunday was Dave Allred, 25, of Corpus Christi, one of the Senator's research assistants and grandson of the deceased.

YARBOROUGH said that Miller traveled to 17 counties in the 1952 campaign when he was already 76 years old and personally nailed up placards.

"During five statewide campaigns in the past 6 years, he was one of my stanchest friends," YARBOROUGH said.

"Not long before his death, he wrote a little verse with a line that said, 'Democracy is my hobby.' It really was more than a hobby—it was a part of his life."

"I know of no one in Texas to fill his place," Senator YARBOROUGH concluded.

Soviet Deputy Premier Mikoyan's Recent Visit

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorial comment which appeared in the Hampton Union and the Rockingham County Gazette of January 22, 1959. One is identified as "Soviet Spider Draws U.S. Flies." I commend this editorial to the attention of my colleagues who were concerned with the recent visit to this country by Deputy Premier Mikoyan.

The other comment, written by Mr. James W. Tucker, and published in his column "Our Town," also concerns the Mikoyan visit.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Hampton Union and the Rockingham County Gazette, Jan. 22, 1959]

SOVIET SPIDER DRAWS U.S. FLIES

It looks as if we might have invited Khrushchev himself (the self-appointed grave-digger for the United States) to visit us than to have permitted his First Deputy, Anastas Mikoyan to land on our shores. As keen as he is cruel, as cunning and ruthless as is disarming, this number one henchman is bad medicine for the United States.

Except for minor annoyances created by Hungarians who resented his slaughter of their kinfolk in the double cross of Budapest, this arch enemy of the United States was given the conquering hero treatment, wined and dined and fawned upon, from coast to coast, by an eager press of politicians and tycoons who should have known better. By the time he had returned to New York, where the police commissioner deemed it wise to detail 500 men to his protection, Mikoyan had spent most of his synthetic sweetness and was talking tough. Next on his agenda were Secretary of State Dulles and President Eisenhower. He indicated in advance that he would find what Mr. Dulles meant by his recent statement that there were other ways of unifying Germany than through elections, would be interested in an alternative—if Mr. Dulles had one—but considered the arrogant Red plan to swallow Berlin the best yet. The President, whose weekends have generally been considered inviolate, stayed in Washington to receive Russia's star salesman Saturday.

We applaud the position taken by our own Senator STYLES BRIDGES who declared Saturday on the floor of the U.S. Senate:

"After a good deal of soul searching, I simply cannot condone the activities of those who indulge in socializing with Deputy Premier Mikoyan. Were he here on some specific business I could understand formal talks with him by our officials who would be concerned with his proposals. It should be obvious to all that Mikoyan is here for a propaganda good will tour; first, to try to weaken our hitherto firm stand in regard to the Berlin situation, and secondly, to attempt to soften us up for eventual proposals of increased trade with the Soviet Union which can only have the effect of weakening our comparative position.

"A few of our industrialists and Wall Street bankers have given him the 'red carpet' treatment as a matter of obvious self-interest if his mission is successful. I, for one, certainly do not intend to aid him in the accomplishment of his mission. I wonder if these same bankers and industrialists are aware of Lenin's statement that, 'When we Communists are ready to hang the capitalists, they'll try to outbid each other for the sale of the hemp to us.' When will we learn that men cannot be both greedy and free? Why do we now pay tribute and social adulation for a temporary smile from a man whose every past word and deed indicates that he despises us and our way of life. Has his many years of Communist indoctrinated thinking so suddenly changed?

"I am distressed that some of my congressional colleagues have also accorded him recognition in social activities. It is especially disturbing that this man, one of the top plotters of our destruction should have been given a luncheon under the very dome of the U.S. Capitol, which is the most important citadel of human freedom in the world today. Those of us in public life who have entrusted to us the safeguarding of the constitutional guarantees of human freedoms might better follow the course set by that astute and beloved leader of the Catholic church, Cardinal Cushing, of Boston, who recently said without equivocation. 'I shall not receive Mikoyan nor attend any functions in his honor.'

"That should, indeed, be the course of our people whose memories are not so dull that they have already forgotten an incident which occurred just a few brief months ago and which characterizes the calculated course of that ruthless regime which Mikoyan represents. An American unarmed transport plane on its way from Turkey to Iran was shot down by Soviet fighter planes over Armenia, which happens to be comrade Mikoyan's homeland. Eventually, Mr. Mikoyan's government was kind enough to return to us the bodies of four American soldiers. Where are the other 10? We don't know.

"Instead of traipsing around the country exuding affable charm, I would be much more impressed if Mikoyan would address himself to giving us some information concerning the whereabouts of those sons of American mothers.

"Cardinal Cushing's course is the one that I had already set for myself from the time Mikoyan arrived in this country. In that decision and in my whole course of action, I will continue to do my utmost to convey to the Soviet enslaved peoples of the world that the torch which they bear in their never-ending struggle for freedom still shines brightly in the eyes of the vast majority of the people of this Nation.

"It will be my purpose to demonstrate to those people of the world who look to us for leadership that the adultation and free-wheeling publicity accorded Mikoyan in some quarters is only an expression of the views of small fraction of the people of this country. A vast majority echo the words of Rudyard Kipling in that great anthem entitled 'The Recessional' which concludes with:

" 'Lord God of Hosts be with us yet—
Lest we forget, lest we forget.'

"I have full faith that the people of this country have not forgotten."

Would that more of our country's political leaders had the same foresight and clear thinking of STYLES BRIDGES and Cardinal

Cushing in respect to the Russian threat to America's heritage of freedom.

[From the Hampton Union and the Rockingham County Gazette, Jan. 22, 1959]

OUR TOWN

(By James W. Tucker)

BUTCHER OF HUNGARY

We had a sheaf of notes relative to some uncomplimentary facts we intended to write about Soviet Deputy Premier Anastas Mikoyan, top Kremlin agent in Budapest during the rape of Hungary and presently an uninvited visitor in our country. Then, in last Saturday morning's papers our Senator, STYLES BRIDGES, said what we had in mind much more politely, concisely, and diplomatically than we could ever have written it. He said: "That sight of American industrialists and Wall Street bankers fawning over Mikoyan makes me sick at my stomach. I regret that some of my own colleagues have seen fit to invite him here."

Technical and Legal Problems of Outer Space

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. SCOTT. Mr. President, the technical and legal problems which surrounds the entry into outer space are receiving the active consideration of legal minds throughout the country. The section of international and comparative law of the American Bar Association has held two seminars and discussions on this subject in the past year.

I ask unanimous consent to have printed in the Appendix of the RECORD two excerpts from a report on these seminars, quoting the views of Rear Adm. Chester C. Ward, U.S. Navy, Judge Advocate General of the U.S. Navy, and those of Loftus Becker, legal adviser to the Department of State.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PROBLEMS IN LAW FOR OUTER SPACE

(Excerpts from second seminar on the law of outer space)

Rear Adm. Chester C. Ward, U.S.N., Judge Advocate General of the U.S. Navy, under the title "National Sovereignty in Space," said:

"Basically, our position is that the law of space should be based upon the facts of space; and that there is much more that we have to learn before we shall be in a position to say what shall be the legal principles applicable to activities in space.

"The one point I hope to make with you is this: If before we know the facts, if before we know what we want, we commit ourselves to a code of laws to be applicable out of this world, we may well prejudice the survival of freedom in this world. We lawyers have our magnificent dreams of the world rule of law and of world peace through world law, but I am sure that we do not propose to use these fine dreams as escape solutions, and thereby weaken the defense of the United States.

"We want no premature system of space law which would bind us but be used by the Communists to assist in creating new Hungarys, Latvias, Estonias, Georgias, Czechoslovakias, Polands, or other satellites—literal or figurative—of the Communist imperialists. We must make certain that we create no system of national sovereignty or control of space which will advantage the military power of aggressive imperialism.

"I must close with a warning: the land mass dominated and enslaved by the Soviets here on earth is vastly greater than ours. Their 13,385,368 square miles would swallow our 3,082,809 square miles. It gives them tremendous advantages in dispersal of ballistic missile launching sites that we cannot match in our own small land mass. To help insure our survival, we must therefore take full advantage of that freedom of the seas we have long fought to defend; and deploy substantial segments of our retaliatory deterrent power on and under the sea. The subpolar voyage of the *Nautilus* has shown us new sources and positions of strength. Second, because of our disadvantage in land mass on earth, we must be doubly careful not to handicap ourselves in space."

Loftus Becker, Legal Adviser to the Department of State, dealt with another area of sovereignty, extending his theme to "The Control of Space," saying:

"Efforts to declare or establish detailed rules at this time can be at best only fumbling in the dark and at the worst prove actual impediments to the rational development of outer space. Before seeking adequate solutions we must know the nature of the technical problems we are facing, the human conflicts that are to be resolved, and the environment in which solutions will operate. As we come to know these things, we can then proceed step by step on the pragmatic basis of actual experience to build an enduring and effective structure of rules and principles which will adequately reflect real interests and sensible solutions.

"The basic pattern of our existing foreign policy with respect to space is no different from that which we have with respect to international relations here on the earth. In conformity with our undertakings under article I of the United Nations Charter, it is our purpose to insure that—in space as on the earth—international peace and security are maintained and that international disputes or situations which might lead to a breach of the peace are adjusted or settled in conformity with the principles of justice and international law.

"What of the question of sovereignty over celestial bodies, as contrasted with sovereignty over zones of outer space? Under existing rules of international law, may any one nation acquire exclusive sovereignty or "ownership" over parts or all of such bodies so as to have the right to exclude or prevent other nations from exploring, occupying, or exploiting them? What will be the legal effect of successful lunar or planetary probes or, perhaps eventually, manned landings?

"As a general matter, it seems clear that international law at the present time furnishes no clear rules or precedents as regards this problem. Neither treaties nor international practice apply to it for the obvious reason that there has been neither necessity nor occasion for either to develop. We have, indeed, analogies to draw upon in the international law pertaining to the law of the sea and in rules and precedents for the acquisition of sovereignty over terra nullius. But these rules are far from well-defined. Moreover, there are very great risks in attempting to transmute a body of law based upon a determined set of facts on the earth into a body of law with respect to celestial bodies as to which the facts have not been determined and which are in all probability vastly different from anything in our experience. We must recognize that the choice of rules in this area will represent a major policy decision for each of the various states—a decision outside the competence of any international body as the world is now constituted.

"Ultimately, to foster and guide the cooperative efforts that are possible, it would appear axiomatic that some appropriate international machinery be created. At this time, we in the State Department envisage no obstacles—political or technical—which would preclude the establishment of such an international system of cooperation or coordination."

Allegheny River Reservoir

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Press of January 23, 1959:

THE ALLEGHENY RIVER FLOOD—AND WHY IT WASN'T PREVENTED

The devastating flood that swept through the Allegheny Valley and came down into the Ohio was bound to happen. Every river expert knew it would happen, in time. The people who live along the banks of the river knew it, and feared it.

Why did it have to happen? For 21 years we've had a sound engineering plan to tame the river and prevent the worst effects of floods.

That plan calls for the Allegheny River Dam at Kinzua. It was proposed by the U.S. Army Engineers and authorized by Congress. The Federal Government wants to spend $100 million building it. The various studies and plans have been completed.

WHY WASN'T THE DAM BUILT?

We have no flood protection on the upper Allegheny because the sound and practical plan of the Army Engineers was blocked by a fantastic series of attacks by pressure groups, bleeding-heart sentimentalists, self-nominated engineering experts and notoriety seekers.

Spokesmen for some sportsmen's organizations and others who call themselves "conservationists" opposed the dam. They said it would destroy an area now used for recreation and adversely affect wildlife.

Amateur engineers flyspecked the U.S. plans and advocated impractical alternatives. Some wanted a series of smaller dams. Some wanted different locations. One highly publicized plan would divert flood waters to Lake Erie at greater cost for less protection.

The most effective lobby against the dam was in behalf of the Seneca Indians of New York State, part of whose reservation would be flooded if the dam were built.

That's where the bleeding hearts came in, and their work against the dam was all too effective. They said the Indians were a separate nation and that their lands were acquired by treaty, which the Federal Government should not break, even to protect the millions of people who lived downstream.

In vain, the U.S. engineers pointed out that Indians now are citizens, like all other Americans; that the Senecas would receive just compensation for their land; that courts repeatedly had held that the Federal Government can take land for public projects, whether owned by Indians or other citizens.

The Senecas, on their part, hired their own engineer to mastermind the U.S. engineers. They also hired a lawyer to take their appeal to the highest court.

We almost got a start on the dam a year ago when Congress—after a 20-year delay—voted the first $1 million to begin construction.

That's when the Indians and their sentimental allies got in their work. Congress was induced to put a proviso in the appropriation bill that construction couldn't start until the court appeal of the Senecas was completed.

Two lower courts now have upheld the Government's right to protect citizens against floods, even if the Senecas lose some of their land. The case now is awaiting a Supreme Court test, and we have lost another year by this maneuver.

The people of the Allegheny Valley and other flooded areas have paid a heavy cost because of the irresponsible actions of a small but highly vocal pressure group which succeeded in preventing protection of the millions in behalf of a selfish few.

It's time we viewed this thing in its proper perspective—in the light of what is happening today in the Allegheny and Ohio Valleys. It's time Congress ignored the special pleaders and acted in the public interest by taking the shackles off the plan for the Kinzua Dam.

Allegheny River Reservoir

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Press of January 25, 1959:

THE HIGH COST OF FLOODS

What is the cost of the recurrent floods in western Pennsylvania's river valleys?

You can get a variety of estimates and educated guesses. Perhaps the best guide is contained in a report given Representative L. H. GAVIN, Oil City Republican, by Col. H. E. Sprague, then district engineer for the U.S. Army at Pittsburgh. It cited a flood survey made by his office some years ago.

"At the time of that report the average annual direct flood damages for the four major damage districts involved (Wheeling, Pittsburgh, New Kensington and Kittanning) based on recurrence of natural flood stages of record and conditions and values as of June 1948, amounted to $10,034,000," Colonel Sprague said. "At present day price levels (1956) such direct damages would amount to approximately $15,600,000."

(The reader should note that this is an average every-year cost, and includes only direct damages, excluding such tangible values as loss of wages, business, and profits.)

The granddaddy of all floods, of course, was the devastating St. Patrick's Day flood of 1936. From Warren, Pa., on the Allegheny and from Braddock on the Monongahela to Moundsville, W. Va., this inundation did damages estimated by the Army Engineers at $728 million (1956 prices).

Which brings up the next question, which is: How much damage would have been prevented if the proposed Allegheny River (Kinzua) Dam had been in existence?

Colonel Sprague estimated 2 years ago that the total average annual benefits of that dam would be (January 1957, prices) $4,971,000, of which $4,093,000 would be in flood control, the balance in other stream control benefits.

He added that the dam would have prevented more than $4,500,000 in damages from the single flood of March 1956, in the Allegheny and Ohio Valleys. It may be assumed that the dam would have been at least equally effective in last week's flood.

The Kinzua Dam was first authorized by Congress back in 1938—21 years ago. It was deferred, delayed and postponed for various reasons, some financial, some because of priorities assigned to other flood control projects and some because of the vigorous opposition of certain groups who just didn't want the dam to be built.

Had the Kinzua Dam been built in 1938, the cost would have been well below the more than $100 million now estimated, and at $4 million a year in flood benefits, the project would have paid for itself by this time.

There are other real benefits to be derived from flood protection besides those dollars-and-cents figures of the engineers. The additional safeguard given lives and properties is worth an inestimable sum.

More, the completion of this key and largest unit of the plan for western Pennsylvania's flood protection would constitute a major improvement for the Allegheny Valley from Warren to Pittsburgh and the Ohio Valley to Moundsville, W. Va. It would open the way to the long-delayed industrial development of the Allegheny Valley—a development which is bound to come some time and which would be hastened by flood protection.

By any account, the Kinzua Dam is an investment that would pay big dividends, in lives, properties and prosperity. Congress should order construction started as soon as possible.

Allegheny River Reservoir

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Post-Gazette of January 24, 1959:

FLOODS STRESS NEED OF KINZUA DAM

As angry, icy waters swept destructively through western Pennsylvania's river towns and on down the Ohio, the public was reminded again that the flood control program undertaken for this area 22 years ago is still incomplete.

In the aftermath of the historic flood of March 1936, the Federal Government planned a system of integrated dams and reservoirs extending into the headwaters of the Allegheny and the Monongahela Rivers.

Much of the work has been completed, with enormous benefits to the residents and industries along the rivers. Army engineers have constructed 10 dams and reservoirs in western Pennsylvania, 8 of them above Pittsburgh.

But one of the most important links in the chain of control remains to be forged. That is the Allegheny River Reservoir above Warren, more commonly designated as Kinzua Dam. Congress first authorized this project in 1938 and a year ago appropriated $1 million to begin construction.

Work has been obstructed, however, by a long and tenacious fight against the project by various interests, including the Seneca Indians, who argue that the reservoir would deprive them of land in violation of a treaty. Valuable time is being lost pending a Supreme Court review of lower court decisions sustaining the Government's right to take the land in the public interest. The Indians would, of course, be compensated like any other American citizens whose property is taken for public purposes.

We are not prepared to argue the extent to which the flood's crest at Pittsburgh—29.21 feet—or at any other point along the Allegheny or Ohio might have been diminished if Kinzua Dam were in operation. That can be left to the estimates of the experts.

It is safe to say, however, that Pittsburgh and other communities would have suffered much greater damage this week if the Government had not undertaken its program 22 years ago. It seems equally plain that danger will remain until the program is completed.

The most important project in the uncompleted part of the flood control system is Kinzua Dam. Anyone who doubts the urgency of the importance of completing the system needs only to look at the swollen rivers rolling ominously through the Allegheny and Ohio Valleys.

Many Clerics Oppose Ties With Red China

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief story which appeared in the January 19, 1959, issue of the New York Times. The story reports on a very interesting survey made by the Committee of One Million Against the Admission of Communist China to the United Nations. The result is very significant, in view of a report, published at an earlier date, to the effect that the Protestant clergymen of America favored the admission of Communist China to the United Nations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANY CLERICS OPPOSE TIES WITH RED CHINA

More than 7,000 Protestant clergymen in the United States have signed a petition opposing United States recognition of Communist China or its admission to the United Nations, the Committee of One Million Against the Admission of Communist China to the United Nations said yesterday.

The committee said it polled a cross section of Protestant ministers, asking them to express their individual point of view on the question of United States relations with Communist China.

Representative WALTER H. JUDD, Republican, of Minnesota, an originator of the poll, said it was designed to counteract a reported resolution adopted by a World Order Study Conference, sponsored by the National Council of Churches of Christ in the U.S.A. last November, proposing that Communist China be recognized by the United States and admitted to the United Nations.

Only 936 clergymen, he said, approved United States recognition of Communist China, in the poll.

The Social Ethic: A Social Evil

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. THURMOND. Mr. President, the age in which we are living seems to favor the group, the bare majority and organizations—all at the expense of the individual. The rugged individuals of yesteryear seem to be disappearing from the scene and with their disappearance go the material with which this Nation was built.

Anthony Harrigan of the Charleston News and Courier has written a thought-provoking analysis of this trend away from individualism in the December 19, 1958, edition of the magazine U.S.A.

I ask unanimous consent that this article, entitled "The Social Ethic: A Social Evil," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SOCIAL ETHIC: A SOCIAL EVIL

(By Anthony Harrigan)

For a full generation, a large body of Americans have subscribed to the social ethic. They believe that group activity is more useful and important than individual activity; that group sanction is the source of the good life.

Adherence to groupism has resulted in theories of "adjustment to life," in hesitation or unwillingness to acknowledge inherent inequalities among individuals, and in a fantastic emphasis on team effort.

The social ethic has caused a devaluation of competition as a desired factor in school and in life. A pupil's report card isn't marked "F" if he fails. "Unsatisfactory" is the most severe penalty allowed by educationists subscribing to the social ethic. And in business organizations, decision making has become more and more a committee function, not an activity for the single, best-informed individual.

Because of the present climate in the world of ideas, it is very important to remember that the historic philosophy of the United States was not the social ethic. The men who founded this Republic and wrote its Constitution held to an individualistic creed. They did not believe that men were atoms useful only when joined together. Every great American to whom we look with retrospective respect—Washington, John Adams, Calhoun, Theodore Roosevelt—was a man who voiced an individualist philosophy, not the doctrine of "mass man."

MARXIST ILL WIND

The intellectual foundations of the social ethic were laid in the 1920's. The First World War had played havoc with civilized values. The seeds of western destruction, embodied in the totalitarian thinking of Karl Marx, were blown over the earth by the windy diatribes of our homegrown Marxists, who arrogantly rejected the unique thinking of their native land, and by European Marxists, who imported to America their resentments and prejudices.

A decade after the end of World War I came an economic crisis that touched off an explosion of disillusionment and left in many Americans the debris of spiritual fatigue. Rejecting the sound traditions of American life, a generation of writers and so-called intellectuals turned to group thinking and collective ideals. They hailed the social ethic. Only in collective enterprises, they said, could modern man control and organize his economic life, thus finding security and spiritual satisfaction.

THE VOICE OF THE PEOPLE

Suddenly, there was an epidemic of talk about the little man, the underprivileged, and the exploited. The greatest group experiments in the social ethic was the New Deal. Freedom to regulate many areas of life in these United States was taken away from individuals and turned over to bureaucrats alleged to be the mind and voice of the people.

By the late 1930's, the American people had shifted from self-reliance based on individualism to dependence based on revolutionary group experiments in collectivist rule. Millions of Americans, born in the freest country on earth, had accepted the idea of a leader and of mass social experimentation and regimentation. The revolutionaries thought not of individual citizens and their individual rights, but of special groups and group rights.

Undoubtedly, World War II fostered more groupism and a more extreme social ethic. A new measure of regimentation was introduced into the lives of Americans. Millions of young men learned to think of the group before the individual, and to value teamwork above all else. For Americans not in military uniforms, there were the new restrictions of rationing, civil defense, and war work.

The postwar years brought a vast change in the living habits of Americans. There was a continuing flight from the farms and, inevitably, a move away from the independence of rural life. Suburban life, with its emphasis on conformity, brought social regimentation into greater degree. Sudden desire for home ownership resulted not so much in respect for property rights as in fear of economic changes that might jeopardize security. Big business itself, while stressing self-reliance in institutional advertising, began to heed the counsel of the social scientists. They instructed personnel managers to recruit men with a strong sense of group loyalty and good team attitudes.

THE FEARLESS FORTIES

In the late 1940's, group thinking became the rage. Laboratories stressed group research instead of work by dedicated individuals. The tax-exempt foundations gave their grants to persons engaged in group projects. The churches began to speak of Christianity as perfect group living, terming belief in God-man directness as the tenet of an incomplete faith. Journalism, as exemplified by the Henry R. Luce publications, became increasingly a faceless group activity wherein the individual observer and creative writer is submerged into anonymity.

It is profoundly ironical that Americans who have turned away from their free society which put a high value on individualism and individual aspirations, are now pitted in a great struggle against the ruling oligarchy of an enslaved nation where the official political philosophy is the social ethic.

SOVIET AWAKENING

Another irony is that despite the ideological framework of the Soviet Union, the masters there have come to realize the value of individual competition, especially in education. As the Soviets move away from groupism and the social ethic in education, the United States moves nearer and nearer to complete fulfillment of the ideals of this weakening philosophy. More and more, our teachers, writers, and preachers urge that in any conflict between the individual and the group, the wise and moral thing is for the individual to submit to the group.

There are Americans who resist the popular way. The rising tide of juvenile crime, the lack of good manners among young people and adults, and the absence of stern moral standards and high cultural aims have caused many thinking citizens to believe that the individual is being debased in our modern society. The social ethic has provided the weaker and lazier individuals with a massive array of excuses for failures and deficiencies.

Life is, of course, fiercely competitive. While a nation may fool itself for a while, reveling in its folly, it cannot continue to live by subjective standards in an objective world.

It is important to remember that the group way over our approach to life's problems can be weakened. Men forged the hold; other men can break it. The evil of the social ethic can be overcome. It is possible to create resistance to groupism. Regardless of the apparent strength of group thinking in the institutions of American life, opposing forces also have strength. America has educationists who would sunder schooling from traditional learning and the accomplishment of hard tasks. America also has educators who insist on strict and high standards, who do not believe that all change is good and that groupist life adjustment is the aim of education.

Happily, our country still has leaders who are aware that lust for legislation is not a fit substitute for maintenance of principles and the slow development of sound customs.

REALISTIC REAPPRAISAL

As a people, we must rid ourselves of silly enthusiasms and belief in panaceas. Historically and traditionally, we have been cold-eyed seekers after reality and we have admired independent men able to see things as they really are. In recent decades, we have allowed ourselves to drift away from realistic thinking into the unrealistic concepts of a comfort culture and an adjustment group philosophy.

But now reality impinges on us in the form of a struggle for survival against a ruthless competitor. This struggle is forcing us to reject what is weak in our own society. Surely, we will right our wrongs, remedy our ills, restore that which needs to be restored, alter what is inept, compose what is disorderly, and abandon what is illusory.

An essentially realistic, individualistic approach to domestic and foreign problems is the one best hope of our Republic.

Let us reject the social ethic and renew the faith of our fathers.

Industrial Development in South Carolina

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. JOHNSTON of South Carolina. Mr. President, on January 15 the Anderson Daily Mail published its ninth annual edition of "The New South". This annual edition of this newspaper is devoted to industrial progress in South Carolina. South Carolina's recently inaugurated Governor, the Honorable Ernest F. Hollings, wrote for the Daily Mail a special article about the present and future prospects of industrial development in South Carolina. I

ask unanimous consent to have this splendid article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MESSAGE FROM THE GOVERNOR OF SOUTH CAROLINA

(By Ernest F. Hollings)

Throughout my campaign for Governor and since that time I have tried to emphasize the importance of industrial development in the economic renaissance of South Carolina. The year 1958 provided a clear-cut demonstration of what new industry can mean to our people.

Despite a recession which in some parts of the Nation created unfortunate conditions, South Carolina moved forward at a steady pace in its almost revolutionary strides toward better standards of living. While the recession was, of course, felt in our State, the effect was not nearly so great had we not had the growing balance that industry is providing for the economy.

Records of the postwar years show that South Carolina, on a percentage basis, has been at or near the top in the Nation in industrial development. The story must not stop here, however. There is still a challenge to be met, for the State still has hundreds of industrial locations which are not only ideal for industry but which would provide needed jobs in communities whose potential has not been fully realized.

It shall be one of the primary purposes of my administration to assist in any way possible to promote this growth in a vigorous way.

Experience has shown us conclusively that a sound, businesslike State government is of the utmost importance in seeking new industry. Our general assembly last year demonstrated its belief in this principle by enacting several proposals to better the business climate. This included an important modernization of the corporate tax laws which had long been needed.

A review of the past year shows that South Carolina continued, in spite of a recession which shelved many plans, to move forward in securing new industry and in the substantial expansion of existing companies. This growth was marked by diversification, toward which we have been moving more rapidly every year.

During 1958 approximately $122,625,000 was expended or allocated for new plants and expansions. Of this total, about $109,625,000 was devoted to completely new industry, while $13 million went into existing company growth.

Both create new jobs, which is after all the aim of our development program. According to records of the State Development Board, approximately 5,300 new jobs are represented by the expenditures. Labor Department averages indicate that this will be about $15,425,000 in new wages, a substantial addition to the economy.

It is particularly interesting to note the growth of machine work during the year. Several new machine tool and dye shops have been established, including one or two of the better known names in the industry. This brings to South Carolina operations which have been greatly needed over the years, and which in themselves tend to bring in new industries.

Among other diversified industries are plants to manufacture such items as TV tubes, plastic products, wood specialties, house trailers, toys, and a number of others.

It was also heartening to note that the year brought several very substantial power developments. Beginning with the announced enlargement to the Virginia-Carolinas nuclear powerplant at Parr Shoals, the list included some of the largest power projects of recent years by several companies. Power must go hand in hand with industrial growth, and certainly our power sources have kept pace through the years and now offer further inducements to new industry.

Matching the growth of our industry is a vast ports improvement program at Charleston, Georgetown, and Beaufort. Substantial progress has already been made in this program under the State Ports Authority, and during the year Charleston enhanced its position as a leading Atlantic seaport.

To complement these developments, the State is experiencing a continued growth of diversification on the farm. With livestock steadily increasing and lands devoted to pasture growing rapidly, our farmers are building a better balanced agriculture with year-round rather than seasonal aspects. Accompanying these changes are higher and higher yields per acre as new and scientific farm methods are used.

As we seek a more stable economy and higher income for South Carolinians, we also realize the potentialities of the tourist business. No State has more to offer the visitor than South Carolina, and it behooves us to let the world know that fact. Already a substantial increase has been achieved in tourist revenue, with an income today of about $200 million annually.

All these things indicate that South Carolina has an excellent opportunity to improve our economy in the years ahead, if the challenges are met.

Proposed National Cultural Center

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 27, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the copy of a letter to the President from Adm. Neill Phillips, chairman of the Committee of One Hundred on the Federal City, containing six resolutions adopted by that group regarding the proposed National Cultural Center. I also ask unanimous consent that a copy of a telegram from Robert W. Dowling to Admiral Phillips, commenting on the importance of the National Cultural Center, be inserted in the RECORD.

Mr. President, on January 13 I wrote the President a letter, calling to his attention the importance of early appointment of the trustees for the National Cultural Center; and on January 16 the assistant to the President kindly answered my letter, expressing the hope that the trustees could be appointed in the very near future.

Again, I wish to urge the President to proceed to appoint the trustees under the authority of Public Law 85–874. I deem it unfortunate, if not inexcusable, that the administration has delayed so long in the appointment of the trustees. Under the bill, the trustees have only 5 years to raise the necessary funds for construction of the center. Almost 5 months have elapsed since enactment of this act, and nothing has been done. The task of the trustees in raising funds for the center will be extremely difficult. They will need sufficient time to accomplish their job.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

AMERICAN PLANNING AND CIVIC ASSOCIATION,
Washington, D.C., January 21, 1959.

Subject: Public Law 85–874, 85th Congress, enacted September 2, 1958, to provide for a National Cultural Center.

THE PRESIDENT,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: The Committee of 100 on the Federal City worked hard for the enactment of Public Law 85–874, and recently has made a study of its current status.

The committee of 100 has passed resolutions as follows:

"1. Public Law 85–874 shall lapse if, within 5 years after enactment date, sufficient funds have not been raised to establish the Cultural Center; therefore, time is of the essence. Already more than 4 precious months have gone by and the board of trustees has not been set up and made into a functioning unit.

"2. The President therefore is respectfully and urgently requested to activate the board of trustees and particularly to:

"(a) Appoint the 15 general trustees provided for under sections 2(a) and 2(b) of the act;

"(b) Appoint a Chairman and members of the Advisory Committee on the Arts provided for under section 2(c);

"(c) Obtain from the President of the Senate and the Speaker of the House the appointments of Members of Congress to serve on the board of trustees as provided for under section 2(a).

"3. The act should be amended, or other steps taken, to provide immediate funds for office space and clerical help for the board of trustees and the Advisory Committee on the Arts; and for reimbursement of members for travel, subsistence, and other necessary expenses incurred in their duties, as permitted by the act. This is essential in order to permit the board and the Advisory Committee to set about raising funds and drawing up plans.

"4. Section 7(b) should be amended to provide, in case the act is terminated within 5 years due to insufficient funds being raised, that contributions may be returned to the donors instead of being transferred to the regents of the Smithsonian Institution. It is held to be an axiom of successful fund raising that donors be asked to give for a specific purpose, and not asked to contribute on a conditional basis as to employment of funds. If it is deemed impracticable to return a vast number of individual contributions, provision at least should be made to allow the donors an option as to how their gifts shall be disposed of in case the cultural center fails. The Committee of 100 believes that the necessary sum for the cultural center can be raised, but holds that the foregoing amendment is necessary for its psychological effect in the fund drive.

"5. The Committee of 100 pledges its continued enthusiastic support for the cultural center and its desire to work with other interested bodies and individuals, public and private, to that end. The Committee of 100 further urges that the overall project of the cultural center be given dynamic support by the executive and legislative branches, with strong guidance from the executive.

"6. The Committee of 100 enthusiastically endorses the views set forth by Mr. Robert W. Dowling in his telegram (copy enclosed) addressed to us at the American Planning and Civic Association. Mr. Dowling has been a successful leader in setting up the enormous project of the Lincoln Center in New York, and his support of the National Cul-

tural Center in Washington is of the greatest value."

Respectfully submitted.

NEILL PHILLIPS,
Chairman.

ADDRESS OF ROBERT W. DOWLING, PRESIDENT, CITY INVESTING CO. OF NEW YORK, RECEIVED BY TELEGRAM FROM NEW YORK CITY BY ADM. NEILL PHILLIPS AND READ BEFORE THE AMERICAN PLANNING AND CIVIC ASSOCIATION, JANUARY 9, 1959

Dear Admiral Phillips and members of the American Planning and Civic Association, it had been my hope up to the last few hours to come to Washington today and to have the pleasure of meeting with you. But a combination of virus and laryngitis will, I am sure, make my absence a pleasure for all of you. I would deeply appreciate having another opportunity to join with you.

My enthusiasm for the Cultural Center in Washington is unbounded. It may very well be the symbol for which our country will longest be remembered. The might and power of the armies of many civilizations have long since faded, but the influence of their cultures lives on. Few remember the names of Spartan and Athenian leaders who waged the Pelopennesian Wars. But the beauty of the Acropolis and the thoughts and works of those who people it are with us still.

New York has a distinguished and well-organized civic group who have made great progress toward the creation of the Lincoln Center. This modern Acropolis will contain an opera house, concert hall, dance theater, theater for repertory drama, and library and museum for music and drama. Two-thirds of their money has been raised, and there is no doubt of its success.

Washington must and can enjoy a greater and more esthetically satisfying National Cultural Center. It is proper that through the encouragement of the Federal Government's gift of a magnificent piece of land that the entire population of the United States should feel a sense of participation in providing the means to create the buildings and the endowments as well. While it would be hard to refuse millions from certain foundations, nevertheless, an ideal of American pride would be for each citizens to provide $1. This would clearly demonstrate both at home and abroad the interest and affection with which our people hold American culture. I am confident through the newspapers, radio, TV, universities and schools, and the leaders of culture that more than enough money for halls, schools, and endowments will be provided. You have it in your power to achieve whatever you think is suitable and worthy.

Any manner in which I may be permitted to participate with you would remain for me the deepest privilege.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. CHURCH. Mr. President, the Young Democratic Club of the District of Columbia, at their monthly meeting on January 23, 1959, passed unanimously a resolution favoring the passage of legislation to grant statehood to Hawaii. The distinguished delegate from Hawaii, the Honorable JOHN BURNS, spoke at the meeting and enlightened the members with his first-hand knowledge of the islands.

The resolution illustrates the interest of the young men and women in further extending the rights and privileges of self-government.

Mr. President, I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas our fellow citizens in the Territory of Hawaii have repeatedly manifested to their countrymen in the United States, to the Congress of the United States and to the world their earnest desire to be admitted into the Union;

Whereas their economy, their culture and their traditions meet all the historical requirements for statehood;

Whereas they bore the first burdens of American participation in the late world war and their sons and daughters fought and died in the battles of that war with patriotism as great as that of their mainland comrades in arms;

Whereas the admission of Alaska into the Union makes Hawaii's petition more significant: Now, therefore, be it

Resolved, That the Young Democratic Club of the District of Columbia, sympathetic because of the District of Columbia's voteless position, officially go on record in support of statehood for Hawaii; and be it further

Resolved, That a copy of this resolution be transmitted to the Senate and the House of Representatives of the United States urging that Hawaii be admitted into the Union as the 50th State of the United States.

West Germany's Import Tax of $4.76 Per Ton on United States Coal Is Further Evidence That Foreign Nations Will Accept American Imports When It Is Principally to Their Advantage

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. VAN ZANDT. Mr. Speaker, last week, the West German Republic announced that effective February 16, 1959, a tax of $4.76 a ton will be levied on coal imported into that country. This tax will adversely affect the hard-hit coal industry of the United States and especially the normal export of 12 to 16 million tons of coal per year to Germany.

Frankly, the Nation's coal industry is about to receive another severe blow on the international trade front.

West Germany's arbitrary imposition of a prohibitive tariff on coal imports from the United States slams the door in the face of a salesman who has been able to deliver his product a distance of more than 3,000 miles and still charge less than producers within close proximity of this market.

This ability to put coal down in Europe at most attractive prices has been made possible through the dogged efforts of an industry that has refused to rest on its laurels as the world's most efficient coal producer. Although output per man day in the United States is at least four times greater than that of any other country, coal management—with the approval and encouragement of the United Mine Workers of America—continues to invest in new methods and machines that are largely responsible for coal's price stability in a period when most commodities have spiraled upward at an alarming rate.

Mr. Speaker, let us consider the impact of this proposed tax levy on the coal industry which has been beset by economic distress for almost every one of the past 10 years.

Many mines in Pennsylvania have long since gone out of business. Others are holding on with 1 or 2 or 3 days a week of production—not enough to allow for normal owner earnings and certainly not enough to provide a respectable standard of living for workmen and their families.

Despite coal's economic ills, the industry has gone forward with its mechanization program. In some cases the necessary capital has been made possible because of firm contracts which the industry has been able to negotiate. Contracts to sell coal to West Germany were among those which some American companies utilized as a basis for attracting investment capital or for making necessary loans. The action of the Bonn Government in placing a duty of $4.76 per ton on American coal entering West Germany amounts to a repudiation of such contracts, for obviously the tariff places an impenetrable cost barrier on U.S. coal.

The impact of West Germany's action will be felt not only among producers shipping overseas; much of the coal that would have been shipped across the Atlantic will, in seeking other outlets, bring further competition into domestic markets in a competitive struggle that the industry should not be expected to bear.

What has happened in Bonn is further evidence that foreign nations will accept American goods only when it is to their decided advantage to do so. In contrast, our State Department has insisted on continued decreases in our own tariff rates and has vehemently opposed quotas that would offer protection for the American coal miner against residual oil imports. The U.S. coal industry has thus been caught in the middle of an international tug of war. Our only recourse is for Congress to enact the legislation necessary to safeguard this vital industry and at the same time give our miners a chance to get back to work.

Incredibly Pleasant

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. PORTER. Mr. Speaker, the February 1959 issue of Holiday magazine

contains a fine article by Robert Carson entitled "West Coast Journey." It tells of the author's recent 3,000-mile trip through Oregon, Washington, and California in, as he notes, "a reexploration of the Pacific slope." It is beautifully illustrated by photographs taken by John Lewis Stage.

I hope each Member of this House and other readers of the CONGRESSIONAL RECORD have the opportunity to read this article. Today I want to quote a small portion of it which concerns the Oregon coast, the most beautiful in the world, and half of which is in the district which I have the honor to represent in this House:

We had been told beforehand that the Oregon coast is the most beautiful in the world, and were prepared to resist; but after 2 or 3 days we were entirely conquered. Nothing in our experience compared to it, even the shores of the Mediterranean, Brittany, the Caribbean, the British Isles and Ireland, and the Pacific side of Central America. To a generation steeped in the wonders of Cinerama, and more inclined to look at Lawrence Welk, the region is a constant delight to the eyes. The unending and almost bewildering succession of sandy beaches, bold cliffs, towering forests, and clean little towns dressed for holidays, is incredibly pleasant. If one grows tired of sparkling water and the swell of bold mountains, it is easy to turn to fields covered with azaleas, rhododendrons, Canterbury bells, tiny white daisies, and yellow and blue lupine. Around Tillamook, fat cows ruminate in landscapes Constable might have painted, and in the cheese factory they make tasty yellow slabs of the Tillamook Cheddar, which is favorably regarded by connoisseurs. All along the fisherman is paramount, either on the beach or in the rivers and streams, in search of salmon and steelhead. And clamming and crabbing rate high in popularity.

The Fight Against Inflation

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include the weekly article of Sunday, January 25, by Mr. George Minot, distinguished managing editor of the Boston Herald, which contained a penetrating analysis of the fight against inflation:

IKE LAUNCHES ALL-OUT FIGHT

(By George Minot)

The big news of the new Congress was supposed to be the headlong clash between the economizers and the spenders. The pencil pushers told you wild-eyed Democrats would pour into Washington come the first of the year, hell bent to see how fast they could get to the job of spending more money on schools, airports, housing, rehabilitation of slum areas, and water resources, and bigger aid for the aged, the ailing, and the subsidy seekers.

It hasn't worked out that way at all, at least not in the first few weeks of the session. The very Democrats who yawned at the Eisenhower state of the Union and budget messages, still are terribly anxious that they themselves don't get in the position of having the big spending label pinned on them.

MIGHT BOOMERANG IN 1960

It's obvious they believe a runaway Congress, one that turns on the spigot of spending and piles up another big Federal deficit, might easily boomerang in 1960. The cost of living is bound to be one of the major issues 2 years hence and the Democrats don't want $2.50-a-pound steak, $1-a-dozen eggs, or 30-cent-a-loaf bread tied around their necks. Keep one eye on this. There's going to be many unfulfilled promises in this session of Congress.

The professors expect a lot from these liberals who replaced stick-in-the-mud Republicans. There's CLAIR ENGLE, from California, succeeding Knowland. VANCE HARTKE sitting where Indiana's Jenner used to sit. STEPHEN YOUNG, of Ohio, replacing Bricker. HUGH SCOTT replacing Ed Martin in Pennsylvania, and ED MUSKIE sitting in Payne's Maine seat. There are others, but these will do for an example.

Their lot is not a happy one. On one hand the professional pundits, the theorizers, and the star gazers harping at them that the population, the scientists, the Russians, and the economy all are running ahead of the administration and its plans for the future. They believe the pace of history is leaving General Eisenhower behind.

They are afraid the President will not gamble enough, explore enough, expand enough in his last 2 years in office, but instead will consolidate, solidify, and restrain. Thus, they tell the liberal newcomers and the country at large, we may fall behind in the race into space and allow the Russians to get ahead of us in some of the great undeveloped areas of the world.

ISN'T PRODUCTIVE AT ALL

They believe in a balanced budget, but they want it balanced at $90 billion instead of $77 billion. They believe that the way to combat inflation is to spend more, not less. They see the national production increasing by leaps and bounds, until by 1964 it is around $600 billion and still on the way up.

The way to get there, they will tell you, is for the Government to spend more and more—for public works, for rivers and harbors, for defense, for foreign aid, and for aid to the States for education, redevelopment, medicine, and the other arts and sciences. This, in theory, brings that mysterious thing known as the gross national product to huge levels.

The fact that big Government spending often, even usually, isn't productive at all, neither alarms nor interests those who advance this line of reasoning. Nor do they deign to look at France of today and learn a lesson from just one of many countries that pay the penalty for a binge into inflation.

All these were arguments advanced after last fall's election. Many Members of Congress were lulled by them. In Washington they found a different atmosphere. They found Mr. Eisenhower pounding home a theme of fiscal responsibility. They had been told the President planned to take it easy in 1959 and 1960. Instead, they ran into the battle of the century, on the result of which depends whether this country continues as a republic or degenerates into a socialist state.

FEARS OF FALSE PROPHETS

They found Eisenhower launching an Operation Budget as the biggest issue in the country. When false prophets twitted this man as one willing to risk the country's safety by paring $45 billion totals in the defense budget, they suddenly remembered that here was the Nation's Commander in Chief who led all the Allied armies in Europe only a few years ago. Thus their fears became laughable.

In his annual budget message and his report on the state of the economy this last week, he got down to business. Here it was put into sharp focus. Here was the start of what is promised to be a house-to-house, street-by-street explanation of how much depends on the purchasing power of the pay envelopes of millions of Americans. Here, obviously, is a man to whom the people will listen.

If Mr. Eisenhower can rally public support for a reliable currency, then the cries of special groups will fade. It won't be easy. Labor unions, a certain type of professor and political stooges deny that the unending cycle of wage increases is a main cause in the steady increase in the cost of living. Ask the landlord, the grocer, the electric light president, the clothing merchant the reasons for his markups. He will tell you, and prove to you, it is largely the cost of labor.

NOT ANXIOUS TO ASSUME BLAME

It won't be too hard for the President to show the householder how this inflation raises havoc with his daily budget, but stopping it will be difficult. It will mean a fight with labor and all those beholden to it and with Congressmen who know that when they vote to cut an appropriation or abolish an installation or a service they will hear complaints from many voters. Congressmen seldom hear complaints when they vote more money for anything.

The President's great asset will be that despite the vote of last fall and the loud cries of zealots, the mood in the country is one of moderation. He will not have as hard a time with Congress as you may suspect. He won't hypnotize anybody with his talk of a balanced budget. He won't get away with dictating legislation or trying to hamstring it, but don't be surprised if he works very well and successfully with JOHNSON in the Senate and RAYBURN in the House.

You probably noticed JOHNSON in his first skirmish. He didn't aline himself with the liberals of the North and West. He didn't care how spectacular were their victories. He and RAYBURN want no new inflationary spiral blamed on Congress. It simply wouldn't be good politics.

If the President goes through with this fight with the same vigor with which he started, it will be a corker.

A Trend in the Newspaper Business

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. CHAMBERLAIN. Mr. Speaker, a free expression of opinion has always been a vital part of the American tradition.

The more citizens who speak their piece, the stronger the base of the democracy. This also follows with the means of transmitting those opinions, the newspapers, magazines, radio, and television.

Today monopolies are surreptitiously creeping into all of these mediums, a trend that is cutting down alarmingly on the number of people who are expressing individual opinions.

Ben Kuroki, the editor and publisher of the Enterprise, a weekly newspaper

in Williamston, Mich., comments brilliantly on this subject as it relates to the newspapers of our country.

I submit herewith his editorial:

A TREND IN THE NEWSPAPER BUSINESS

The big news in the newspaper industry 2 weeks ago was the sale of the Chicago Daily News to Field Enterprises, Inc., owner of the Chicago Sun-Times.

The Chicago Daily News belonged to the Knight chain and has been one of the top newspapers in the Nation. But the real story behind the news is the growning trend of consolidation in the newspaper business and of fewer and fewer newspapers.

This trend is alarmingly pointed out in the January 16 issue of U.S. News & World Report. In 10 years, 217 daily newspapers have disappeared in the United States by suspension, merger, or shift to weekly or semiweekly basis.

Rapidly rising costs and labor relations were named as the two big problems of the newspaper business. For instance, U.S. News points out, "Over the last decade the average cost of getting out a newspaper has gone up more than 50 percent. Advertising rates have had to be increased. Subscription rates have moved up sharply. Yet more and more papers have found themselves unable to keep pace with rising costs."

The magazine adds: "Since 1948 the price of newsprint has risen from $88.50 a ton to $135."

Increasing competition from other forms of advertising—particularly television and radio—also has caused the disappearance of many dailies.

The trend toward consolidation and fewer newspapers also holds true in the weekly field. Rising newsprint and production costs have also been major problems in the profession.

The unfortunate thing is this trend is that there is less and less individuality in newspapering today. The whole concept of the freedom of the press is increasingly marred as ideals and views are subjected to greater control and monopoly.

The trend is not a healthy one in a democracy.

Legislation To Protect the Right of the Blind to Self-Expression

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. REES of Kansas. Mr. Speaker, at the request of the National Federation of the Blind, I am introducing a bill intended for the protection of the rights and privileges of blind people, especially with regard to the right of self-expression. In order that blind people may be heard and given more opportunity to express their views with regard to matters that relate to them and to their Government, it becomes necessary they be assisted through representatives of organizations with which they are associated.

The bill is in two sections. Under the first section the Secretary of Health, Education, and Welfare would consult with authorized representatives of recognized independent organizations of blind people in formulating administrative programs to provide aid and rehabilitation to the blind. This section is also intended to recommend that State agencies formulate programs that will coincide and work with those provided under the Federal program.

Blind people are asking, among other things, that they be given a chance to present their views and their programs to agencies of Government that deal in particular with blind people. They claim that about the only way they can make themselves heard is to do it through recognized organizations that represent the blind.

Blind people of America want to be recognized as a part of our Government. They are interested in the management of its affairs. It is not just a question of providing funds for these people, but more especially a recognition that they can be of service to our country and be a part of the community by becoming self-supporting when afforded opportunity to do so. Providing funds is important, but not enough. The desire for emancipation from economic and social bondage must come from the people themselves. This desire is strong in the blind citizens of our country.

In 1940 a group of 15 or 20 blind men and women from 7 States met for the purpose of starting an organization which today has a membership of many thousands in 45 States. In our State we have the Kansas Association for the Blind. This association has won the admiration of the people of our State.

The Kansas association, along with other State organizations, is joined with the National Federation of the Blind. I am informed it is the only countrywide organization to which blind people belong. Members of the national federation seek and work toward improvement of their position in society. They expend their strength toward the attainment of a better and freer life for people who are blind. By their initiative and courage and by refusing to accept helplessness as their lot, these people have proven their claim that they be consulted on matters which affect the blind. They insist on their right to join organizations of their own choosing and that such organizations represent them in matters of particular interest to blind people.

Members of Congress, as well as people in general, have always been concerned with regard to our blind Americans. The American people will continue to see that the needs of the blind are properly protected. This is a problem of assisting people who want to help themselves. Blind people do not ask for charity. They ask for opportunity to permit them insofar as possible to make their own way.

This bill is intended, especially, to protect these handicapped people in their rights as American citizens and to afford greater opportunity whereby they may help themselves. They feel that under the terms of this proposed legislation they will be better fitted to cope with problems that apply in particular to blind people.

The Small Business Committee Helped the Dairy Industry

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. PATMAN. Mr. Speaker, it is recalled that in the last Congress small and independent distributors and processors of dairy products complained that large distributors were using unfair methods of competition, including the making of sales at discriminatory prices and at levels below cost to destroy small competitors and gain a monopoly control over prices. The House Small Business Committee seriously studied and considered those complaints. A special investigating subcommittee was established to investigate the matter. It held hearings in Dallas, Tex., Kansas City, Mo., and Washington, D.C. Meetings were held with representatives of the dairy industry in Oklahoma City and other points for a discussion of the problem.

Our distinguished colleague from Oklahoma [Mr. STEED] served as chairman of the special investigating subcommittee and presided over the hearings relating to these problems in the dairy industry. Out of the records of those hearings, a very excellent report was developed—House Report 2713—entitled "Price Discrimination in the Distribution of Dairy Products." That report has been acclaimed by many who are engaged in various segments of the dairy industry. Our colleague, the gentleman from Oklahoma [Mr. STEED], has been commended highly for his conduct of the hearings and for the report on the problem.

I have just received a letter dated January 23, 1959, from the National Independent Dairies Association explaining how the dairy industry was helped by the investigations and studies made by the House Small Business Committee. Under permission to extend and revise my remarks, I include a copy of that letter in the RECORD at this point. The letter is as follows:

NATIONAL INDEPENDENT DAIRIES ASSOCIATION,
Washington, D.C., January 23, 1959.

Hon. WRIGHT PATMAN,
Chairman, Select Committee on Small Business,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: We have read with great interest the excellent report entitled "Price Discrimination in the Distribution of Dairy Products," recently released by the House Select Committee on Small Business.

The investigation, upon which the report is based, was a most thorough and comprehensive one, and the report brings into clear focus many reasons for the chaotic conditions existent in the dairy industry today.

The evidence makes it crystal clear that the independent dairymen are suffering irreparable injuries resulting from such sales practices as sales below cost. Small and medium-sized independent dairymen simply cannot cope with financial giants who

can afford to engage in price wars, selling their products below cost in one area while realizing handsome profits in other areas of the Nation. As a consequence, many independent dairymen have been forced to sell out to a competitor or face bankruptcy. Consequently, there exists not a creeping concentration but a galloping concentration of the dairy industry into the hands of a few giant concerns.

We cannot too highly commend you, Representative TOM STEED, the acting chairman of the subcommittee, and its other members for the outstanding work done in this connection. We well recall that the need for the investigation was apparently deemed to be so urgent that you and Representative STEED held the first hearing on December 31, 1957.

Enclosed herewith is a reprint of an editorial from the 1957 American Milk Review, a national trade journal, entitled "Destructive Competition," which, no doubt, will be of interest to you.

Sincerely yours,

D. C. DANIEL.

The editorial which appeared in the June 1957 issue of the American Milk Review entitled "Destructive Competition," and which was referred to in the letter from the National Independent Dairies Association is as follows:

DESTRUCTIVE COMPETITION

The failure of a fair trade practices bill in Ohio is a blow to the dairy industry's efforts to extricate itself from the morass of destructive competition in which it is mired. The respect enjoyed by Ohio gives it an influence that extends far beyond its political boundaries. Other legislatures facing similar decisions will, to a degree, be affected by the debate and action taken at Columbus.

The unfavorable vote was probably the least of the misfortunes that befell the dairy industry. Far more serious in our estimation was the division of the industry that was exhibited. Despite the fact that the bill had the support of the Ohio Dairy Products Association the active opposition of certain powerful segments of the dairy industry contributed to its defeat.

We can view the result only with distaste and foreboding. It tends to give substance to the basic evil in the competitive situation. The evil, expressed in terms of unjustified discounts, free equipment and services, extensive loans, and outright gifts of cash, transform competition from a contest based on quality, service, and efficiency into a contest of financial strength. The victory goes to the biggest bank roll.

Such a condition is bad for the industry and bad for the country. It breeds a cynicism, a corrosion of the moral foundations upon which society rests.

We visited a magnificent plant a few weeks ago. It represented the best in milk processing equipment and design. Here was industrial management at its best. Here were the old virtues of thrift, of sound financial management, of service, of quality plus enlightened labor relations, progressive merchandising, and a high sense of industrial responsibility. By all the standards of the free enterprise philosophy this plant was a model. Yet it was struggling. It was struggling because it did not have a bank roll big enough to meet the deals that some of its competitors were offering. Of what avail are integrity, merit, and quality against a 12-percent discount with a new car thrown in?

This situation is not a mere matter of business relationships. This touches the very heart of the ethical and moral concepts that are the basic framework of civilization. A bribe is a bribe whether it is used to buy a vote or a stop. The demoralizing influence of such practices upon the industry is surpassed by the shameful deterioration of moral standards that they represent.

Perhaps the Members will be interested also in a feature article appearing in the American Milk Review, January 1959, entitled "Injunction May Be Answer to Destructive Competition." That article discusses the problem highlighted in the hearings over which our colleague the gentleman from Oklahoma [Mr. STEED] presided. Under permission to extend and revise my remarks, I include a copy of that article at this point. The article is as follows:

INJUNCTION MAY BE ANSWER TO DESTRUCTIVE COMPETITION

The use of the injunctive process in meeting the thrusts of destructive competition should be developed in the dairy industry, Representative TOM STEED, of Oklahoma, told 297 members and guests of the National Independent Dairy Association at a luncheon in Chicago on December 11. Declaring that he had found in the dairy industry certain trade practices "peculiar to itself," the Oklahoma Congressman said that although milk distributors often had protection under the law where destructive competition was concerned, too often "they find themselves out of business before their case is heard." As a solution to this situation Mr. STEED urged the use of injunctions.

A member of the House Committee on Small Business, and chairman of a subcommittee investigating trade practices in the dairy industry, Representative STEED spoke with authority on the subject of competition in the dairy industry. He reported that his subcommittee, on the basis of evidence taken at its hearing, would recommend several pieces of corrective legislation to the 87th Congress.

GOOD-FAITH CLAUSE

Principal features of proposed corrective legislation dealt with tightening up existing regulations governing competitive practices. One of these was the so-called good-faith clause in the section 2b of the Clayton Act. Courts have held that a price reduction made in good faith in order to meet competition is a complete defense against the prohibitions in this section. The corrective legislation would make reduction in prices in order to meet competition a complete defense provided the action does not destroy competition or tend to create a monopoly. The need for correction arises out of an abuse where a large distributor of goods with a substantial portion of the market uses the low prices offered by an extremely small distributor with but a very tiny portion of the market as a justification for cutting the price on the grounds that the price cuts were made to meet competition. It is a case of arguing that a small tail is wagging a big dog.

Representative STEED also proposes that section 3 of the Robinson-Patman Act be made a part of the Clayton Act. The Clayton Act provides treble damages for firms that have been injured as a result of violations of the antitrust laws. Selling at low prices to destroy competition or create a monopoly is prohibited under the Robinson-Patman Act. However, the courts have held that the Robinson-Patman Act is not one of the antitrust laws and, therefore, persons or firms injured as a result of violations of the Robinson-Patman Act cannot collect treble damages for injuries sustained through such violations. By making section 3 of the Robinson-Patman Act a part of the Clayton Act, violators of this provision would become liable for treble damages.

VIGOROUS ENFORCEMENT

Two other recommendations from Mr. STEED's committee, while not exactly legislative, are offered as areas for action. The first of these is a more vigorous enforcement of existing laws. It is in order to get this more vigorous enforcement that the preceding legislative recommendations are made. The loophole of the good-faith clause and the redress of treble damages coupled with the use of the temporary injunction are tools to be used in making enforcement more feasible and more effective.

A second and rather startling recommendation is a review of Federal milk marketing orders. Mr. STEED said, "There are some areas where they have been working a hardship on both the consumer and the distributor and have had the incipient tendency to foment price wars.

"In other areas we found that price wars were backlashing and actually working a hardship on producers made possible through the way the milk industry works."

The essence of Mr. STEED's work with his committee was summed up in two very succinct paragraphs.

"We have discovered in these hearings that unless something is done to make the situation more stable than it has been, that no man in this room can go home knowing that he has any security if some big competitor with a big enough bank roll takes the notion to drive him out of business.

"Now that is not a good way for a businessman to have to live. I don't think it was the way it was intended. The only fear you ought to have is that if a man can make a better mousetrap and the customers want it, that is a competitive fact you must accept, but I don't think you should be the victim of a boobytrap. That is fundamentally what we are trying to bring about in the work of our committee."

MEMBERSHIP UP

Prior to Congressman STEED's talk, D. C. Daniel, executive vice president of the National Independent Dairies Association, described the growth of the organization and the work that it was doing. As of the time of the meeting, Mr. Daniel reported a membership of 307, an increase of approximately 100 over the figure reported at the first annual meeting in April.

Mr. Daniel listed four major functions of the organization. These were, first, representing the association before legislative committees and governmental agencies. Last year, for example, three out of five bills that the association supported were passed.

A second and very important area of activity is on-the-spot help for members hit by unfair trade practices, especially price wars. In these cases the association goes into an area where a violation of the law is taking place, enlightens people as to what the laws are and advises on the proper procedure. This has had a salubrious effect in most instances.

The association puts out a news letter or bulletin advising members of association activities and keeping them informed of significant legislative and judicial actions that affect their business.

The association also acts as a clearing house for evidences of violations of the laws on trade practices and is able to bring the matter to the attention of the proper authorities.

The Chicago luncheon, which was a sellout (in fact, some late comers had to be turned away), was further evidence of the deep interest that the matter of competitive relationships has evoked in the dairy industry. Some of the best independent operators in the milk business were present. The meeting gave the impression that some pretty solid citizens were trying, with considerable hope of success, to find a collective answer to a collective problem.

Why Latin America Distrusts Us

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. PORTER. Mr. Speaker, the following is a good account of the results of our mistaken policies in Latin America but it is further evidence of why both Houses of Congress ought now, through their respective committees, to conduct studies of Latin American policy in the hopes that it may be improved in the near future. Under a previous consent to extend my remarks, I am enclosing an article entitled "Why Latin America Distrusts Us," by Thayer Waldo, from the Harpers magazine of November 1958:

WHY LATIN AMERICA DISTRUSTS US

(By Thayer Waldo)

When Rafael Leonidas Trujillo Molina told the U.S. Government, a few months ago, what it could do with some $650,000 in proffered military aid, he was very angry—but not at all rash.

The one-time butcher's apprentice, who has run the Dominican Republic as his private hacienda for the past 28 years, could comfortably afford the gesture of spurning further arms shipments from this country. Since 1949, he had already received enough weapons—mostly obsolescent by Pentagon standards, but highly effective for Trujillo's purpose—to keep his 2,325,000 subjects in total subjection and to guard against any attempted invasion by Dominican exiles and their sympathizers.

The generalissimo's anger was, of course, occasioned by unkind congressional comment about the openhanded gallantries of his eldest son, Ramfis. That sportive yachtsman—who heads his father's air force although he does not fly—was forthwith appointed chairman of the Dominican joint chiefs of staff, apparently as a consolation for failing to get a diploma at the U.S. Army's Staff and Command School in Leavenworth, Kans.

The opera bouffe overtones of such goings-on tend to obscure a deeper and more disturbing fact. Trujillo is not the only Latin American dictator who has been able to keep the power he took by force, thanks almost exclusively to the military aid he has received from the United States. He is merely the first and most durable of a long line.

This point, painfully clear to the citizenry of other Western Hemisphere republics, seems to be lost on most Americans—including RICHARD NIXON. The charge that our policies in Latin America promote dictatorships was heard during and after the Vice President's hectic tour last spring; but the majority of us either discounted it as Communist propaganda or were simply nonplused by such a shocking accusation from our good neighbors.

The State Department helped to distract attention from the real issue by solemnly pointing out that any discrimination against dictators would be tantamount to intervention in the internal affairs of other countries. Yet many Latin Americans argue—with substantial evidence—that our recent practice of signing mutual defense pacts with, and supplying military aid to, any regime which takes the anti-Communist pledge is, in practice, the grossest kind of meddling.

When the Pan-American mutual security plan was launched by Secretary of State George C. Marshall at the Rio Conference of 1947, only three nations in the Western Hemisphere—Argentina, Nicaragua, and the Dominican Republic—were ruled by dictatorships. Even Perón had gone through the motions of a political campaign and general elections. The following year the U.S. Defense Department began furnishing arms, equipment, and training to the armed forces of the countries which joined the plan. By 1953, military men had ousted the legal governments and seized power for themselves in seven other Republics—all recipients of mutual defense aid.

They used American weapons to take over, then promptly demanded more to keep themselves in control. Such requests were nearly always granted. Cuba, which asked for and got less than $150,000 worth of military aid in 2 years under the presidency of Dr. Carlos Prío Socarrás, received nearly 12 times as much in a like period after Fulgencio Batista grabbed the government. Colonel Marcos Pérez Jiménez, overthrown last January after almost a decade as Venezuela's dictator, was given warships, planes, tanks, and artillery valued at more than $8 million. The 90,000-man Peruvian armed forces were completely re-equipped with quasi-modern armament between 1948 and 1955—the period when General Manuel Odría was ruling the country without benefit of civil mandate.

THE RED STRAWMAN

The pretext for the whole military-aid program is that it strengthens continental defenses against a potential Communist attack. Leaving aside the unanswerable questions raised by ICBMs with nuclear warheads, it is still astounding that such an argument could ever have been put forward with a straight face. Is it conceivable, for instance, that if the Soviet Union undertook to capture South America's Pacific Coast ports, from Buenaventura to Valparaíso, the invasion could be blocked, even momentarily, by the collection of antique gunboats, outmoded submarines, obsolete aircraft, and surplus howitzers we have shipped to that area?

As for native Reds, their number and influence have been vastly overstated. Mr. Nixon informs us that he learned that some South American labor unions are now being infiltrated by Communists. I have, as they say, news for the Vice President: many big unions throughout Latin America have been bossed by Communists for the past quarter of a century or longer.

Yet, generally speaking, the proportion of card-carrying Party members among the rank-and-file of those same unions is lower today than it was, say, fifteen years ago—except perhaps in Venezuela, Peru, and Columbia, where dictatorships, by suppressing the traditional liberal parties for long periods, have nudged some of the disenfranchised into the Red underground.

But even in those countries the totals are negligible and not likely to grow. Union members were conspicuously present in the huge crowds that demonstrated passionately in most Latin-American capitals in 1956 against the Russian rape of Hungary. Communism, as an ideology, has never won a solid foothold in Latin America—and in any case it can be fought effectively only with political propaganda and economic weapons, not with tanks.

What our blind insistence on carrying out the guns-for-generals program has actually done has been to create doubts about the United States in the minds of Latin American public figures who were once our stanch allies. The degree to which this has gone varies, naturally, with the man, his personal experiences, and what his country has had to endure. Thus Rómulo Betancourt of Venezuela is bitter on the subject, while Colombia's President Alberto Lleras Camargo merely views American policy with wary disapproval. Betancourt spent 10 years marking time in exile while Jiménez was dictator; Lleras went home from Washington and spearheaded the movement that finally unhorsed Dictator Gustavo Rojas Pinilla.

Lleras, who held his first cabinet post at 27, served as interim chief executive of his country in 1945–46 and then took over the direction of the Pan American Union. With tireless energy, he pushed through reforms which converted that fusty, ornamental agency into the modern, functional Organization of American States.

As Colombia's President-elect, he was present at Bogotá's Techo Airport to meet the Nixons on their arrival from Quito, Ecuador, one day last May. The bone-thin, 51-year-old Colombian sat beside them as their car, creeping through the capital's narrow streets toward the Tequendama Hotel, was the target of boos, jeers, and contemptuously flung U.S. coins.

Lleras understood quite well what lay behind the demonstration—exceeded in hostility on that South American tour only by the rougher tactics of students at Lima's San Marcos University, 3 days earlier, and the explosive violence still to come in Caracas. A newspaperman by profession and an internationalist by long training, he knew just how much of his countrymen's antagonism was directed at NIXON, the political representative, and how much at the flag and fabric of the United States.

"You must remember that Colombians have been through a great deal in the past few years," he remarked, somewhat cryptically. The observation was double-edged—referring at once to the savage strife between Liberals and Conservatives which took upward of 200,000 lives in a decade, and to the hard fact that General Rojas Pinilla could never have kept himself in power for 4 years without the arms supplied by the United States.

Until that practice is radically modified, we cannot hope to enjoy the full trust of even such men as Lleras Camargo, a thorough-going democrat whose basic sentiments toward us are eminently cordial. We may already have lost permanently the good will of Betancourt, Venezuela's former provisional president, who returned to Caracas from New York a few days after the ouster of Perez Jiménez.

TAKING FRIENDS FOR GRANTED

A clever, cultivated politician, Betancourt organized Venezuela's major party—the left-of-center Acción Democrática—and conducted the one free election in the nation's history. That was in 1946. The Acción Democrática slate, running on a markedly New Deal platform, received 68 percent of the ballots cast—and 9 out of every 10 eligible voters went to the polls. Betancourt handed the reins of government to an administration headed by Rómulo Gallegos, the country's best known novelist.

Two years later, the government was overthrown by Perez Jiménez and his military cohorts. A 3-man army junta, acting under martial law, began a wholesale roundup of the legal regime's top executive and congressional leaders. As this got underway, the U.S. Department of State blandly announced "no interruption of normal relations" with Venezuela. And while the mass imprisonment of elected officials was still going on, U.S. oil interests operating in the Republic signed a new contract with Perez Jiménez & Co., incorporating the 50–50 profit split they had refused to grant the Gallegos administration.

In the years that followed, Venezuela's dictatorship used its $2 million-a-day oil royalties to supplement arms shipments from the United States with the purchase of British military jet aircraft, and raised the pay scales and perquisites of the armed forces to seductive levels. Falangist experts were imported from Spain to organize and train a 15,000-man secret police force. Eventually the jails bulged with more than 18,000 polit-

ical prisoners, an estimated 20 percent of whom died behind bars.

Through all this, including the awarding of a medal by Dwight D. Eisenhower to Marcos Pérez Jiménez and public praise for his regime from other high U.S. officials—Betancourt held his peace. The greater part of his exile was spent in New York City, where he lectured at Columbia University and other colleges, wrote a variety of articles, essays, criticism, and poetry, and indefatigably directed resistance activities by the underground at home.

An intimate of Betancourt's during the final 3 years of his stay in this country credits him with originating the now familar assessment of our official postwar position toward Latin America: woo your enemies incessantly and take your friends for granted—a conclusion reached independently by other prominent Latin Americans, several of them through harsh personal experience.

Military aid is far from being the only sore point in those relations. Another crucial issue—better publicized superficially, but still little understood here—is economic assistance. Take the case of Galo Plaze, ex-President of Ecuador and, more recently, chairman of the United Nations factfinding commission in Lebanon.

Plaza, born in New York City 52 years ago, is perhaps the most knowledgeable, and surely one of the firmest, of this country's friends. Elected Ecuador's Chief Executive in 1948, largely on the strength of the popular belief that his close ties with the United States would bring the nation greater prestige and more help from Washington, Plaza found his solidly democratic, middle-of-the-road administration so benevolently regarded there that it was written off as safe to ignore.

Even the massive Ecuadoran earthquake of August 1949—one of the 20th century's major natural disasters in terms of human life and suffering—brought less financial aid from the U.S. Government than from those of Chile, Uruguay, or Venezuela. In the same year, the Export-Import Bank granted Perón's regime $125 million to repay forced deposits by American firms operating in Argentina, which had been misappropriated.

Bitterly disillusioned by such contrasts, Ecuador's voters turned the presidency over in 1952 to a sworn foe of Plaza—a nationalist demagogue who disavowed communism but shrilly echoed its vilification of el imperialismo yanqui.

Nixon spent more time talking to Galo Plaza than to any other South American he met on his junket. He found the strapping former soccer star, bullfighter, and Grace Line deckhand as warmly disposed as always toward the land of his birth. (Plaza's father was Ecuadorian minister to the United States in 1906.) In part, this is because of his unique appreciation of what motivates peoples in both segments of the Americas; in part, because he understands and sympathizes with the U.S. struggle to become a first-rank power in more than name.

But he also told the U.S. Vice President bluntly that the United States would have to take Latin America's aspirations for economic development into account—and help provide material support for their realization—if it looked for more than grudging lip service to Pan-American ideals.

GO TALK TO WALL STREET

What he was referring to is easily illustrated. I was present at an informal news conference held by Albert J. Powers, a Commerce Department trade consultant (Chief, Caribbean Section, American Republics Division, Office of Economic Affairs, Bureau of Foreign Commerce), who headed a U.S. delegation to the 1955 International Industrial Exposition in Bogotá, Colombia. A Colombian reporter asked if there was any hope of getting money from Washington for development projects.

"It is the policy of my Government," Powers replied, "not to intervene in the financing of activities which should properly be promoted by private enterprise. It is up to you people to create business and industrial opportunities which will attract investment capital from the United States. Remember, too, that you must offer the possibility of greater profits than can be obtained at home. This is a time of exceptional inducements in my country for domestic financial ventures."

NIXON came home saying his misadventures had shown, among other things, that we would have to reconsider many of our policies and practices in Latin America. Yet he gave an answer almost identical to Powers' when he was queried in Uruguay about prospects for economic assistance from this country.

This laissez-faire notion has crystallized during the past 5 years. In the same period, contributions to development programs sponsored by governments in Asia, Africa, and the Middle East have been stepped up—in large part because of eloquent recommendations by the Vice President, following visits to those regions. Anyone who misses the connection between such incongruities and the hostile reception accorded NIXON in South America is as totally misled about the whole affair as those who sought to dismiss it all as a Communist plot.

A popular misconception among Americans is that any talk by foreigners about financial aid means that they are looking for handouts. This is simply not true in the case of responsible Latin Americans. Galo Plaza stressed in his conversation with NIXON that a judiciously planned program of loans is needed, rather than outright grants. And events over the past decade and a half make his argument plausible.

During World War II, all Latin American republics, except Argentina, cooperated more or less willingly in the production of strategic materials. If they made money doing so, they also had to postpone many development projects and let other activities lie fallow for those years. When, after hostilities ceased, they sought to spend their accumulated reserves on U.S. machinery, tools, and equipment, they found domestic priorities here holding up shipments interminably, and inflated prices forcing a sharp cutback in their calculations.

Then came the Korean war and another near-total hiatus in U. S. export trade. By then, European economies had recovered; Britain, France, West Germany, and Scandinavia showed interest in Latin-American markets and the means to cultivate them. Government banks floated loans for the construction of hydroelectric plants, steel mills, bridges—all built with materials bought in the countries financing the jobs. Interest rates on long-term credits average half of those charged by the U.S. Export-Import Bank on shorter ones. The total bill often came to less than 50 percent of what comparable equipment and services from American firms would have cost. And where necessary or desired, the sponsoring nation generally furnished technician-instructors at very modest salaries.

Still, all this was only piecemeal assistance, and the Latins had other ideas. With the Eisenhower administration in office, the Korean conflict ended, and U.S. industrial output burgeoning, they advanced their long-cherished, carefully thought-out plan for an Inter-American Development Bank.

At the Caracas Conference in March 1954, John Foster Dulles would not so much as read a draft of their proposals. A few months later, then-Secretary of the Treasury George Humphrey attended a meeting of finance ministers in Buenos Aires, listened to an outline of the plan, and advised its backers coldly to stop dreaming. The Eximbank, he said, would always consider, within the limits of its funding authority, loans for specific, conservative, self-amortizing projects; for the rest, look to private capital.

Following Secretary Dulles' recent consultations with President Kubitschek of Brazil, and Milton Eisenhower's return from his Central American trip, it was announced that the United States would, at last, go along with the development-bank scheme. This suggests that some valuable lessons were, indeed, learned from Nixon's troubled tour. (Incidentally, Milton Eisenhower urged, as long ago as 1953, after a quick look around South America, that we accept the bank proposal. However, that recommendation and several others—including a pointed reference to the need for improving the caliber of our diplomatic representation in Latin America—were quietly shelved. His whole report has now been dusted off for careful re-examination. The first results showed up at the September meetings of Latin-American foreign ministers in Washington, where a beginning step was taken toward setting up the bank.)

TWO SKEPTICS

If this apparent shift in U.S. outlook continues, it could lead to improved relations with at least two other influential South Americans who now view us with profound reserve.

Arturo Frondizi, the wily lawyer who took office as Argentina's president while NIXON struggled vainly through Buenos Aires traffic to reach the ceremony on time, was for years a participating witness of U.S. indecision and ineptitude.

After our 1946 interventionist fiasco in Argentina, master-minded by Spruille Braden, the State Department executed an artless U-turn and began courting the Perón dictatorship at every opportunity, apparent or invented. Frondizi, then a leader of the opposition Radical Civic Union Party, publicly attacked these maneuvers and their motivation. And despite his canny wooing of peronista support in his campaign, and a broad amnesty decree signed within 2 weeks of inauguration day, the new Argentine chief executive has not modified his enmity toward the exiled despot—or his cool distrust of Washington.

Argentines have never considered themselves full members of the Pan-American family, and their relations with the United States have traditionally been distant and formal. Above all, they want no part of any economic aid on a cooperative basis. Argentina was the only Latin-American republic to reject the point 4 program, just as she had previously declined assistance in the fields of health, education, and agriculture from the old Institute of Inter-American Affairs.

Loans and credits, with no strings attached, are a different matter. The Frondizi administration must get outside financial help before it can begin restoring the country's crippled economy. Indications now are that it might favor obtaining such funds through an inter-American agency, within which Argentina would seek to form an austral bloc—including Chile, Bolivia, Paraguay, Peru, and, perhaps, Uruguay—to counter U.S. influence on its policies.

However, Frondizi will probably prove easier to get along with than any Argentine president in the past 20 years. An extremely practical man, he is well aware that the present world situation offers choice opportunities for playing off the West against the Soviet sphere where aid and trade are concerned; but the same shrewd sense of values guards him against any illusions about which side is more apt to keep its commitments, once made.

Victor Raúl Haya de la Torre, Peru's dominant political figure and probable next president, presents a different problem. Now 57, Haya has always been a mystic—high priest of a movement which combines Marxist agrarian-reform theories with age-old In-

do-American aspirations in a somewhat amorphous ideology that has attracted several million devoted followers of Indian ancestry and mixed blood.

The APRA party, which he founded, delivered better than 60 percent of the vote in the 1945 elections. Three years later, when General Odría took over in a military coup, it was outlawed. Haya was branded a common criminal and hunted throughout the land by men with no specific orders to take him alive.

One dark night, the fugitive slipped through the gates of the Colombian Embassy in Lima and requested asylum. For almost 6 years thereafter, he never left the Embassy grounds—which Peruvian security police watched day and night—and had no contact with party colleagues. Yet his organization maintained such solid discipline and loyalty that it was back in business within hours after the proscription against it was lifted, during the 1955 campaign.

Septuagenarian Manuel Prado, elected president chiefly with aprista votes, voided the trumped-up charges hanging over Haya. And Haya, freed the year before from his diplomatic prison through bilateral agreement, came home from Europe to a triumphal welcome.

Although he is a fervent admirer of Franklin Roosevelt's policies, Haya harbors no such sentiments toward those of the present Washington administration. A number of the hostile students who met NIXON at the gates of San Marcos University were apristas; but they had not been encouraged by their mentor to attack the Vice President. In fact, Haya, who abhors violence, personally ordered expelled from the party 2 youths identified as rock throwers.

Later, he is reported to have told an associate sorrowfully: "Even Gandhi could not persuade all his people to forswear aggression, as witness his own end."

The comment is characteristic. Although Haya does not pretend to be a spiritual leader, much of his program resembles the Mahatma's. He wants to promote self-contained village enterprises, not unlike Gandhi's "cottage industries." He feels, as the Hindu ascetic did about India, that Peru must help itself gain economic maturity and independence primarily by diversifying its production.

TIME RUNNING OUT

Haya, however, also recognizes the need for foreign aid in developing his country's natural resources. And since he does not believe in capitalist management of such enterprises, he would welcome long-term loans to the government, with technical experts brought in under contract to supervise oil exploration, expansion of mining operations, and the buildup of light industry.

The next Peruvian elections are scheduled for 1960. If Haya runs and wins—as he seems fairly certain to do—his orientation to the United States is likely to depend on events between now and then. A changed Washington policy toward relations with dictatorships and a liberalized outlook on economic aid are both vital issues from his liberal point of view. Haya would be the most difficult Latin-American chief of state for us to deal with if he held the post today.

A very real danger exists that we are not going to do enough, soon enough, to bring about a firm improvement of our position in the Western Hemisphere. The flurry of anxiety and self-searching that immediately succeeded the Nixons' encounter with spittle, stones, and slurs has simmered down. Once more we are perilously involved and deeply committed in other areas of the world. There is a tendency for our latent, unconfessed feeling of contempt toward Latin America (cf. Stalin's cynical, "How many divisions has the Pope?") to reassert itself.

It may be worthwhile to ask how many of us believed, 4 or 5 years ago, in the possibility of a Middle Eastern crisis so grave as to prompt our military intervention. The parallel is not idly drawn. The very sort of aspiring, aggressive nationalism which we now recognize among Arab, Asian, and African peoples has also become the most surging force in Latin America. Merely because these nations gained political independence from colonial rule, 60 to 135 years ago, does not mean that they have attained true freedom, as we understand the term.

Coffee and tin; copper, silver, iron, oil; textiles and agricultural products: these are the prime exports of the other American Republics, sold on world markets where fluctuating prices are determined largely by the volume of U.S. purchases. One-crop countries, such as Brazil, Chile, Colombia, Bolivia, and Cuba, find themselves caught in a network of recurring crises, which spur inflation, accentuate poverty, bring unrest and instability, and frighten off domestic investment capital. Unable to obtain foreign loans or credits of sufficient size, at any one time, to make a real start on industrial diversification, they are limited to stitching a flimsy patch on the raggedest spot of the economy—and then waiting helplessly for the next seam to split.

These are not, to be sure, the only things wrong with Latin America. A good many of its woes arise from an ossified caste system, particularly evident in the Andean lands. The Indian, the mestizo, and the citizen of pure European extraction are as inexorably segregated, one from the other, in Peru, Bolivia, Colombia, and Ecuador as are the Negro and Caucasian residents of Jackson, Miss.—though perhaps less obviously, to the casual observer.

Mexico is, indeed, the one American Republic that has achieved almost total integration. The cause-and-effect pattern surrounding that circumstance is noteworthy: Mexico brought about social democracy, in large part, by successfully diversifying its production, and the economic independence thus gained permitted Mexico, alone of major Latin-American nations, the luxury of refusing to sign a mutual defense agreement with the United States.

This is not suggest that unwillingness to subscribe to such pacts should be an ideal. Precisely the contrary; it ought to be a fixed goal of the U.S. Government to cement trustworthy alliances with countries as healthy and courageous as Mexico.

That is not going to happen as long as we provide tyrants—present or prospective—with the means to defy the popular will. Nor can a truly working partnership within the Pan-American system be expected to develop until the strongest, richest member state in the group is ready to take its responsibilities to its nearest neighbors more seriously.

A Continuing Purpose

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. CHAMBERLAIN. Mr. Speaker, sometimes one of the newspapers in my State of Michigan editorially wraps up a national situation with such effectiveness that I feel it should be a matter of permanent record in the annals of the Congress.

On January 22, the State Journal of Lansing, in an editorial called, "A Continuing Purpose" summarizes how travel taxes labeled "temporary" when imposed, during wartime emergency, have become permanent. Thereby penalizing both the taxpayer, and all phases of the transportation business. I go on record to say that I agree heartily with this stand, and will continue to work toward the removal of these deadweights around a vital phase of the American economy.

I submit here, Mr. Speaker, the article referred to above:

A CONTINUING PURPOSE

The public is accustomed to hearing of cases in which the word "temporary" means "permanent" when used in connection with taxes.

A prime example is the Federal transportation tax which was imposed at the beginning of World War II in order to discourage nonessential travel by civilians using common carriers—the railroads, airlines, and buses.

The Air Transport Association points out that the principle of taxing passengers during wartime was put into practice during World War I when a tax was levied on civilians using the railroads and buses which were needed for transportation of military supplies and personnel. This tax was repealed 3 years after the end of World War I.

The association also pointed out that Canada put a 15-percent tax on travel during the Second World War for similar reasons but repealed the levy just 3½ years after the end of the war.

Although World War II ended more than 13 years ago the travel tax imposed at its beginning is still in effect although reduced from 15 to 10 percent in 1954.

The levy long ago had accomplished its purpose of discouraging civilian travel in wartime. Yet it continues to discourage travel at a time when common carriers are able and eager to handle all the traffic they can find.

The trouble is that after temporary taxes, including the excise tax on automobiles, accomplish their original and special purpose, they are retained to serve the continuing purpose of producing revenue for Government in spite of their adverse effect on vital segments of the Nation's economy.

Report on Higher Education in the Soviet Union

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. DENT. Mr Speaker, recently the University of Pittsburgh prepared a very valuable and timely report on education in the Soviet Union.

Since this session of Congress will have a great many problems dealing with education, I feel that this report is essential reading for all Members of Congress.

Under leave to extend my remarks I submit the following "Report on Higher Education in the Soviet Union."

REPORT ON HIGHER EDUCATION IN THE SOVIET UNION

I. INTRODUCTION

This is a report on higher education in the Soviet Union prepared by the heads of a number of American educational and research institutions. The group, lately returned from the Soviet Union, traveled as an official delegation from the United States under the recent United States-Soviet agree-

ment for the exchange of persons in scientific and cultural fields.

During its 15-day survey the group as a whole, or several of its individual members, visited 18 institutions of higher education including universities and research and technical institutes. The delegation conferred with educational officials at the Union, Republic, and local levels. It traveled 8,000 miles, visiting in European portions of the country the cities of Moscow, Leningrad, and Tbilisi as well as Tashkent, Samarkand, and Alma Ata in central Asia. Visits to teaching and research institutions were supplemented by visits to libraries, theaters, bookstores, museums, industrial and agricultural exhibitions, a technicum, youth camps, factories, collective farms, and a variety of other organizations representative of contemporary life in the Soviet Union.

This report is prepared primarily for those who are concerned with the problems of higher education in the United States. The limitations of the report should be clearly understood. In the first place, the delegation functioned under several severe handicaps. No group of this kind is in a position to verify the statistics with which it works. Language interpretation in any technical field makes for imperfect communication. The abstract terminology involved in the description of educational concepts is particularly liable to inadequate rendering in the relatively brief conversations that time permitted.

In the second place, we were unable to relate satisfactorily what we observed in higher education to the role of the governing elite in Soviet society, the Communist Party. Other brief observers of the Soviet scene, from time to time, have commented on the role of the Young Communist League in student life and occasionally in the classroom, the probable party role in the ideological content of textbooks and other instructional materials, the membership of university faculties in the party, and other similar considerations. These are but glimpses of the shadow. They tell us relatively little of the substance. Until an exhaustive study is made of the subject, our own experience would lead us to caution against drawing firm conclusions. However, it is our observation that all basic objectives and the nature of the pattern of higher education; as every other phase of Soviet life, are determined centrally for the nation by the party and do not necessarily reflect the thought and wishes of the faculties or administrations of the separate institutions. In such a society, there may be extraordinarily rapid changes in policies with a resulting flexibility necessary in the educational system as in other aspects of life. For instance, without an appreciation of this, it would be impossible to understand the rapidity with which an entire system of higher education could be significantly altered by an unexpected decision at central political levels that 80 percent of the students being admitted to the institutions of higher education should have 2 years of work in industry following the completion of their secondary education. Thus, we see the emergence of a new concept of learning in a manner which would be hard to understand in any nation other than one in which basic decisions are the exclusive prerogative of an isolated governing elite. Higher education, like all other parts of Soviet society, may be changed at any time, in almost any degree, and for any political reason which may appeal to the party. It is of primary importance to recognise that education in the Soviet Union is not a basic resource which undergirds the society, but a tool, fashioned, sharpened, and changed by the state in its own interests as those interests may be determined by the party.

It is perhaps pertinent to comment on the atmosphere in which our inquiries were made. In the first place, we had access to virtually all of the institutions, materials, and areas which we asked to see. The one exception was the schools of higher education maintained for the training of leaders in the Communist Party. Little is known about these educational programs and we are unable to add anything. Since the U.S.S.R. is a one-party totalitarian state, the role of these Party schools and military academies, especially the former is vital. Of the present number of the Party Central Committee, only a minority have college degrees. All have attended Party institutions. Otherwise, materials, institutions, and areas were quite freely opened to us. Our freedom of action extended to the taking of pictures under most circumstances, talking freely to people on the streets, in the halls of the universities, in the museums, and at work in plants and on farms. We were left alone to explore the cities in which we found ourselves and, as far as any of us could tell, we did so without surveillance, and certainly without hindrance.

In the second place, we undertook our study in an extraordinarily friendly atmosphere. Whether dealing with officials in the Ministry in Moscow, rectors of the universities, members of the faculties, students in the schools, or the most casual passers-by, we encountered an open friendliness which was too consistent, too spontaneous, and too widespread to have been simulated. Many in the group who are well acquainted with Europe, the Middle East, the Far East, and Latin American observed that they had never before been in a nation in which there were not occasional unfriendly glances or bitter comments about Americans.

A great many of the large number of people whom we saw evidenced great curiosity about the United States. Most of these questions had to do with material aspects of daily living, but more frequently than one might expect there would be questions about American authors and about American music. We found less basic curiosity among the university officials with whom we dealt. While some of them asked questions, many did not.

We must also comment on the residue of anti-American propaganda which is still part of the thinking of a number of the university people we met. While no one was deliberately critical, questions nevertheless reflected the indoctrination received. We were asked about the education of the American Indian, racial segregation in public schools, the serious depression, reasons for prohibitively high tuition rates, why so many able students were never permitted to continue their education, whether we taught anything about Soviet law and related aspects of Soviet culture, and why we permitted use of poor textbooks. There were similar questions reflecting either a quite mistaken or an exaggerated view of the problems of American higher education. During our stay in the Soviet Union, a typically Government-inspired criticism of American higher education appeared in the New Times. It contained precisely the kind of misinformation, quotation out of context, and half-truth which provided the basis for the questions we received. It was replete with such phrases as "the schools, too, feel the effect of the huckstering commercialism characteristic of capitalism." We must place what we found in proper perspective. In view of the barrage of critical comment which Government-inspired sources have made of American higher education, it is probably remarkable that we saw and heard as little residual criticism as we did. Furthermore, that which we did find did not seem to alter the basically friendly attitude of the faculties and officials we met.

Finally, we must caution the reader, as we have repeatedly reminded ourselves, to recall that while we have been unable to avoid making comparisons between Soviet and American educational practice, the fact is that there is an inherent difficulty in making such comparisons. Comparisons imply counterpart roles of similarly designated and motivated individuals and institutions. Whereas, in fact, the irreconcilable difference in the political foundations of the two societies means that no functional counterpart exists. Each comparison must therefore be examined in terms of the basic differences in the fundamental social structure of the two nations.

To summarize, this report is submitted to our colleagues in American higher education as a series of comments based upon what must necessarily be regarded as preliminary observations. They are not presented and should not be interpreted as definitive conclusions. Understanding of the Soviet Union will be furthered if they are accepted in this light.

II. GENERAL OBSERVATIONS

The delegation noted a number of general conditions which give depth and context to some of our observations specifically concerning higher education. Many of these are fundamental matters of far-reaching consequence in Soviet society. Indeed, they are of so much importance and our opportunity for observation was so limited that they are set forth with caution. Nonetheless, they are significant as statements of some of the general conditions in society which influenced our more specific reactions to higher education.

1. Cultural affairs

In the first place, one cannot visit the Soviet Union without concluding that there is a very widespread interest in what would generally be regarded as cultural affairs.

Good theater is cultivated and widely appreciated. Ballet, opera, drama are not only well supported by the State but enthusiastically received by large masses of the population. In Tashkent, in Central Asia, we found a city of 400,000 people with six or seven theaters, one of which gives 200 performances of ballet and opera each year to a consistently filled hall.

Museums are crowded with audiences apparently representative of the population. Among the museum throngs are a noticeable number of young people avidly taking notes which they claim to be for their own development. As this was a time when school was not in session we gave somewhat more credence to this reply than we might have under other circumstances.

Book stores are crowded and interest in newly published materials is so great that, at least in Moscow, there is a black market in new paperback editions of both contemporary and classic works. Furthermore, statistics as to claimed holdings of general libraries are very impressive, although there is some question as to the interpretation of certain of the data supplied.

The point that must be made here is that whatever evidence our readers may find later in this report of general support of higher education and a belief in its importance must be placed in the context of a far-reaching interest in cultural and intellectual affairs. It is not possible for us to conclude how much of this is spontaneous interest of the people and how much may result from encouragement by the Kremlin for whatever reasons may appeal to it in its total strategic political design.

2. Intellectual isolation

A second general matter came as no surprise to us, and certainly will not startle the reader, but still requires noting. There is clear evidence in many parts of the Soviet Union of the intellectual isolation in which the people have lived for so many years. This applies not only to subjects in which Government indoctrination has replaced the facts of world affairs, but also to areas of study and thought which are not necessarily inimical to the Party's own convictions. For example, we could find little evidence of any

familiarity with recent developments in such a politically neutral field as administrative science.

If there should be a period ahead in which there is relative freedom in the exchange of ideas, it may well be that some of these serious shortcomings will be corrected. There are some among us who feel that a much freer exchange of people and materials will be forthcoming in the period just ahead because of a widespread conviction among Soviet officials and scientists that they have more to gain by having access to our ideas and our progress in science and technology than they have to lose by the "corroding" influences of a capitalistic society.

3. Dynamics of atmosphere

A third condition which may be noted in most aspects of Soviet life is what might loosely be referred to as "the dynamics of the atmosphere." There is a noticeable conviction as to progress, an aparent feeling of success, a pride and a sense of destiny which is inescapable. Whether the individual is right or wrong in feeling as he does, the fact remains that the prevalence of this dynamic provides a general stimulation for the people which is of tremendous importance. Anyone who has assumed a role of leadership in creating change in either a single institution or in a major segment of society is aware of the fundamental significance of the development of such a dynamic. Anyone who finds himself in a competitive relationship with the Soviet Union would do well not to underestimate this, whether it is with reference to higher education, industrial productivity, military power, or any other aspect of modern life.

4. Competition for progress

Closely related is a fourth consideration. That is the extent to which competitiveness prevailed in everything we saw. It is not always competition of individual against individual; often it is that of the group against an established standard. Whether it is one or the other, it is nevertheless ever-present. None of us had witnessed before a situation in which there was as far-reaching an articulated system of rewards and punishments. The rewards may be lapel pins, they may be pictures and notices in the public square, they may be better summer camps for the best elementary and secondary school students, excursions for the best members of the Young Communist League, organized free trips on a tremendous scale to Moscow for those surpassing quotas on the farm or in industry, or they may be monetary payments to professors for articles published in professional journals or books published on professional subjects. Children are introduced to competition at an early age—in grade school and pioneer camp, and in organized sports and recreation. As others have noted, one frequently sees postered admonitions for Russians to equal and excel the United States.

Competition is measured not only against standards but against past performance. Every curve shown in charts in industrial and agricultural exhibits moves constantly upward.

In short, the use of competition of individuals and of groups against one another, against absolute norms, and against past performance is built into Soviet society as a way of stimulating ever-greater effort. Americans could not be more mistaken than to believe that competition is characteristic of our society and absent in the Soviet Union.

The relevance of this point to our specific study is that competition provides a motive for excellence in scholastic performance, for the investment of student effort, and for spurring faculty teaching and research. There is clear evidence of official Soviet interest in outdoing and outcompeting the United States in the money, the buildings, the salaries, and the research facilities which they provide for their universities.

5. Role of women

One cannot help but be impressed by another universal in the Soviet system. This is the recognition of an important role for women in society. Women are in every field and at virtually every level within each field. This is particularly true in education and in the medical profession. Very generous arrangements are made for working mothers during child-bearing periods and at other times when they are needed at home.

We must be cautious indeed in drawing conclusions in this area, but several of us have the impression that the price paid in family life for this kind of professional participation by women may not be materially greater than that paid by American and British families who send their children away to school and who have them in camps during the summer. There does appear to be a real difference in the use of released time by the women in our different societies.

As far as higher education is concerned, there is no evidence of grave teacher shortage in the Soviet Union, and the very widespread employment and service of women may be one of the reasons why this is true. In the United States, where we are apprehensively contemplating a tremendous increase in our student population in institutions of higher learning and the consequent faculty shortages, we might well pay attention to the values the Soviet Union attaches to its womanpower.

6. Program of plant improvement

We must also note that there is a tremendous program of plant improvement underway in the Soviet Union. The Moscow visitor sees this first in the vast array of new apartment buildings extending for several miles along the highway from the airport to the city. He sees it again in the extraordinary number of trucks hauling construction materials all through the city of Moscow. But he sees it, too, in Tashkent and Alma Ata. In the former city, we were told that 90 percent of the population now lives in modern dwellings and only 10 percent continues to live in the ancient adobe structures of the old Central Asian city. We, of course, had no way of verifying this statistic, but we did see blocks of new apartment buildings which could certainly house a vast number—if not actually 90 percent—of the city's former adobe dwellers. Curiously, plant improvement goes on even in elaborate and costly restorations of historic churches and mosques which an antireligionus state might be expected to ignore. New industrial plants of major importance are apparently developing in a variety of areas removed from the borders.

All of this is relevant to what we shall say later regarding plant expansion in higher education. It would be a mistake to think that the universities and the technical teaching and research institutes had been singled out for major plant improvement. Those improvements in educational plant are very great indeed, but on the other hand they must be weighed in terms of the commitment to plant improvement in industry, in domestic housing, in hospitals, and in a variety of other parts of the total society.

Furthermore, while this general improvement in plant is impressive in extent, we must most emphatically observe, first, that there is widespread evidence of shoddy construction which promises short life and high maintenance costs for many of these structures. Second, for all of their gains the Soviets are still far, far behind the United States in residential buildings and in selected other areas.

7. Planned society

Another general, yet crucial, observation is that most efforts that go forward in the Soviet Union have a clearly defined utility and a specific plan and they are not undertaken unless they are pragmatically important. Men and materials are assigned arbitrarily to realize the plan. Ultimately this affects the direction of research and the character of instruction. We would guess that this makes for a social system which is immediately productive and useful, but it probably makes for one which is less provocative and creative than we would hope for our own society. So, too, the system of higher education is intended to serve the identified utilitarian needs of the state, not the unpredictable values involved in the growth of the individual human being.

8. Absolutism in thinking and living

Again, while there is nothing new in the observation that the Soviet Union is a society of absolute rather than relative values, we were not entirely prepared for the extent to which that absolutism influences the patterns of thought and daily living. Every problem has one and only one right solution. Just as there is one correct way of interpreting history, so there is one best textbook in each field for use by all classes in all universities in all parts of the nation. There is one correct content for a university education, and hence there is one curriculum, and it is ordained for all institutions in all parts of the Soviet Union. If the unity and the absolute character of truth make it logical to have but a single press and a single political party to express it, so, with equal logic, there being but one correct interpretation of Othello, of Dreiser, of the Industrial Revolution, the content of all courses is necessarily the same; the prescription is prepared in Moscow and repeated in the classrooms throughout the land.

Our Soviet colleagues simply could not understand why we would permit several textbooks to be used in similar courses when obviously there could be only one correct one and, therefore, not only no need for several, but an actual loss involved in the use of any but the correct version. The uniformity of institutions and their centralized control are thus functions of the desire to preserve a dictated "absolute truth" rather than primary values in themselves.

Obviously, this has very far-reaching significance in education both in terms of academic freedom for the faculty and the development of creative and inquisitive minds on the part of the students. We have grave concern about an educational system which, at its presumably creative levels, postulates an overbearing major premise for every academic value and practice.

9. Strong nationalism

Like most newcomers to the Soviet Union, we were surprised by the amount of nationalism we found in the outlying republics such as Kazakhstan, Uzbekistan, and Georgia. Nationalism is evidenced by the use of national languages both in newspapers and in daily speech, by the pride the people take in their national music and local costumes, and by a variety of other ways. In higher education it is reflected by the predominance of the national language in the classroom, in the written classroom materials, and by faculties primarily composed of people drawn from the republic involved. We were aware of the historical tension between the Russians and the individual national groups, but we had little opportunity to judge whether this tension is growing or abating or, if constant, whether it is a serious factor or not.

10. Many visitors welcomed

We must call attention to the fact that the Soviet Union is virtually flooded with officially sponsored delegations from over the world. In two days' time we counted 17 different national groups from Europe, Africa, South America, the Middle and Far East

which were traveling in the Soviet Union as guests of the Government.

The office coordinating these exchanges reports directly to the council of ministers, and the program has a high priority in Soviet affairs. As to our own experience, we found that the top officials together with their associates were available to meet with our group. The Government is well equipped with staff and funds to do everything necessary to impress the visitors effectively. Planes are placed at their disposal, and guides and interpreters are assigned in abundant number. Factories, farms, schools, camps, theaters, national shrines, public works projects are on constant display to this stream of visitors whom the Soviet Government would impress, and the visitors enjoy the best of the nation's hospitality.

We commend this observation to our own Congress, both with reference to the numbers of exchange persons involved and to the realistic financial provisions which are made for appropriate care of the national guests once they arrive in the country.

11. Personal living standards secondary to public needs

We also think it pertinent to comment on the disparity between personal and public standards of living. Individuals live in meager to very modest homes and apartments, have relatively few clothes and personal effects, and enjoy very few personal luxuries. There is no comparison between their standard of living and our own.

On the other hand, they have quite extraordinary public facilities. The theaters are elaborate and in some cases most attractive. The drama, choral, ballet, and opera groups which perform in the theaters are very good indeed. Schools, libraries, museums, parks, and similar public facilities are distinctly superior. They are very extensively used and appear to be deeply appreciated.

Our point is that there is a pattern of consumption which is deemed to be in the interest of the public rather than the individual. In the scheme of values the large public cultural and recreational purposes receive a much higher priority than purely personal and material considerations. Such a value makes it easier for a nation to make the commitment to education which we shall describe in greater detail in subsequent sections.

12. Summary of general observations

Finally, we cannot say too often that both these general conditions and the more specific aspects of higher education on which we shall also report arise in a very different way than they would in our own country. The unusual role for women, the interest in "things cultural," the conviction as to the importance of "competition" do not arise from the exercise of discretion by the Soviet people. They, like the "dynamic" of which we have spoken, are the exclusive product of the Communist Party's thought and decision.

Dr. Alexander G. Korol of the Center for International Studies of Massachusetts Institute of Technology has wisely cautioned us against suggesting that we are "comparing choices made by the peoples of the two countries" for we are "in fact comparing American popular consensus with the fiat of the Soviet government (the Communist Party)."

The specific observations about higher education which are made later must be interpreted in the light of the general reactions to the pervasive conditions and trends which have been noted here.

III. STRUCTURE OF SOVIET HIGHER EDUCATION

The detailed structure of Soviet higher education is set forth comprehensively in a variety of sources readily available to the reader. We will describe it briefly only to make our subsequent observations clearer.

1. Not parallel to U.S. education

Soviet higher education does not parallel that which we know in the United States. In general, the term "higher education" is used to describe a multitude of teaching and research organizations which offer programs beyond the 10-year (primary and secondary) school. For the most part, these are 5- or 6-year programs which, when added to the standard 10-year school, make a total of from 15 to 16 years of instruction. Since this includes professional work in medicine, law, and other areas at the post-baccalaureate levels in our system, the 15- to 16-year span is to be compared with our 16- to 20-year span. If one adds the 2-year work period now required before undertaking higher education, 17 to 18 elapsed years are involved, but the actual time in school remains less than ours.

2. Academic program limited

The Soviet universities have a much more limited academic program than American universities. They are normally divided into two groups, the faculties of the natural sciences and the faculties of the humanities. Humanities often includes faculties of law and journalism; and, in some of these faculties, heavy emphasis is placed on Oriental studies.

Most of the professional schools are separately organized in technical institutes. These include medicine, architecture, engineering, agriculture, mining, and metallurgy, and a variety of similar professional offerings which would normally be part of a total university organization in our country.

At the present time, there are 39 universities and 734 technical institutes. Two hundred of these higher educational organizations are part of the Ministry of Higher Education (not to be confused with the separate Ministry of Education which is principally concerned with the administration of the 10-year schools). The others are administratively tied to the ministry of most immediate interest. The medical schools, for instance, are in the Ministry of Health; the agricultural institutes in the Ministry of Agriculture. However, the admissions policy of such institutes, their curriculums, textbook materials, and a series of other policy matters are determined by the Ministry of Higher Education and not by the ministry having administrative responsibility for them. As we shall comment later, this results in a mass of isolated and highly specialized schools administered not by integrated educational institutions, but by a variety of different ministries.

The internal structure of the universities and the technical institutes is relatively uniform throughout the country. As with curriculum and textbooks, the structure is specified by the Ministry of Higher Education in Moscow. Course content, in large measure, is a matter of national prescription as well. Admissions policy and examinations are the same throughout the Soviet Union. Theoretically, each republic does have its own ministry of higher education and the rectors of the universities in those areas would report to their republic minister but, in fact, few of the republics have actually been given their own ministries and, in any event, all basic educational policy appears to originate in the Ministry in Moscow.

Graduate degrees are of two kinds. The candidate in science degree, which probably is a little less than the equivalent of our doctorate, represents approximately 3 years of work beyond the first diploma. It involves the defense of a thesis as does our doctor's degree. The doctor's degree in the Soviet Union represents a number of years of additional work, and satisfactory completion presumably involves a number of significant contributions to knowledge. The degree is not awarded by the individual institutions, but by a national commission charged with this responsibility. It may be earned by a person with the candidate's degree who is either a member of a university faculty or of the staff of a technical institute or one of the several academies of sciences.

3. Academies of sciences

Related to the institutions of higher education are the academies of sciences. The oldest of these, founded in 1725 in St. Petersberg, is really the parent of all the others, including an academy for each of 15 other republics. Each of the academies maintains a number of research institutes, not only in the natural sciences, but in the humanities as well. This is quite consistent with the almost universal practice of referring to all areas of scholarship as science. (Statistical reports must often be read with this in mind.) Several of the applied fields, such as medicine, have their own separate academies. While these are primarily research organizations, in several respects they overlap the institutions of higher education. Some of the academies' research is undertaken jointly with the technical institutes or the universities, and there are joint appointments between the faculties and the staffs of the academies. A considerable amount of research toward the candidate or doctoral degrees may be undertaken in the research programs of the several academies. The academy in Moscow reports directly to the Council of Ministers, and its budget is, in fact, approved by the Prime Minister after he has personally conducted budget hearings and the Council of Ministers has given him its recommendation. It would appear that a very considerable importance is attached to these research programs by the highest levels in the Soviet Union.

4. Division of educational systems

Again, we must repeat that there are two quite separate systems of higher education. We examined and will speak about the one with which the largest part of Soviet society is concerned. However, one must never lose sight of the very important higher schools for the party leaders. We are not able to comment upon these institutions for higher political education. The educational system is as sharply divided as the society is divided, between the governors and the governed.

IV. SIGNIFICANT ACHIEVEMENTS IN HIGHER EDUCATION

1. Prestige

By all means, the most significant aspect of higher education in the Soviet Union is the prestige it enjoys and the consequent support it can command. It is held in the highest regard by all portions of society. Its importance is unchallenged by industrialist or bureaucrat. Attendance at a university or technical institute is a prized opportunity. Faculties enjoy prestige second to no other professional group in the Soviet Union. Higher education is viewed by the State as the principal method of channeling the abilities of the nation. It is regarded by the individual as indispensable to significant achievement in society.

2. Support

The most important single thing that we can say to our colleagues, to legislators, to alumni, and to others who support higher education in our country is that in the Soviet Union higher education is prized and those who prize it are prepared to pay the costs thereof. Some of these are monetary costs and some are investments in human effort, but both are given willingly (albeit by the state apparatus and not entirely by the people) in the interest of a value which gives a higher and more urgent priority to university education than our people give it.

If one seeks to be competitive, here is a real challenge. If one is fearful of the predominance of the Soviet Union, here, indeed,

is cause for fear. To urge that this is utilitarian instruction—that it is more training than it is education—does not minimize the challenge; indeed, in the short run it may increase the reason for fear.

3. High faculty salaries

This overwhelming dedication to higher education is a stimulus for a whole series of circumstances which we can only regard as fortunate for the Soviet people. The first of these has been commented upon by other observers—the high monetary returns to faculty members. Basic salaries are among the highest in the nation. Perquisites in the form of larger housing allocations and payments for books and articles contribute to the effort to recognize scholarship and those who are responsible for it. The Soviets find it difficult to believe that we attach great importance to higher education when our faculties are among the lowest paid professional people in our Nation.

4. Excellent plant and equipment

The premium placed upon higher education also results in plant and equipment which, in terms of relative capacities to provide, is far in excess of anything done in the United States.

Let us cite a few examples. Construction of new buildings for the University of Moscow began in 1949. In the ensuing 9 years more than $200 million, at the most cautious appraisal of the ruble, have been invested, and large-scale construction is still underway. The University stands on a hill overlooking the city and rises symbolically to a height exceeded in Europe only by the Eiffel Tower. In location, height, and extent, it effectively illustrates the high value which the Soviet Government and its people place upon learning. In the University at Alma Ata, an already extensive plant for a resident student body of only 4,000 has now been allocated $27 million for additional facilities over the next 5 years.

The Minister of Higher Education claims total plant development in the next 5 years for a resident student population of constant size will exceed $1.5 billion. These are significant statistics under any circumstance, but they take on new meaning when we realize that this investment in education comes at a time when the allocation of housing space is still 9 square meters or approximately 80 square feet per person. One may not agree to the standard of values, but one cannot escape the conclusion that it is a formidable competitor who will force this much personal inconvenience uopn the individual in order to provide the best possible educational facilities for her future leaders in science, technology, government service, and industry.

5. High student regard

Students have a high regard for university education. Several times as many apply as are accepted. Those who are admitted have a minimum work week of sixty hours of classroom, laboratory, and study. In addition, they are expected to participate actively in student scientific societies and sports clubs.

We are not of one opinion as to the comparison between the actual amount of work done by students in the two countries. Some of us are inclined to regard it as significantly more in the Soviet Union in general, though this generalization would not be true of our students in science, engineering, and several graduate and professional areas. Others among us doubt that the Soviet student makes a substantially greater effort, and are inclined to minimize the value of some of the classroom work.

In any event, we have another illustration of a substantial investment—in this case a personal investment—which is made as a result of the high value placed upon university education. To make a comparison in terms characteristic of our respective systems: in the Soviet Union the hardworking and superior student is regarded and spoken of as a "hero."' Too often, on our campuses, and more particularly our secondary schools, he may be referred to as a "grind." As we commended the Soviet comparatively greater financial investment to those who have financial responsibilities for American higher education, so we commend this investment of student effort to student groups in our country for their thoughtful examination.

6. Extensive opportunities for women

We have noted with approval that higher education in the Soviet Union provides extensive opportunities for women. Thirty-five percent of the faculties of the universities and the technical institutes today are women. They are assistants, docents, professors, deans, and directors. Fifty-one percent of the students in institutions of higher education are women. In many fields, the percentage is higher. In medicine, for example, 69 percent of the students are women.

Even in such a traditionally masculine field as engineering, women comprise 39 percent of the student body. In Alma Ata, the capital of Kazakhstan, we found that women constituted 35 percent of the student enrollment in the faculty of physics and mathematics—probably a factor 10 percent greater than is common at an American university. We can only interpret this extensive use of women in the institutions as one more evidence of the deadly seriousness of Soviet intent to maximize its every human resource in its effort to achieve world leadership.

7. Significant relationship to industry

We have noted a very close relationship between the higher educational institutions and the work-a-day community. Many students work for a year or more after finishing the 10-year school and before entering the university. As a result of Mr. Khrushchev's recent announcement, this figure will apparently grow to roughly 80 percent of those who are admitted to universities and technical institutes.

After completion of the 5-year program, individuals who are going on to do graduate work are again urged, and indeed often required, to work in industry for another 2-year period. In industry graduate students are working in the areas of their specialization, whereas in the earlier period they were simply making their contribution to society, and presumably becoming more mature in the process.

In both cases, the educational theory of the Soviets rests on several considerations. In the first place, they believe that after work experience students are more mature and, therefore, more able to profit from the education they are given. In the second place, they believe that both a humility and a sense of reality result from work, and so the student emerges as a better balanced individual.

We pass no judgment on this thinking but would imagine that in the Soviet kind of society the practice has much to recommend it. The reader will make his own comparisons with the extensive summer and part-time year-round work experience which many of our own students have.

Further illustration of the closeness of relationship between the higher educational institutions and the community is the very large number of correspondence and part-time students who are working full time and who are taking work at the university level either by correspondence or in the evening. There are about 880,000 such students. Each is taking work toward a degree and following the prescribed patterns of study that are followed by the full-time students. The seriousness of their intention and of their industries' commitment to them is illustrated by the fact that each of them returns to the campus for 2 months of study and preparation for examinations every year. Published reports in some cases claim a 10-day leave for entrance examinations, 30 days for laboratory work and yearly examinations, and 4 months' leave for preparation and defense of diploma projects.

We have calculated the significance of this amount of released time, checked it carefully with members of the Ministry and individual institution heads, and find that apparently about 250 million man-hours are made available by industry to enable these 880,000 students to return (with compensation and with all expenses paid) each year for their study and examination periods. If one wanted a practical illustration of the importance with which the Soviets view higher education, this figure of one-quarter of a billion man-hours of released industrial time is surely an effective example.

These several points have a reciprocal relationship. If industry is required to give up student time for higher education on the one hand, it is equally true that all students are expected to give time to industry either before entering the university and/or before going on with graduate work. All of this suggests a conviction about the importance of maintaining the vitality of the relationship between the institutions of higher education, on the one hand, and the working world, on the other. It may well be that this helps to dissipate the artificiality of being in college today and at work tomorrow and, after graduation, of maintaining an exclusively work-a-day interest without regard to any further university work. The Soviet system would suggest that work and study are closely related and should be related over a long period of time. This has significance for our society, which too often regards the two as separate and distinct, pursued at different times in life, and related only as the layers in a cake.

8. Extensive libraries

Further evidence of the seriousness of Soviet commitment to higher education is found in the size and the extensiveness of library collections. While a definitive appraisal ought to be undertaken by specialists, it would nevertheless appear that, even after making allowance for variations in terminology, the Moscow University collection is one of the largest in the world. It claims 5.5 million volumes and a capacity for 12.5 million. The University of Leningrad claims 4.5 million volumes and the large Polytechnical Institute in the same city with 11,000 students is said to subscribe currently to 600 foreign periodicals. A relatively small university in Georgia with 4,300 full-time students boasts of having more than 1.5 million volumes. The University of Central Asia in Tashkent, established after the revolution, has but 4,000 full-time and 1,000 correspondence students, but already has accumulated better than a million volumes.

We were unable to determine the seriousness of the gaps in professional literature covering the periods in which free exchange of information was made difficult by the Soviet high command. Nor were we able to verify or disprove the frequent American assertions regarding inadequacy of cataloging and incredible delays in finding and delivering books for use. We did see enough to know there is a very comprehensive coverage today of foreign literature.

Furthermore, in the Academy of Sciences in Moscow we saw copies of abstracts of foreign literature which many of us have urged upon our own national organizations for a long period of time without success. We would judge from what we saw of these abstracts that Soviet scholars have better abstract materials of foreign articles and books than are available to American scholars.

However inaccurate any individual statistics may be, the overall pattern is none-

theless clear; the Soviets place a high premium on libraries, are providing them for their scholars, and are paying the very high costs involved. We cannot say how extensively these collections are being used. This would take a different kind of study from that which our group was able to make. However, with the seriousness of intent which we found everywhere, and with the materials apparently available, we think there is relatively little question but that usage is substantial.

9. Extensive student aid

Educators are concerned that people of ability have an opportunity to utilize their abilities to their own maximum profit and to society's ultimate advantage. In our country we know well that a significant number of our most able students never go on to higher education. While this is, in part, because of lack of motive, some of it also stems from inability or unwillingness to provide the financial support which the student requires.

Without in anyway commending the way in which the Soviets achieve it, we must acknowledge that they appear to be extraordinary successful in removing financial handicaps to persons seeking to continue their education. In the Soviet Union more than 80 percent of the students are assisted financially either in whole or in part, and the individual stipends are increased or decreased in accordance with demonstrated academic achievement. Many American families sacrifice personal convenience and pleasure in the interest of their children's education. On the other hand, many do not. Indeed, we are painfully aware of the unwillingness of the student and his parents to borrow from loan funds for educational purposes, although borrowing heavily for household appliances. The Soviets force on their people the sort of sacrifice made voluntarily by some of our families, in the interest of achieving the same objective for a total student population.

None of us would like to see a duplication of Soviet methods for bringing able people to universities but, on the other hand, we cannot help being envious of the consequence of their large stipends which provide the opportunity for virtually all the nation's most able people to have a higher education. At the same time we must recall that only 20 percent of those completing secondary schools are permitted to continue their education. This, indeed, is a parallel with the point we have made regarding the utilization of women. It is again an effort on the part of the Soviet Union to take maximum advantage of the human resources available to it, insofar as it may have need for them.

10. Size of classes planned

We raised questions as to the size of classes as this has bearing on the quality of instruction. We found a general conviction that large lecture courses were appropriate in the first 2 or 3 years of university instruction. On the other hand, in the seminars in the fourth and fifth years and in the discussion periods in the earlier years there appears to be systematic effort to restrict the size of the class to 25 or less. Their general ratio between faculty and students (1 to 10) is better than ours except in a few of our very wealthiest institutions.

11. Emphasis on language training

Others have commented sentiently on the importance which the Soviets attach to foreign language instructions. There is no question of the accuracy of earlier observations on this point. In addition to the foreign language work which the student is required to take in the 10-year school, every student at the university and technical institute level is required to take 3 to 4 years of a foreign language. There is every reason to expect that as a result of this the next generation of Soviet citizens will have a very large number of persons with fluency in English, French, German, or Chinese. In addition, it is extremely important to recognize that there will be a substantial number of people who will be able to speak a variety of Middle or Far Eastern languages which are regarded as so extremely specialized in our own country that only a handful of students are aware of them. In the Oriental Institutes found at several Soviet universities, language training is closely related to area studies which provide an intensive concentration on the foreign country's geography, culture, religion, government, institutions.

While the study of foreign languages is a matter of considerable preoccupation with Soviet educators and government officials, the intensity of their preoccupation and the extent of their pride should not be interpreted as having only academic concern. These are not people who are interested in culture for culture's sake and who think that fluency in a foreign language is of value because it suggests one's cultural attainments. We have already attempted to stress that this is essentially a utilitarian society, and its educational system is patterned after utilitarian values. We would suggest that the real significance of the emphasis upon foreign language competence is that the Soviets fully expect such a major role in world leadership in the years ahead that it will be incumbent upon their industrialists, their scientists, their government officials, their professional people generally to be fluent in the languages of the communities which they dominate or in which they exercise substantial influence.

In other words, foreign language instruction does not have the significance which we might accord it. Rather, it is, in their eyes, a measure of the extent to which their leaders will be able to discharge effectively their responsibilities in the days when they have even greater world hegemony. May we again suggest that if there is to be competition between our country and the Soviet Union, this is a very sobering consideration, even after allowance has been made for the fact that our need may be less since English is a second language in such a large portion of the world.

12. Speedup of professional study

Every educational system accumulates barnacles in the same fashion that other institutions do. We looked within politically neutral fields in the educational system to see whether the utilitarian interests of the new culture might have found ways of eliminating unnecessary time and motion. Evidence of Soviet ability to perform the same function in a more limited period of time was suggested by their experience in medical education. We are not prepared to draw a conclusion; but members of our group who had the best opportunity to observe the medical institutes and earlier visiting groups of medical educators suggest that the Soviets may educate their physicians as thoroughly in 6 years as we do in 8 years. Admittedly, this is at the expense of a liberal education, as we understand the term.

13. Physical education important

Whatever its commitment to the intellectual aspect of campus life, the Soviet system has not lost track of the continuing importance of personal physical vigor and health. None of the institutions represented in our delegation has as stringent a requirement in the field of physical education as is uniformly specified for the higher educational institutions in the Soviet Union. During the first 2 years every student is required to devote 136 hours to physical education. After that, he has options but is still required to do a certain amount of work to keep in the best possible physical condition.

Although we were unable to appraise the consequences of such a program, it is clear that the Soviets attach great importance to physical education and require substantially more of it than we normally do. This point has been treated here on the assumption that a well-considered physical education program is a significant addition to the intellectual work undertaken at the higher educational levels.

14. An example of accomplishment

We have attempted to outline some of the impressive characteristics of higher education in the Soviet Union. The question must remain as to the adequacy of the product. This is more than we could undertake to judge. However, as one measure of what can be accomplished by the kind of determination to which we have referred, the experience of the Republic of Kazakhstan will be of interest.

At the time of the revolution, Kazakhstan was a wide area inhabited by nomadic peoples. Illiteracy is alleged to have been at least 98 percent, but by any calculation was extraordinarily high. There were no institutions of higher learning, and there were only a handful of students from that area who traveled to other parts of Russia for education. Libraries were virtually nonexistent. Today, judged by almost any standard, a substantial amount has been accomplished. There are 27 institutions of higher education in that Republic. Of the 8 million people more than 55,000 are studying in institutions of higher learning today. Illiteracy, if not eliminated, has at least been reduced to the point of relative inconsequence in this 40-year period. We encountered professors in the medical school who had never been taught to read until age 16 and who have now made professional contributions which have been acknowledged in the outside world. The Republic's Academy of Sciences includes a large number of research institutes. One of them, situated high in the mountains, is the Astro-Physics Institute which, among other programs, is analyzing the orbits of earth satellites. As we have noted elsewhere, it supports seven or eight theaters, has an excellent Republic symphony, which we heard, maintains its own ballet troupe, and has built a park system in its capital which would be the envy of any American city of 400,000.

Judged by almost any standards, there has been a most successful effort in the cultural development of the people of the Republic. With a conviction about the importance of cultural developments generally and higher education specifically, these people have allocated their scarce resources to these fields. The consequences are impressive. At the same time we are fully aware of the fact that the same state determination which accomplished these improvements also dictated the drastic collectivization and forced resettlements in this Republic which had very serious human consequences for large masses of Kazakh population.

15. Summary

As we look at the preceding pages and review our appraisal of the positive aspects of the Soviet system, we come to several general conclusions.

1. The Soviets attach a greater value to higher education and have adopted a more pragmatic approach to it than we have in this country.

2. They do so because they regard higher education as a vehicle for the improvement of their own society on the one hand and for the assumption of world leadership on the other.

3. In the interests of the two considerations set out in point two above, they are prepared to pay the human and financial costs involved in making the most of higher education.

4. We should recognize their accomplishments in higher education, anticipate future achievements, and be aware of the significance of these developments for our society.

5. If we must live in competition with the Soviet Union, every educator, legislator, alumnus, taxpayer, student, and parent must develop a deeper appreciation of the values of higher education and be prepared to accept a greater commitment of his financial resources to higher education.

V. RESERVATIONS REGARDING SOVIET HIGHER EDUCATION

1. Basic philosophy unacceptable

Most readers of this report are well aware of the basically different premises from which Soviet and United States higher education proceed. The former regards education as an instrumentality for the training of persons who will serve the defined objectives of the State. If scientists and engineers are needed, individuals will be trained in those fields. Were public health suddenly to become a matter of major consequence, quotas for health education would be suddenly and perhaps drastically revised. On the other hand, if a surplus should develop in any field or the costs of the training made too costly, the quotas for admission and the facilities provided would be systematically curtailed. The objective is to train people to staff the State's programs.

In our own country, of course, we are concerned primarily with the development of the individual. The educational system is created in order to enable him to develop his capacities and interests to the maximum extent. Fundamental here is our assumption that a dynamic and free society will be able to utilize fully every new resource that is thus created in the individual.

In one culture higher education becomes a means for the achievement of defined objectives through planned efforts to realize them. In the other it is an instrumentality for individual growth which is assumed to create a total resource which will enable that society to grow more rapidly and more fully than it could if it proceeded on limited definitions of objective. This difference in premise as to the purpose of higher education and, in turn, the concept of social organization and change upon which it is based explain many of the specific differences found in the two systems and the reason we find many of the Soviet conclusions unacceptable.

2. Many students rejected

The most obvious difference between the two systems, stemming from the varying premises, is in admissions policy. Every year over 1.5 million students graduate from the 10-year schools but only 440,000 (220,000 full-time and 220,000 part-time) are admitted to institutions of higher education. The Minister of Higher Education predicts that in the future an even higher rejection rate may be expected.

These young men and women are not necessarily refused admission because of inability to profit considerably from higher education, but rather because the State has no specific and defined need for them in the fields which it has decided are important. The quota for chemical engineers in any given year is determined by an analysis of the new industrial needs in that field 5 years hence, plus the expected rate of attrition due to death and other causes within the present ranks of chemical engineers, and by other pertinent factors. Once this determination has been made, the institutions are assigned their quotas, and they will admit students on that basis. There may be thousands of others who are capable of being chemical engineers and who could make a contribution to society, but the goals have already been defined and the number of positions required to realize them has been determined; hence, only a specified number of students is required. This is repeated throughout the system.

The justification of this practice on the ground that a completely ordered society has no choice but to so regulate its educational program only transfers the grounds of our criticism from the immediate field of education to the more fundamental question of the limitations on creativity which such a highly regulated society implies. Or perhaps, it would be as well to say that in this denial of opportunity for growth of a large number of capable individuals in their areas of natural interest, and their deflection into channels deemed more important by the state in order to serve the purposes of a regulated society, we have another illustration of the limitations of such social organization. If we are apprehensive because of the thoroughness of the training of Soviets in certain areas, we can take satisfaction in the fact that we are not losing the benefits of the development of hundreds of thousands of students whom we would permit to follow their own chosen interests but who are denied that privilege in the Soviet Union.

3. Overspecialization

There is a further consequence of the use of higher education as a vehicle for the realization of state objectives rather than for the development of the individual person. Once he has been admitted to an institution of higher education the Soviet student becomes a specialist. If he enrolls with the faculty of biology, an overwhelming amount of his work is taken in that or in closely related fields. If he is enrolled in engineering, he has 5 years of strictly engineering work as well as applied, but relatively little theoretical, work in the natural sciences. The objective of every faculty is to train people who are thoroughly acquainted with the subject matter of that individual faculty. A well-trained specialist is the objective because specialists are what the state needs for the fulfillment of its defined objectives.

In terms of our premise, the Soviet student is seriously overspecialized. We are aware of the fact that in the 10-year school a significant effort is made to give the individual work in literature, history, language, music, and other aspects of the humanities to perhaps a greater extent than we succeed in doing in our elementary and secondary schools. However good training is at the lower-school levels, it is, in our judgment, no substitute for a liberal education of the mature mind either immediately prior to or in conjunction with professional education at the university level. Required courses in Communist Party history and philosophy and in foreign languages taught for purely utilitarian purposes are no substitute for an adequate grounding of the mature mind in the humanities and in the social sciences. Returning to the basic disparity in premises, we may say that, judged by our premise, Soviet students are seriously overspecialized, but judged by their premise they are being effectively developed as individual staff units in a highly organized society.

4. Prescribed curricula

Higher education which proceeds from the Soviet premise has in it something of the quality of prescription filling. Having determined what kinds of specializations it requires, the ministry first settles upon the curricula which will most fully achieve this specialized training, then forwards to the individual institution for implementation both that curricula, the individual course content, the textbook materials, and related readings. This has an important consequent impact on the individual professor. His role is that of faithfully inculcating prescribed materials. In a large sense, then, he is denied the opportunity for innovation, for the development of new interpretations, or for the search for new insights, all that we regard as essential ingredients of the inquisitive mind. Academic freedom in the affirmative sense (in which we too infrequently use it) is largely missing in Soviet institutions of higher education. It is not surprising, therefore, that we should encounter frequent comments about the mediocre and rote character of the classroom instruction.

An exception may be research in the natural sciences, though it is probable that this results largely from the absence of substantial conflict with party dogma. Where there has been conflict, as in genetics, dogma has replaced genuine academic freedom.

We postulate the importance of academic freedom as a guarantee to the individual faculty member that he may fully realize himself, and thus make his maximum contribution to his students, to the institution, and indeed to the world of scholarship as a whole. It parallels our concern that every able student have the opportunity to attend a college or university, to the end that he too may realize his full potential. To state it another way, in the Soviet system a large part of the faculty—and we must be careful not to overgeneralize this—would appear to be serving the prescribed ends of the state rather than fully realizing themselves as the interpreters and seekers of knowledge.

5. Serious gaps in subject matter

The same circumstances which militate against free inquiry by the individual faculty member and flexibility of curriculum development by individual institutions have resulted in serious gaps in the subject matter fields included in the university offering.

Because of a variety of aspects of Communist doctrine, and because of the pragmatic approach which demands a demonstrably utilitarian curricular content, one finds relatively little attention being paid to the social sciences as we know them. Economics is often buried under the heading "History of the Working Class." Social psychology is virtually unknown. Even the rudimentary psychology staffs are buried in faculties of law and philosophy. Sociology and anthropology as fields for objective inquiry are virtually nonexistent.

As we have noted elsewhere, there appears to be little awareness of the research undertaken in the behavioral sciences during the past generation in other parts of the world. Curiously enough, in a managed society we found relatively little interest in organization theory and related aspects of the field of administration. Although there is interest in cybernetics and operations research, in general we found little curiosity and no feeling of the inadequacy of their offerings in these fields. We did find one or two notable exceptions of individuals who were aware of what was developing in these areas in other parts of the world and who were at least intellectually curious about them. In one case we actually had a private admission that psychology, sociology, and anthropology would need very great strengthening in the Soviet Union in the years ahead. This, however, was a most exceptional point of view. In this connection we must note that we were seldom asked about new developments in thought in the outside world about fields other than the natural sciences.

6. Student development curtailed

Again we have reservations about the breadth of minds emerging from Soviet higher education. We are not speaking here of breadth of substantive material assimilated, but rather of the flexibility, the capacities for critical analysis, and the faculty for intellectual creativity.

The rigidity of the curriculum denies the student the opportunity to range widely in the development of his talents. Indeed, responsible Soviet administrators both in the ministry and in the institutions are themselves of the opinion that a rigidly prescribed curriculum and the desire that sub-

stantially all students obtain passing grades have discouraged the better minds from developing as much as they might. Here their complaints about their own higher education bear strong resemblance to the deep misgivings many of us have about secondary and elementary education in our own country.

But beyond the stereotyping effect of the curriculum itself there is the further point of the attitudes of instruction which appear to prevail in many faculties. Subject matter is passed to the students in what we judge to be a relatively doctrinaire way. Absolutist concepts which we have noted earlier as prevalent in the society as a whole discourage the student from critical analysis of materials placed before him. Most subjects appear to have an ordered frame of reference within which he is expected to do his thinking. We would judge that in a very substantial segment of higher education the student never has an opportunity to exercise his critical faculties with reference to first principles. As a consequence, we would suppose that the average Soviet student emerges from his university training with more knowledge, but with less of a critical faculty and with less analytical skill than the average student in our system.

Enough has been said to make it clear that what is called higher education is in fact training and not education. It is specific, pragmatic, concentrated indoctrination. It is not liberalizing, wide-ranging, thought-provoking intellectual development. Here is its short-run efficiency and its major threat to a competitor. But here, too, is its basic long-run built-in limitation.

7. Research limited

Research is not prescribed to the extent teaching is. There is a great deal of recognition of the need for the individual researcher to take the initiative in the development of his projects. However, once he has determined what he would like to do, his project is coordinated with work being done elsewhere in the nation through a series of regional and national reviewing bodies. He may in this way be assisted by information from other persons working in related fields. On the other hand, he may be denied funds with which to proceed and otherwise discouraged from working in this area in the event that the coordinating body is of the opinion that the research might be more effectively undertaken by some other person in some other institutional setting. To the extent that this represents coordination and communication, it is certainly helpful. To the extent that it represents centralized control, it again reflects the difficulty encountered by the individually creative mind which seeks to undertake research in its own directions by its own methods. It is consistent with the general pattern of utilitarian organization which may achieve monumental goals in prescribed fields but does so at the expense of what we assume to be the greater long-run good of unordered creativity.

8 Interdisciplinary and interprofessional communication lacking

We have grave reservations about the fundamental structure of higher education in the Soviet Union. Note has already been made of the fact that the concept of a total university is nonexistent. Professional schools are not organizationally related to the faculties of the natural science, humanities, and rudimentary social science disciplines. Medicine will be in one institution, engineering in another, law in a third, and the pedagogical institute still elsewhere. There does appear to be an occasional joint appointment which helps to mitigate the seriousness of this excessive separation.

Further fracturing of our concept of the university comes as a result of the establishment of a multitude of research institutions which undertake much of the basic research which in our country would be undertaken on the university campus. This is research sponsored by technical institutions within the several academies of sciences, medicine, et al. Indeed, there is general conviction in the academies of sciences that the more fundamental research is very largely the prerogative of academy-organized institutes and not of the universities or nonacademic technical institutes.

We thus have a double fracturing of the concept of a community of scholars. In the first instance, it is fractured by separating the faculties into isolated organizations and, secondly, it is further divided by the extensive inroads which the purely research institutes make upon the research function of the several faculties. This is not a chance development, but was deliberately undertaken to achieve a specified objective.

Some of the Soviet universities were at one time real communities of scholars. However, they were systematically divided in the interest of achieving two things. First, the Soviets believed that a greater specialization resulted from separation, and thus that they had prospect of realizing their immediate goals more quickly and efficiently than if less specialization were achieved. Second, it was thought that there was practical advantage in associating individual faculties with the fields of their application. In other words, the colleges of agriculture would do better if placed in the Ministry of Agriculture than if placed on a university campus, and the schools of medicine would be of greater immediate use if made part of the Ministry of Health. The immediacy of the relationship has a utilitarian value which in their view is compelling.

9. Dangers in separation of educational units

In our view, this compounded fracture of the university community has a number of serious implications. We think that it denies the faculties in similar areas the stimulation which comes with constant association. The Soviets would like the physicists in the engineering schools to be exclusively interested in the applied aspects of physics for the immediate and practical results that are achieved thereby. We are inclined to believe that, in the long run, better engineers will be trained if their physics faculties are geographically and professionally close enough to the theoretical physicists, not only to assure their continued stimulation, but also to keep both groups immediately abreast of developments in each of the areas with which the two are concerned. We would make the same point with reference to many of the disciplinary faculties and professional schools and would urge the same point as between faculties of professional schools themselves. A community of scholars is tremendously important in the Nation's total intellectual growth, and it is made immeasurably more difficult of attainment in the Soviet Union than it is in our own academic world.

In our judgment, students also suffer from this fracturing. Any tendency of the student in a professional school to broaden his preparation by taking work in the disciplinary faculties will be discouraged when it means transferring from institution to institution and perhaps even from city to city. It is a structure, in other words, which digs deeper an already well entrenched tendency to excessive specialization.

But we believe there is a further danger which results from this kind of institutional atomization of learning. We wonder whether it does not discourage the development of new fields of inquiry and instruction. In other parts of the world we have noted the retarding effect which rigidly structured faculty organization has upon the growth of new fields of scholarship. To mention but a few: law faculties in Europe have systematically frustrated the development of the field of political science; economics faculties in many parts of the world have discouraged the growth of independent instructional and research faculties in the field of business administration; the field of public health had difficulty in establishing its identity as long as it was dominated by faculties of medicine.

There is nothing unusual or reprehensible in this. Faculties, like all other social organizations, develop their internal cohesiveness in the protection of established views and values. They seek to protect the organism rather than to multiply it or to break off cells which will become new organisms with their own systems of knowledge. But it is part of the architectural role of academic leadership to assure a structure which is sufficiently flexible to permit the growth of new organisms when the need arises. We believe that this is a role which is best undertaken in the academic atmosphere of the total university community. We doubt that it may be properly assumed in the academically remote offices of a national ministry of higher education and in the substantial number of other ministries with technical institute responsibilities which are coordinated only through the Council of Ministers.

This fractured system of organization is also extravagant in its use of money and manpower. The separated institutions maintain their own faculties in the natural science and humanities disciplines rather than depend upon the services of the basic departments in a complex organization which can supply the needs of several specialties.

VI. CONCLUSION

In conclusion, we must say that we would have preferred to digest and integrate our observations over a longer period of time; but we wanted to release this report within a reasonable period after our return. In many respects it has been a puzzling experience upon which we will enjoy rather extended reflection. Moreover, we certainly wish to be understood as being constantly aware of the reservations and disclaimers which were outlined in the early part of this report. On specific matters we do not pretend to bring back definitive answers. Rather, we return with tentative conclusions which we hope are based upon careful observation.

Whatever our caution may be about specific aspects of Soviet higher education, we are, nonetheless, reasonably confident of the overall pattern which appears to us to emerge. Affirmatively, we may say that the Soviets have achieved general recognition of the primary importance of higher education in any effective society, that they are prepared to support it with human effort and state resources to an extraordinary degree; that their overall approach is highly realistic and pragmatic; that their specialized curricula and institutional structure give promise of very impressive results in the specialized fields to which they have given attention, and that in the very large geographic areas which previously were underprivileged in education they have made astonishing progress in building the institutions, the facilities, the faculties, and the values of an effective system of higher education.

On the other hand, we return with an equally clear impression that the product of their educational system is overspecialized, less intellectually self-reliant, less competent in critical analysis, and probably on the average less intellectually creative than that which an institutionally dynamic and individually creative society requires in the long run. In other words, the Soviets profit from specificity of object and the specialization of their educational system but, by the same token, they may well suffer from the counterpart dangers of overdirection, lack of breadth, and lack of individual creativity.

Nuclear Testing and the Problem of Peace

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following text of an article by Henry A. Kissinger entitled "Nuclear Testing and the Problem of Peace," which appeared in the October 1958 issue of Foreign Affairs. I think it is very timely in view of the debate that has arisen regarding the controversial question of our abandonment of nuclear testing:

NUCLEAR TESTING AND THE PROBLEM OF PEACE
(By Henry A. Kissinger)

I

President Eisenhower's announcement of the suspension for 1 year of all nuclear weapons tests and his invitation to the Soviet Union to negotiate a permanent ban on tests has raised hopes all over the world that a beginning has been made in controlling nuclear weapons and that a big step forward has been taken in the quest for peace.

The hopes which have been focused on a nuclear test ban are intense and varied. Many thoughtful people concerned about the danger of radioactive fallout maintain that the quest for security must not be allowed to endanger the health of future generations. Others argue that the end of nuclear testing is essential to build confidence for more fundamental agreement, especially in the field of disarmament. It would prevent the diffusion of nuclear weapons to other powers. It would lessen the dangers of thermonuclear wars. And these arguments are reinforced by an insistent Soviet campaign to the effect that nuclear tests should be unconditionally prohibited and nuclear weapons outlawed.

The yearning for an end of the cold war reflects the deepest aspirations of the free world. So intense is it that we have been ready to stigmatize as more immoral than other weapons the weapon around which we have built our defense of that world. But the very intensity of our desire for peace may increase our peril. It may make us seek agreement for its own sake and thus set in motion a train of events which will divide the non-Communist world and undermine its resolution. The hopes which have been attached to a complete ban on nuclear tests are surely understandable. But they should not have been raised so high without a careful analysis of the political and psychological implications of such a step and its relationship to our defense policies and long-term goals. Instead we became preoccupied with technical problems of a test ban, which are by no means the most important. When we agreed to meet with Soviet scientists at Geneva, we clearly implied that if inspection was found to be technically feasible, we would be willing to discuss a complete ban. Therefore, when the scientists had made their report, we felt impelled to make a critical policy decision, although only its technical aspects had been fully explored.

This article questions whether a complete suspension of nuclear testing is desirable, whatever the possibilities of inspection. It argues that we should deal with the health hazard by ending tests which involve appreciable fallout but that we should agree to a complete ban only as part of a general disarmament agreement which includes conventional weapons. The desire to avoid a nuclear holocaust and to achieve a lasting peace should be taken for granted in any debate on this problem. At issue can only be the best means to achieve these ends.

II

Because of the emphasis laid on the technical aspects of ending nuclear tests, it may be useful at the start to discuss these and to point out some of the difficulties involved. It is generally agreed that surface nuclear explosions can be detected at considerable distances by equipment which measures radioactivity and shock waves.[1] The difficulty arises with underground testing, high altitude testing, and testing underneath the polar icecaps, and with the increasing civilian uses of nuclear energy.

With respect to underground testing it is argued that a system of inspection stations spaced 300 miles apart could detect all underground explosions of about 1 kiloton explosive power except in the seismic belt where earthquakes are more frequent, requiring inspection stations on a 100-mile grid. Nevertheless, serious problems remain. Methods of "buffering" explosions so that the seismic shock is weakened have barely been explored, but indications are that they can reduce the seismic wave by a very substantial percentage. Moreover, the seismic equipment can locate the shock only within an area several miles in diameter. Some, but not all, of the characteristics of an underground explosion can be distinguished from those of an earthquake. Conclusive proof can be obtained only by finding the precise location of the suspected evasion either by means of boring for radioactive samples or by discovering an entrance to the test site. This is a considerable task in an area which may cover more than 30 square miles. And the negotiators at Geneva agreed that the problem of high altitude testing was very little understood at this stage. The same difficulty may apply to testing underneath the polar icecaps.

Again, as the peaceful uses of nuclear energy become more widespread, other means of evasion may be developed. In fact, the United States explicitly and the Soviet Union by implication have both exempted peaceful applications of nuclear energy from their announced test bans.[2] One of the obvious applications of nuclear energy is in mining. It will not be easy to prevent a country from using devices for blasting which also have military applications, or from gaining militarily useful knowledge by checking the results with scientific instruments. To be sure, inspection teams could be invited to witness each peaceful use of nuclear explosives; but as the peaceful applications of nuclear energy grow more common, this will become increasingly difficult. A nation determined on evasion could overload the inspection mechanism by hiding test explosions among hundreds of ordinary ones.

In any event we must keep in mind that the best inspection system can guard only against presently known methods of evasion. In the nature of things it is difficult to protect against a contingency not yet imagined. And finally, evasion will be easier to attempt and to conceal in the Soviet Union than in the West. In the West a ban on nuclear testing will be largely self-policing, because public opinion will not countenance evasion and scientists will not lend themselves to it.[3] No such inhibitions will exist in the U.S.S.R.

Yet the most vexing problem of inspection is not that of obtaining information, difficult as it is, but the political consequences to be drawn from whatever information does become available. Obviously a violation of the nuclear test ban is not a casus belli. It may not even be a sufficient cause for the injured party to start testing again. Once nuclear tests have been banned, the free world will not abrogate its agreement easily, even in the face of strong provocation. Even if it reached a decision to do so, years might be consumed before tests could be resumed. For one thing, a nation like the United States which had observed the ban might by then have nothing to test. A ban extended over a period of years would almost certainly lead to the attrition of our weapons laboratories, whose ablest scientists would be increasingly tempted to concentrate on more promising fields. For another, the United States would have great difficulty reassembling its testing machinery. Present tests involve scores of installations and thousands of personnel. It would be impossible to keep these teams together once a test ban had been agreed upon. Even a strong indication of Soviet violation might therefore leave the United States at a serious disadvantage or at least without adequate recourse.

Moreover, there is a great difference between obtaining information which is technically reliable and establishing a similar degree of political and psychological clarity. It is often maintained that a violation of the test band would have a catastrophic impact on world opinion. But this assumes a degree of certainty about Soviet intentions which is belied by all past experience. The Soviet Union has always been skillful in presenting its challenges in an ambiguous manner, partly by masking its own actions, partly by charging its opponents with similar transgressions. According to its usual tactics, the Kremlin, within a short time of signing an agreement to end nuclear tests, would quite probably accuse us of violating it.[4] In the resulting atmosphere of recrimination it would be difficult to separate sincere charges from the customary exchanges of the cold war. The result might well be a further weakening of the will of the free world.

Finally, it is quite possible that a complete ban on testing would enable the Soviet Union to overtake us in the military applications of nuclear energy. Whereas a complete test ban would magnify our already great difficulty in inducing our ablest scientists to work on nuclear weapons, it would not prevent the Soviet Union from keeping its research teams together either by compulsion or by arranging appropriate incentives. Also, the Soviets may feel less dependent on testing in order to achieve scientific progress. The experimental method is instinctive to the West. Marxist dogmatism places much greater reliance on theory. For example, the Kremlin announced its first nuclear explosion several days before it took place. Thus even if the rate of scientific progress were the same, the Soviets may gain an advantage because of greater confidence in untested data. Or else they may use a temporary cessation to prepare tests of superior weapons.

Nevertheless, the deepest concern about a complete ban on testing does not arise from the danger that it may permit Soviet technical advances or from the political and practical difficulty of inspection. We must consider whether the basic motive behind Communist pressure for a complete ending of nuclear tests may not be the Soviet Union's conviction that it would gain a substantial advantage from a complete ban which it scrupulously observed. The wisdom of a complete end of nuclear tests so often advocated as a first step depends on the answer to the question "first step toward what?"

III

It may be argued that such a question is a symptom of the distrust which has produced the cold war. Unless both sides are willing to take some risks in the quest for

Footnotes at end of speech.

peace, it will be said, the world will be doomed to an indefinitely continued armaments race and eventual destruction. Since the death of Stalin, great changes have occurred in the Soviet Union, brought about by the appearance of a new bureaucracy, the increasing demand for consumer goods, and the creation of the entire apparatus of an industrialized society. According to this line of thought, the Russians' expressed desire for peaceful coexistence represents a concession to the pressures of these new forces. Given time and patience, the Soviet Union may evolve into a society not unlike ours.

Because these assertions derive from attitudes which have contributed so much to the stability and often the freedom of our society and that of many of our allies, it is difficult to contradict them. A status quo power always has difficulty in understanding a revolutionary state. All its instincts tempt it to accept peaceful professions and to refuse to believe in implacable hostility.

Were it not for this difficulty of understanding, no revolution would ever have succeeded. A revolutionary movement always starts from a position of inferior strength. It owes its survival to the reluctance of its declared victims to accept its professions at face value. It owes its success to the psychological advantage which single-minded purpose confers over an opponent who does not believe that some states may prefer victory to peace. The ambiguity which makes the Soviet challenge so deadly derives in part from the skill of the Soviet leadership; but the danger is magnified by the tendency of the free world to choose the interpretation of Soviet motivations which best accords with its own preconceptions. Neither Lenin's writings, nor Stalin's utterances, nor Mao's published works, nor Khrushchev's declarations, have availed against the conviction of the West that a basic change in Communist society and aims was imminent and that a problem deferred was a problem solved. It is only to posterity that revolutionary movements appear unambiguous. Thus a status quo power is never certain until too late that another state intends to overthrow the international system, especially as the revolutionary power will present each demand as a specific, limited objective, which often in itself seems quite reasonable. However weak at the beginning, it can substitute psychological strength for physical power; it can use the very enormity of its goals to defeat gradually an opponent who cannot come to grips with a policy of unlimited objectives.

This becomes a particular problem if the revolutionary power exploits this weakness systematically. In Soviet terminology, for example, the concepts war and peace are inherently confusing. Since, according to Communist theory, the social structure of capitalist states necessarily produces war, real peace can be achieved only by the world-wide triumph of communism. Therefore any act by the Soviet Union, however warlike on the surface, is pacific by definition and any measure by a capitalist state, however seemingly conciliatory, tends toward war. Thus the slogan peaceful coexistence has never had more than a tactical significance in Communist terminology. "Marxism-Leninism," wrote Mao, "does not allow concessions to be regarded as something purely negative. * * * Our concession, withdrawal, turning to the defensive or suspending action, whether in dealing with allies or enemies, should always be regarded as part of the entire revolutionary policy, as an indispensable link in the general revolutionary line. * * *"[5] To be sure, the protestations of peaceful coexistence have recently become more insistent; but the reason is not very flattering to the West, since it consists in the assertion that war has become unnecessary in order to encompass the downfall of the free world.

The argument outlined here may not prove persuasive to the increasing number of people in the free world who desire an end to the cold war so intensely that they ignore the lessons of the past and the fundamental professions of Communist doctrine. But even the most optimistic should ask themselves why Khrushchev can be expected to deal any more gently with the countries of the free world than with his erstwhile colleagues in the Soviet presidium. What was the doctrine of collective leadership but the principle of peaceful coexistence applied among the Soviet leaders? Yet it was used ruthlessly by Khrushchev first to paralyze opposition by branding it contrary to the principle of collective leadership and then to defeat his opponents one by one. Khrushchev could not have succeeded domestically had he not been able first to convince his colleagues of his sincerity. Is it not at least possible that the men who arrested the leaders of the Hungarian revolution while negotiating an armistice with them and who executed them despite a promise of safe conduct are now seeking to apply these same methods to weaken the cohesion of the free world and then to destroy its members piecemeal? A wise policy will at least consider this contingency and will not risk everything simply for the sake of agreement.

Certainly the free world has a duty to seek to spare mankind the horrors of another war. It must strive for any agreement that offers such prospects. But a real relaxation of tensions can come about only if the Soviet leaders become convinced that they cannot use negotiations to induce us to disarm unilaterally, that any agreement must be mutually advantageous. We must consider, then, whether insistent Soviet demands for a complete ban on nuclear testing are not designed to paralyze the free world rather than to bring about peace as we understand the word.

IV

Rightly or wrongly, the free world has based its defense on nuclear weapons. We need not here review the circumstances nor analyze the motives that led to this decision. It is enough to note that nowhere in the Western World are there sufficient conventional forces to resist the Soviet preponderance in conventional strength; and nowhere is there any immediate prospect of developing them. Nothing now stands in the way of Soviet domoniation of Eurasia save the Soviet reluctance to pay the price of a nuclear war.

That is why the Soviet Union has systematically sought to paralyze the West's will to use the weapons around which its entire defense effort has been built. It has done this both by creating a substantial nuclear stockpile of its own and by seeking to have nuclear weapons outlawed. Appealing to the most basic fears of humanity, the whole apparatus of Soviet policy, from diplomacy to peace congresses, has sought to undermine our reliance on the most effective—or at least the only available—means of resistance to Soviet domination.

The free world should therefore have no illusions about the implications of a complete ban on nuclear tests. For if a cessation of nuclear testing is a "first step" to anything it is to an increased campaign to outlaw nuclear weapons altogether. If these weapons are too dangerous to test, so the argument will go, they are surely too terrible to use. That this is the aim of Soviet policy was made explicit by Khrushchev: "After the termination of nuclear weapons tests, it would be possible to raise the question of the powers making a solemn undertaking not to use hydrogen and atomic weapons and henceforth to adopt a decision on the total prohibition of nuclear and thermonuclear weapons."[6] In the present state of Western defenses such a prohibition is tantamount to unilateral disarmament. The onesidedness of our military establishment has deprived our diplomacy of flexibility. If the free world possessed a conventional force sufficiently powerful and mobile to blunt Soviet aggression by similar forces, the complete cessation of nuclear testing would not be so dangerous. But none of the advocates of a nuclear test ban has been prepared to champion—and many have actively opposed—a build-up of conventional forces sufficient to offset the grave risks which their proposals invite.

Nor will the weakening of the free world be compensated for by a victory in the battle for the minds of men. In the current atmosphere where all attention has been focused on the most cataclysmic uses of nuclear weapons and we have failed to develop or to offer a plausible alternative, a complete cessation of tests will merely serve to shift pressures to the banning of nuclear weapons. We must be sensitive to world opinion. But we have also an obligation to contribute to shaping it. We must succeed in conveying the fact that unless the free world is prepared to accept a settlement on Soviet terms, we must have a military establishment which we are prepared to invoke for our defense. If we are not willing to run some risks for the preservation of our values and our interests, the collapse of the free world is inevitable and no amount of rhetoric can eliminate this fact.

V

The willingness to run risks depends in part on the options afforded by our military establishment. We require more conventional forces. We must have a wider spectrum of nuclear weapons. We must stop pretending that we can have security on the cheap.

One of the penalties of being on the defensive is that the choices which we must make are more difficult than the aggressor's, if only because the dangers against which we must protect ourselves are more varied. The aggressor can choose his point of attack; he can select the weapons system which seems most promising; he can concentrate on the area where his opponent is weakest either geographically or in weaponry. The defender must be able to defend all likely targets of aggression and against any weapons system that may be employed. Two consequences follow: (a) at equal levels of military effort the aggressor usually has an advantage; and (b) the defensive requires a more advanced weapons technology than its opponent. The side which concedes the first blow must have a more mobile and better protected retaliatory force, for it must be able to withstand the attrition of the initial attack. Its weapons must be lighter so that they can be rapidly moved to threatened areas. It must possess a range of capabilities which deters the aggressor from tilting the scales by expanding either the area or the intensity of the conflict. The side which concedes the first blow therefore runs major risks if it compounds the disadvantage of the defensive by having a frozen weapons technology. This is particularly true in the present stage of weapons development.

The nuclear weapons with which we are most familiar and which are most fully tested are also the most destructive. Any war would have to be conducted in their shadow. Under present circumstances they even inhibit recourse to conventional weapons, for the danger of a nuclear showdown will be thought to be inherent in any conflict. This view has already been articulated in Great Britain where Lord Russell has insisted that even surrender is preferable to running the risk of war.[7]

Footnotes at end of speech.

It is therefore essential that we develop nuclear weapons of finer discrimination, less destructive power and greatly reduced fallout. This need exists regardless of whether we intend to rely on a conventional or on a nuclear defense. As long as the defensive effort of the free world is polarized between inadequate conventional forces and nuclear weapons of enormous destructiveness, the Soviet bloc will be able to pose the dilemma of suicide or surrender in a variety of forms. By engaging in or encouraging aggression with conventional forces it can force our leaders to choose between yielding or invoking a strategy which will involve catastrophic casualties. Even if we build up conventional forces and resist initially without recourse to nuclear weapons, the Soviet Union may be tempted to utilize a few weapons of low yield unless deterred by the knowledge that we have ample weapons of similar discrimination and superior technology.[8] A conventional war can be kept conventional only if we are prepared with a wide variety of nuclear weapons.

This will be true whether or not the Soviet Union follows suit. The rhetorical question "Why develop clean weapons if they use dirty weapons against us?" is surely no more pertinent than the argument "Why rely on bullets if the opponent has nuclear weapons?" This reasoning would loosen all constraints and would lead to the continued elaboration of ever more destructive weapons. Moreover, the availability of clean weapons is of great importance for the protection of our own troops and also civilian populations, which may be endangered by fallout from our own weapons. But the essential purpose of having a wide range of clean and discriminating weapons is to give the free world an option which does not involve either immediate catastrophe or surrender. Possession of them will improve the plausibility of our deterrent and reduce the possibility of Soviet atomic blackmail which has been so central a feature of Soviet diplomacy in recent years. And they will provide a shield behind which to build up conventional forces if we are prepared to make the sacrifices. The difference in willpower between the Soviet bloc and the free world must not reach the point where we assume an unlimited willingness on the part of our opponent to run risks, while we recoil before the risks of even a limited defense.

In a revolutionary world rife with possibilities for upheavals, perhaps unsought by any major power, it is imperative to couple the quest for peace with efforts to mitigate the consequences of conflicts that may occur either by accident or design. If this effort is not made, the result must be an increasing pacifism which will produce appeasement if not surrender; or else, if a decision to resist is taken, it will lead to the most catastrophic kind of war. Is it not possible that Soviet leaders have been so insistent on a complete and unconditional end of nuclear tests precisely because they are aware of the paralysis produced by such prospects?

VI

Would not the end of nuclear testing avoid the diffusion of nuclear weapons among other powers? Of course, a nuclear test ban will serve only to inhibit the independent development of nuclear weapons by fourth powers; it will not necessarily prevent the distribution of nuclear weapons from the stockpiles of the major nuclear powers, nor will it stop them from turning over blueprints to an ally. Nevertheless a complete ban on nuclear testing will have psychological and political consequences which will make it difficult for other powers to acquire nuclear weapons, particularly in the free world. The issue of a ban on nuclear testing is therefore inseparable from that of nuclear sharing.

The situation with respect to nuclear sharing can be summarized as follows: The Communist bloc possesses a decisive military superiority in all contiguous areas. The Soviet Union can threaten with nuclear weapons all peripheral areas and much of Africa from its own territories; Communist China is overwhelmingly stronger than any neighboring state in conventional weapons. In these circumstances the Soviet Union may have decided that it has little to gain and a great deal to lose from the diffusion of nuclear weapons. Indeed, in view of the political unreliability of some of the satellite regimes, it probably has a positive interest in keeping nuclear weapons out of their hands.

The immediate Soviet objective is therefore to prevent the development of a nuclear capability under local control on the European Continent, for then Western Europe and other contiguous areas will eventually become neutralized. Without a nuclear capability of its own, Europe will find it impossible to resist the increasingly bold Soviet threats of nuclear warfare, which have been a cardinal aspect of Soviet diplomacy in every crisis since Suez. Europe, should it want to be defended, would then become entirely dependent on the American assessment of its danger. In such a situation the Soviet leaders may well calculate that the United States would be reluctant to invoke its own destruction for the defense of Europe, or than even in an all-out war they could not be prevented from seizing Europe. For after the initial exchange of blows the Soviet Union would remain supreme in Eurasia.[9] That the Soviet Union is concerned with making Europe impotent and not with the threat offered by a Europan nuclear establishment is demonstrated by the Soviet protest against the plan to equip the Swiss Army with nuclear weapons.[10] By no stretch of the imagination can Switzerland be suspected of aggressive intent against the U.S.S.R.

In negotiating about a nuclear test ban we must therefore take care not to contribute to a climate of opinion which will make our position on the Continent untenable and a local defense of Europe impossible. Already influential groups in Britain argue for a unilateral renunciation of nuclear weapons and considerable pressures exist in Germany against equipping German forces for nuclear war. In both countries the cessation of nuclear tests is considered as an initial move away from atomic weapons. The more the Soviet Union succeeds in building up a distinction between nuclear weapons and other weapons, while retaining full control of its own stockpile, the more it will undermine the will of the Western alliance to resist. Once the Soviet Union has succeeded in bringing about a divergence between our military establishment and that of our European allies, it may hope that our NATO partners will be paralyzed by their impotence and we by our unwillingness to risk all-out war.

If we permit a distinction to grow up between our military establishment and that of our NATO allies, our expulsion from Europe is almost inevitable. Further delay in the distribution of nuclear weapons to our European allies will give the Soviet Union more time to persuade Europeans that they will be able to escape involvement in any conflict by refusing to permit nuclear installations on their territory. Logically, this denuclearization of Europe will be followed by a demand that American troops withdraw, since their equipment is so obviously nuclear. At the very least it will expose us to great pressure to withdraw all our nuclear installations from the continent. Western Europe would then be impotent, at the mercy of Soviet Russia. NATO would cease to have meaning.

This is not to say that Europe must obtain nuclear weapons from its own production or that these weapons must be under national control. From many points of view it would be highly desirable if NATO's nuclear components were under NATO control, or if a European atomic force were formed on the model of E.D.C. Similarly it is not essential that nuclear weapons be locally produced, but only that there be European participation in their use and control. Before we go much further in the direction of a complete ban on testing, we should at the very least amend our Atomic Energy Act to permit wider nuclear sharing. And our approach to the question of nuclear testing should be based on premises which do not inhibit nuclear sharing and which will not give impetus to Soviet ban-the-bomb propaganda.

Will not the possession of nuclear weapons by our allies increase the danger of war? This would be true if our allies felt thereby encouraged to attack the Soviet Union, or if they were to use nuclear weapons in their own quarrels outside of Europe. But excessive adventurousness vis-à-vis the Soviet Union can hardly be considered a European failing. Even in the less preferred contingency that nuclear weapons were under national rather than NATO control, it is difficult to conceive the circumstances which would induce any European country to unleash a unilateral attack on the Soviet Union. The individual nuclear capability will remain so small, the disproportion in vulnerability is so great, that they could not, by any rational calculation, use these weapons for offensive ends. Their purpose would be to make the costs of aggression, particularly of local adventures, prohibitive, and to discourage Soviet atomic blackmail.[11]

As for the use of these weapons to settle private quarrels outside Europe, this could be effectively forestalled by placing them under NATO or an overall European control. But even should they be under national control, the likelihood of their use outside of NATO is slight. The difficulty which the French army has in Algeria is not inadequate firepower but that of finding targets against which this firepower can be used. Atomic weapons have little significance in guerrilla-type operations.

But what of the uncommitted nations? Is there to be no end to the diffusion of nuclear weapons? First, it must be recognized that from a technical standpoint the diffusion of nuclear weapons will grow increasingly difficult to prevent, regardless of what decision is reached with respect to nuclear testing. As the peaceful uses of nuclear energy become widespread, more and more nations will become familiar with nuclear technology. The end product of many atomic reactors is plutonium, which is also the basic component of nuclear weapons. As nuclear energy becomes more familiar, its military applications will be very difficult to control. Nothing short of the original Baruch-Lilienthal plan seems capable of arresting this trend.

It does not follow, moreover, that because the diffusion of nuclear weapons must be stopped at some point it must be stopped at this point, or that the most effective method is a ban on nuclear testing. To be sure, the more nuclear powers exist the more difficult it will be to arrest the spread of nuclear weapons. But we must weigh this risk against the danger of collaborating with the Soviet Union in the neutralization of Europe. This would leave us without powerful allies. It would place us ultimately in the position of having to defend the whole Soviet periphery alone against Soviet nuclear attack or Soviet atomic blackmail. Bilateral negotiations with the Soviet Union to the exclusion of our European allies are fraught with danger. It would be much bet-

Footnotes at end of speech.

ter to deal with the problem of the diffusion of nuclear weapons directly rather than through the indirect method of a test ban, and to include our NATO allies as nuclear powers in any agreement, preferably through a European Atomic Community.

Of possible methods to prevent the spread of nuclear weapons, a test ban is the most disadvantageous to the free world. In relevance to nuclear sharing is primarily that it will contribute to a psychological attitude in the West making it impossible for any of our allies to acquire nuclear weapons. Communist China will not be similarly inhibited from obtaining nuclear weapons from the Soviet Union. Even if reports that the U.S.S.R. has already agreed to give nuclear weapons to Communist China are premature [12] it does not seem likely that the Soviet Union would in the long run risk its most important alliance by refusing to share nuclear weapons in any form. It is idle to argue that in these circumstances the United States would be free to give nuclear weapons to its own allies. By that time, the public opinion of our NATO partners would not permit the possession of nuclear weapons, especially as the direct threat to these countries is not markedly increased if China possesses nuclear weapons.

The difficulty with a total ban on nuclear testing is that it stakes too much on a measure which in itself is of problematical significance. It will build up worldwide reluctance to resort to nuclear weapons, the only means of defense now existing against Soviet aggression or Soviet military pressure. It will impede if not prevent the articulation of a strategy for the defense of Europe. It will increase the danger that any war that does break out will take the most catastrophic form. By freezing weapons development after only the most fearful applications of nuclear power have been fully explored, it will increase the possibilities for Soviet atomic blackmail without reducing the free world's peril. As a first step it goes too far and in a too uncertain direction.

VII

One of the difficulties the free world has had in dealing with the Soviet bloc is that we have been clearer about the things we oppose than those we stand for. This has given much of our negotiations with the Soviet Union the quality of a stubborn rearguard action designed primarily to thwart Soviet overtures. It has enabled the Soviet leadership to define the issues in international debate, putting us in the position of respondent rather than initiator. Worldwide pressures are built up against us before we have a chance to demonstrate our own purposes and values.

So it has been with the issue of nuclear testing. Our diplomacy has concentrated on problems of inspection or on belittling the danger of fallout. Whatever the scientific basis of the fear of radiation,[13] there is no question that we should respect the depth of that fear among many peoples exposed to fallout from tests outside their control and against which they have no protection. Control over radioactive fallout is therefore a requirement of any U.S. policy on nuclear testing. But the United States should not be asked at the same time to initiate the control of armaments by paralyzing itself and its allies without at least the beginning of a reduction of Soviet conventional strength and of some protection against surprise attack. The fact that the Soviet Union has proved obdurate on a general disarmament scheme indicates only that it wants to use negotiations to disarm us unilaterally, not that such a scheme lacks merit. If we negotiate only on issues the Soviets declare soluble, we can be sure that diplomacy will become increasingly a device to undermine the free world.

Footnotes at end of speech.

In the negotiations on a nuclear test ban which are about to begin, the United States should therefore propose that we are willing to address ourselves immediately to the problem of fallout but that a complete ban would depend on a comprehensive disarmament agreement. Pending such an agreement, we should propose that, while nuclear weapons are essential to the defense of the free world, we are prepared to take immediate steps to mitigate the effects either of testing or of using them. We should invite the Soviet Union to join a U.N. committee which would immediately set a maximum dosage of permissible fallout from testing well below the level brought about by recent tests. The U.N. committee should then assign a quota to the United States and its allies and another to the Soviet bloc on a 50–50 basis. (Since most of the potential "fourth" powers are in the West, this would be a considerable concession to the U.S.S.R.) For 2 years all powers would agree to register with the U.N. all tests which involve fallout and both sides would agree not to exceed their quota. During those 2 years the quota would be progressively reduced, ultimately to zero. Afterward, unless there were by then a general disarmament agreement, nations would remain free to conduct surface tests of "clean" weapons, underground tests, and tests in outer space, so long as they did not cause fallout. Technical experts from both sides would agree on an adequate inspection mechanism, which could be relatively simple.

While such an agreement would impede the arms race, it would not stop weapons development altogether. It would permit the continued elaboration of defensive weapons and of weapons which can be applied with discrimination, both in terms of fallout and in terms of yield. Indeed, it will put a premium on such development because these weapons can be tested most easily underground or within established fallout quotas. It will avoid placing the United States in the position of not trusting its allies with the development of weapons which are essential to their defense and which their opponent already possesses in quantity. At the same time, it will impede the too rapid diffusion of nuclear technology and thereby afford time for a careful study of this problem. The easiest weapons to develop are those with major fallout effects. The least complicated method of testing is above ground. Thus a limited ban could channel future weapons development into the least destructive channels. It would reduce and ultimately eliminate whatever health hazard there may be in present testing.

Such a proposal would counteract the Soviet effort to elaborate a distinction between nuclear and nonnuclear powers or zones or warfare, a distinction which can only paralyze the free world. At the same time, it would call attention to a distinction between forms of warfare which are unnecessarily destructive and those which seek to confine devastation to the smallest possible proportions—a condition which is essential to make our deterrent posture plausible and to strengthen the will of the free world. If the Soviet Union rejected our proposal, we and our allies should impose a steeply decreasing quota on ourselves, thus forcing the Soviet Union into the position of being solely responsible for any health hazard in nuclear testing. In this manner, increasing pressure of world opinion could be built up against the most catastrophic use of nuclear weapons and in favor of a general disarmament agreement. This approach to the problem of nuclear testing would have the additional advantage that it would be much easier to inspect. Inspection could concentrate on one problem reasonably well understood: that of fallout. If no radioactivity were found, no violation was taking place.

A restriction of nuclear testing as outlined here would meet many of the fears of humanity without exposing the free world to incalculable peril. It would be a first step which avoids most of the dangers of a complete ban and yet achieves many of its goals. If the limitation of nuclear tests proved workable, the inspection system could be expanded, reduction of arms might follow, and efforts could be made to reduce the danger of surprise attack. None of these measures is possible, however, as long as the Soviet Union is encouraged to believe, by the irresolution and evasions of the free world, that through skillful and persistent diplomacy it can break up the cohesiveness of the Western alliance and undermine the will to resist aggression with the only effective weapon now at our disposal.

VIII

It is widely believed in the West that the issue of nuclear testing is a touchstone of our sincerity. Many argue that the Soviet Union scored a major gain by renouncing nuclear tests and that we exhibited lack of imagination and the absence of a moral dimension by not following suit immediately. The reluctance to end nuclear testing, so the argument goes, is a symptom of the sterility and overconcern with military problems which have been at the root of so many of our difficulties.

There is no doubt that the Western World is in deep trouble. It has not been able to articulate either a philosophy or a program adequate to the challenge of the times. It has failed to identify itself with the revolutionary period through which we are living and it has not had the vision or the willingness to carry through a sustained program of world economic development. Because we have not been clear about our purpose we have often found it easier to concentrate on defensive measures than on those which might give a sense of direction to a world in turmoil.

But even in the military field we are inadequately prepared to deal with most of the issues with which we are likely to be confronted. We have insufficient strength for limited war. We are falling behind in the overall strategic equation. The answer to our political dilemma is not to be found in reducing our defenses—for even here more effort and imagination are required—but in injecting a greater sense of purpose into our overall performance.

As a Nation of specialists we like to believe that a problem is either political or economic or military. The challenge we face, however, is that contemporary problems involve a combination of all these factors. Our choice is not between working for the things in which we believe or attending to our necessities. If we cannot do both, we will not be able to do either.

Bangor Celebrates 125th Anniversary

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. McINTIRE. Mr. Speaker, it is easy to understand why Bangor, Maine, in the celebration of its 125 years of history, should seek to establish its claim to Paul Bunyan—both are grand.

I submit for insertion in the RECORD news articles from the Enterprise, which depict how the Queen City has laid claim to this kingly legendary personality:

BANGOR COMMITTEE WILL KEEP THE YEAR HUMMING—PROGRAM HAS BIG DOINGS OF ALL KINDS EACH MONTH

The 30-foot statue of Paul Bunyan has been erected in front of the auditorium in Bangor, and the Queen City is embarked on its year-long celebration of 125 years of history. From now until the end of the year, Bangor will be in festival, a program that started on New Year's Eve with a bonfire of Christmas trees.

SYMBOL

Paul Bunyan has definitely become the symbol of the frolic, although it seems this was not exactly the plan. Story comes that some citizens of Bangor think there is a ribald and indecorous tinge to the mighty Paul, and that as a symbol he is not precisely what the Bangor program ought to be, or will be. But Paul has always had a way of dominating anything he has to do with, and there probably is no point at this late date in fighting the thing.

Paul Bunyan is an American legend, the patron saint of lumbering, and the stories about him lie a mile high in all directions. He has long been associated with Minnesota and the Great Northwest, where his prodigious deeds are well known. Although the full legend makes him a native of Maine he has never been fully accredited as such until Bangor's 125th committee worked him in. Then the fun began. The Bangor News has been a clearinghouse for letters to the editor, including all sorts of incontrovertible proof that Paul belongs to Maine, and also dubious conclusions by experts that he was not indigenous. Nobody believes the latter, of course.

STOCKING CAP

Anyway, the 30-foot statue of fibre glass, the most magnificent of all those in existence, was ordered and set up, and the Paul Bunyan stocking cap became a Bangor commonplace. Paul Bunyan Days, from January 29 to February 1, are the winter carnival portion of the program, and high times and high jinks are in the offing.

If there's anything Bangor hasn't thought of to round out the year, the committee would like to know what it is. Some dates and events are still tentative, but other plans that will materialize haven't been mentioned yet. The committee has produced a printed program, and it may be had by dropping a note to the committee office, Bangor City Hall. Ask for the 125th program.

Calling it the big year to be here, Bangor lists the 1959 events with the following outstanding and ambitious dates:

PROGRAM

January 29 to February 1: Paul Bunyan Days, winter carnival, coronation of anniversary queen, contests, dances.

February 12: Lincoln-Hamlin Day.

February 23 to March 7: Regional and State basketball finals.

March 16 to 22: Ice Capades.

April: Circus, merchandising show, Oklahoma on stage.

May: High-school music festival, Armed Forces Day, antique car show.

June: Dairy Month do. Tourist tours start. Conventions.

July: Hurray for the Glorious Fourth. Big time.

August: 110th annual Bangor Fair. Pro football; first in Maine.

September: Softball playoffs. Labor Day stuff. Horseshoe. Big Shrine time.

October: Halloween fracas, banquets, business week, etc.

November: Historical pageant sine qua non.

December: Everybody pooped.

BANGOR FINDS BUNYAN BIRTH—CHANGES THINGS A WEE BIT

Bangor has played around a bit with Paul Bunyan's origins, and claims he was born there on February 12, 1834, the year the city was incorporated. The city clerk of Bangor deposed and stated a birth certificate is on file. They have further located a character designated as Lemuel, middle name Eliza, Chamberlain, now 125 years old and living at 37 Kaisar Boulevard, Bangor, who says he (she) remembers Paul as a boy.

Bangor also stipulates Paul was the son of "French-Canadian" parents, father's name was Jacques, mother's Sarah Marie.

Most of the stories say Paul was born at, or near, Machias. Having created the Fundy tides by rocking his floating cradle as a newborn babe, Paul obviously was cradled somewhere near the Fundy region. Bangor has changed that to "Penobscot tides." Does it matter?

A Tribute to Hon. Herman Eberharter

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, the untimely passing of our dear friend and colleague from Pennsylvania, the Honorable Herman Eberharter, was a real loss to our State and the Nation. It was also a great personal loss to those of us who had the privilege of knowing and working with him here in the House.

His tireless efforts in behalf of more equitable tax legislation, social security legislation to improve the economic status of our old folks, and other liberal measures earned for him the respect and admiration of his colleagues.

Herman Eberharter was a keen, active, and able legislator who possessed great courage and vision to see beyond the immediate aspects of a particular problem. He was faithful to his duties, sincere, and upright in dealings with his colleagues. We shall miss him greatly in the days ahead.

Alabama Press Association Denounces Washington Post for Refusing Putnam Ad

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. HUDDLESTON. Mr. Speaker, last weekend the Alabama Press Association, the membership of which is composed of all publishers and editors of daily and weekly newspapers in the State of Alabama, met at its 88th annual convention. One of the highlights of the convention was the adoption by unanimous vote of a resolution criticizing the Washington Post and Times Herald for its refusal to run the Putnam letter, which has received much publicity of late, as a paid advertisement. It is my privilege to insert in the CONGRESSIONAL RECORD, under leave heretofore granted, a newspaper article which appeared in the Monday, January 26, 1959, issue of the Birmingham Post-Herald, concerning the meeting and adoption of the resolution:

STATE PRESS GROUP ATTACKS PAPER FOR REFUSAL OF AD

Alabama Press Association delegates, winding up their 3-day 88th annual convention, headed back to their editorial offices across the State over the weekend, but not before they'd fired a parting salvo at a Washington newspaper for betrayal of the press.

The association, representing 16 Alabama dailies and 116 weeklies, by resolution condemned and deplored the Washington Post and Times Herald for its refusal to publish the "Putnam Letter" as a paid advertisement.

The Alabama newsmen accused the Washington daily of obstructing the right of the people to know all sides of a public issue.

Before the resolution was read the newsmen elected William Stewart, of Monroeville, to succeed C. G. Thomason, of the Ensley Industrial Press, as it new president.

Post-Herald Editor James E. Mills was named first vice president. New second vice president is Harold May, of the Florence Herald.

Col. Harry Ayers, Anniston Star publisher, proposed the resolution flaying the Washington Post and Times Herald. That paper 2 weeks ago, with regret, had notified James Simpson, head of the Birmingham-based Putnam Letter Fund, it would not publish the letter, which expresses a general southern viewpoint, in a tract written by New Englander Carleton Putnam.

On the same topic of publicizing the "South's viewpoint," Lt. Gov. Albert Bout-

well, the convention's main speaker Friday, had informed the newsmen that an Alabama legislative committee would be formed to spearhead a States rights battle.

In another proposal, the conventioners had endorsed a resolution drawn by L. O. Brackeen, Auburn, to create a "Hall of Fame" for Alabama newspapers and outstanding journalists.

A five-member fame committee will report on the subject at the 1960 convention.

Jones Giles, Tuscaloosa, was reelected secretary treasurer and field manager.

New directors of the association are Tip Matthews, Mobile Press Register; Joel Smith, Eufaula Tribune; Porter Harvey, Guntersville Gleam; Jay Thornton, Haleyville Advertiser; Arthus Cook, Shades Valley Sun; and Arthur Slayton, Moulton Advertiser and Russellville Citizen Times.

Directors of the Alabama Newspaper Advertising Service also were elected. They are J. C. Henderson, Alexander City Outlook; Fred Elland, Cleburne County News; Tom Gardner, Brewton Standard; and Bob Bryan, Cullman Times and Democrat.

Labor and Industry Work Together To Save Hat Firm in Amesbury, Mass.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. BATES. Mr. Speaker, the Nation has a special interest in the news that the Merrimac Hat Corp., of Amesbury, Mass., will soon hum with activity. Threatened with liquidation, this 100-year-old firm faces a bright horizon as a result of a deep mutual understanding between labor and management.

For many years, it has been my pleasure to cooperate with the Merrimac Hat Corp., of Amesbury, in the consideration of its problems. During this period, I have observed a relationship between labor and management that was rare, enlightened and especially noteworthy because of a sincere spirit of cooperation and sharing of the difficulties that have faced the hat industry in recent years.

Discussions of the corporation's problems were frank and sincere and the viewpoint of the union's was strongly advanced by Mr. Frank Cynewski, the agent of the union. Yet, in the active and forceful presentation of views, there was a constant band of harmony uniting both groups.

It is a privilege, therefore, for me to congratulate the present and past presidents of the company, Mr. Hans Rie and Mr. Everett T. Brown, also Mr. Frank Cynewski, the representative of labor for their efforts which have been so much appreciated by the community.

Under leave to extend my remarks, I wish to include the following article from the Washington Post and which presents this interesting story in detail:

NEW YORK, January 19.—The union representing the Nation's hat workers has bought controlling interest in an ailing 100-year-old Massachusetts hat concern in a unique rescue operation that may foreshadow a radical shift in labor's traditional role.

The United Hatters, Cap & Millinery Workers (AFL–CIO) announced over the weekend it has taken over control of the Merrimac Hat Corp., Amesbury, Mass.

The move is designed to save the company from liquidation and reopen its plant which has been shut down since last November, idling 325 union members.

Alex Rose, president of the 35,000-member union, said he and 4 other union officials have been elected to the 9-man board of the company.

The union has bought the assets of Merrimac for $200,000, he said and plans to invest an additional $100,000, giving it a 60 percent stock ownership in the hat company.

The rest of the money to refinance the company will come from stock purchases by company workers, local merchants, and others in the community of 11,000. Rose said the plant would reopen February 2.

Rose emphasized that all present company officials will remain in their posts.

However, the union's action, apparently violates the AFL–CIO ethical practices code adopted 3 years ago which prohibits unions from investing money in or making loans to companies with which they have collective bargaining agreements. The ban was aimed at racketeers in the labor movement from enriching themselves through such deals.

Rose said he has written to George Meany, president of the AFL–CIO, assuring him that no one in the hat union local will profit personally by the Merrimac venture.

Tribute to Management of Long Beach Veterans' Administration Hospital

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. HOSMER. Mr. Speaker, in May of this year, Dr. E. V. Edwards, manager of the Long Beach, Calif., Veterans' Administration Hospital, will retire from public service. Many letters of appreciation have been received by me from veterans who have been hospitalized under his supervision and care. His work has been outstanding during the 13 years that he has devoted his time to making the hospital a successful operation. The following letter I received from a veteran; recently a patient at the Long Beach Veterans' Hospital, is a real tribute to Dr. Edwards and his staff:

LONG BEACH, CALIF.

Mr. CRAIG HOSMER,
Representative for 18th District of California.

DEAR SIR: As a recent patient at the Long Beach Veterans' Hospital, I wish to thank you for your interest in the hospital and to assure you that interest is not misplaced.

I have had a serious illness for 5 years, and when I entered the hospital several doctors said I would have it the rest of my life. I don't know what the doctors did but my illness has gone. I used to cough so much I would disrupt the peace at the table, couldn't go to a theater, movie, or church; couldn't teach my class at Red Cross in first aid. When I got to thinking of the years ahead—of my trouble and embarrassment to others, I felt like going AWOL.

I can only say it was a semimiracle due to plenty of know-how that cured me. One other know-how—how to be pleasant and courteous—is used at the hospital. The sign "courtesy is contagious" has been well read and practiced as the hospital is one of the most efficiently run and the most pleasant places— with the most pleasant people—doctors, secretaries, nurses, orderlies, nurses aides, and cleaners. They are all imbued with the idea to make the patients feel as if they were a long-lost brother.

The so-called heaven could not be more pleasant and have more pleasant people. So the management of the Long Beach Veterans' Administration Hospital must be efficient, nice people.

Sincerely yours,

ARCHER C. BEACH.

Protecting Sources of Information Is Protection for the Public

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Shreveport Times of January 9 entitled "Protecting Sources of Information Is Protection for the Public":

PROTECTING SOURCES OF INFORMATION IS PROTECTION FOR THE PUBLIC

Miss Marie Torre, a TV columnist for the New York Herald-Tribune, now is serving 10 days in a Federal prison for contempt of a New York Federal district court. She was not plaintiff or defendant in the case at issue. She merely had been called as a witness in a preliminary hearing to a damage suit filed against a TV network by a once world-famous movie actress who flopped on the air.

Miss Torre had written and the Herald-Tribune had published a column in which she quoted an unnamed TV network executive as giving reasons why the actress flopped on the air, among them being a supposed inferiority complex. While suing the network, the actress did not sue either Miss Torre or the Herald-Tribune for libel, slander, or anything else.

Called on at the preliminary hearing to identify the TV executive, Miss Torre naturally refused to do so. The judge sentenced her to 10 days, the U.S. circuit court of appeals upheld the sentence, and the Supreme Court refused to review the case, thus, in effect, upholding the lower courts.

In sentencing Miss Torre, the Federal judge also lectured her, even going to the extent of dragging in southern desegregation issues by saying that she should set a good example to people in certain parts of the country who were defying the Federal courts. Since contempt is a continuing offense, when Miss Torre finishes her 10 days she can be sentenced to another 10 days, and this procedure carried on for the rest of her life if the judge so wishes and she continues to refuse to divulge the source of her information. No one expects that to happen, but at times it seems that almost anything can happen in Federal courts these days, and, according to press association dispatches, the sentencing judge was quite irritated with Miss Torre.

It takes a long imagination, indeed, to picture Miss Torre as intentionally defying the Federal courts by refusing to give information which she obtained in confidence—refusing at a preliminary hearing to a damage suit between two other parties and to which neither she nor her newspaper were directly connected.

Miss Torre is not the first newspaper reporter to go to jail for refusing to reveal

sources of information. Others have done so on back through the decades, although rarely have courts imposed jail sentences in such cases and, when they did, usually it was merely a token sentence of a few hours and not a matter of 10 days.

Newspapers in this country always have asserted, as their right, the privilege of refusing to divulge sources of information. This right is not specified in the Federal Constitution, but the Constitution does specify in its first amendment that there shall be no law abridging freedom of the press. And a "right" can be ethical or moral as well as statutory and constitutional; in this case, certainly ethical and moral and having at least an inferential constitutional foundation, although the Federal district, circuit, and Supreme Courts denied the latter.

The importance of the Torre case is not merely that a newspaper reporter has been sent to jail or whether a newspaper has the right to withhold sources of information from courts or other official bodies, such as investigating committees of Congress or of State legislatures. Freedom of the press was intended by those who wrote the Constitution to protect the freedom of the people to know what is going on in or out of their governments. It is not some special privilege for publications.

Newspapers and other means of communication do not make news—they merely publish it, whether in printed form in a daily newspaper, on the air, in a book, a pamphlet, a circular, or by any other means. Freedom of the press is simply a part of the whole constitutional setup of freedom of speech and freedom of assembly and even freedom of religion.

The value to the American people of the self-asserted right of their newspapers to withhold sources of information in vital matters has been demonstrated over and over again. Many of the great scandals of city, State, and Federal Government which have come to light throughout the Nation's history—scandals of graft and corruption and stealing of public funds and public assets—were first brought before the public through investigations by newspapers and usually the revelations were possible because someone was willing to give newspaper reporters information under a pledge that identity of the giver would not be made public under any conditions.

The huge Teapot Dome oil scandals in the Harding administration came into full public revelation because the late Paul Y. Anderson, a Washington reporter for the St. Louis Post-Dispatch, was able to obtain confidential information which he passed on to Senator Burt Wheeler, prosecutor for the investigating committee, but without revealing the source of this information. The inquiry had come to a dead end, but with Anderson's information, Senator Wheeler was able to phrase questions to the president of a big oil company which brought replies revealing oil corruption all over Washington. Later the oil company president himself went to prison. A Cabinet member went to prison for accepting a $50,000 bribe in connection with oil leases. Two other Cabinet members were forced to resign. Several persons committed suicide and numerous others went to prison in this and related Federal Government scandals of that time.

None of this could have happened but for the information Anderson obtained from official sources. Anderson could not have obtained the information but for realization on the part of persons giving it that he would protect their identity—protect his sources of information.

Millions of dollars in graft and corruption and stealing in an Illinois State administration in the 1920's running into tens of millions of dollars was exposed and brought to an end and public officials sent to prison because reporters for the Chicago Tribune were able to obtain private and confidential information under pledge not to reveal identity of those giving it. Only a few years ago, the State Auditor of Illinois was revealed as having stolen more than a million dollars from the public funds of the State—meaning from the people—and sent to prison as a result of investigations by a Chicago Daily News reporter who could not have gotten to first base but for confidential information obtained under pledge to protect the person giving it.

The huge scandals of graft and corruption and stealing in Pennsylvania during the days of the Vare Philadelphia machine were revealed by newspapers as a result of being able to obtain information confidentially. The terrible story of Tammany Hall in New York City and its thieving for decades came out in the same way, with the New York World (now out of existence) as the leader but with many newspapers taking part.

Here in Louisiana, the graft and corruption and stealing of State administrations in the middle and late 1930's became public when a New Orleans newspaper, acting on confidential information obtained through a pledge to protect the person giving it, printed pictures of State property being used for private construction of homes of State officials. This led to an almost endless trail of graft and corruption, bribery, kickbacks, and thievery.

The first revelations of the Dave Beck Teamsters Union graft and corruption and of the activities of Jimmy Hoffa came through publication by newspapers ranging from Pennsylvania to Oregon of data which stemmed from confidential information obtained under the pledge of protection of the person supplying it.

This could be carried on endlessly. The history of most of the great and independent newspapers of the Nation, large or small, is marked with fearless exposures of the type cited, made possible through exercise of the self-asserted right of newspapers, moral or ethical, to protect their sources of information.

Since the Supreme Court now has ruled that such protection is not constitutional, it is about time for Congress to make it so, through statutory action which Congress specifically is empowered by the Constitution to take—the enactment of laws specifying the appellate authority of the Federal courts. As things stand now, the U.S. Supreme Court has ruled that a newspaper reporter must snitch on friends who supply information in confidence, but that an ex-Communist—in this particular case a nationally known playwright—need not name his fellow Communists of the days when he was a member of an organization pledged to seek overthrow of the U.S. Government, by force if necessary. In the latter case, the playwright was sentenced for contempt of Congress and the Supreme Court freed him, holding that he did not have to give such information.

Orderly Gains Noted in Cuba

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include two articles from the January 26, 1959, edition of the Christian Science Monitor. Writers Bertram B. Johansson and Thomas Probasco Wright bring encouraging words from the Cuban scene, words I am glad to bring to Members of the Congress:

CUBAN ORDERLY GAINS NOTED

(By Bertram B. Johansson)

WASHINGTON.—There is an increasing segment of responsible opinion here which holds that in spite of the aberrations of military trials in Cuba, the new Urrutia government is steadily consolidating its position and gradually, if slowly, bringing order out of chaos.

Certain news reports of the military executions, these sources hold, have tended to discolor and black out the new government's accomplishments.

Evidence from both United States and Latin-American sources confirms that a substantial start has been made in harvesting the sugar crop which supplies 40 percent of the white sweetener for U.S. tables.

ROADS, BRIDGES REPAIRED

The government and sugar firms are cooperating closely in repairing roads and bridges, so as to be able to transport cane from fields to the sugar grinding mills, and eventually from the mills to rail depots and ports.

In some respects, the Urrutia government has acted more circumspectly than the Batista regime in the matter of setting sugar quotas.

Under Dictator Fulgencia Batista, the Sugar Stabilization Institute, which sets the annual crop targets, had proposed a quota of 5,900,000 Spanish tons of sugar.

The Urrutia government, not wanting to handle matters in the same manner as the previous regime, set a quota of 5,800,000 Spanish tons.

AIMS TO AVERT GLUT

Several years ago, when a quota of 8 million tons was set and harvested, the glut of sugar this produced on the world market created a serious price depression in sugar.

It took several years before the effects of an overproduction of sugar were dissipated.

In the labor field a new awareness of the Communist infiltration threat has brought quick action.

Sources close to the Cuban labor movement state that Communist labor elements which attempted to make capital of the confusion attending the last months before General Batista's fall have been effectively shorn of their power.

A revolutionary labor front named FONU, or National United Labor Front, on which Communists had managed to gain several positions, has been summarily dissolved.

LABOR FRONT BUOYED

Responsible labor sources opine that a new council recently set up represents a definite defeat for the Communists who are charging betrayal and unilateral action by the 26th of July movement.

How vigorous the vigilance will be against Communist penetration into Cuba's labor unions remains to be seen, but labor sources here are cheered by first results.

The new Urrutia government is not without its many problems, as it strives to marshal up a program in the wake of the corruption of Batista dictatorship.

Financial problems are legion. The Batista administration, among other legacies, left a budget deficit of some $50 million, and a huge national debt of $1,500 million.

Not the least of the Urrutia-Castro government's problems is the fact that until now it has been a military organization.

Until it took power January 1, it had given no visible demonstration of a capability of establishing political unity. Military discipline and unity quickly established order among rival factions in the first

few days of the occupation of Havana, when it was feared wholesale slaughters such as took place with the fall of the Machado dictatorship in the 1930's might occur.

It has become apparent in recent weeks that the 26th of July movement, while effective as a military organization, still needs to learn the political skills of accommodation and compromise, and to establish a national economic program.

Latin-American statesmen, who know how deep the Castro revolution has cut into the corruption and cruelty that surrounded the Batista regime, are concerned lest it should falter now, for lack of political experience.

STATESMEN ANXIOUS

It can be stated authoritatively that these statesmen are so concerned about this that men like Gov. Muñoz Marín, of Puerto Rico; President-elect Betancourt, of Venezuela; President López Mateos, and ex-President José Figueres, of Costa Rica, are prepared to take Fidel Castro "under their arm" and teach him some of the political arts needed to preserve the reforms of the independence movement.

Currently, Major Castro is in Caracas, Venezuela, where he was invited to attend ceremonies celebrating the deposing of dictator Pérez Jiménez last January 27.

While there, Major Castro was highly critical of certain U.S. Congressmen and elements of the U.S. press which he felt had distorted the news from Cuba in recent weeks.

CUBA: OUT OF ITS CHAINS

(By Thomas Probasco Wright)

To one who has loved Cuba for many years, the news of its liberation from a brutal military dictatorship has brought a great relief and delight. But he knows that the words of Fidel Castro on entering Habana are emphatically true: "The revolution has only begun."

A glance backward at history to find how the ousted Frankenstein came into being will help to point the way to prevent such dark shadows from enveloping Cuba in the future, and aid in establishing the stable, democratic government under which that island's lovable people can realize their dream of happiness.

In all Spanish-oriented lands benevolent government is hard to find. Perhaps the reason is to be found in the Spaniard's innate view of life as pointed out by Thomas Madariaga in his definitive book "Spain" where he says that his countrymen are prone to look vertically up to God, disregarding their fellow men, while the Anglo-Saxon looks horizontally toward his fellow men, and is not so concerned with an unseen God. Outside his family group the Spaniard is not so socially minded, and this makes the self-sacrificing cooperation necessary for democratic government difficult to attain. No sooner does one strong man with his followers get to the top than another strong man with his backers is plotting to overthrow him—and incessantly unstable government is the result.

So it was with Cuba shortly before World War II, when a shaky President Machado was fighting off efforts to displace him, in a period punctuated by more than one political assassination and with the country in a turmoil. Cubans will tell you that at this point the Colossus of the North stepped in, in the person of Sumner Welles, who took up residence in the Hotel Nacional and, they say, worked with dissident elements for the removal of Machado. At any rate, the opposition mounted till Machado was sent packing to New York, and Fulgencio Batista, a professional army man, strode into power.

The writer was in Cuba during the early days of the war, when Batista had consolidated his rule and was running the country in no uncertain terms. Businessmen there said that under previous governments they had grown accustomed to 10 percent political graft, but that the "take" had increased to 50 percent. Batista grew enormously rich, and after a number of years chose to step out for a breathing spell and enjoy life at ease in Daytona Beach, Fla.

In 1952 the lure of power and its golden fruits brought him back again in a military coup that came natural to Batista with his long-time army connections. And then, in place of the former smiling and comparatively mild boss-man, a new Batista began to emerge. Hemisphere defense had become uppermost in Washington's relations with Latin American countries, and military aid poured in to buttress Batista's army backing to a point where no civil opposition could make a dent in it. It enabled him to build up a military establishment of 65,000 armed to the teeth, with bases all over the island, in addition to heavily swollen local police units at every country crossroads, all tightly organized for their own and their jefe's benefit—while the Cuban people more and more bowed their heads and paid the mounting bill of personal subjugation.

The officers' clubs were like Arabian Nights dreams; the corporals and sergeants rode in new American cars while other ordinary Cubans drove old jalopies or walked; and the foot soldiers exerted petty graft on the harassed populace. Two years ago I traveled the length and breadth of the island by bus and taxi, from Pinar del Rio in the west to the Oriente in the eastern end, from north-coast Caibarién to southcoast Cienfuegos, and everywhere the feeling was the same: it was Batista and his army against the Cuban people. Those who objected were murdered and tortured by the now-grim Batista shouting, "Communistas, Communistas," over the radio in an effort to distract attention from his own bloody rule.

While I was there, the president of the student body was shot dead, unarmed, on the University of Havana campus, and one of the most respected judges was dragged out of his home and murdered by the soldiers. And the killing and raping and torturing mounted and mounted and mounted as the freedom-loving Cubans struggled against their pampered oppressors.

Against this seemingly invincible machine, one youthful leader with 80-odd men landed from Mexico on the wild, rugged shore at the foot of the Sierra Maestra Mountains in southeast Cuba. Just a handful of small arms and limited ammunition was all they had. They were a comparatively unknown group not connected with other opposition elements, but in 2½ years under the flaming spirit of their Fidel Castro they overturned the "butcher of Havana" and rode triumphant down the heart of Cuba amid the grateful cheers and tears of the liberated population. And the first thing Fidel Castro did after his victory was to turn over the presidency of the country to a civil leader. The words in his first speech in the capital will long be remembered by the Cuban people: "We are determined to give you love."

In the face of the present challenging situation in Cuba, and remembering recent history, what can America do to help our warmhearted, gracious neighbor to the south in its struggle to attain stable, democratic government? We can view its efforts with patience and sympathy, keeping in mind the fact that, unlike ourselves who have inherited an established tradition of constitutional government from wise forebears, the Latin Americans have no such tradition and must gradually work it out in the fiery crucible of political experience.

We can resist the temptation to meddle in their internal affairs. Cubans know what is best for them, and they have a right to develop their own destinies just as we have ours. But if at times it seems impossible to refrain from interfering, let it never be on the side of dictators, which merely chains a Latin American country to the unhappy past and prevents it from going on to attain the democratic self-government we now enjoy.

It is impossible for one who has experienced the rich beauties of the Cuban landscape to end this article on a political note. Columbus is said to have described the island as "the fairest land ever beheld by mortal eye," and the modern adventurer through this "pearl of the Antilles" comes to agree with him.

But do not spend all your time in Habana. Visit the Valley of Vinales, which lies like a green sunken garden of the gods in the beautiful western mountains. Spend a few of the most restful days of your life at San Jose Del Lago in central Cuba, with its string of lakes and sprightly little Cuban horses to carry you up into luxuriant emerald hills from whose summit you can glimpse the hazy blue Caribbean far to the north. Wander through the unspoiled Spanish colonial town of Trinidad. It was from there that Cortez sailed to his conquest of Mexico.

Then head into the far eastern province of Oriente, the "wild west" of Cuba, and see sombreroed horsemen herding cattle on broad, rolling ranchos. This wide, open land has always been Cuba's Cradle of Liberty. You will see monuments all along the way to heroes of the War of Liberation from Spain. Then continue on to gloriously historic Santiago, and stand on the heights overlooking the bay where the Spanish Navy was trapped to usher in Cuba's independence. As you stand there raise your eyes to the towering, rugged Sierra Maestra range in the west where Castro launched his drive to free Cuba from an equally difficult foe.

Do all these things, my friend, and you will know what it means when you hear Cuban patriots singing their newly revived national anthem, and fairly raising the roof with a final "viva Cuba."

The 41st Anniversary of Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. ZABLOCKI. Mr. Speaker, today marks the 41st anniversary of the proclamation of independence by the Ukrainian National Republic. It is fitting that we join with Americans of Ukrainian ancestry, and with freedom-loving peoples everywhere, in commemorating this important date, and in expressing our deepest sympathy for the present plight of the Ukrainian people.

When the sovereignty and independence of the Ukrainian National Republic was crushed in 1920, the Ukrainian National Republic was one of the first victims of Communist expansion and aggression. Throughout the long years of enslavement, the people of Ukraine have kept alive a spirit of freedom and have preserved their strong national feelings.

Man and his sustained faith in eventual liberation are the most vital and potent weapons against communism. The human desire for freedom will survive all hardship, and will outlast the

effect of any technological or scientific weapons. We must not forget this basic truth.

The brave people of Ukraine must be encouraged to continue their undaunted determination to regain independent national status. We must again pledge ourselves to the goal that we shall build a better world in which all nations may live in peace, freedom, and justice. We will work toward this end, and trust that our determination to do this will bring added courage to the people of the Ukraine and the peoples of other Communist-dominated nations.

Davisville Boys 4–H Club News Report for Year 1957–58

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SIKES. Mr. Speaker, under permission granted me to extend my remarks and include extraneous material, I include the following to be reprinted in the CONGRESSIONAL RECORD.

I am extremely proud of the accomplishments of the members of the Davisville Boys 4–H Club and am pleased to submit the following report of the club's activities in order that others may become aware of the great work our 4–H clubs are performing.

DAVISVILLE BOYS 4–H CLUB NEWS REPORT FOR YEAR 1957–58

The Davisville Boys 4–H Club is now ending its first full year as a community 4–H club. We have had a full and interesting year and are proud of our record.

Our club placed first in the 1957 and 1958 Alabama-Florida fair held in Atmore, Ala. Our club also won first place in the 1957 and 1958 Interstate Fair held in Pensacola, Fla. Our club won first place in the district, however, because the boys are all under 14 years of age, they were not eligible to compete for first place in the State. They attended the State 4–H Camp at Lake Placid, Fla., for a week in August.

In 1957, Johnnie Godwin was a county winner in the 4–H boy of the month contest, and was also one of the top 10 corn producers in the county. This year Billy Franklin was a 4–H boy of the month, and was second in the top 10 corn producers making 102.9 bushels per acre yield. Both boys were guests at a luncheon given by the Kiwanis Club and Sears, Roebuck & Co. at the San Carlos Hotel in Pensacola.

Several of the boys won awards in the 1957 Sears corn show in Pensacola and Tallahassee. Our club members also won awards in dairy, meat, animal, and other shows—both county and State.

Four members won scholarships to Camp Timpoochee, and many others attended the camp, including the adult leader, Mr. Morris Miller.

The 1957 county achievement medal and the dairying medal were won by Billy Franklin. Johnnie Godwin captured the medal for meat animals, and Bill Pigg won second place in the county lamp-making contest.

The Davisville boys, in cooperation with the 4–H girls, entertained members of the PTA at one of the meetings.

The fifth-grade boys won first place in the county basketball tournament.

Members of our club participated in community clean-up drives, various health and safety programs, a campaign to establish a recreational center, charity drives, and rode horses in the Atmore, Ala., Christmas parade.

Members made many field trips, including a tour of the city fire department, the city hall, the potato grading sheds, the local sawmills, the pole plant, and outstanding farms and forestry sections.

In the 1958 Sears corn show, now in progress at the fair in Pensacola, the following boys won blue ribbons for their corn: Junior Albritton, Billy Franklin, Johnnie Godwin, Eddie Seales, and Ralph Darby.

Second-place ribbons were won by Jeff Montgomery, Robert Montgomery, Billy Franklin, and James Lee.

Third-place winners were George Peters and Marvin Hollingsworth.

Officers for the 1958–59 year are: David Wilson, president; Eddie Seales, vice president; Billy Franklin, secretary-treasurer; Johnnie Godwin, reporter; James Lee, delegate; Albert Paulson, alternate delegate; Mr. and Mrs. Morris B. Miller, adult leaders; Mrs. Martin Franklin and Mr. Jean Wilson, trustees; and Mr. Calvin Winters, assistant county agent.

This concludes the report for 1957–58 of the activities of the Davisville 4–H Boys Club.

No Need for Good-Will Trips

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. BATES. Mr. Speaker, the recent visit of Anastas Mikoyan, First Deputy Premier of the Soviet Union, was reflected in varied emotions by the American people. All of us long for peace and in the minds of some, this occasion marked the advent of a new and hopeful gesture toward that end. But to those who have tired of this dangerous international game that the Soviet Union has played with mankind with its threat to civilization, the visit added further obstacles in the path of peace.

Under leave to extend my remarks in the RECORD, I wish to include a highly interesting article by Col. Roland W. Estey, of the Salem Evening News in Salem, Mass., and with which I strongly concur:

ANGRY MR. MIKOYAN?
(By Col. Roland W. Estey)

We are not too sorry, Mr. Mikoyan, to learn that you are angry with us. Frankly, we anticipated that you would be, when it came time for you to return to your native land.

We tried to be good hosts to you on your trip to some of our more important industrial centers. While we didn't roll out our newest red carpet we did greet you with some degree of respect.

If you hadn't received our full approval of the things you felt you could jam down our throats then it is because you didn't have sufficient foresight to plan your trip properly.

You gave us too much advance notice of what you and your associate represent. We Americans are pretty well governed in our thinking and judge an individual by his previous acts and reputation.

It was your past record, Mr. Mikoyan, that probably had more to do with your failure and the defeat of your aims and objectives than any other contributing factors.

The American public is standing back of the President and the State Department in their refusal to lower the barriers to Soviet-United States trade.

There has not been much, in recent years, that would lead us to believe in the good faith of yourself and your associates. This is basically the reason you were turned down and why the American public support the President and the State Department in these particular decisions.

Strangely, you created some degree of good will in your trip across the country. You were openminded most of the time and in some of your activities you appeared almost human. We give you credit for these touches.

But, your last few hours and your announcements, particularly those relating to your stubborn insistence of maintaining Soviet policies and position, erased the favorable reactions you had gained since your arrival in this country.

Your childish attitude during the last few hours of criticizing our unwillingness to budge simply backslapped into your face for this is exactly what you were doing. You didn't suggest a single "budge" on your part or on the part of those you represent.

Your country is supposedly outstanding in the use of publicity and propaganda and its effect on the world. However, you failed miserably this time.

You apparently forgot one thing about radio, television and newspapers in this country. When a person talks in this country, particularly a VIP from another nation, there is no censoring of his remarks. The air channels are open and the printed word is made free to all who wish to read and listen.

This was your greatest error, Mr. Mikoyan. You forgot you were in the free world. This is not Moscow.

In a sense, it is unfortunate you have gone home angry. By doing so, your trip has proved a failure and Americans are more convinced than ever that our skepticism and doubts are fully justified.

Heading for a Dead End

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. ADAIR. Mr. Speaker, since a great deal of consideration is being given now to the matter of the possible increase in gasoline taxes, the attached editorial from the Butler (Ind.) Record-Herald is timely. It is important also, I think, in that it represents the thinking of a number of people with respect to this whole problem.

IN OUR OPINION—HEADING FOR A DEAD END

It is likely that Congress will be asked to increase the Federal gasoline tax from 3 to 5 cents a gallon, as a means of meeting anticipated deficits in the highway trust fund. And this probability is of very direct concern to consumers.

Motorists are already bearing an extremely heavy burden of special taxes. The State and Federal gasoline taxes combined now

average 9 cents per gallon—equivalent to 41 percent of the average retail price of the fuel. This burden is far out of line with that imposed on any comparable product in general use including luxuries.

Much of the revenue from special Federal taxes on motorists is being diverted. This revenue came to about $3.6 billion in the last fiscal year. But only $2.1 billion was allocated to the highway trust fund, while the remainder of $1.5 billion went into the general fund of the Treasury. If all the revenue expected to be collected from motorists in coming years was to be dedicated to road purposes, there would be no need for additional taxes on highway users.

Major new road construction is not the concern solely of those who use the highways. For example, one primary reason for the multi-billion dollar highway program authorized by Congress is the needs of national defense. It is grossly unfair to expect one group of citizens—motor vehicle operators—to pay the whole cost.

Finally, where the cost of the highway program was originally estimated at $27 billion, the current estimate is $40 billion. There's every possibility that it will go up by many more billions as the years wear on. Maybe it's time that Congress took a fresh and hard new look at the whole program, with a view to revising it in the light of the Nation's actual needs and capabilities. Excessive taxation can lead to a dead end road instead of a network of superhighways.

St. Agnes Congregation of Fond du Lac, Wis., Observes Its 100th Anniversary

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. VAN PELT. Mr. Speaker, back in 1858 the Reverend Casper Rehrl, pioneer missionary to Wisconsin, founded the Order of St. Agnes in Barton, Wis. This month the congregation observed its centennial. At this point I request permission to extend my sincere congratulations to the present Mother General M. Rosita, C.S.A., and the sisters of St. Agnes Convent, Fond du Lac, and include in my remarks for insertion in the CONGRESSIONAL RECORD a brief history of the order as it appeared in the January 20, 1959, edition of the Fond du Lac Commonwealth Reporter. The article follows:

ORDER'S FIRST MOTHER GENERAL JUST 16 WHEN CHOSEN IN 1858

History of the congregation of St. Agnes, currently observing its centennial, is one in which the pioneer nuns endured physical hardships and dealt with constant unforeseen difficulties and trials.

One of the highlights of the centennial observance will take place at the convent Wednesday when bishops, archbishops, clergymen, and representatives of various religious orders gather for a pontifical mass and a special banquet and program.

Order of St. Agnes was founded in Barton in 1858 by the Reverend Casper Rehrl, pioneer missionary to Wisconsin. First mother general of the congregation of Agnesian nuns was Mother M. Agnes Hazotte, who was appointed to that office by Father Rehrl when she was 16 years of age.

Mother Agnes was born in Detroit and died in Hays, Kans., at the age of 57. She had held office from 1864 to 1905, having been unanimously reelected three times.

In fact, when Mother Rosita, C.S.A., present mother general, visited Rome last summer and had audience with the late Pope Pius XII, it represented the first trip to the Vatican by an Agnesian mother general since Mother Hazotte visited Pope Leo XIII in 1884. Mother Rosita's visit and her meeting with the Pope constituted a major event of the centennial year.

At one time the little community of sisters at Barton was reduced to one blind nun before other candidates joined the order. Today there are 800 professed sisters in the order in this country and abroad.

It was on August 1, 1870, that the sisters decided to come to Fond du Lac. The mother house is on East Division Street at the original site of the convent.

The Congregation of St. Agnes is a papal institute. The three steps necessary for this distinction include a decree of praise, approval of the institute, and approval of the constitution or rules. Pope Pius IX issued the decree of praise on March 28, 1875, only 17 years after the beginning of the order.

Meanwhile, the Reverend Francis Haas, O.F.M., Cap., founder of the Capuchin order at Mount Calvary, wrote the rules according to which the sisters planned to live. The rules as well as the institute received the approbation of the then reigning pontiff, Pope Leo XIII, on July 11, 1880.

The sisters, while not a diocesan community, render complete submission to the bishops. Through the years the nuns have ministered under seven archbishops including the Most Reverend John Martin Henni, F. X. Katzer, Sebastian Messmer, Samuel Stritch, Moses E. Kilev, and Albert G. Meyer, now archbishop of Chicago.

Archbishop Meyer will be the celebrant of the pontifical mass at the convent Wednesday at 10 a.m. While here he will have opportunity to visit his sister, Sister Mary Theresa, C.S.A., registrar at Marian College.

Ormonde A. Kieb

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. WALLHAUSER. Mr. Speaker, it gives me great pleasure to have this opportunity to pay tribute to a close personal friend who has recently resigned as Assistant Postmaster General, Ormonde A. Kieb.

Prior to assuming the very responsible office in the Post Office Department in February of 1953, he had been a very prominent realtor in Newark, N.J., had served as president of the New Jersey Association of Real Estate Boards, as national president of the Institute of Real Estate Management, and was one of the organizers and a charter member of the Society of Industrial Realtors. He had been active in the National Association of Real Estate Boards, having served as national director and as chairman of the public relations committee.

It was, therefore, with a fine background of business experience and real knowledge that he undertook the difficult task of the management of the Bureau of Facilities of the Post Office Department, which has jurisdiction over the real property management program of the Department, as well as the procurement and distribution of all supplies, equipment, and vehicles; the maintenance of the motor vehicle fleet, and the communications and physical properties of the Department's civil defense planning. The Bureau formulates policies and programs governing procurement, management, maintenance, and disposal of all real property, all equipment, all vehicles and supplies used in the postal service.

He rendered distinguished service and effected measures that led to the modernization of his department, reduced costs, reduced delivery schedule time, and streamlined procedures.

He received the Award of Achievement for the year 1955 in recognition of his outstanding success in introducing many methods of efficiency and economy. In 1956 the Postmaster General presented him the Distinguished Service Award of the Post Office Department in recognition of outstanding accomplishments.

As he returns to his profession of real estate it is a great pleasure for me, who has known him for many years, to testify to his high character, zeal, and his ability and, on behalf of his many friends, to wish him the greatest possible success in his future endeavors.

Consent of the Governed

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. SCHWENGEL. Mr. Speaker, because all of us serve in this Chamber through the will of the people, I feel that we must occasionally remind ourselves of this fact if we are to serve in the best interest of those we represent. For that reason, I found a recent editorial in the Davenport (Iowa) Times-Democrat by a constituent of mine, Attorney Edmund Carroll, of Davenport, to be especially worthy of note. I ask consent that it be reprinted here so that its message can reach more public servants. The editorial follows:

THE CONSENT OF THE GOVERNED

Thankfully, we are living in a nation that has evolved, by heritage and through its history, a theory of government in which all authority and power of public officials is derived by delegation from the people—each governing by and with the consent of the governed.

Public officials have certain responsibilities to the people from whom they derive authority, for the people have delegated, not abdicated, authority.

Acting in his official capacity, the officer has the obligation of honesty, of competency, of efficiency, and to be forthright, entrusted with the affairs of the people to which they are entitled, favorable or unfavorable, except

such as would give aid to potential national enemies.

The citizen has the right to assume that every public official will transact his duties in such a manner. At times, this is not the case. We have seen dishonest officials, lazy and incompetent officials and the withholding from the public of information unfavorable to them.

What can we do, as members of the public, to insure that public officials will meet the required standards?

Initially we can rely upon the various news media that historically have scrutinized public offices and officers. But we can do more.

The political stability of this Nation can largely be attributed to our form of Government and the fact that it has operated through 2 major political parties. Each of these is comprised of various interested groups and each of them contests vigorously in presenting candidates and positions to the people for selection. It is this contest that enable the citizen to reach his decision.

But discussion at the barber shop, on the street corners and at lunch although interesting and perhaps stimulating is only that. To be effective and to make his views productive, the citizen must participate within the framework of the 2 political parties.

This does not mean that the writer suggests that every person can or should become a candidate for elective office. It does mean that the citizen can participate in the party of his choice for only by so doing can he share in the selection of the persons and ideas who will prevail as local, State and national leaders and national policies.

Party caucuses attended by a handful of people give disproportionate influence in the selection of delegates to county and State conventions, and from these and only these are selected delegates to national conventions which present national leaders and establish national policies.

Truly in the affairs of Government, by the consent of the governed, large oaks from very small acorns grow.

Soviet Psychopolitics

EXTENSION OF REMARKS
OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. HIESTAND. Mr. Speaker, articles III and IV of George Todt's current series on "Psychopolitics" further delineate the battle for the human mind that is being waged by the Soviet Union.

III. MURDER OF HUMAN MINDS

"You must carry forward the myth that only a European doctor is competent in the field of insanity and thus excuse among you the high incidence of foreign birth and training." Beria.—Address to American Quislings, 1936.

Yesterday, the question was posed: "What is a lobotomy?" How many people know the answer to that one? Perhaps not many.

And yet it is something the public ought to know about, dreadful and revolting as it may appear to be. Why should it be hidden from us?

Let's put the cards on the table for all to see. Possibly Joe and Mary Doakes will demand some answers for themselves. Why not?

Let me quote to you from the U.S. CONGRESSIONAL RECORD today. A bright young Congressman, GLENARD P. LIPSCOMB, in whose congressional district I reside, sends it to me—and it often contains some real eye-openers. Imagine the shock, electric or otherwise, which I received when I read the following astonishing information which was given on the floor of Congress—with no reply or denial of any kind to follow it, incidentally—by Congressman Usher L. Burdick, of North Dakota, on Thursday, June 13, 1957. The extension of his remarks, entitled: "Beware of Psychiatrists" is given verbatim as follows:

"Mr. BURDICK. Mr. Speaker, one way to destroy any people is to destroy their health. The destruction of the mind is less obvious and not an open act of murder, but the millions who have had their minds destroyed by this sly Fascist and communistic scheme of controlling the people are as dead as they will ever be.

"Listen to what Dictator Georgi Malenkov said when he succeeded Stalin: 'There will be no more lobotomies while I am dictator of Russia.'

"Now, let us see what a lobotomy is. First, the patient is strapped to an operating table. The straps must be tight and very strong. Then electrodes are clamped to the temples of the person about to be lobotomized. Next, three jolts of electricity are shot through the patient's brains—enough to start violent convulsions, which give way to an anesthetic coma. Now the doctor takes his leucotomes—picklike instrument—and inserts them under the patient's eyelids. With a hammer he then drives them through the eyesockets of the skull and into the forepart of the brain. Finally, with a few deft sweeping motions back and forth, the doctor severs the prefrontal lobes of the brain from the rest of it.

"Hitler used this method on millions of his subjects and Stalin had over 10 million slaves or prisoners operated upon and turned into mere beasts of burden.

"It takes only 5 minutes to perform this operation and the subject does not know what has been done to him. He loses his animation as a living object and becomes a zombie. His productive organs wither up and he is incapable of resistance.

"This same practice is used here in the United States on persons said to be mentally ill, and it is estimated that 100,000 persons in the United States have been subjected to this operation upon the advice of some psychiatrist. This is murder, per se, although the patient may be hopelessly incurable. It is another way of putting the patients to death under the advice of skilled psychiatrists.

"In the United States today a large percentage of the psychiatrists are foreigners, most of them educated in Russia. The percentage runs as high as 80 percent.

"What does this mean? Does it mean that the Russian finesse of human destruction is introduced in America to further weaken our people so that there will be less resistance to communism? It means nothing short of that."

In view of this damning indictment by an American solon before the House of Representatives in Washington, D.C., over a year ago, it must appear curious that there has been no reply of any sort from the parties concerned or their friends? How come?

Is there really any answer besides what appears to be obvious and, if so, when will it be forthcoming to allay the fears and suspicions of an already aroused public? What's the score here?

IV. ANOTHER SAMPLE OF MIND ATROCITY

"By psychopolitics, create chaos. Leave a nation leaderless. Kill our enemies and bring to earth, through communism, the greatest peace man has ever known." Beria—To American Quislings, Lenin University, 1936.

Just as Rev. Kenneth Goff was about to say goodbye to me last week in Los Angeles, he suddenly turned and asked this question:

"Have you given your readers the contents of chapter 13 of the official Russian textbook on psychopolitics yet?"

"No, but I shall do so very soon," I promised him. "I think they are about ready to receive this hidden knowledge by this time; but I doubt that they will like it."

So here is chapter 13 of the Bolshevik travesty upon human decency called "The Recruiting of Psychological Dupes":

"The psychological dupe is a well-trained individual who serves in complete obedience the psychopolitician.

"In that nearly all persons in training are expected to undergo a certain amount of treatment in any field of the mind, it is not too difficult to persuade persons in the field of mental healing to subject themselves to mild or minor drugs or shock. If this can be done, a psychological dupe on the basis of pain-drug hypnosis can immediately result.

"Recruitment into the ranks of mental healing can best be done by carefully bringing to it only those healing students who are, to some slight degree, already depraved, or who have been treated by psychopolitical operatives. Recruitment is effected by making the field of mental healing very attractive, financially and sexually.

"The amount of promiscuity which can be induced in mental patients can work definitely to the advantage of the psychopolitical recruiting agent. The dupe can thus be induced into many lurid sexual contacts, and these, properly witnessed, can thereafter be used as blackmail material to assist any failure of pain-drug hypnosis in causing him to execute orders.

"The promise of unlimited sexual opportunities, the promise of complete dominion over the bodies and minds of helpless patients, the promise of complete lawlessness without detection, can thus attract to 'mental healing' many desirable recruits who will willingly fall in line with psychopolitical activities.

"In that the psychopolitician has under his control the insane of the Nation, most of them have criminal tendencies, and as he can, as his movement goes forward, recruit for his ranks, the criminals themselves, he has unlimited numbers of human beings to employ on whatever project he may see fit. In that the insane will execute destructive projects without question, if given the proper amount of punishment and implantation, the degradation of the country's youth, the defamation of its leaders, the suborning of its courts becomes childishly easy.

"The psychopolitician has the advantage of naming as a delusory symptom any attempt on the part of the patient to expose commands.

"The psychopolitician should carefully adhere to institutions and should eschew private practice wherever possible, since this gives him the greatest number of human beings to control to the use of communism.

"When he does act in private practice, it should be only in contact with the families of the wealthy and the officials of the country."

On such a note ends chapter 13 of the official Russian textbook on Psychopolitics. Reprints of this loathsome Red bilge may be obtained by my readers through writing to Rev. Goff in Englewood, Colo. Cost is $1 in check or money order from. It may cause us to retch before we have finished with its contents, but it is something every alert and vigilant American citizen ought to see for himself or herself.

Called Brain-Washing: A Synthesis of the Russian Text Book on Psychopolitics, this little eye-opener ought to be the subject of a study group by every patriotic society in the United States today. Why not?

Pepe Figueres on the Cuban Trials

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. PORTER. Mr. Speaker, Jose (Pepe) Figueres, ex-President of Costa Rica, and one of the foremost Democrats in the hemisphere, comments on the Cuban trials in a letter which was published January 18 in the San Jose, Costa Rica, newspaper La Republica. It contains a point of view which is highly persuasive and which should be given more consideration in this country:

(Translated from the Spanish)

Sr. EDMOND WOODBRIDGE, *San Jose.*

ESTEEMED FRIEND: Thank you for your expressive telegram of January 16, which says:

"You are the most qualified to interpret the humanitarian sentiments of the Costa Rican people by suggesting the cessation of the summary executions in Cuba. In this manner, as Cuba yesterday thanked you for your support in the revolution, tomorrow it will thank you even more for having tried to prevent violence from sullying the magnificient democratic triumph. All of the combatants who made the War of Liberations of 1948 with you are today harvesting the fruits of the clemency and justice which you stipulated for the losers. This memory is your best credential to take before Fidel Castro the matter which I respectfully suggest to you."

With such noble concepts, friend Edmond, you put me in a difficult situation with myself. How agreeable it would be for me to agree with your thesis! And how painful it is for me to disagree!

It is curious how the same event (the summary executions in Cuba) and a same desire (that of guaranteeing democracy in America) can stir up diametrically opposed reactions in different persons.

I am going to make public a letter I sent to Fidel Castro recently, before learning of the requests in various congresses of America asking suspension of the executions, and before knowing that the Legislative Assembly of Costa Rica, on the other hand, had turned down, by great majority, a motion aimed at sending the same request for clemency to Fidel Castro.

I have learned that the North American association, ADA, has addressed you asking clemency for the Cuban war criminals.

The ADA is a very estimable liberal group. Many of its members are friends of mind. They are the ideological allies of the Latin American democrats. And the petition which they make to you could not be better intentioned, nor more authorized.

This petition, in my judgment, complicates even more the rough matter of sanctions, in which it is so difficult to decide with certainty. It has its pros and its cons, of short and of long term.

I consider it a duty of other Americans to share with you this prodigious responsibility, at the risk of also committing an error. For this reason I dare to offer you this unsolicited opinion, in a matter that seems to be Cuban, but is American.

In my country capital punishment does not exist, nor has the necessity for it been felt in this century, fortunately. But each society and each historical moment has its own necessities of survival, which are wont to be the least of various bad possibilities. In Cuba's present circumstances, which I know well, severity can be a lesser evil and impunity.

Disgracefully in our America today, to be a democrat you have to risk life. This will not end until it is universally understood that you have to risk your life to be a hired assassin.

Yours respectfully,

JOSE FIGUERES.

Permit me to repeat the idea contained in the last paragraph of this letter to Fidel Castro, because it expresses my conviction, very sad, very lamentable, but one which I should not hide: so long as in several countries of our America it is necessary to risk one's life to fight for freedom, and so long as there is not the unquestionable certainty that to be an instrument of tyranny also means that you have to risk everything, there will be no end to the temptation on the part of bigtime adventurers to seize power and on the part of irresponsible citizens to back the seizure and to benefit from it by torturing their fellow countrymen.

There is an American minority, composed of politicians and military men and their henchmen who see in the governments of the countries a field in which to satisfy their appetites. Those people are always ready to take over a government by any means, and to hold it by blood and fire. They help each other, in a real alliance, and declare war against the democratic forces.

It is necessary that their soldiers know that they do not go to war simply to kill, but also to die. If it is not so, they will continue to hold all the advantages of aggressiveness and the lack of principles, and the good people all the inhibitions of decency and morality.

It is demonstrated that it is almost impossible, when a dictator is overthrown, "to catch the fat fish." Those always find the way to escape with their millions. Those who remain behind pay their debts. This injustice, superimposed on all the others, should serve as a warning: He who lets himself serve as a paid assassin of a tyrant should know that it is own life which is in danger, and not that of his master. The day when there are no instruments there will be no tyrants.

Society should protect itself by methods adequate to the circumstances. If the circumstances are extraordinary, the social defenses should also be extraordinary. No one who knows the barbaric extremes to which the recent torturers in Cuba, Venezuela, and other republics, arrived will be able to deny with his conscience that the corrective methods should be extreme, keeping relationship with the magnitude of the crimes and the propensity to commit them.

For the well-being of society, the law of vengeance cannot be recommended: eye for an eye, tooth for a tooth. The torturers should not be disrespected or tortured. But capital punishment, summary execution, turns out, in these extreme cases, by a cruel paradox, to be a civilized way to repress delinquency.

It is almost inconceivable the level of cruelty which the political delinquency in the 20th century has reached. Civilization needs to resort to the most painful methods to detain the tide. This spectacle of our times led a penalist of the stature of Jimenez de Asua to declare, a short time after World War II, that he would prefer the revolutionary justice in whose name the Italian people simply hung by the feet Mussolini and his lover, to the type of cold, slow, judicial process which was adopted in the Nuremburg trials.

Those who today favor that the Cuban war criminals be tried in common courts are not in touch with the present circumstances. There is no doubt, in every city and in every town, who were the principal murderers. Poor Cuba. It would be a tragic comedy to present proofs. The proofs are not even in the cemeteries. The corpses are in the wells, in the sewers, in the basements. And, just as happened in Venezuela, those who did not reach the relief of death from the tortures will be in insane asylums for the rest of their lives.

If the provisional Government does not rapidly execute the most notorious criminals, public passion, indignant at the impunity or the delay, will overflow, and then the number of deaths will be many, many thousands.

If there is not an exemplary punishment which leaves an impression in the memory of the country, the assassins will soon be organizing invasions, with the millions of dollars removed by the tyranny, in order to impose it again.

The Cuban people have suffered great disillusionments. I hope that today's revolution will not disillusion them again. For the time being, the severity of the punishment seems to me a salutary measure, however distressing. I believe it my duty to back it, in spite of the fact that I consider capital punishment repugnant, inadmissible, in other circumstances.

Inflation Is Everybody's Business

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. McDONOUGH. Mr. Speaker, the prevalent and persistent problem of inflation for which the Government and business are trying to find a satisfactory solution is everybody's business.

The average citizen can help stem the tide of inflation just as effectively as big business or big government if he realizes that every new service he asks the Government to perform comes from his tax dollar.

The following statement by Jesse W. Tapp, a prominent banker in Los Angeles, Calif., reveals the responsibility of the average citizen in curbing the inflation spiral about which we are all concerned.

INFLATION CONTROL NEEDS RESTRAINT ON GOVERNMENT DEBT

(By Jesse W. Tapp)

The Federal Government is faced with a deficit which may reach $12 billion by the

end of the current fiscal year. This prospect has greatly complicated the financing problems of the Treasury and has raised many questions about public debt management and the possibility of renewed inflationary pressures.

One question accompanying the numerous thorny problems of Government debts, however, should give us particular concern. It is a question which is not very amenable to productive study by economists, technical commissions, and national authorities.

UP TO THE PEOPLE

It is a question which can be solved only by the people themselves, by studies which each individual citizen makes within his own mind. It is a matter of private preference and, one might even say, of private morality—these are qualities which cannot be legislated; rather, they determine legislation.

I am referring to the following question: Has the public faced up to the consequences of demanding from their Government so many services for which they are unwilling to pay by current taxes?

Now I am not suggesting that the Government should never go into debt. For instance, local communities appropriately will continue to issue school bonds for the construction of classrooms to be used by the children of citizens not yet on the tax rolls.

Nevertheless, I wonder whether we, as a people, have become so accustomed to red-ink finance by governments as to forget that bills must be paid.

IT'S EASY TO BE LAX

Have we become too lax in our scrutiny of governmental expenditures on the local, State, and national levels—under the illusion that the funds for the less urgent activities are coming from somebody else's pocket, either by inflation or by taxation in some remote future?

Have we even urged our representatives to support projects that we would be unwilling to pay for if the terms were cash on the barrelhead?

One aspect of governmental debts, therefore, is the possibility that it weakens our resistance to governmental services that are pleasant but not feasible at the moment without adding to tax burdens or inflationary pressures.

Only a citizenry awakened to this problem can limit governmental functions to those for which they are willing to pay without inviting increases in governmental debts at a rate which will promote inflation.

Call in the Cookie-Pushers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. MULTER. Mr. Speaker, a most interesting article appeared in the New Republic magazine of January 26, 1959. Written by Gerald W. Johnson, the article points out that the American public is kept as uninformed as this administration can possibly keep it. However, Mr. John Q. Citizen should not feel too bad about being kept in the dark. Members of Congress fare little better.

Mr. Johnson's article follows:

THE SUPERFICIAL ASPECT—CALL IN THE COOKIE-PUSHERS

The American with no inside information who must judge by the superficial aspect of things now has to choose one of two theories, both unpalatble. He must believe either (a) that the administration really had no inkling that lunik was going up and that Batista was coming down, or (b) that, possessing the information, it deemed it unimportant to give the American public the slightest warning of these impending events.

Since there is evidence to support either belief, it is admissible to confess a preference, and I prefer (a). If the Government really didn't know what was happening, that is evidence merely of an incompetent spy system. But if it considered it inadvisable to inform the people of highly significant events simply because the information might be somewhat alarming, that is evidence of incompent government; and it is obviously easier to reform the spy system than to reform the Government from top to bottom.

The principal evidence supporting the more dismal theory (b) is, in fact, merely the prevalence of the Madison Avenue mentality in Government circles. That mentality holds as an article of faith that what the customer does not know will not hurt the advertiser. This principle seems to be the only logical basis for Mr. Dulles' persistent refusal to permit American newspaper men to find out at their own risk what Red China is actually like and is actually doing.

On the other hand, the swift resignation of the American Ambassador to Cuba supports the other theory. It is clear enough that Washington is not filled with love and admiration of Mr. Smith; and it is easy to understand why if he let Washington get caught in an embarrassing position when the Batista Government fell. The event occurred between two editions of the Baltimore Sun. The morning paper carried dispatches from Habana asserting that the revolt was practically crushed; the Evening Sun, of the same day, announced Batista's flight. Editorially, the paper has remained grimly silent on the subject, but it can hardly be pleased at having been made to look foolish. No more can the Associated Press and other news services, when the merest hint from the State Department would have enabled them to cover themselves with a paragraph explaining that the earlier dispatches were only what the Batista Government said.

The prompt disappearance of the Ambassador suggests that remedial steps are being taken, but it is not proof that they are sufficient. If the gentleman is, as various commentators have been cruel enough to suggest, merely a fat cat who owed his appointment to heavy campaign contributions, still that doesn't account for the Embassy staff, the lads that used to me derisively called the cookie-pushers. In the old days, if a revolution had been boiling under his feet, even a second-rate cookie-pusher would have discovered it and would have tipped off Washington long before the bullets began to smash the Embassy windows.

One is bound to suspect that here is a delayed reaction to the disastrous pilgrimage of Cohn and Schine, those fantastic stooges of Senator McCarthy, who trailed through Europe half a dozen years ago, shattering the morale of the Foreign Service. It was discovered then that any cookie-pusher who reported to Washington an opinion, however well founded, that displeased a Senator was liable to be kicked out of his job and blasted as a Communist sympathizer; so, not being imbeciles, they quit reporting such opinions. But important news quite commonly comes in fist as a rumor without confirmation, and if the State Department isn't informed of those rumors it may be caught flat footed.

In any event, whatever the reason, it is evident that the American public is not being given early and accurate information of what is going on beyond the boundaries of the country. As regards the Russian satellite program there is some excuse, for gathering accurate information about that is extremely difficult. But when we are completely misled about the course of a civil war raging in an island 90 miles from Key West, our system of information is definitely breaking down badly.

Perhaps it is impossible for a man who served his time in newspaper work in the editorial, not the advertising, end to form a just appreciation of the Madison Avenue mentality; but I am persuaded that one of the chief failures of this administration is due to its inability to grasp the enormous difference between selling soap and gathering early and accurate information. Both, to be sure, are phases of public relations, but their methods are widely dissimilar. Roosevelt and Truman understood this, and F.D.R. was the great master of the art of making a hostile press serve his own ends. The cookie-pushers may have their comic aspect, but as a class they are intelligent and to a man they know that in ordinary affairs half a dozen first-rate American newspaper correspondents can get them more information than a platoon of hired spies and can get it sooner.

Is It Humiliating To Proclaim Loyalty?

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I wish to place in the RECORD a timely editorial which appeared in the Cleveland Plain Dealer on January 26, 1959.

The editorial follows:

IS IT HUMILIATING TO PROCLAIM LOYALTY?

The American Association of University Professors is urging the repeal of the provision that recipients of Federal scholarships and student loans should be required to sign an oath pledging allegiance to the Government and Constitution of the United States and an affidavit declaring he did not believe in or support any subversive organization. The association says this provision is humiliating.

The presidents of Yale, Harvard, and Princeton Universities have protested this provision in the National Defense Education Act. Recently the Oberlin College student council took similar action.

President A. Whitney Griswold, of Yale, wrote to Arthur S. Flemming, Secretary of Health, Education, and Welfare, that oaths and affidavits of this sort are at best odious, at worst a potential threat to our profession and that they are especially distasteful when they are required of young people who are just entering upon the most important phase of their educational experience.

If this reasoning is correct, we suppose then that the pledge of allegiance to the flag should be abolished. Even kindergarten children are taught to repeat it, and who can say what odious effect it will have upon them in later life? Likewise, the oaths required of public officials, from President on down, to uphold the Constitution and laws of the United States should be relegated to the ash heap. A man elected to the presidency who had spent his lifetime in public service might find it humiliating to swear on the Bible that he did not intend to violate the Constitution or disregard the laws.

What is so special about students, especially those who apply for a handout from

the Federal Government, that they should be exempted from taking an oath of loyalty to the Government that is about to provide them with the handout? If some students find such an oath distasteful, or if they fear they might incur the penalties for perjury by taking it, let them refrain from applying for Federal loans and scholarships, the money for which, after all, is being provided by the taxpayers, and that includes all of us.

Pills

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include a letter to me from Elizabeth Hall, president of the Iowa Directors of County Relief, together with an editorial from the Malvern Leader, Malvern Iowa.

Mr. Speaker, Congress best see to it that we go not one step farther toward socialized medicine. England, tried it, and failed miserably. The people soon learned that the government official in charge of socialized medicine considered them, and treated them, as we would treat, and think, of a sick pig—by number only.

The letter and editorial follow:

Hon. BEN F. JENSEN,
House Office Building,
Washington, D.C.

DEAR MR. JENSEN: I note in the evening paper that the President has at last realized the fallacy of the Federal Government taking over local welfare programs.

It would have saved a lot of grief to Iowa, if this had been thought of before the last social security bill was passed, sending the State department of social welfare $6 million to be used were it is needed most. Rather than use the money to improve existing programs, this great State bureaucracy used the money to start a new State medical program, taking over a program that was already adequately provided by the counties.

(Please read enclosed excerpt from the Malvern Leader.) The old folks are really having a ball running to the doctor and buying pills. The local medical societies are furious.

Since 1951, the old-age assistance cases have decreased by 12,384 cases. Eventually all old-age assistance and most of the aid to dependent children cases will be taken over by social security. The counties could then pick up the few remaining cases and there would be no need for an expensive State agency. Yet this State agency is continually being built up with Federal subsidies, requiring matching State and county funds that, in the end, cost more than entire programs operated on a local level.

When the President appoints this advisory committee, if you were to send me their address, do you think they would be interested in information from as far down in the grassroots as Sidney, Iowa?

My best personal wishes to you.

Mrs. ELIZABETH HALL,
President, Iowa Directors of County Relief, affiliated with, Iowa County Officers' Association.

[From the Malvern (Iowa) Leader, Jan. 8, 1959]

BIG RUSH TO THE DRUG COUNTERS IN MILLS COUNTY PUTS HEAVY DRAIN ON PILL SUPPLIES

The new look in social welfare arrived in Mills County along with 1959—causing much concern as county officials and citizens associated with the new procedure.

In brief the State of Iowa has taken over and, as one member of the board of supervisors remarked: "It just sums up that the county welfare board doesn't have much to say about it."

Recently the State department of social welfare sent a notice with their checks to old-age pensioners. This read in effect that henceforth al bills would be taken care of by the State.

An immediate effect was a rush for medicines. Druggists in Mills County have been pushed almost to the limit in dispensing medications. Some have been so swamped that they were running out of certain kinds of pills.

But the fact that old folks are now taking more pills than they used to has aroused dander in many quarters.

It has brought charges from the county relief directors' group that many who now are not totally disabled and need only occasional help would under the State program with alleged lax eligibility requirements quickly become totally disabled and then would receive a monthly cash grant from which any income from work would be deducted. Since there is no supervision over spending of this money, the directors charge that incentive for rehabilitation is taken away.

"The county will be required to pay a share of this cost which will amount to more than they are now paying to take care of the entire program," they added.

It was pointed out that $6 million was given to Iowa under the new Social Security Act to be used where needed most. It was used, the directors continued, to start a new State medical program taking over cases that were being cared for adequately by the counties or relatives, and the counties will lose all control of them.

"It is a well-known fact that within the next few years the social security program of the Federal Government will absorb all of the old age assistance and most of the aid to dependent children cases.

"The county relief program is administered more efficiently and more economically on a local level, under the supervision of the board of supervisors."

Alabama Press Association Condemns Betrayal by Washington Post

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. ROBERTS. Mr. Speaker, when the Washington Post and Times Herald refused to accept as a paid advertisement the Carleton Putnam letter to President Eisenhower, a wave of protest swept through the American reading public. For Americans, like no other citizens anywhere else in the world, demand and defend most vigorously their right to know all sides of a story and to decide for themselves how they will react.

Dean Walter Williams, of the Missouri School of Journalism last year wrote a "Journalists' Creed," and part of this creed stated:

I believe that the public journal is a public trust; that all connected with it are, to the full measure of their responsibility, trustees for the public; that acceptance of a lesser service than the public service is betrayal of this trust.

Certainly the Washington Post did not act in the public service when it decided to suppress an advertisement whose contents disagreed with the editorial policies of the newspaper. Of course, every newspaper has the right and the duty to take definitive positions in its editorial columns, but when a newspaper's obsessions bring it to spill these positions over into the advertising and news columns it cannot help but arouse the public's mistrust.

That this is an affront to the entire fourth estate is realized by the Alabama Press Association, which at its meeting in Birmingham last week adopted a resolution condemning the Washington Post and Times Herald for its untenable betrayal. The resolution was drawn up by Col. Harry M. Ayers, publisher of the Anniston (Ala.) Star, who also wrote an editorial on this subject in the Star of January 26, 1959.

There follows an Associated Press story on the Alabama Press Association resolution and the editorial to which I have just referred:

STATE PRESS GROUP HITS LETTER MOVE—CAPITAL PAPER IS CONDEMNED

BIRMINGHAM.—The Alabama Press Association Saturday condemned the Washington Post and Times Herald for refusing to carry the Putnam letter as a paid advertisement.

A private Alabama group is publishing the letter in northern and western newspapers as an expression of southern views on racial segregation.

A resolution adopted by the association at its annual convention said the APA "does deplore and condemn the betrayal of the press and of the right of the people to know all sides of a public issue."

COMMENT IS DECLINED

The Post and Times Herald declined comment in Washington on the association's resolution.

Carleton Putnam, a retired executive of Washington, wrote the letter to President Eisenhower in criticism of U.S. Supreme Court decisions requiring racial integration of public facilities. He was particularly critical of the ruling that racial segregation in public schools is unconstitutional.

A committee of prominent Alabamians launched a fund-raising campaign aimed at getting the letter published as a paid advertisement in northern and western newspapers.

TO APPEAR MONDAY

To date it has been printed in the New York Times and the committee says it will appear in the Washington Star Monday.

[From the Anniston Star, Jan. 26, 1959]

OUR RIGHT TO KNOW

It is pleasing to note that the Alabama Press Association, in session at Birmingham

last week, sought to rebuke the Washington Post and Times Herald management for its refusal to publish even as a paid advertisement the well-known Putnam letter, which sets forth in clear and measured language some great social truths.

The letter in question was originally addressed to President Eisenhower, but Ike never answers any personal letter that is not pleasing to his vanity. His latest offense in that direction was his snub of Field Marshal Viscount Montgomery, who had questioned Ike's generalship in the Monty book.

It could easily be understood, therefore, why the Putnam letter, which was written by a noted author and business executive, failed to get the attention that it deserved at the White House.

But it was a different question entirely so far as the Washington morning daily was concerned.

For the executive editor of that paper had served as chairman of the committee on free speech under appointment by the president of the American Society of Newspaper Editors and had fought valiantly to break up the growing evil of secrecy and censorship in the conduct of the people's public business.

In his fight with Charles I, one of the most tyrannical of the Stuart kings of England, old John Milton, in 1644, addressed a letter to the Parliament under the title, Areopagitica, in which he said: "Give me the liberty to know, to utter and to argue freely, according to conscience, above all other liberties."

King Charles lost his head largely because he denied that freedom, and any other government or agency that tries to hide the truth from the people will not long survive.

In fine, the Washington Post has done irreparable damage to the right of the people to know all the facts about a historic debate and has played into the hands of the censors throughout the country. This fact was ably set forth by Representative GEORGE HUDDLESTON, of Birmingham, in a speech on the floor of Congress a few days ago.

The organized press and other agencies of free expression, or the right of the people to know, were making great progress, even in Congress, before the noted Washington daily betrayed its fundamental creed. But now we shall have to apologize for Post's default in every fight for freedom we undertake.

Economic Grounds Said Key Factor in U.S. Welfare—Banker Urges Diligence, Honesty in Club's Toast to President

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following text of an article which appeared in the Saginaw News of January 2 and which contains the text of a speech presented by Mr. R. Perry Shorts, one of Saginaw, Michigan's most respected citizens. Mr. Shorts' excellent address was given on the occasion of the Saginaw Club's 47th annual toast to the President of the United States.

ECONOMIC GROUNDS SAID KEY FACTOR IN U.S. WELFARE—BANKER URGES DILIGENCE, HONESTY IN CLUB'S TOAST TO PRESIDENT

(EDITOR'S NOTE.—Members of the Saginaw Club and their sons yesterday heard the counsel of one of Michigan's wisest business patriarchs when he gave the Saginaw Club's 47th annual toast to the President of the United States.)

It was given by R. Perry Shorts, chairman of the board of Second National Bank and one of the club's oldest and most respected members.

The New Year's Day toast ceremony at The Saginaw Club is one of Michigan's finest Yuletide holiday traditions. Mr. Shorts gave the toast once before, on January 1, 1921.

In his message, Mr. Shorts urged his attentive audience to consider the inherent greatness of the United States, oppose forces which would tarnish and dissipate the great heritage of American freedom and private enterprise.

He bade the young men, especially, to be diligent in their work and honest and thrifty in their habits.

He called out against improvident Government spending and warned against the menace of pressure groups dominating our standards of living.

Mr. Shorts labeled inflation as one of the foremost foes of the U.S. economy.

He praised President Eisenhower for his "untiring efforts even beyond his physical strength, to the promotion of peace on earth, the preservation of free enterprise for our people and efficiency, solvency and morality for our Government."

The Saginaw Club's invitation to give this year's toast was extended to Mr. Shorts several months ago. Some time after he had accepted it, he learned about plans, then underway, for the civic luncheon which was given in honor of his 79th birthday last Tuesday. He felt embarrassed about all the publicity the two events would bring to him in so short a space of time. But he could not stop the plans for his birthday party and was told it was too late to change plans for the New Year's toast.

The text of Mr. Shorts' address:

Having been a resident of this great country for 75 years, protected by its laws, educated by its schools, inspired by its institutions, and prospered by its industries—I eagerly grasp the opportunity this occasion affords to publicly thank God for the United States of America and to pay deserving tribute to its leadership. And it seems to me most fitting that on this patriotic occasion, we fathers should inform our sons on some of our national problems and urge them to take active part in their constructive solution.

AMERICA—A LAND OF OPPORTUNITY

Surely, we are living in the grandest Nation in the world. To our sons present and to every young man I would say—you don't have to be exceptionally brilliant to make a good living here. Our country is a land of opportunity where every man has a chance to rise and win his share of its manifold blessings to mankind. All you have to do is to use your God-given brains and follow the simple formula of thrift, hard work and old-fashioned honesty.

If you can't save money, boys, you haven't a chance of much success. Every fortune you see is proof positive that somebody worked and saved. What you earn is not so important—it's what you save that counts. Also, hard work is essential. Every outstanding man in every trade and profession is a hard worker—make no mistake about that. And you must be honest, in order to maintain a good reputation. Nobody will trust you far or long—unless you are honest.

FREE ENTERPRISE VERSUS SOCIALISM

And the grand thing about it all is that the great majority of our people have always been thrifty, hard working and honest—and their combined thrift and labor and integrity throughout the years, coupled with free enterprise, have built up the strongest Nation in the world. Critics may attack our free enterprise system, but no one can successfully attack the standards of living it provides—broadest ownership, highest wages, and greatest abundance of the good things of life. Back in ancient times, Horace, the wise old philosopher, said, "If a better system is thine, impart it; if not, make use of mine." This is America's challenge to the world today.

And don't let any politician tell you that our low income groups can't share in our prosperity. The top men in scores of our large corporations today were once poor boys who saved their money, bought their companies' stock and then worked like beavers to climb to the top. Any man who has saved $100 can now buy shares in almost any business corporation in America. Right now, we have an economic system that beats statism and socialism and communism a mile; where our workers themselves can even buy control of their own corporations—and do it without any bloody revolution. All they have to do is to save their money and invest it wisely. They will then be running their own lives—and not slaving for a dictator or a group of bureaucrats.

Every young man should quickly learn that the only allurement that socialism has to offer is a promise of greater abundance in exchange for freedom—but history shows that abundance and freedom for the people never go together. There just isn't enough abundance to go around. He should also soon discover that the Government hasn't any money to hand out to people, except what it collects in taxes from the people themselves, unless, of course, it manufactures it against Government debt, or simply prints it—and that kind of money spells trouble.

The true welfare of our people rests on economic grounds. When business prospers, we have prosperity—more wealth, more factories, more goods, more jobs—and every law that hurts business hurts everybody. There is more danger in big Government than in big business. It is free enterprise that promotes our industries, furnishes our jobs, and passes prosperity around. And so surely, it is our patriotic duty to preserve free enterprise in our Nation and not permit Socialistic philosophies to weaken its structure or divert its ideals.

PRESSURE GROUPS

After the Revolutionary War when the American colonies had finally won their independence, Benjamin Franklin said, "You have won your freedom—now keep it." And in 1857 (over 100 years ago), Macauley, the great English scholar, expressed the opinion that while our democratic form of Government was ideal in theory, "Your Constitution is all sail and no anchor." He then predicted that pressure groups would gradually pressure our Government to give up its seed corn for their special benefit and thereby bleed and weaken its structure and constitute a dangerous threat to its survival.

These predicted pressure groups are now growing by leaps and bounds. There are veterans' groups, farm groups, labor groups, pension groups, education groups, foreign-aid groups, and a host of others—and they are constantly demanding from the Government more and more costly benefits. They practice the slogan of the old horse-and-buggy days—"The wheel that squeaks the loudest gets the grease"—and few lawmakers have the courage to refuse to spend taxpayers' money when large groups of votes are at stake. In the last 5 years, Government spending on agriculture alone has more than doubled and now amounts to over $1,000 for every farm in the country.

And then there are cooperatives and mutual associations (hundreds of them of every nature and description) transacting billions of dollars of business per year and being allowed hundreds of millions of dollars of unfair tax advantages over our full taxpaying businessmen, against whom they compete. They are not concerned with the Govern-

ment's loss of revenue—but only with retaining their freedom from taxes. The pressure groups increase our outgo, and the co-ops decrease our income—and the ones who suffer are the full taxpaying citizens. Millions of members belong to these pressure groups and co-ops and they are working day and night to increase their representation in our legislative halls, both State and national. Isn't it about time we put an anchor in our laws to prevent discrimination and restrain the power of organized minorities?

Furthermore, these spenders on the one hand and tax-advantage-seeking co-ops on the other, are not Jeffersonian Democrats (for Jefferson advocated Government economy and pronounced "public debt as the greatest of dangers"), and they are not Lincoln Republicans (for Lincoln stood for equal rights for all)—and yet they are demoralizing both parties and threatening the stability of our Government. If democracy means anything surely it means tax equality and equal privileges for all. I have no fear of our ability to meet and defeat any foreign foe—it is group attacks from within that worry me.

SOUND MONEY

And in the financial field, I believe our greatest problem of the day is the defense of the dollar. Even the Communists work on the theory that the quickest way to ruin a country is to destroy its currency. Never before has our U.S. dollar been worth so little as it is today—and never before has our debt been so large (and socialistic ideas usually grow as a nation's debt grows). Monkey with the nation's currency and you jeopardize all values. Our Government started this inflation when it took us off the gold standard in 1933, and began its "pump priming" and spending sprees—and it can never stop it until it restores sound money again and quits spending more than it takes in. Only the Government can start widespread inflation—and only the Government can stop it.

Inflation is the politicians' cocktail to keep the people happy while it ruins them—and yet these spenders know that every time they vote another pension, another bonus, or another price support (without providing means to pay for it) your hard-earned dollar goes lower and lower. If our money today were depreciated since prior to World War I as much as France's money now is, $100 would buy about 2 pounds of hamburger. But, of course, the politicians don't like sound money because it restrains their spending. The tragic thing about it all is that this basic immorality which makes our Government's promises worth less and less is rarely ever considered by many of our politicians today. My earnest hope is that someday before it is too late our Government will declare and enforce as a national policy free and fair competition resting upon sound and stable money, and thus permit our country to sail proudly on to ever-enlarging strength and freedom and progress.

Here, then, are some of our national problems which you young men are facing. Study them carefully, protest against the wrong and fight for the right, always keeping in mind that famous warning: "To sin by silence when we should protest makes cowards out of men. The human race has climbed by protest." And also remember the words of Edmund Burke: "All that is necessary for the forces of evil to win in the world is for enough good men to do nothing."

NATION'S LEADERSHIP

And now let us consider the leadership under which our great Nation has developed. Thirty-three men have occupied the Presidency of the United States—and only three are still alive. Today we are toasting our present leader.

It is one of the tragedies of American history that the greatness of our greatest men has not been fully recognized until after death had closed their careers. So it was with Washington and Jefferson and Lincoln—and so it will be with President Eisenhower. It seems that greatness cannot be discerned except from a distance. In its presence our eyes are dimmed. You cannot see a mountain if you stand too close.

As in business, a man's net worth is measured by the surplus of his assets over his liabilities, so in history, a great man's net worth must be measured by the excess of his acccomplishments over his failures. War heroes are made by war, peace heroes by peace and world statesmen by world issues. Carlisle has said "Great men always come when they are needed." To my mind, President Eisenhower has been a great war hero, a great peace hero, and a great statesman in the cause of world peace—and I believe that a few years hence, when political prejudices have been forever washed away by the purifying waves of time, history will record him as one of the outstanding great men of our day—and one who came when he was needed.

His whole life has been one of unselfish service—first to his country, and then to the free world at large. In the early forties, when the chief business of the world was war, and the vast battles had thus far gone overwhelmingly in favor of the Axis Powers; when the Allies decided as a last resort to pool their European forces and launch one colossal attack against the enemy—it was Dwight D. Eisenhower whom they selected as the supreme commander of their combined armies and navies and air forces. The voluntary concentration of such stupendous faith and power into the hands of one man had never before been known. This battle was, no doubt, the greatest physical conflict in the history of mankind for on its outcome rested the continued life of 47 Allied nations throughout the world and the freedom of hundreds of millions of people (including you and me)—and the result was unconditional surrender of the enemy.

After World War II was over, Dwight Eisenhower came home. In 1952, he was elected President of the United States, and from that time on has devoted his untiring efforts even beyond his physical strength, to the promotion of peace on earth, and the preservation of free enterprise for our people, and efficiency, solvency, and morality for our Government.

And now, Mr. Chairman, just one more thought and I am through. At this crucial time, when our whole system of government is being challenged by a foreign power, let us not adjourn a large meeting like this without rededicating our lives to our country and its ideals of freedom—the noblest cause we know. Though our vision may now be obscured by the turmoil of the times and our spirits sorely tried by the apparent strength of evil, yet we have faith that the dawn is surely breaking on the day when the free nations of the world will stand together to establish and maintain enduring freedom for mankind.

"Ye who have faith to look with fearless eyes
Beyond the tragedy of a world at strife,
And know that out of death and night shall rise
The dawn of ampler life;
Rejoice, whatever anguish rend your heart,
That God has given to you the priceless dower
To live in these great times, and bear your part
In freedom's crowning hour;
That ye may tell your sons who see the light
High in the heavens, their heritage to take—
'I saw the powers of darkness put to flight;
I saw the morning break.'"

Gentlemen, I give you the President of the United States.

Speech of Hon. Arthur Winstead at the Mississippi Products Dinner

EXTENSION OF REMARKS
OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit herewith a speech delivered by my distinguished colleague, the Honorable ARTHUR WINSTEAD, of Mississippi, on the occasion of the Mississippi products dinner on December 6 last at the Sheraton Park Hotel, Washington, D.C.

It will be recalled that the Dixie Darlings and the band from Mississippi Southern College, located in my own congressional district at Hattiesburg, Miss., were honored guests on this occasion. The next day they put on one of the best half-time football shows ever exhibited in these United States on the occasion of the pro football game between the Washington Redskins and the Pittsburgh Steelers. The menu at the dinner consisted of delicacies from Mississippi.

Mississippi Southern College, although a comparatively young institution, has achieved an outstanding record among the colleges of the Nation in the short period of its existence. It is famous not only for its outstanding prowess on the gridiron and its Dixie Darlings, but for the enviable record in the scholastic field that it has achieved.

The speaker on the occasion of the Mississippi products dinner given by the Mississippi Day Committee was my distinguished colleague, Congressman ARTHUR WINSTEAD.

His speech follows:

Mr. Chairman, Mr. George Marshall, ladies and gentlemen, this is a most happy occasion. Personally, I feel that we Mississippians in Washington are greatly honored by the visit of the Dixie Darlings, the pride of Mississippi, the marching band from Mississippi Southern College, officials of Mississippi Southern, and the many fine people who have come to the Capital from our State to be with us on this great occasion.

As an alumnus of Mississippi Southern, I feel also that our fine institution has been honored. Of course, our Dixie Darlings and band deserve the honor. They were chosen this year as the outstanding college drill team and band in the Nation and will perform tomorrow over a national radio and television network between the halves at the Washington Redskins-Pittsburgh Steelers football game. We are proud of the fine achievements of Mississippi Southern, which is the fastest growing institution of higher learning in the South.

We are proud that this great institution was honored when its band and Dixie Darlings were chosen as star performers at our first annual Mississippi products dinner in Washington.

Now, I know that Mississippians in Washington try to keep up with what is going on back home. However, I would like to call your attention to some of the outstanding achievements of Mississippi in agriculture and in agricultural industry, dramatized here tonight.

Up on Capitol Hill here in Washington we often find outstanding proof of the popu-

larity of gulf coast shrimp. Several times a year our friends on the gulf coast send up shrimp for seafood luncheons and dinners. And none of these congressional parties ever go begging when we let our colleagues know we are having a shrimp feed. Every first-class restaurant features gulf coast shrimp. To add to this tasty cocktail, Jimmy Love has supplied his delicious sauce. Jimmy has made this remoulade sauce, perfected by the Buena Vista Hotel, famous throughout the Nation.

You have not enjoyed real gumbo until you have tasted Pascagoula crab gumbo. Hermes Gautier, Pascagoula's ambassador of good will, is here tonight to enjoy with us this wonderful gulf coast delicacy.

We often hear that so-called western beef makes the finest steaks in America. But did you know that often top grade Mississippi beef sells on the Memphis market at prices higher than the same grade of western beef sells at the same time in Kansas City, Chicago, and Omaha? We are honored tonight by the presence of the world's No. 1 polled Hereford cattleman. I refer, of course, to my good friend, "Hot" Moore of Senatobia. Each year for the past 17 years, Mr. Moore's Circle M Ranch has staged the top cattle sale in America.

Last February, he sold a champion polled Hereford bull for $55,000, and that is the world's record price for any bull. We are proud of the fine achievements of Mississippi cattlemen and farmers in bringing our State to the forefront in livestock production.

Now, over in my district, in Scott County, we have the world's No. 1 poultry processing activity.

The chicken breasts that you will enjoy here tonight were supplied by my personal friend of Morton, Benny Rogers, who has one of the biggest chicken processing plants in existence. I stopped in to see Benny while I was in Mississippi this fall. As I parked in front of his plant a big truck, loaded with Mississippi chickens was pulling out for Los Angeles. Our Scott County chicken industry supplies poultry throughout the United States and many foreign countries.

The vegetables you are enjoying tonight were supplied by Wally Wright, one of the Nation's biggest wholesale grocers. He has wholesale stores throughout Mississippi and is interested in similar operations in other States. You will enjoy the lady peas, cooked southern style, and the delicious baked potatoes served you here tonight.

Mississippi has always been a leader in the production of dairy products. Mississippi Dairy Products Association shipped to our dinner pure creamery butter produced in our State. The Hattiesburg Creamery has surprised us with the addition of about 200 gallons of Hattiesburg ice cream to give you a choice of desserts.

But, before we come to the dessert, permit me to call to your attention to the wonderful deviled egg salad, made from the recipe of Mrs. L. E. Burnett, whose husband is the head of an organization known as "Better Eggs, Inc.," at Jackson. Mississippi grocers no longer find it necessary to import eggs to meet the table demands of our people.

Then, of course, we are enjoying wonderful Stafford Springs mineral water. Stafford Springs is also in my district. Stafford Springs water is most pleasant tasting, as you have already noted, and has very fine medicinal qualities.

Now, we come to the dessert. Many Mississippians contend that molasses pecan pie originated in our State.

The molasses in the pie here tonight is the very finest Marion County blue ribbon cane sirup. Lester Williams, nationally known weekly newspaper publisher who also owns the radio station at Columbia, was responsible for the sirup.

South Mississippi pecans were supplied by the Funsten Pecan Co. of Hattiesburg and the Natchez Pecan Shelling Co. of Natchez. The pecan industry also contributes substantially to our Mississippi economy. At this time of the year, they are in demand in all parts of the country, for pecans are essential in any good Christmas fruit cake.

We are most grateful to Mr. George Marshall, of the Washington Redskins, and to Philip Morris, sponsors of the National radio and television show for tomorrow, for helping us make possible this occasion.

Now, let's all have a good time and join in telling our friends in Washington about what a great State we have in Mississippi.

Oh, yes; before I sit down I want to ask a very pertinent question. My question is directed to Ole Miss and Mississippi State. Why don't you play Mississippi Southern?

Undue Banking Concentration Must Be Stopped

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by me before the Wisconsin Bankers Association at the Hotel Schroeder, Milwaukee, Wis., Monday, January 26, 1959.

The address follows:

I am very happy to be here with members of this distinguished group which has been in the forefront in seeking to maintain a sound, vigorously competitive unit banking system in this country and to arrest the trend which is slowly concentrating our financial resources into fewer and fewer hands. The members of this association are well aware that the healthy growth of independent banks is of vital importance for the preservation of our traditional, free enterprise system. That system is premised on a diffusion of economic power and depends upon economic activity being controlled by the market and not manipulated by a handful of men.

It is for these reasons, I think, that the American concept of banking traditionally has been based on community banking which provides the widest range of financial services to the people in the area. In my judgment, independent banks, locally organized, locally financed, and locally managed, not only act as a necessary balance wheel to offset the power of big business, they tend to provide a much healthier basis for effective community organization than does the absentee ownership of mammoth banking institutions. In fact, it is the independent bank—not the giant financial house—which in many cases provides the new ideas from which widespread innovations originate.

During the last 35 years, however, events have transpired in the field of banking which have severely transformed the entire structure of the Nation's banking system and have threatened to alter fundamental assumptions underlying the deposit and credit structure of the economy. In the last 35 years, the banking population of the country has been more than halved notwithstanding that the business transacted by the commercial banking system has multiplied many times. In 1921, there were over 30,000 commercial banks as compared to approximately 13,500 at the present time. True, a large share of the Nation's losses occurred prior to 1933 because of the depression when approximately 9,000 banks were forced to suspend operations during the 4-year period between 1930 and the end of 1933. However, since 1933, the merger movement has been the major factor in the gradual decline in the total number of banks. For example, in the period 1950 through 1958, some 1,330 of the Nation's commercial banks have disappeared by way of mergers and consolidations. Many of these consolidations, I would hasten to add, have been primarily the outgrowth of a deliberate effort on the part of certain banks to expand their banking facilities, add to their capital and depositors, and, in general, increase their overall financial strength in the economy.

This depletion of the ranks of the country's banks has lessened competition among banks in many communities. Over 76 counties in the United States have no commercial banking facilities whatsoever, while more than half the counties in the United States have only three or fewer banks serving the needs of the community. Hundreds of small, rural American communities have become bankless towns and many others are served by only one bank in place of the two or three which existed in the 1920's.

Other important trends have accompanied the demise of many of the Nation's banks. In the first place, banks have gradually been increasing in size. A bank that was considered large in size in the midthirties is now a relatively small institution. Smaller banks have become fewer in number, the big banks greater in proportion to the banking population.

In addition, the banking system has become characterized by a high degree of concentration of financial resources where a few large banks control a disproportionate share of total loans and deposits. Today the 100 largest banks control more than 48 percent of the Nation's bank deposits. In 10 of the Nation's 16 leading financial centers, 4 banks own more than 80 percent of all commercial assets. Furthermore, in nine of these financial centers, two banks own more than 60 percent of all commercial bank assets. Again, in each of the 16 leading financial centers, the first two banks own more than 40 percent of all the commercial assets, the first four banks, 60 percent.

Another aspect is concentration through bank holding companies which exercise a high degree of control over banking facilities in many areas. In Massachusetts, for example, holding companies control 48.5 percent of all commercial banking deposits; in Minnesota, two bank holding companies control 45 percent of commercial bank deposits; in Montana, the same two companies control over 44 percent of the commercial bank deposits; in Oregon, one company controls 42 percent of the State's bank deposits; in Nevada, the same company holds 78 percent of the commercial bank deposits. And here in Milwaukee, one bank, controlled by a holding company, has 48.8 percent of all deposits in the city.

The increase in banking concentration has been coupled with a comparative contraction in the credit extended to borrowers by the banking system. As banks have grown larger, they have tended to have fewer dealings with smaller businesses. A study conducted by the Federal Reserve Board several years ago shows that the very large banks with deposits of $500 million or more had the least number of loans with small business of all classes of banks, the next to lowest dollar volume of loans with small business, and the smallest percentage of dollar volume of all loans with small business. Considering the decrease in the proportion of small banks in the financial community, the overall drop in credit extended, and the frequent resort to Government agencies for funds, it seems likely that the increasing trend toward concentration has at times entailed credit shortages especially for smaller enterprises.

There is increasing awareness, I believe, that additional precautions are essential to

preserve the banking competition that still remains and to prevent banking credit from becoming dominated to an ever-increasing extent by a small tightly knit group. Successfully resisted in New York State last year, for example, were bills which would accomplish the following: First, permit bank holding company expansion throughout the State without regard to bank branch district lines, thus ending the freeze on bank holding company expansion except in accordance with branch geographic limitations; second, obliterate the branch district line between New York City and the suburban areas hence permitting bank expansion throughout the entire new district.

As I pointed out to Governor Harriman, adoption of such legislation not only would have the gravest consequences in respect of the State's future banking structure, but would bring banking monopoly closer into being. It would also have had the gravest repercussions throughout the Nation, since what happens in New York in the banking field frequently sets the stage for numerous other States.

Adoption of the first proposal, I indicated, would enable a bank, via the holding company device, to circumvent branch district lines and enable the same management, which is restricted in its operations under a bank charter, to acquire through a holding company a unit bank in the State of New York regardless of where situated and operate it in the same manner a branch would be operated. It was my position that this proposal would accomplish indirectly what is prohibited by the State in establishing branch district lines and would have effectively dissolved branch limitations. Beyond that, it seemed crystal clear to me that the proposal could have ignited what might have been the greatest chain reaction in recent banking history, the effects of which threatened to go to the very roots of the entire banking structure of New York State.

With respect to the proposal to obliterate the branch district line between New York City and the suburban counties, I emphasized that these district lines were drawn to protect independent banking from encroachment of the giant money-market-institutions in New York City, and that it was of even greater importance now to guard against such encroachment.

In my several communications to Governor Harriman, I also emphasized that to adopt either proposal would be to yield without justification to a few powerful financial institutions in New York City, which have, for years, sought to achieve dominance over the banking system of the entire State of New York.

The Independent Bankers Association, of which your group is a constituent part, played an important role in mustering effective opposition to this legislation. It is to be commended as is Governor Harriman who, recognizing the importance of unit banks, maintained unrelenting resistance to these measures.

I am sure the sponsors of this legislation will renew their efforts to secure passage of these proposals. I trust that the new Governor of New York, Mr. Rockefeller, will act with the same dedication to the public interest in opposing such measures as did his predecessor.

Also noteworthy this past year was rejection by the Federal Reserve Board of a plan by the First National City Bank of New York, the second largest in the city, to evade New York State statutory limitations preventing banks in New York City from establishing branches outside the boundaries of New York City. This it tried to do by applying to the Federal Reserve Board for permission to form a bank holding company with the initial objective of acquiring control of the County Trust Co. of White Plains, N.Y., the dominant commercial bank in Westchester County. In opposing this plan, I testified in detail before the Board that its consummation would be contrary to the competitive standards of the Bank Holding Company Act and in violation of the Celler-Kefauver act; that its effectuation could mean the end of branch district lines in the State; and could mean basic alteration of the State's banking structure completely without the approval of the State's legislature. My good friend Mr. Ben DuBois of the Independent Bankers Association, likewise testified in opposition to this proposal and, I might add, presented most persuasive arguments. It is gratifying that the majority of the Board recognized the serious competitive implications of this proposal and rejected it on that basis.

No less significant are the proposed mergers between the Guaranty Trust Co. of New York and J. P. Morgan & Co. and between the Manufacturers Trust Co. and the Bankers Trust Co. There is little doubt that consummation of either of these transactions would result in an undue concentration of banking facilities in the city; spur a further wave of bank mergers; and ignite a chain reaction that could have the most profound repercussions on our banking structure.

In view of the apparent impact these transactions would have on the competitive situation, I have communicated with the Superintendent of Banks of New York State whose aproval is required, together with the Federal Reserve Board which also must approve in the event either of the continuing banks establishes branches at locations of former offices of the absorbed institution. In addition, I have written to the Department of Justice which has jurisdiction under the Sherman Act which prohibits any combination in restraint of trade, attempt to monopolize, or monopolization.

With respect to these merger proposals, it is relevant that 3 years ago the New York Superintendent of Banks, Mr. George A. Mooney, testified before our Antitrust Subcommittee:

"It has been my policy as superintendent of banks of the State of New York to follow the spirit of the Celler Antimerger Act in determining whether or not to approve mergers of banks that come within my jurisdiction. That is to say, if after analysis of all facts, I find that the effect of a proposed bank merger may be substantially to lessen competition or tend to monopoly in any locality, I will unhesitatingly withhold approval."

Mr. Mooney's term expired a few weeks ago. In the circumstances, it is vitally important that his successor who will be appointed by Governor Rockefeller adhere scrupulously to the above policy in scrutinizing the Guaranty Trust-Morgan and Manufacturers Trust-Bankers Trust merger proposals. I would also note that before leaving office Mr. Mooney advised me that his Department was undertaking a thorough investigation of the Guaranty-Morgan proposal.

I hope that the new Superintendent not only continues that investigation but broadens it to include the Manufacturers Trust-Bankers Trust transaction. I trust that the Superintendent will, in addition, consult with the Antitrust Division of the Department of Justice and the Federal Reserve Board as to the competitive aspects of these mergers. Furthermore, I believe it necessary that the Superintendent hold public hearings on the proposals so that all interested persons may be afforded an opportunity to present their views.

Let me make it clear that as chairman of the Antitrust subcommittee, I will keep a watchful eye on all developments.

On the positive side, additional Federal legislation dealing with bank mergers is imperative if we are to stop undue concentration and keep a unit banking system in this country. For there is little doubt that present Federal law on this subject is grossly inadequate.

Under the National Banking Act, approval of the Comptroller of the Currency is required for any merger between national banks, or between a national bank and a State bank, where the resultant institution is a national bank. In addition, the Federal Deposit Insurance Act requires that approval of certain mergers must be obtained from the Federal Deposit Insurance Corporation, the Comptroller of the Currency, or the Federal Reserve Board, as the case may be, but only where the capital stock or surplus of the resulting bank will be less than the aggregate stock of the two institutions combined. Also, approval of the Federal Deposit Insurance Corporation is required for mergers between insured and noninsured banks. None of these Federal banking statutes applicable to mergers deals substantively with competition in the field of banking, and in no case is the competitive impact of the merger a necessary element to be considered by Federal banking officials in deciding whether or not to grant approval.

Bank mergers are also circumscribed by the provisions of the Sherman Act of 1890 which prohibit combinations in restraint of trade, attempts to monopolize, or monopolization of trade or commerce. Illegality is established by proof that the merger has actually resulted in an unreasonable lessening of competition; it is immaterial whether the merger was accomplished by stock or asset acquisitions.

Section 7 of the Clayton Act of 1914, on the other hand, deals specifically with corporate and bank mergers and bans those achieved by stock purchases where there is a reasonable probability of a substantial lessening of competition or a tendency to monopoly. Responsibility for enforcing the section insofar as banks are concerned is vested concurrently in the Attorney General and the Federal Reserve Board.

Section 7 was designed to stop mergers beyond the reach of the Sherman Act but its failure to include mergers accomplished by asset acquisitions resulted in a loophole which so far as nonbanking corporations are concerned was closed by passage of the Celler-Kefauver Act of 1950. However, because of revisions made in subsequent versions of various antimerger bills, it became impracticable to include within the scope of the Celler-Kefauver Act corporations other than those subject to the jurisdiction of the Federal Trade Commission. This left asset acquisitions by banks unaffected by the new law since authority to enforce the provisions of section 7 dealing with banks is vested in the Federal Reserve Board and not in the Federal Trade Commission.

Beyond this, most bank mergers are accomplished by asset acquisitions. For this reason section 7 of the Clayton Act has limited value in coping with the mounting trend of bank merger activity.

Against this background I believe it necessary as a first step that Section 18(c) of the Federal Deposit Insurance Corporation Act be amended in the following respects:

First, the provisions of existing law should be expanded so as to require prior approval by the appropriate Federal bank supervisory agency for every merger or consolidation involving insured banks;

Second, the appropriate Federal bank supervisory agency should be prohibited from approving any bank merger or consolidation where the effect may be substantially to lessen competition or tend to create a monopoly;

Third, the appropriate Federal bank supervisory agency should be required to give notice to the Attorney General of a proposed merger and enable him to intervene or offer his views respecting the competitive phases of the transaction;

Fourth, the appropriate Federal bank supervisory agency should be required to give notice with opportunity to be heard to the appropriate supervisory authority of the in-

terested State in the event the transaction involves State banks;

Fifth, an antitrust savings clause should be adopted for bank mergers similar to that governing bank holding companies which would make it clear that applicable provisions of the antitrust laws pertaining to banks are not to be superseded.

In addition, the loophole in Section 7 of the Clayton Act should be closed and Federal enforcement agencies should be provided with the same authority to move against bank mergers accomplished by asset acquisition as they have to move against bank mergers consummated by way of stock acquisitions.

It is important to note that amendment of the banking laws in this area is not inconsistent with amendment of the antitrust laws to cover bank mergers accomplished by asset acquisitions. Indeed, adoption of the approach that I have outlined would mean, in effect, that the antitrust statutory provisions pertaining to bank mergers would be essentially similar to provisions presently applicable to bank holding company acquisition of banking facilities.

The Federal banking agencies, while recommending amendment of existing laws so as to require prior approval of all bank mergers, feel that in granting or withholding consent, they should be required only "to take into consideration whether the effect (of the proposed transaction) may be to lessen competition unduly or to tend unduly to create a monopoly." They oppose the approach recommended above that would require them to disapprove a merger where the effect may be substantially to lessen competition or tend to monopoly.

Under the suggestion of the banking agencies competitive considerations would be only one of the various factors that would have to be taken into account by the appropriate Federal banking agency in scrutinizing a proposed bank merger. Moreover, they would have Congress adopt an entirely novel test, namely, whether the acquisition may lessen competition unduly or tend unduly to create a monopoly. Indisputably this proposed standard is far weaker than that of section 7 of the Clayton Act as amended by the Celler-Kefauver Act which applies to other businesses and prohibits any merger where the effect of the acquisition may be substantially to lessen competition, or to tend to create a monopoly. Nor are the characteristics of the banking industry so unique as to justify such departure.

The term "substantially lessen competition" has been imbedded in Federal jurisprudence for some 35 years in the course of which it has received judicial content through numerous court interpretations. If we discard this standard for the vague and novel standard of "unduly," we will find ourselves in a sea of trouble. It took years and years to determine through court interpretation what the term "substantially to lessen competition" means. Should the banking agencies' proposal be adopted, not only would the courts have to start all over again in interpreting a vague and untested term, there would be created—and without justification—a dual standard, one for banks, another for nonbanking corporations.

Also, it must be recognized that if the Congress should adopt the standard proposed by the banking agencies and proscribe only bank mergers which tend unduly to monopoly, then the Congress in effect would be placing its imprimatur of approval on mergers which tend to monopoly. Stated otherwise, adoption of the "unduly" standard would mean that it is the policy of Congress that a bank merger which tends to monopoly is in the public interest; that only if it tends unduly to monopoly should it be banned.

The short of the matter is that, as a former Assistant Attorney General in charge of the antitrust division testified, "the banking agencies' proposal does little if anything, to insure competitive enterprise in banking. Any pretense that it does seems to me hardly more than sham."

More than that, the proposal of the banking agencies would weaken the competitive standards which the Comptroller of the Currency now professes to follow with respect to bank mergers. It will be recalled that approval of the Comptroller of the Currency is required in all cases of mergers between national banks, or between a national bank and a State bank where the resultant institution is to be operated under a national charter. I point out that the Comptroller has stated on numerous occasions that before granting merger approval, he will determine whether its effect in any section of the country may be substantially to lessen competition or tend to create a monopoly; that he will determine, in sum, whether the transaction is violative of the policy of the Celler-Kefauver Act.

The conclusion is inescapable, however, as the Attorney General has testified, that the office of the Comptroller has tended to give little or no consideration to the question as to whether or not competition would be substantially lessened.

It is important that legislation in this area require the appropriate Federal bank supervisory agency to give notice to the Attorney General. As the Department of Justice has observed, "failure to insure informed advice on competitive factors could have effects far beyond the banking field. Without (the Department's) right to intervene in bank mergers there might be as many different views of section 7 standards and scope as there were agencies charged with this enforcement. The result could well be disparities in view, which, in turn, spell real enforcement inequities. Enforcement effectiveness as well requires some procedure for (the) Department's intervention. Otherwise in its overall responsibility for section 7's enforcement * * * outside of the banking area, the Department would be bound by bank merger precedents (it) had no voice in picking or shaping."

In these circumstances, it would be little short of folly to require the appropriate Federal bank supervisory agency to obtain the views of the other two banking agencies, as the agencies have recommended, but not impose the same requirement in respect to seeking the informed advice of the Department of Justice—the one agency possessing the necessary competency to make an informed recommendation respecting competitive implications of a proposed merger.

Furthermore, on the basis of past experience, unless a requirement of mandatory consultation with the Department is written into law, there is little, if any, likelihood that the Federal banking agencies will seek the informed advice of the Attorney General.

The foregoing considerations are equally applicable in respect to obtaining the views of the appropriate State banking supervisor when the continuing institution is to be a State bank. In such cases it is as necessary to obtain the views of the appropriate local official as it is the views of the other two Federal banking agencies since the State supervisor usually will have special knowledge of local banking and other matters, factors which are of the highest degree or relevance to a determination as to whether final approval should be granted or withheld.

Amendment of existing law is essential in another respect: to prohibit holding company acquisition of banks within a State except within the area within which branches of banks are permitted. Such provision, it will be recalled, was incorporated in section 5(c) of the Spence Bank Holding Company bill (H.R. 6627) which was adopted overwhelmingly by the House in the 84th Congress, though the section was later deleted in conference. Subsequent developments have only served to underscore need for its enactment. Absent such provision, State geographic limitations have been and can be avoided by the simple expedient of forming a holding company to acquire control of banks throughout a State without regard to district lines. To my mind the conclusion is inescapable that despite all that has been said about the distinction between bank holding company groups and branch banking systems, both accomplish the same thing—the operation of a number of banking units under one control and management. Through the corporate device, holding companies still can be used to evade branch banking laws and defeat the declared policies of the State regarding branch banking. This should not be tolerated.

Bear in mind that the overriding purpose of the Bank Holding Company Act and of State branching restrictions is similar: to safeguard against banking monopoly by minimizing the dangers inherent in concentration of economic power through centralized banking control. Yet, the Bank Holding Company Act, by permitting the piercing of branch district lines through the holding company device, is now serving as a convenient vehicle for fostering just that banking concentration which it is designed to prevent. I can think of no greater anomaly.

The legislation I have recommended above is the minimum necessary to preserve competition in the banking field. I shall do everything possible to see to its enactment during this Congress and I am confident that with the help of your association and other like-minded organizations, it will be approved by the present Congress.

TV Booster Stations

EXTENSION OF REMARKS

OF

HON. LAWRENCE BROCK

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. BROCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from the Legislature of Nebraska:

LEGISLATIVE RESOLUTION 6

Whereas the Federal Communications Commission on December 31, 1958, announced a decision prohibiting the operation of low power television broadcaster repeater stations on very high frequency channels and requiring existing stations to apply for conversion to licensed ultra high frequency translators by April 1; and

Whereas the cost of conversion to an operation of ultra high frequency translators would be prohibitive in the sparsely settled areas in Nebraska; and

Whereas because of the distances involved in the sparsely settled areas of Nebraska the use of repeater stations on very high frequency channels does not interfere with licensed operations using the same channel: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 69th session assembled—

1. That this legislature respectfully requests the Federal Communications Commission to reconsider its decision of December 31 insofar as it applies to Nebraska and permit the continued operation of low power television repeater stations on very high frequency channels in this State.

2. That a copy of this resolution be sent to the Federal Communications Commission and to each of the Members from Nebraska in the U.S. House of Representatives and the Senate.

Physicians in Congress

EXTENSION OF REMARKS
OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. FENTON. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article listing the physicians who have served in the American Congress from 1774 to 1959.

This interesting article was prepared by Mr. Jaroslave Nemec, the librarian of the Washington office of the American Medical Association.

I am sure that Members will find this information unusual. I congratulate Mr. Nemec on his scholarship and effort devoted to this work.

This is the story of the 361 physicians, who, over the years, have helped to shape the destiny of the country as Members of the U.S. House of Representatives and Senate.

The story is interesting and in some ways revealing. For example, at least 13 also were State or Territorial governors, and 3 States selected men from this group as their first governors. If the report does nothing else it will document the point we have been making for years. There is nothing new, unusual, or improper in doctors taking an acting part in the National Government; they have been doing so from the very beginning of the Republic.

We are not offering this as a complete or definitive historical work on doctors in government. It deals only with those who served in the House or Senate. Obviously we can't touch on all of them, but we have said something about more than 50 whose careers seemed to us to be particularly outstanding or unusual.

The basis for this report is a complete listing, extracted by our librarian from historical documents, of all physicians who have served in the National legislature. It shows their name, party, dates of birth and death, years served in Congress, and occasionally other information about them.

DOCTORS WERE IN ON THE GROUND FLOOR; FIVE SIGNED DECLARATION

In 1776, Josiah Bartlett, physician, was 46 years old, a confirmed and vigorous patriot. So it was natural that as a New Hampshire delegate to the Continental Congress he signed the Declaration of Independence on July 4. Perhaps it was only an accident, but he was the second person to sign the engrossed document at the formal ceremony on August 2 of that year.

For Dr. Bartlett, that was only one incident in a long and brilliant public career that successively saw him as a signer of the Articles of Confederation, judge, member of the Constitutional Convention, Governor of New Hampshire.

Dr. Bartlett was not the only physician to sign the Declaration. There were four others: Drs. Lyman Hall, Benjamin Rush, Matthew Thornton, and Oliver Wolcott. All except Dr. Wolcott were in active practice at the time; while trained in medicine, he had given it up for law.

With all the others who signed the document—the lawyers, the statesmen, the soldiers, the businessmen—these five doctors were to achieve a degree of immortality. They are also symbolic of the strong interest the medical profession has taken in national legislation over the years.

DOCTORS IN CONGRESS THROUGH THE YEARS—BY STATES, BY PARTIES

Dr. Bartlett had been one of four physician members of the Second Continental Congress in 1775. The next year the Colonies sent eight doctors to the deliberations. In the critical years of 1783–84, 11 doctors were in the young Congresses that struggled to keep the States united. It is a tribute to the versatility of the profession that in the 181 years since 1775, doctors have sat in every Congress.

Research by this office carries down through nearly two centuries, Congress by Congress, the story of the medical profession's contribution to the development of the American Legislature. Here are some statistics on the doctors' participation:

Total representation

Six physicians now are Members of the House of Representatives of the 86th Congress. Counting them, a total of 361 physicians have served in American Congresses since 1775, including 35 Senators. Of the 361, 11 practiced another profession—generally law—as well as medicine, 33 were not active in practice when elected, and 18 had graduated in medicine but never practiced.

By parties

A total of 165 physicians were Democrats. Other party representation: Republicans 68, Whigs 30, Federalists 17, Jacksonian Democrats 6, American Party 5, National Republicans 2, Independents 2, and 1 each from 6 other minor parties. There is no record of party affiliation for 32 doctors in Congress, and party labels were not attached to the 27 who sat in the Continental Congress between 1775 and 1788.

By States

The large States that were members of the Original Thirteen Colonies naturally have supplied the most doctors to Congress. Leading the list is Pennsylvania with 52. Next are New York with 48 and New Jersey, 30. Ohio, although coming into the Union later, has sent 26 doctors to Congress. Other totals: Georgia 17, Kentucky 12, Maryland 16, Massachusetts 13, Missouri 10, New Hampshire 14, Virginia 18, North Carolina 11. Connecticut has elected 6 to Congress, Delaware 7, Illinois 5, Indiana 7, Louisiana 5, Michigan 5, South Carolina 5, Tennessee 8. The following have elected from one to four physicians as Representatives or Senators: Alabama, Arkansas, California, North Dakota, Florida, Idaho, Iowa, Maine, Minnesota, Montana, Nebraska, New Mexico, Oregon, Rhode Island, Texas, Utah, Vermont, Washington, West Virginia, Wisconsin, and Wyoming. Puerto Rico's present Resident Commissioner also is a physician, Dr. A. Fernós-Isern. He is a nonvoting Member of the House.

SKETCHES OF A FEW FAMOUS AMERICAN PHYSICIAN-LEGISLATORS

During the troubled years from 1810 to 1849—the War of 1812, the struggle for expansion, the Mexican War, the early political skirmishes over slavery—there were at least eight and usually 12 to 18 doctors in Congress. In the following few sessions of Congress, the years leading up to the Civil War, the profession also was well represented, having from 7 to 15 of its Members in the House or Senate. During the Civil War, although a high percentage of the doctors were with the armies, between five and seven usually were seated in Washington.

These statistics may be important, but they show nothing at all about what these men were like as men, or what impelled them into the turmoil of national politics. In subsequent paragraphs some of them will be described in other connections—as State governors, as military line officers, as physician-legislators who also made unusual contributions. Below are brief sketches of a few not otherwise described in this report who are outstanding.

Matthew Thornton, a contemporary of Dr. Bartlett and the third signer of the Declaration of Independence, was a colonel in the New Hampshire troops almost 30 years before the Revolutionary War. Massive physically as well as mentally, he is said to have had black and penetrating eyes and an invincibly grave expression. After one session of the Continental Congress, he was appointed to his State's supreme court and thereafter did not practice medicine. One example of his mental capacity: when past 80 years of age he wrote a metaphysical treatise.

Lyman Hall, another signer of the Declaration, was born in Connecticut, graduated from Yale, then migrated to St. John's Parish on the Georgia coast, where he gathered around him a colony of intellectuals and independents. When he arrived at the Continental Congress in 1775, John Adams described him as "intelligent and spirited • • • made a powerful addition to our phalanx." Like Dr. Bartlett and most of the others, he suffered for his views. His home was burned by the British in 1778. Later, as Governor of Georgia, he helped to found the University of Georgia. Throughout his career he practiced medicine while also prospering as a rice planter.

Benjamin Rush of Pennsylvania, another practicing physician who signed the Declaration, was easily the most famous American physician and medical teacher of his generation. Dr. Rush was a rugged character, brash and bold in debate and in conduct. His correspondence was so indiscreet—he feuded violently with Washington, among others—that his family kept his private papers secret until recent years. He was a confidant of all the important men of his age in political life. It was to him that Jefferson wrote the famous line: "I have sworn upon the altar of God eternal hosility against every form of tyranny over the mind of man."

William Shippen of Pennsylvania was a member of the Continental Congress and a dedicated physician all his life, one of the founders of the College of Philadelphia (later University of Pennsylvania) and of the College of New Jersey (later Princeton).

Samuel Holten of Massachusetts, a friend of the Revolution from the beginning, held many State posts, and was a member of Provincial Congress, of the Committee of Safety and at one time president pro tempore of Continental Congress; later a judge.

David Ramsey of South Carolina, where he moved from Philadelphia, was an Army surgeon during the Revolution. Captured at the fall of Charleston, he was imprisoned by British for 11 months. Later, a member of Continental Congress and at one time its president pro tempore, he instituted the first election contest ever filed before Congress.

John Condit of New Jersey was twice appointed and twice elected to the U.S. Senate and several times elected to House. A founder and trustee of Orange Academy, he was an Army surgeon during the Revolution.

Samuel L. Mitchell of New York served as Representative or Senator from 1800 to 1813. He was medical editor and professor of natural history and botany and materia medica in the New York College of Physicians and Surgeons.

Westel Willoughby, Jr., of New York, was State judge, member of State assembly and president of Western New York College of Physicians and Surgeons. He was an Army surgeon (1812) before election to U.S. House. He founded the town of Willoughby, Ohio, and Willoughby College (now part of Syracuse University).

Royal S. Copeland of New York, perhaps best known of the modern physician-Sena-

tors, entered political life as mayor of Ann Arbor, Mich. (1901–03), and on moving to New York City, served as public health commissioner for 5 years. He was elected to the Senate in 1922 and served until his death in 1938.

FOURTEEN PHYSICIAN-CONGRESSMEN ALSO WERE GOVERNORS

Among the 359 doctors who have reached Congress, there are scores who, the records show, thrived on political combat. All their lives they were active in State and local politics and government, as well as national. They were sheriffs, judges, State legislators, State and national committeemen. Records we have studied are evidence that at least 14 of these men—doctors elected to Washington—also became State or Territorial Governors at one time or another.

One of the most colorful must have been Dr. James W. Throckmorton, of Texas, who served in the House of Representatives after the Civil War. He was elected Governor of Texas without much trouble, but was thrown out of office on orders of General Sheridan.

Three States; Alabama, Delaware, and Ohio, had doctors as their first Governors. William W. Bidd was Alabama's first Governor, before coming to Congress, where he served both in Senate and House. Likewise, Edward Tiffin was elected first Governor of Ohio in 1803, following which he came to Washington as a U.S. Senator. Joshua Clayton, who had one term in the U.S. Senate at the end of the 18th century, was Delaware's first Governor.

At least two physicians who served in Congress also have been Territorial Governors. Late in his career, William A. Newell was Territorial Governor of Washington, a job that could not have been a novelty to him as he had served as New Jersey's chief executive between 2 terms in the U.S. Senate in the midnineteenth century. Dr. Newell rounded off his career with an appointment as U.S. Indian Inspector, starting in 1884. During the Civil War, William Jayne was Dakota Territory Governor after sitting 2 years in the U.S. House as a nonvoting delegate. Other physican-Governors who spent some time in the U.S. House or Senate: John Osborne, Wyoming Governor 1893–95; William Harrison Bissel, Illinois, midnineteenth century; Alexander M. Dockery, Missouri's Governor at end of 19th century; William Eustis, who served as U.S. Minister to the Netherlands and Governor of Massachusetts after two terms in the House of Representatives; Joseph Kent, Maryland's Governor between terms in U.S. House and Senate; Henry Drury Hatfield, spectacular West Virginian, Governor 1913–17, U.S. Senator 1929–35; and Drs. Hall, of Georgia and Wolcott, of Connecticut, mentioned earlier as signers of the Declaration.

SCORES OF PHYSICIAN-CONGRESSMEN ALSO LED TROOPS IN BATTLE

When the country was young and bursting at its seams, doctors like others moved from one profession or business to another rather freely—medicine to law to agriculture then perhaps back to medicine. But among doctors in national politics, the most popular transition was from medicine to military duty as line officers, then back again to medicine. This tendency was pronounced during the Revolutionary War, continued through the War of 1812, and was not unusual in the Civil War, even though by that time there was a national awareness of the great value of military surgeons.

Henry M. Shaw, of North Carolina, served two terms in the U.S. House of Representatives before the Civil War. But when the fighting started he showed up as a line colonel in the Confederate Army and was killed in action near New Bern, N.C.

Similar to his career was that of a contemporary, Graham Fitch, of Indiana, who raised a regiment of volunteers for the North and led the men as colonel until wounds forced his retirement. A younger doctor in Virginia, Robert E. Withers, followed the same course; a major of infantry, then colonel, finally discharged in consequence of numerous disabling wounds. After the war he served in the Senate, founded the Lynchburg (Va.) News, was named consul at Hong Kong.

A generation earlier, Solon Borland, of Arkansas, had done the same thing—practiced medicine until the fighting started in Mexican and Civil Wars, then led troops in battle. His Senate service came between the wars. Similarly, John Bratton, of South Carolina, preferred fighting to doctoring; like Dr. Borland he had the rank of line brigadier general in the Confederate Army. He was a U.S. Senator after the reconstruction period.

In view of these cases, it is not unusual that two physicians who served in Congress also were selected as Secretary of War. One was Henry Dearborn, of Massachusetts, line officer in the Revolutionary War, Secretary of War for 8 years under Washington, Member of Congress, then senior major general in command of troops in the War of 1812. An earlier Secretary of War for Washington was James McHenry, of Maryland, whose Revolutionary War record shows him as surgeon, secretary to Washington, member of Lafayette's staff. He had sat in the Continental Congress.

THEY WERE LAWYERS, BOTANISTS, ASTRONOMERS, DIPLOMATS, PREACHERS

In addition to sitting in the U.S. Congress, doctors had the enthusiasm and capacity for many other activities, some unusual. They are not easy to catalog. Following are a few words about more of them. Unless otherwise indicated, their Congressional service was in the House of Representatives and during the years shown in parentheses:

John Archer of Maryland (1801–09) received the first medical degree issued on the American continent. Several combined preaching or theology with medicine; John Bull of Missouri (1833–35), Oliver Cromwell Comstock of New York (1813–19), Luther Jewett of Vermont (1815–17), Hugh Williamson of North Carolina (1789–93), and Manasseh Cutler of Massachusetts (1801–05). Dr. Cutler also had the time to be a lawyer, botanist, and astronomer; John S. Harrison of Ohio (1853–59), had as good a claim on the White House as a man could get without being elected to it; he was the son of one President and the father of another. The first President Harrison, incidentally, studied medicine but did not practice. * * * Two doctors who served in the Congress were later directors of the U.S. mint, Samuel Moore of Pennsylvania (1817–23) and Daniel Sturgeon of Pennsylvania (Senate 1840–51), and one was U.S. Treasurer, Thomas T. Tucker of South Carolina (1787–88) * * * Alexander Campbell (Senate 1809–13) was vice president of the first Ohio anti-slavery society * * * Thomas Dunn English of New Jersey (1891–95), trained as physician and lawyer, neglected both for writing. . . Samuel Fowler of New Jersey (1833–37) is recognized as the discoverer of two minerals, fowlerite and franklinite * * * John E. Hutton of Missouri (1885–89) practiced law and medicine at the same time. * * * After serving in the House, George B. Loring of Massachusetts (1877–81) was made U.S. Commissioner of Agriculture, then minister to Portugal * * * William S. Haymond (1875–77) organized the Central Medical College of Indianapolis, after Civil War service * * * Norton S. Townsend of Ohio (1851–53) became prominent in scientific agriculture * * * William Darlington of Pennsylvania (1815–23) was internationally recognized as a botanist * * * Robert B. Vance of North Carolina served one term (1823–25), was defeated three consecutive times when he tried again, the last time with a degree of finality: his successful opponent killed him in a duel.

PHYSICIAN MEMBERS OF 86TH CONGRESS

IVOR D. FENTON, of Pennsylvania, Member of the House since 1939, is the dean of five physicians in the 86th Congress in point of service. He is known in the House as the hard coal doctor because of his persistent battles in behalf of the Pennsylvania anthracite region, some of which have attracted national attention. As an Army medical officer FENTON was awarded the Silver Star and World War I Victory Medal with two Bronze Battle Clasps for "gallantry in action and meritorious services." WALTER H. JUDD, of Minnesota, Member of House since 1943. Served in field artillery in World War I, medical missionary in China 1925–31 and 1934–38; just prior to World War II staged virtually one-man campaign to arouse people of the United States against Japanese military expansion. THOMAS E. MORGAN, of Pennsylvania, Member of House since 1945. Maintains practice at Fredericktown, Pa. Chairman of House Foreign Affairs Committee. DALE ALFORD, of Little Rock, Ark., who ran for public office for first time last fall; he is a board ophthalmologist. ANTONIO FERNÓS-ISERN, Puerto Rico's Resident Commissioner in Washington since 1946. Cardiologist, professor of public health in School of Tropical Medicine of Puerto Rico, commissioner of health and Acting Governor of the island several times prior to election to House.

Physicians who have service in the American Congress, 1774–1959

Name	State	Political party	Congress	House or Senate
1. Abbot, Joel (1776–1826). Prepared the first National Pharmacopoeia	Georgia	Democrat	15–18	House.
2. Acker, Ephraim Lester (1827–1903). Graduated in medicine, editor and publisher.	Pennsylvania	do	42	Do.
3. Ahl, John Alexander (1813–82)	do	do	35	Do.
4. Alexander, Nathaniel (1756–1808). Served in the Revolutionary War as a surgeon 1778–82. Governor of North Carolina.	North Carolina		8–9	Do.
5. Alford, Thomas Dale	Arkansas	Democrat	86	Do.
6. Allen, Henry Dixon (1854–1924). Later practiced law	Kentucky	do	56–57	Do.
7. Anderson, Samuel (1773–1850)	Pennsylvania		20	Do.
8. Archer, John (1741–1810). In 1767 received the 1st medical diploma issued on the American Continent.	Maryland	Democrat	7–9	Do.
9. Armstrong, James (1748–1828)	Pennsylvania	Federalist	3	Do.
10. Arnold, Jonathan (1741–93). Served in the Revolutionary Army as surgeon.	Rhode Island		Member of the Continental Congress, 1782–84	

Physicians who have service in the American Congress, 1774–1959—Continued

Name	State	Political party	Congress	House or Senate
11. Atkinson, Louis Ewans (1841–1910). Later practiced law	Pennsylvania	Republican	48–52	House.
12. Austin, Albert Elmer (1877–1942)	Connecticut	do	76	Do.
13. Averett, Thomas Hamlet (1800–1855)	Virginia	Democrat	31–32	Do.
14. Avery, John (1824–1914)	Michigan	Republican	53–54	Do.
15. Aycrigg, John Bancker (1798–1856)	New Jersey	Whig	25, 27	Do.
16. Babcock, Alfred (1805–71)	New York	do	27	Do.
17. Baker, Ezra (before 1765, died after 1818). Practiced medicine for a short time.	New Jersey		14	Do.
18. Ball, Lewis Heisler (1861–1932)	Delaware	Republican	57	Do.
			1903–5	Senate.
19. Barber, Isaac Ambrose (1852–1909). Practiced medicine for 15 years, then engaged in the milling business.	Maryland	do	55	House.

STATISTICAL SUMMARY

As the sources do not contain a complete biography of each Member of the Congress (this is especially true for the Members of early Congresses), we are not able to get an exact total of persons who have completed their medical education.

Keeping this in mind, we can derive from the list of physician Members of the Congress statistical data as follows:

Practicing physicians	299
Physicians practicing medicine and also another profession	11
Physicians who abandoned their profession	33
Graduates in medicine who did not practice	18
Total	361

Political affiliation

Democrats	166
Republicans	69
Whigs	30
Federalists	15
Jackson Democrats	6

Hallelujah! The Small Tobacco Farmer Has Been Saved for One More Year

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. HECHLER. Mr. Speaker, I would like to report the arrival of good news which will hearten everyone who is interested in seeing that people get a fair break in their efforts to make a living.

I was informed yesterday that the Department of Agriculture had abandoned a previous plan to cut burley tobacco quotas by 16 percent, and will keep the 1959 quotas at the present level for another year.

Mr. Speaker, this is a great break for the small tobacco farmers in West Virginia, and throughout the burley belt. In fact, it will mean the difference between their survival and the danger of bankruptcy and possible starvation.

A few days ago I made a strong appeal for the small tobacco farmer in testimony before the Tobacco Division of the Department of Agriculture. I pointed out that the small tobacco farmer could scarcely be held responsible for creating any surplus—if indeed there were a surplus. Had this punitive measure been put into effect, it would have been roughly comparable to court-martialing a lowly private for the war crimes of his general.

Most recent policies of the Agriculture Department have tended to favor the big farmer, and conversely, to hamper the small farmer. Millions of small farmers have been driven off their farms. A cut in tobacco quotas not only would have hampered our small tobacco farmers—in some cases it would have driven him out of business altogether.

When I appeared before the tobacco hearing, I paraphrased a famous old tobacco advertising slogan, saying I did not want "L.S./M.F.T." to come to mean "Let's starve mountaineer farmers of tobacco."

If I may paraphrase another tobacco slogan of more recent vintage, may I say that "They said it couldn't be done." But somehow, the Department of Agriculture was persuaded to change its mind and rescind this punitive decrease in allotments.

All of us interested in fairness and justice applaud the action taken, and we are truly thankful.

A Whole $1,027 Per Year

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. BURDICK. Mr. Speaker, a recent article by Roscoe Fleming in the Denver Post very graphically points out the misconceptions which are fostered by the present administration in regard to per capita farm income in our Nation. I ask unanimous consent to have printed in the Appendix of the RECORD this article, titled "A Whole $1,027 Per Year," from the Denver Post of January 23, 1959:

THE GREEDY FARMER AGAIN—A WHOLE $1,027 PER YEAR

(By Roscoe Fleming)

It is said that figures do not lie. However, statisticians do obfuscate, as aided by publicity men.

One of the finest alltime jobs of this kind is done by the staff of Mr. Ezra Benson, Secretary of Agriculture.

For example, the Department of Agriculture recently got out a release implying that the farmers "never had it so good" as under Mr. Benson; and all at the expense of us city folk.

They reported that the average U.S. farmer is now enjoying a per capita yearly income of $1,027, or the "highest in history."

And they added that net income per farm operation is $2,735 yearly, characterized as the second-highest of all time.

The serious flaw in Mr. Benson's happy statistics is that they make no comparison whatever with the status of other Americans.

To take one example, the farmer's "highest in history" per capita income of $1,027 yearly is just about half of the 1957 national average income per person which was $2,027.

In other words, the farmer as a group got paid for his work and investment at hardly more than half the average return of all Americans.

Second, the $2,735 yearly net income per farm operation means that this was what the average farmer had left yearly to support his family on, buy shoes, schooling, and Cadillacs, after paying his business expenses.

How many city families get along on $2,735 a year? Too many, perhaps. But the average city wage earner, salaried man, or businessman would regard $52 a week as a starvation return, and that's what the farmer's net return averages.

Don't know about you, but I'm getting a little tired of having $5,000 to $50,000 city people encouraged to scold the $2,735-a-year farmer for allegedly charging them too much for food.

Finally, the makeup of the farmer's net: As reported by Mr. Benson's statisticians, it is made up, one-third from jobs off the farm; one-third from Government payments; and only one-third from actual market returns for the food and the fiber which he provides to keep the Nation going.

I do not know any other group of Americans whose net income is figured on the basis of what they must do outside their regular vocation to make a living.

By the lowest estimate a million farm families, or more, keep going only because either husband or wife has a full-time extra job of some sort, maybe driving 20 miles each way daily to and from it.

Of course, lots of city families are two-job families too; but they do end up with somewhat more than $2,735 yearly to show for it.

Second, that one-third of the farmer's net income form Government payments. Mostly these are designed to hold up prices at the farm and in the marketplace, which is exactly the wrong way to go about it.

But this statistic, more than any other, shows the grave illness of American agriculture. Yet, we are being continuously importuned to take away those supports, on the ground that the farmer is nothing more than a greedy oaf who is victimizing all the rest of us.

Specifically, that would reduce net income from farming to not more than $1,000 per farm, and net income per farm person from farming to not more than $400 a year.

A dandier way to promote poverty and to bring on depression, insecurity, and another 1929 can scarcely be imagined.

Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. LEVERING. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD, an editorial from the Mount Vernon (Ohio) News, for January 19, 1959, relating to the subject of a judge's earnest efforts to find some way to stem the rising tide of juvenile delinquency.

It so happens, Mr. Speaker, that for some years I have known Common Pleas Judge Jay S. McDevitt, whose new plan for helping to assuage the problem of juvenile delinquency is discussed in this thoughtful editorial. As an attorney, I have argued cases in his court and I know him to be a prudent, kind, and extremely intelligent jurist. I know that he, like many another conscientious judge, has devoted a great deal of time and thought to the problem of juvenile delinquency.

We all understand that there is no one answer to the growing problem of crime with which our Nation is plagued, whether the crime be committed by young people or by old, hardened criminals. There is much to be learned about the subject, and how society will deal with this increasing problem. And there is much being left undone that could be done, under the laws now in existence, to stem the crime wave. I am happy and proud that Judge McDevitt is striving to find some answers, and I am just as happy to know that there are alert editors who will pay him the tribute he deserves, as this fine editorial does.

The editorial follows:

HOLDS PROMISE

Numerous attempts to solve the problem of teenage delinquency have been made. Few have been successful judging by reports on crime.

Some have failed because they were too drastic and some because they were too lenient.

A program, designed to deter young people from committing the numerous crimes that have been committed in the community recently was announced from the bench the other day by Common Pleas Judge Jay S. McDevitt when he was called upon to pass sentence on four young men, all under 20 years of age.

They had been indicted by the grand jury, 3 on 11 counts of breaking and entering, and 1 on a count of grand larceny. All had pleaded guilty.

Judge McDevitt announced that he had discarded the "plain probationary" method of handling such cases and had devised one of his own.

The four were placed on probation for 6 months under unusual conditions.

They were ordered to answer, without help, five questions which he submitted:

Did you know you were doing wrong when you committed this crime?

Why did you commit this crime?

Are you sorry you committed this crime or just sorry you got caught?

Will you obey the laws from now on and why?

What would you think of a person who would steal from you under like or similar circumstances wherein you were apprehended?

The questions must be answered and submitted to the court in writing within 30 days, must be accompanied by a statement, sworn to before a notary public, that they are their own.

Further provisions of the probation, include:

They must be at home by 9 p.m. every night of the six-month period.

They must not drink intoxicating liquor.

They must file monthly reports with Probation Officer Arthur L. Warman.

They must learn the ten commandments and recite them to the court within 30 days.

They must accompany the sheriff or his deputies to the Mansfield Reformatory or the Ohio Penitentiary to see what they still might face.

And the judge sternly warned them that the slightest violation of the provisions of their parole will mean sentences to the reformatory.

Judge McDevitt's program is neither too drastic nor too lenient.

He has imposed terms which are entirely reasonable, but which, at the same time, enable officials to keep tab on their habits, which should make them consider their illegal conduct and make them reflect on what is in store for them should they disobey the court's orders.

The four are at an age when they should be starting their careers and preparing to assume the responsibilities of citizenship.

They have been given the opportunity to make a start in that direction. It is not too late.

Judge McDevitt's program holds promise.

In Memoriam: October 23, 1956

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following text of a statement which appeared in the Michigan Daily, the official student newspaper of the University of Michigan, a few months ago. This statement, written by the Hungarian students at that university, appeals again to the American people not to forget the treachery of the Soviet Communists and the millions of enslaved peoples still living behind the Iron Curtain:

HUNGARIAN REVOLUTION—IN MEMORIAM: OCTOBER 23, 1956

Two years ago today the people of Hungary rose against their Communist rulers who had reduced the country to a mere colony of Soviet imperialism in servile obedience to their Kremlin masters.

With one blow the meticulously constructed legend of "people's democracies" marching toward the blissful goal of communism was shattered. Never will we forget that magnificent display of national unity, of millions of Hungarians fighting with one will for freedom, for independence.

From the old, retired lady teacher who overnight became an expert in fixing Molotov cocktails to the 14-year-old schoolboy who left a football game to play cowboys and Indians with Soviet tanks, from the docile elderly professor of philosophy who went sharpshooting on AVH henchmen and their Soviet pals to the frail, dark-haired girl confronting an armored car column with a single weapon, the Hungarian flag in her hand, holding it high until crushed to death; every one of us has contributed his or her modest share.

Incredible as it seems for our sophisticated century, the romantic pages of oldtime history books came alive. With banners and barricades, songs and pamphlets, rifles and machineguns, students and workers, peasants and poets challenged the massed military might of the Red Army—and a miracle took place, the people gained six unforgettable days of freedom. Apparently, these 6 days proved too short a time for the United Nations to officially acknowledge the country's regained independence and the declared neutrality of the revolutionary Hungarian Government (recognized, incidentally, as the legal government of the country by the Russians during the short period of armistice talks between the two countries). Left to themselves in a world preoccupied with the Suez crisis, and their supreme commander lured to a trap, under the pretense of negotiating the withdrawal of Soviet troops from Hungarian soil, the revolutionaries fought to the last bullet against the overwhelming strength of 25 Soviet armored divisions.

When the last hope of UN action faded, fearful of Communist revenge, unable to face their final loss of freedom, tens of thousands fled to the West leaving everything behind.

Those of us who were fortunate enough to be accepted by this country have experienced genuine good will, utmost willingness to help, and opportunity for all to found a new existence in the free world. For this, on this occasion, we would like to extend our gratitude.

As residents of the most powerful democracy, and as ambassadors by fate of our fellow Hungarians whose voice is so effectively silenced by the cruelest tyranny in the history of mankind, we feel obliged to draw the attention of our fellow students to some facts of major importance.

1. We wish to refute certain cleverly disguised insinuations, manifestations of clandestine Communist propaganda, according to which the October 1956 revolution had been a merely nationalistic uprising against foreign oppression. Our revolt was primarily aimed against the Hungarian Communist regime with the aim of securing the basic human rights of the individual citizen.

2. Millions are living today behind the Iron Curtain under a dictatorship whose callous brutality is unimaginable to those of you enjoying a democratic way of life. These millions have all but lost their faith in the Western democracies as well as in the United Nations because of their failure to come in any form to the aid of Hungary after her victory over the Soviet oppressors.

3. Anybody having to deal with Communist governments must realize that their word, like that of Hitler, is not worth the paper it is written on, and that in no way and under no circumstances can they be trusted to carry out their obligations if and when they find it more advantageous to do contrarywise.

4. While the West is painfully trying to maintain peaceful coexistence with com-

munism alias Soviet imperialism, for hundreds of millions this peaceful coexistence is tantamount to total economic, political, social and moral imprisonment with torture chambers and execution squads extinguishing human lives day by day. Who dares to assert that all this is not permitted to continue with the tacit acceptance of the free world?

HUNGARIAN STUDENTS OF THE UNIVERSITY.

Israel Metes Justice in Kafr Kasim Incident

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MULTER. Mr. Speaker, the young State of Israel has set an example in meting out punishment to its citizens who were responsible for the Kafr Kasim incident of 1956. I commend to the attention of our colleagues the following editorial which appeared in the October 27, 1958, issue of Congress Weekly:

JUSTICE IS DONE

The specter of Kafr Kasim, the scene of the shocking murder of 43 Israeli Arabs on October 29, 1956, the day the Sinai campaign was launched, has for the past 2 years haunted the national conscience of Israel and has occasioned widespread uneasiness among Jews everywhere. The atrocity was an inexcusable accompaniment to a military action ultimately recognized by the world as both moral and justified. If left unpunished, it could only expose the callousness of a people whose heritage and traditions enjoin against insensibility to wrongs.

An attitude of moral paralysis, however, has not prevailed nor was it ever countenanced. The outraged community of Israel, from the Prime Minister down, voiced its horror upon disclosure of the brutal facts and demanded that those responsible be brought to justice. Now, after months of testimony in a trial that lasted almost a year, a special military court sitting in Jerusalem has found eight border policemen guilty of murder for their part in the Kafr Kasim killings and sentenced them to long prison terms. Thus, in a dramatic application of the ancient Biblical injunction to "put away the evil from the midst of thee," Israel has again given evidence of her decision to abide by principles of law and honor.

The court's verdict cannot, of course, erase the memory of an act whose wantonness runs counter to every genuine Jewish instinct; the innocent blood of the murdered villagers will always be a stain on the nation's honor. Nevertheless, by the court's courageous action in assigning guilt, in addition to the generous compensation previously paid to the families of the victims, such amends as are possible have been made. Moreover, a nation's shame and horror have been publicly admitted, and this in itself is something remarkable.

Incidents such as the one at Kafr Kasim are not unknown throughout our troubled world, but rarely do they arouse the same degree of impassioned outrage as that vented by the Israeli public. Though officially regrettable, localized atrocities, minor massacres and the like have come to be regarded as inevitable consequences of the tensions of our time. That the innocent, caught helplessly in the path of the crossfire, must suffer an occasional, incidental injustice is accepted as a cruel but unavoidable fact. Governments rarely take the trouble to make full investigations, nor do they seek to punish the guilty. A justification—or at least a rationalization—is handily supplied and that is where the matter usually ends.

Israel, too, could have explained away the Kafr Kasim massacre in routine fashion. It had occurred at a time of national tension when a certain number of trigger-happy fingers could be expected, to be subsequently forgiven. Arab border villages had been placed under curfew and the villagers returning from the fields, though unaware of the curfew, were in technical violation of the law and the orders were to shoot anyone caught breaking curfew.

Nevertheless, despite these opportunities to be lenient in judgment and notwithstanding the excellent service records of the defendants, the court held fast and found the policemen guilty of having killed the 43 men, women and children deliberately and without any justification. As the presiding judge reminded the court, officers in other Arab villages had received the same orders as those given to the patrol at Kafr Kasim, but had interpreted them differently. What happened at Kafr Kasim must therefore be regarded as murder in cold blood.

In her insistence that justice be done, in avoiding an easy way out of a moral dilemma, Israel has set an example that other nations might well emulate.

A Salute to the 4–H Clubs and Their Leaders

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. NATCHER. Mr. Speaker, on January 24 the Kentucky 4–H champions were named and it was with a great deal of pleasure that I learned that Joseph Wesley Sprague, 18, of Sturgis, Union County, Ky., had been selected as the champion in agriculture in the 1958 4–H Club achievement contest, while a young lady from another section of Kentucky took honors in home economics.

Joe W. Sprague is typical of the young men in the Second Congressional District of Kentucky, which I have the honor to represent, who have consistently taken prize after prize in agricultural contests throughout the State. During the 9 years Joe has been a member of the 4–H Club he has undertaken projects in the following categories: Baby beef, labor service, electric, tractor, leadership, appearance and grooming. His baby-beef project has won him numerous blue ribbons and cash awards; and a profit of $3,175 earned from this project has been set aside for his college education. In addition to his 4–H Club work, Joe, son of Mr. and Mrs. A. D. Sprague, takes a keen interest and an active part in various school and church affairs. He has a 12-year perfect attendance record at Sunday school.

While Joe Sprague is certainly to be commended for his outstanding achievements in agriculture, we must not forget or neglect the many dedicated people concerned with the development of our youth who make such achievements possible. We are indeed fortunate in having in the Second Congressional District a great many intelligent and energetic men and women who as 4–H Club leaders, argicultural teachers, county and home demonstration agents, and advisers to the Future Farmers of America and the Future Homemakers of America play such a vital part in inspiring, guiding, and instructing our youth in agricultural pursuits. When so many of our young people are leaving the land for the so-called glamour of the city, the selfless and untiring efforts of these persons in demonstrating the benefits to be gained from farming cannot be overestimated. It is to these leaders that we owe a deep sense of gratitude for having instilled in our young men and women an appreciation of the rewards and satisfaction to be achieved from a life devoted to farming, for as Thomas Jefferson said, "Those who labor in the earth are the chosen people of God."

Fame of Fitzpatrick

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a well deserved tribute to Sheriff Howard Fitzpatrick, Middlesex County, Mass., which appeared in the Lynn, Mass., Telegram-News on January 22, 1959:

FAME OF FITZPATRICK

The appointment of Middlesex County Sheriff Howard Fitzpatrick as chairman of the Jefferson-Jackson committee by Democratic Party leaders serves notice that the party is not pausing in its forward march to hold, in 1960, the elective offices they won in the last election.

A close associate of the late former Gov. Paul A. Dever, Fitzpatrick succeeds Governor Dever as chairman of the Jefferson-Jackson fund-raising committee.

His unanimous choice by party leaders to succeed Governor Dever, virtually places him in the commanding post of director of important party functions on both the State and national level.

The fame of Fitzpatrick, energetic, hard working and brilliant battler for the Democratic cause that he is, extends beyond the political boundaries of the Bay State.

National Democratic policy-makers credit him for being responsible for the changing over of Middlesex County, which was once considered the greatest Republican stronghold in the State, to a solid Democratic section.

Governor Dever first brought Sheriff Fitzpatrick into public service by appointing him Middlesex County sheriff to fill a vacancy. He was elected sheriff in 1950, being the first Democratic sheriff ever elected in the country. In 1956 he was reelected with the largest vote ever given to a candidate in the county.

Through Fitzpatrick's political endeavors, every major elective office in the county is now held by a Democrat.

Noted as an outstanding benefactor to humanity, a business man of extraordinary talents and an astute politician, Fitzpatrick's appointment as chairman of the Jefferson-Jackson committee will redound to the great benefit of the Democratic Party as a whole, both State and nationwide.

He will bring to the party new faces, new ideas, and dynamic initiative. He exemplifies the qualities of leadership that are so much a part of the modern Democratic Party.

Blast at Arizona Meant for Senator

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. RHODES or Arizona. Mr. Speaker, since Arizona became a State in 1912, it has always voted for the winning candidate for President of the United States. In fact, Arizona has been a more dependable political bellwether than has the great State of Maine, about which it has been said, "As Maine goes, so goes the Nation."

I represent one county in Arizona. This county has a population of over 550,000. In it is located the city of Phoenix, which has a population in excess of 350,000. It would hardly qualify then as a sparsely settled area of the country.

Therefore, when I heard a well-known commentator on television say that Arizona is sparsely populated, is an undeveloped State, and cast doubts upon Arizona's political erudition, I was somewhat taken aback. Apparently so was my friend Bert Fireman, whose column "Under the Sun" has appeared in the Phoenix Gazette for many years. I include herewith Mr. Fireman's column of Wednesday, January 21, 1959:

BLAST AT ARIZONA MEANT FOR SENATOR

(By Bert Fireman)

There probably are as many ways of falling in love with Arizona as there are persons possessed of the bright spark of individualism. Ordinarily affection for our sunshine and beauties comes through association. After a person has been here a while—whether he or she came for a vacation, as a health seeker, on business, or was sent here by Uncle Sam for training—he finds the joy of living here leads to the desire to remain. Those who go away soon want to return.

But there are also individuals who can so project their emotions that they can fall in love with a star in the sky, with a princess in a fairy tale, or with glamorous accounts of a sunny land as reported in the public prints. A lady, who lives in the East, has fallen in love with Arizona through reading the Phoenix Gazette. She hasn't explained how she happened to subscribe, and I would not look a gift horse in the mouth by asking.

It is almost enough that she has adopted Arizona although she has never been here and has no immediate plans to immigrate. Like the bullfight aficionado who lives in Brooklyn, or the resident of Montpelier, Vt., who knows the addresses of the Hollywood stars, she enjoys this escape from the realities of her own life.

Well, she doesn't always enjoy it. Some time ago she had her television set turned on. It being the Sunday after the general election, she heard and saw a program called "The Great Game of Politics." She sat there with great interest as Eric Sevareid and a panel of newspaper columnists reviewed the big upsets of the week.

She listened to their erudite comments without unusual response until one of the panelists started discussing Arizona. Say, said our fair listener to herself, that's my State. What she heard turned to gall. She just couldn't believe it. Lest she had misunderstood, she got in touch with the TV station and some time later was sent a copy of what had been said. She had heard correctly.

Miss Doris Fleeson, one of the best-known political columnists in the country, had made three statements (in commenting on the election) that my friend insists were unfair.

Miss Fleeson's first damaging statement was this: "Arizona is virtually meaningless in this land." One of the other panelists disagreed, saying Arizona residents wouldn't agree with that.

Undismayed, Miss Fleeson continued: "Arizona is sparsely populated, an undeveloped State relative to the trend that appeared * * * It seems to me that it's idle to say that Arizona represents anything significant * * *"

The lady who loves Arizona began to dislike Miss Fleeson. She wrote to me: "Can't you get the chamber of commerce to protest to Miss Fleeson and her syndicate? Why should she be allowed to slander Arizona? Who does she think she is, anyhow? I'd like to punch her."

Newspaper people are supposed to defend their colleagues. It just happens that I am acquainted with Miss Fleeson, but I don't know, in justice to either of us, that we are like peas in a pod. She can defend herself.

Doris is probably the most articulate and partisan defender of the Truman administration who still has an audience. She is married to Adm. Dan Kimball, former Secretary of Navy under Truman, now head of Aerojet, a California subsidiary of General Tire & Rubber Co., which produces rockets.

Miss Fleeson has visited Arizona at least twice that I know about in recent months. Both times she seemed to like our sunshine and warmth. But she is rabid, as Truman Fair Dealers can be, in her political opinions, and particularly zeroes-in on Senator BARRY GOLDWATER whenever she has the chance. Being an adept political columnist, she makes opportunities when none are readily available. He is one of her favorite whipping boys.

Actually, her comments about Arizona were not directed against Arizona, but was her way of venting displeasure over our State's choice of Senator GOLDWATER in the election. She meant that Arizona's decision to reelect BARRY was virtually meaningless against the national trend and jettisoned other Republicans. She doesn't like the way Arizona voted, so churlishly calls the results here "insignificant".

She is entitled to that opinion, of course, no matter how wrong it may be.

A Poem by Fred W. Cole of Upland, Ind.

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. DENTON. Mr. Speaker, under leave granted I insert in the Appendix of the RECORD, by request of Mr. Paul L. Hillsamer, of Marion, Ind., a poem written in 1938 by a young man 18 years of age, Fred W. Cole, of Upland, Ind., which is as follows:

Land of the dreamers where dreams come true.
These are my dreams and hopes for you;
Always thy government's form to be
An ever evolving democracy,
With thy people empowered to safeguard all
With initiative, referendum and recall.
May the spirit that prompts all law agree
With the Golden Rule and equality.
In the love of peace may our spirits pause
And weigh the merits of every cause.

And for sake of harmony let us seek
To avert strife, turning the cheek;
But never being too proud to fight,
If the need arise, in the cause of right;
For only through courage is progress made,
So, be ye peaceful but unafraid.
May thy economic creed aspire
To a living standard ever higher,
To the end that abundance be shared by all
Be the citizen rich, poor, great, or small.

May your modes of travel be good and cheap
That the lowliest citizen may keep
In touch with Nature's scenic thrills,
Waterfalls, geysers, springs and hills,
Oceans, mountains, and giant trees,
Canyons, glaciers, and sights like these,
That lift men's spirits and make them grow
Tuned with creation's wondrous show.
May the cities be free from ugly scars
Of crime and poverty, all that mars
The civic beauty, and destroys wealth,
Lowers manhood and injures health,
Like crowded tenements, filth, disease,
Graft, corruption, and things like these
That serve no purpose of worthy need
Racial hatred and narrow creed,
Of religious bigot whose dark-age rot
Blights and embitters, we need them not.
May men have courage to put in place
Facts of science and deeds of grace,
That America may ever stand
In peace and plenty—the promised land.

The Responsibility of Maintaining Permanent Peace

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. PORTER. Mr. Speaker, early last September I had the privilege to attend the seventh conference of the World Parliamentarians Association in France. There were parliamentarians from 28 countries in attendance. The aims of our meeting were expressed through a charter which we adopted at Versailles on September 8. My remarks moving the adoption of the Charter of Versailles are, under a previous consent, included below along with the text of the charter:

REMARKS BY REPRESENTATIVE CHARLES O. PORTER, THE PALACE OF VERSAILLES, SEPTEMBER 8, 1958

Mr. President, distinguished Lord Attlee, and distinguished ladies and gentlemen, I am deeply honored to be permitted to move adoption of the Charter of Versailles.

Although I am the only Member of the United States Congress present here today,

you may be sure that there are many other Members who agree with our aims and who will help attain them.

My 460,000 constituents in the Fourth Congressional District of Oregon on the westernmost side of the United States join with the peoples of the world in demanding that the rule of law replaces the rule of force before it is too late.

While we must dream, must look ahead beyond seemingly impassable difficulties of history, languages, and culture, we must also be skeptics. Here we are in a beautiful historic palace, the scene of many crucial decisions in the fate of great nations. Is our Charter of Versailles a scrap of paper which will rate not even the sneer of a latter-day Caesar?

Paper and ink alone will not overcome greed and fear. The hour is too late for mere gestures, however pretty. This charter is a call to action, particular action, or it is worse than nothing.

In the 85th U.S. Congress, recently adjourned, I joined with my colleagues in voting to appropriate some $40 billion to keep my country strong. I am proud to be an officer in the Air Force Reserve. But, along with you I yearn for an end to the waste, the futility, the catastrophe of war.

What do we do to make our solemn act today meaningful?

Here are my recommendations, humbly presented for your consideration both as dreamers and as skeptics.

First, the call of this charter should be presented immediately to the chief executive and the legislative body of every nation. They must decide. The people of the world want their affirmation without delay. Specifically it is my hope that the decision will be to consider these vital matters at a United Nations Charter Revision Conference in 1959.

In my country we have a special problem. The Secretary of State holds that such matters are not within "the proper scope of the review conference." This means that the President or the Congress must overrule Mr. Dulles or Mr. Dulles has to change his mind or, regrettably in my opinion, the conference must be held outside the United Nations.

My intention is to present a copy of this charter to President Eisenhower directly upon my return home and to ask that he give his opinion about it and that he consider changing the policy laid down by his Secretary of State.

Both President Eisenhower and Secretary Dulles are clearly on record endorsing world law as the only road to world peace. Less than 2 months ago in Washington the President declared that the attainment of peace required that nations make mutual concessions of sovereignty so that law could become the basis for settling their disputes.

To gain universal and enthusiastic acceptance of the aims set forth in the charter will require strong delegations of this association in every country. In the face of ignorance and prejudice this will not be easy. It may be that the first conference, because of the reluctance of some or even all of the big powers, will be a foothills conference of the other nations, a step which I believe would lead the peoples in the nonparticipating nations to demand favorable policies from their governments.

The second line of action has to do with devising and agreeing on safeguards so as to prevent one nation from getting the advantage over another or of interfering in the internal affairs of any nation in matters unrelated to world peace.

Of course the superb book by Grenville Clark and Louis Sohn immediately comes to mind. They have intelligently proposed the necessary amendments for strengthening the United Nations Charter and in a form most convenient for profitable discussions. The name of the book is "World Peace Through World Law."

Our lawyers and parliamentarians are up to this task. Already the American Bar Association and the International Bar Association have made great contributions and are determined to advance steadily.

The third and last line of action I suggest relates to what is known as public relations. The aims of this charter must be sold to people who thirst for peace but are themselves properly skeptical and somewhat disillusioned. The Clark-Sohn recommendations should be discussed widely, especially by women's organizations like the League of Women Voters in my country, by youth groups and by religious bodies everywhere.

Your signature on this charter, fellow parliamentarians, means that you will use your best efforts along these interrelated lines of action, political, legal and public relations. The winds that blow radioactive debris over all the earth will whisk away mere scraps of paper.

Finally, a word about the urgency of action. The massive force of the new weapons is a banal subject. The possibility of the total extinction of the human race bores many people. The human mind rebels at concentrating very long upon the prospect of collective death. Many are comforted by the so-called balance of terror and I, myself, believe that the instinct of self-preservation greatly diminishes the likelihood of intentional atomic war.

The danger, as I see it, is that given our present policies we will certainly stumble into the all-out atomic war. Three nations today have, each of them, enough nuclear power to end human life or at least human civilization. Almost all of these weapons are ready for instant dispatch and detonation. And who controls these myriad delivery systems and detonations? Who but error-prone human beings like you and me, imperfect entities who often make mistakes no matter what precautions are taken. We panic, we get drunk, our minds snap, we miscalculate, we misunderstand, we are misguidedly idealistic.

The real danger for mankind is that an accidental or unauthorized explosion will, perhaps later today even, trigger the all-out war. It not today, in my opinion, sometime soon. Errare est humanum now just as in the days of Rome. The difference is that they didn't have these awesome weapons.

Such an explosion will lend itself to misinterpretation as being the precursor of an attack. There will be no witnesses to interrogate, no twisted wreckage to examine. There will be many pictures on TV and in the papers, stories in the papers and on the radio, driving home the horror and, you may be sure, repeatedly and fearfully raising the question "Is this terrible explosion the first of many?"

An explosion of this sort means instant full alert for our Strategic Air Command for our other Armed Forces. Our intelligence agencies would report to the President forthwith that there was no evidence of it being part of an attack by the Soviet Union. But 20 minutes later or less the Soviet Union will go on maximum alert, just as would the United States were the circumstances reversed and the tensions as critical as they are today. Decision times grow shorter daily. Ballistic missiles, unlike manned bombers, cannot be recalled. There is no way to determine with reasonable certainty the difference between a military alert which is entirely defensive and one which precedes an offensive.

In these times of dread a small match in the form of an accidental or unauthorized nuclear explosion can light the short fuse of disastrous war. The question is this: Are we smart enough to survive? There is much reason for doubt but none for despair. What parent would not readily give up his place in the lifeboat of a sinking ship to save his child? The stakes are no less, but the choice is not yet clear to many parents.

The alternative to one world or peace through law is no world at all for anybody.

Mr. President, as dreamer, skeptic, and parent, I move the adoption of the Charter of Versailles.

CHARTER OF VERSAILLES

The point has been reached in human history when the peoples, parliaments, and governments of the world, must abolish the evil of war, fraught as that evil is with the possibility of the total extinction of the human race.

The peoples, parliaments, and governments of the world must decide to set up a world authority charged with the responsibility of maintaining permanent peace.

The world authority must be endowed with the necessary powers and means to carry out this task.

We, parliamentarians of many nations, met in the Galerie des Batailles in the Palace of Versailles, on this 8th day of September, 1958, dedicate ourselves to this end.

We solemnly promise that, through our parliaments and our governments, we shall seek urgently to realize our aim in order that the men, women, and children of the world may be saved from the destruction which threatens them.

We call upon the prime ministers, foreign secretaries, and governments who accept the principles underlying this policy, to convene a world conference of peoples, parliamentarians, and governments, to consider how there should be established: A world assembly to enact world law in order to secure and maintain permanent peace; an executive to administer these world laws; international courts of justice with compulsory jurisdiction in all matters of dispute concerning these world laws; a world police force to enforce world laws against all those who commit, or threaten to commit, a breach of these world laws, and thus make possible universal, simultaneous, and complete disarmament of all nations.

Demise of Government Contractors by Bureaucratic Fiat

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article which appeared in the Commercial Law Journal of September 1958.

The article was written by my longtime friend, Solomon Dimond, a member of the District of Columbia and New York bars:

DEMISE OF GOVERNMENT CONTRACTORS BY BUREAUCRATIC FIAT

Government contractors, financially sound in every respect, have been indirectly forced out of business without any legal basis by the actions taken by Government officials. The subsequent liquidations are the byproduct of these arbitrary and ill-advised actions. As soon as the contracting officer concludes that there is a sum of money due the Government, he is required by internal regulations to follow prescribed procedures. These

procedures are designed to withhold sufficient moneys due the contractor to protect the Government.

If a contractor has one or more Government contracts and, in the opinion of the contracting officer, it has defaulted on one of its contracts, the contracting officer is obligated to protect the Government for its possible damage claims. This is done by withholding funds due for materials delivered to and accepted by the Government, either on the defaulted contract or on any other Government contract. These alleged damage claims can be very substantial since in the event of default the Government reserves the right to reprocure by negotiation. It can claim that time is of the essence and instead of going into the open market, agree to pay any sum that it considers necessary to get the materials which it needs within the delivery requirements of the original contract. In one case, the original contract unit price was $6.75, after a default termination, the Government negotiated a reprocurement at a unit price of $16.11 and claimed damages of about $160,000. Apart from the fact that the contractor does not get paid for its work in process on the defaulted contract, any other moneys owed it by the Government, regardless of the source, are subject to withholding. Government contractors who allegedly owe money to the Government are placed on a consolidated hold up list which requires all other Government agencies and instrumentalities to withhold funds due the contractor to the extent of its indebtedness to the Government.

Government contracts have certain standard clauses which make them unique. The standard defaults clause gives the contracting officer the authority to make findings of fact that the contractor is in default and the standard disputes contract states that any findings of fact made by the contracting officer shall be final unless an appeal is taken within 30 days after the making of the findings. Despite the fact that an appeal is taken and the findings are not final, the Government nevertheless proceeds to collect the moneys allegedly due it.

Thus, as a practical matter, the Government prejudges the issue and withholds the moneys due the contractor without regard to the consequences of the withholdings. It is quite obvious that if the sums withheld by the Government are relatively substantial, companies could be forced out of business and into insolvency and liquidation. While the contractor has some remedies, it has no remedy as of right by which it can obtain the release of its funds before it is finally determined whether the decision of the contracting officer was fraudulent or capricious or arbitrary or so grossly erroneous as necessarily to imply bad faith, or is not supported by substantial evidence.

The time factors in the remedies available to the contractor are not within its control. Firstly, the contractor has 30 days' time in which to file its notice of appeal. The contractor can either file its complaint with its notice of appeal or within 30 days thereafter. After the appeal is filed with the contracting officer, there is no mandatory time requirement by which he must forward the appeal to the Armed Services Board of Contract Appeals. In one situation, the contracting officer held the notice of appeal for 72 days, and this period was not considered unreasonable by the U.S. Court of Claims. If after the appeal is taken, the contracting officer feels that he wants to make revised findings, he merely does so, and again the contractor has the privilege of filing an appeal . Thereafter, the Government has 30 days time in which to file its answer, or, if that time is not sufficient, then, as a practical matter, it may obtain on a unilateral basis as much additional time as it may require from the Armed Services Board of Contract Appeals.

Depending upon the complexities of the case, the appeal procedures can easily take from 1 year to 3 years.[1] If the decision of the Board is adverse, the contractor may institute suit in the U.S. district courts or the U.S. Court of Claims if the amount involved is less than $10,000, and if more than $10,000 is involved, suit must be brought in the U.S. Court of Claims.[2] While either the Board or a court might determine that the contracting officer was wrong, years can go by during which period the contractor's funds can be withheld.[3] If it is finally determined that the contracting officer was wrong, the contractor can obtain neither interest on the moneys withheld nor damages for the losses sustained by the contractor as a result of the withholding of its funds. There is little solace for a contractor who has been put out of business to be advised that the contracting officer's actions were wrong and that he has the privilege of proving his claim for damages as of the date the contract was improperly terminated.

While the heads of the Departments involved can grant relief, as a practical matter such relief is rarely given without the intervention of Members of Congress, particularly those Members who can act through one of the cognizant congressional committees. There are instances in which funds have been released under congressional pressure when a showing could be made that a contractor would be forced into bankruptcy.

It is unfortunate that Government officials are not more concerned with the irreparable harm caused by precipitate and ill-advised decisions. Unless Government procurement authorities are willing to write appropriate regulations protecting contractors from the arbitrary withholding of their funds, it is up to the Congress to enact suitable legislation to prohibit the withholding of a contractor's funds until it is finally determined that the Government is entitled to withhold.

---

[1] There are a few cases which have taken less than a year.

[2] It generally takes a minimum of 18 months in the U.S. Court of Claims to get a final decision.

[3] In one instance, the contract was defaulted on Feb. 24, 1951, and the contractor forced into bankruptcy. The issues have been in litigation since that time.

Unjustified Oil Price Increase

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. STRATTON. No problem has been brought more forcefully or more repeatedly to the Members of the 86th Congress than has the problem of inflation and the need for holding the line in our price structure. The President of the United States has made this the major theme in two of the messages which he has submitted to this body, the state of the Union message and the economic report of the President.

In his state of the Union message Mr. Eisenhower said:

We must avoid any contribution to inflationary processes, which could disrupt sound growth in our economy. Prices have displayed a welcome stability in recent months and, if we are wise and resolute, we will not tolerate inflation in the years to come. * * * Inflation can be prevented. But this demands statesmanship on the part of business and labor leaders and of Government at all levels.

In his economic report the President touched on the same line:

Our objective must be to establish a firm foundation for extending economic growth with stable prices in the months and years ahead. This will not come about automatically. * * * Self-discipline and restraint are essential if reasonable stability of prices is to be reached within the framework of the free competitive institutions on which we rely heavily for the improvement of our material welfare.

Among the commodities which are essential to our modern civilization, in the rural areas no less than in the urban and industrial areas, is oil, especially oil for heating purposes. I have been deeply disturbed, Mr. Speaker, to learn that in sections of the 32d Congressional District of New York a wholesale oil price increase has gone into effect within recent days. In the village of Cooperstown, N.Y., the famous home of baseball, the major oil companies have just instituted an increase of one-half a cent per gallon in No. 2 oil, boosting the total price on this commodity to 16.4 cents a gallon, the highest in history. A similar increase of one-half a cent per gallon has gone into effect in Gloversville, and a similar increase has been authorized for Schenectady and Oneonta.

In Cooperstown alone it has been estimated that this increase will cost consumers about $7,000 during the next 2 winter months, when the necessity for oil is at its height.

I have been informed, Mr. Speaker, that at the same time this price increase has gone into effect for individual home consumers, that the oil companies have negotiated an arrangement with the Otsego County Courthouse to deliver oil at a price which is a cent a gallon less than Cooperstown dealers are themselves required to pay for the same product.

Let me make clear, Mr. Speaker, that this increase has not resulted from action by the local dealers, but has been dictated by the oil companies themselves, and without any justification. As a result the dealers are as hard pressed as the consumers, because their margin of profit has been forced down.

Irresponsible action of this kind is contrary to the call made by the President, and is the type of thing that could most directly contribute to the kind of runaway inflation we all abhor.

Because inflation, Mr. Speaker, is something that can come upon us gradually step by step, without our fully realizing it, I believe that this unjustified price increase ought to be fully explored immediately, and I have therefore referred the facts concerning it both to the congressional committee which is investigating all aspects of so-called administered prices and to the Justice Department for possible antitrust action on their part.

We in the Congress and in the Nation must act promptly and together to pre-

vent such unjustified increases and to hold the line against inflation.

Under unanimous consent, Mr. Speaker, I include at this point an editorial from the Freeman's Journal, of Cooperstown, one of the oldest regular weekly newspapers in our Nation. The editorial appeared on January 21, 1959:

UNJUSTIFIED OIL PRICE INCREASE

Last week, the major companies which supply Cooperstown dealers with fuel oil announced a half-cent-a-gallon price increase, which local dealers of necessity have had to pass on to their customers because of the small margin of profit per gallon on which they operate. The dealers did not—and rarely do—add on anything extra for themselves. In fact their profit per gallon is just about the same now as it was 10 years ago. They've been able to maintain this per gallon profit, despite increasing costs, because of a higher business volume over the past 10 years.

Last week's price rise, initiated by the oil companies, ran the price of No. 2 oil to 16.4 cents a gallon, the highest in history here. There was no justification for this increase—it simply is a matter of price gouging on the part of the major producers who seem to operate on the theory that if you can come up with some excuse—no matter how flimsy—you've got a moral right to charge whatever the traffic will bear under a given set of conditions.

This time the oil companies have the flimsiest of excuses. They plead that this winter has been colder than usual so far, and that demand for oil has outstripped their refinery capacity. They've had to go into the open market, they say, and pay independent producers a premium for their product in order to get enough oil to meet this demand. That's a lot of bunk. They may have to do that to cover a small percentage of their requirements, but this percentage would be so small that a major producer would have to search and search for a legitimate excuse to boost the price by even a tenth of a cent a gallon, much less five times this amount.

Another thing that sticks in our craw about this oil company piracy, is this—how come a major producer can deliver oil to the Otsego County courthouse at a price which is about a cent a gallon under the price Cooperstown dealers have to pay for the same basic product? This means that the county pays about $60 a tank truck load less for its oil than local dealers pay for the same amount.

Why should it cost $60 more to deliver a truckload of oil from a terminal (Albany or Utica or Binghamton) to the storage plants of two local dealers only a few hundred feet from the courthouse, and to the third dealer who is less than a mile from the courthouse? The consumer could use this penny-a-gallon saving, and we're sure the local dealers would pass it on to him.

This latest half-cent increase by the oil companies is going to cost Cooperstown consumers about $7,000 during the next 2 winter months.

We would like to emphasize that this oil price increase has been none of the doing of your local dealers. They aren't going to make any more money out of it. In fact, their percentage of profit has dropped.

Don't get mad at him. But if this latest price increase makes you want to sound off, well, go ahead and sound off—but to the oil companies, who are the culprits. Your local dealer will forward your letter to the company if you can't find the latter's address.

Pioneering a New School Plan

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which appeared in the Washington Star on January 25, 1959. It deals with that all-important subject of education and how the city of San Angelo, Tex., is attempting to improve its system. The article is as follows:

PIONEERING A NEW SCHOOL PLAN

(By G. K. Hodenfield)

SAN ANGELO, TEX.—This city of 60,000 on the west Texas plains thinks it has the best public school system in the United States.

That's a strong statement, even for Texas, and it begs for proof. San Angelo thinks it has proof aplenty.

For more than a year critics of education in the country have been demanding more academic achievement and less life adjustment. They want more of the solid and traditional subjects and fewer frills and vocational "escape courses," more challenges for the gifted student, more attention to the slow learner, better discipline, and more and better counseling.

In San Angelo they practice what the critics preach.

The philosophy here is to challenge each student to do his very best work in every subject, and then to provide the facilities and courses to meet and extend that challenge.

The payoff is in the curriculum—a three-rail program tailored to meet the needs and capabilities of all students, from the brightest to the dullest.

The San Angelo story is more than just the curriculum, however.

It's the story of a young, eager and informed schoolboard more concerned with learning than penny pinching, a citizenry willing to pay the taxes that built one of the outstanding high school plants in the country, a group of teachers and administrators willing to work 12 to 14 hours a day.

TOO PROGRESSIVE

It's the story, too, of Supt. Gerald S. Wadzeck, a man who cherished a dream for years and now has the tools and backing to make it a reality. When Mr. Wadzeck came to San Angelo 7 years ago the city had had an overdose of progressive, permissive, do-as-you-please education. It was ready for a change.

It took 2 years—until 1954—for Mr. Wadzeck to lay the groundwork and get his plans into action. And he's the first to admit there is still much to be done.

The San Angelo curriculum is based on the 3-rail plan. Rail I is for superior students, able to move much faster than their schoolmates. Rail II is for average students, eligible for college after high school graduation. Rail III is for the poor student, the slow learner for whom high school is the terminal point of education.

The rail plan isn't new. Versions of it can be found across the country. In San Angelo, however, it starts in the first grade.

During a pupil's first year in school he is constantly tested and evaluated to see whether he is really ready for school, really ready for the learning process.

"About 90 percent of a kid's trouble in grade school," says Mr. Wadzeck, "is that he is biologically immature when he starts. Some kids walk earlier than others, some talk earlier. It's the same with learning, some are ready before the others."

If a child isn't up to doing first grade work, he is held in that grade for another year.

FIRST MAJOR CHECK POINT

"We retain about 25 percent of our first graders," Mr. Wadzeck says, "probably the highest proportion in the country. We don't call it flunking or failing. We just hold them back till they're ready to learn, then we throw the book at 'em.

"After the first grade, there are very few we have to hold back through the next 5 grades."

At the end of the third grade there is a major check point.

"In the first 3 grades these children have been introduced to the tools of learning—numbers, the alphabet, reading, etc.," Mr. Wadzeck says. "From the fourth grade on, they will be using these tools more extensively. It's time to find out just where they stand."

Based on grades, intelligence tests, aptitude tests and teachers' reports, the pupils are assigned to rails I, II, or III during the first grade. Depending on their aptitudes, some students might be in rail I English and social studies, and rail II or III arithmetic. Depending on their achievement, they can climb to a higher rail, or drop to a lower one. All three rails are taught by the same teacher in the same classroom.

Some pupils spend 4 years getting past the third grade, some do it in two. There is no grade skipping, although Mr. Wadzeck says it may be necessary in the near future. Brighter pupils stay in their own age groups, but do more advanced work.

One major departure from normal grade school practice, even where the program is railed, is that only the student in rail I can get an A. If he is in rail II, the best he can get is a B, in rail III a C.

Some educators will tell you this might frustrate the children, that they should be graded on the basis of whether they are doing the best work of which they are capable.

Mr. Wadzeck disagrees: "Life is competitive, and if the children don't learn it in the classroom, they'll certainly find it out for themselves on the playground."

At the end of the sixth year there is another major check point. For many students, this may be a last chance to get on the academic ball.

From all of San Angelo's 17 elementary schools the pupils are brought to Washington School for the seventh grade. No other grades are taught in the building.

SIX SUBJECTS TAUGHT

Each student in rails I and II takes six academic subjects—English, reading, math, social science, natural science and foreign language—plus one fine arts elective and physical education.

Rail III students do no seventh grade work. They spend the year catching up on work in which they have fallen behind. In math, for instance, they would review fourth, fifth and sixth grade arithmetic.

And here is an exclusive San Angelo twist: If the rail III students get an A or B in his makeup work, he isn't promoted. He is held back so that the following year he can take rail II or college preparatory courses. If, however, he gets a C or less, he is promoted into the eighth grade in rail III.

"When a rail III student comes up with excellent grades in his remedial work," says Mr. Wadzeck, "we figure he deserves another chance. He may have had emotional problems stemming from troubles at home. Maybe he has been ill and out of school for long periods. Maybe he's just a 'late bloomer.' "

LOOK TO HONOR COURSES

"But if he comes up with poor grades in his remedial or makeup work, we just have to figure he isn't college material. So we push him ahead on a rail III program that will give him the best education he can absorb. If he spurts ahead later, of course, our testing and evaluating will catch him and there may still be time for him to advance to a higher rail."

Rail I students in the seventh grade take 2 years of a subject in 1 year and clear the way for honor courses and college-level work during the 11th and 12th grades. Rail II students take the "national curriculum" or normal college preparatory courses. Rail III students take modified work adapted to their capabilities, but including arithmetic every year through the 11th grade and English every year through the 12th.

"It may take a slower learner 10 to 12 years to master ninth-grade math," Mr. Wadzeck says, "but he'll know it by the time he graduates. And our kids with 4 years of rail III English are going to know more about the subject than the average student who takes 3 years of English in a traditional high school program."

In this, the fifth year of the program, San Angelo's only high school, Central High, has railed courses in math, foreign languages, science, and English.

Mr. Wadzeck figures only about 1 percent of the students are able to handle the top rail in all four subjects. About 10 percent take two courses in rail I and two in rail II and about 5 percent take only one rail I course.

The bulk of the students—about two-thirds—can handle all rail II courses. Even those who carry two rail II courses can be college material, Mr. Wadzeck says, if they have two rail II courses and keep their grades up.

CHECKING UP ON WORK

In high school the students are graded according to the work they do in the rail to which they have been assigned. The transcripts, however, identify the course by the rail number. Thus colleges and universities, as well as prospective employers, will know just what sort of work the student has done.

San Angelo's students are given every opportunity to enrich and broaden their education—and to pull themselves up to a higher rail while doing it.

For instance, the 710 seventh graders at Washington School have a 75-minute extra learning period at the end of the school day. If enough students ask for a particular course, Principal Dave Sands will try to find them a teacher.

Thus, 20 students who take Spanish during regular school hours are studying Latin in the extra-learning period—for no academic credit. Similar no-credit courses are also offered in math, science, orchestra, drama, rapid reading, poetry, speech, journalism—even football.

"Some of our students stay in the science labs until 5 or 5:30, when we have to chase them home," Mr. Sands says. "It proves our point that if you give the students an opportunity, they'll jump at it."

PAY TUITION IN SUMMER

Almost half the 1,400 students at Central High paid tuition to take summer courses last summer. Most of them wanted only to brush up in their weak subjects or qualify for a higher rail.

Mr. Wadzeck hopes that eventually all summer courses will be free and that the summer program can take over most or all of the nonacademic subjects.

"Typing is an excellent course for students who are going on to college," he says, "but why waste time on it during the regular school year? It would be a fine summer session course. The same goes for driver training—I'd like to see that as a strictly summer course, although it will take time to make the shift.

"We encourage the students to go to summer school and pull themselves up.

"That's the whole idea here—we want to challenge every student to extend himself to his limits, his full capacity. And when you get right down to it, that's all any school system can do."

Why Did O'Henry Become O'Henry?

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. PATMAN. Mr. Speaker, it has been observed before that great legal minds frequently take up hobbies of literary detective work, and the result is usually entertaining as well as instructive. I suppose this is because lawyers in general, and particularly those who have risen to the top of their profession, have cultivated a talent for observing significant details and solving the riddles of human motivation, all from the written word.

I believe the Members may be interested and amused by a highly original conclusion that Mr. Joseph Borkin has reached as a result of his literary detective work on the question why William Sidney Porter chose the pen name O'Henry. Accordingly, I am inserting a clipping from the Boston Daily Globe of January 1, 1959, which sets out Mr. Borkin's analysis.

Perhaps I should add that Mr. Borkin has engaged in literary detective work of a much more serious nature. In the early years of World War II Mr. Borkin was Chief of the Patent and Cartel Section of the Department of Justice, an experience which led to one of his more famous writings, "Germany's Master Plan," which he coauthored with Charles A. Welsh in 1943.

My own interest in Mr. Borkin was first aroused on reading his article on "Impeachment" in the Encyclopedia Britannica and on learning that he had, as a hobby, become the top authority on this subject.

The clipping from the Boston Daily Globe is as follows:

WHY DID PORTER CHOOSE O. HENRY?

(By Joseph Borkin)

WASHINGTON.—The origin of the pseudonym O. Henry and the motive for its choice have baffled students of literature for over half a century. Why did William Sidney Porter employ the alias? Was it more than a random choice? The solution presented here has the quality that follows the traditional formula for an O. Henry story.

To take his readers by surprise in constructing plausibility out of absurdity and contradiction was in the essence of his literary character. We should not be astonished, therefore, if the alias O. Henry betrays what it was designed to hide.

The explanation by Porter that the surname Henry was chosen at random, plucked from the society columns of a New Orleans newspaper, while the "O." was added as the easiest letter to write, has a tongue-in-cheek quality.

A theory accepted by many critics and biographers is that the name was that of a guard, Orrin Henry, who was employed years earlier at the Ohio Penitentiary. It is surmised that Porter, while a convict, saw the name on some prison records and adopted it.

In another version, Henry was the name of a bartender in a tavern frequented by Porter, who would indicate his thirst by calling, "Oh, Henry!"

Less plausible is the version that O. Henry was derived from an old ballad of the Kentucky hills and may have been a favorite song of Porter's.

These accounts are two-dimensional, and none is in the tradition or character of O. Henry. This is apparently what led Stephen Leacock to remark that the choice of pseudonym lacked aptness and must have been picked in a moment of whimsy.

Examine the portrait of William Sidney Porter.

He had the soul of a poet, the weaknesses of an alcoholic, and the job of a bank clerk. He was indicted in Austin, Tex., under the Federal Banking Act for embezzling funds from the bank in which he worked.

He stood mute at his trial, unwilling to help his attorneys or himself.

His bored and disinterested manner at the trial helped assure the verdict of guilty by the jury. An eyewitness who saw him off to prison recalled that he appeared to have welcomed his conviction. Many experts today are convinced of Porter's innocence, however.

Sentenced to 5 years' imprisonment in the Ohio penitentiary, which at that time had a subleasing arrangement with the Federal Government, he actually served 3 years, from 1896 to 1899.

In prison he utilized his talent as a writer and storyteller, sending his literary products to publishers via an intermediary, the relative of a fellow prisoner. It is to these stories, written in prison, that Porter first attached the pseudonym O. Henry, indicating no first name. With these devices, he was able to disguise his place of residence as well as his identity as the convicted embezzler William Sidney Porter.

Writers use pseudonyms to mask authorship while criminals use them to conceal their past records. Although O. Henry fits both categories, his pseudonym does not appear to have been designed to conceal the writer but rather to hide the identity of the convict. This distinction, I believe, is the answer to the riddle of O. Henry.

A police department could not function properly without an alias or monicker file. Although an alias is consciously designed to hide criminal identity, it so often is revealing that it has become standard operating procedure to examine it for clues. An alias lends distinction to the individual.

Sometimes the name will be taken from what the police call the "M.O.," or modus operandi, of the crime.

Among criminologists and psychologists, there is a growing awareness that many criminals may engage in a life of crime in order to be punished due to an irrational and overwhelming sense of guilt. They are constantly seeking punishment and perform in a manner designed to insure capture. It explains the masochistic components of most persons who find themselves incarcerated in prison.

Alcoholics seem to be subject to the same mechanism. It is possible that the compulsive drinker does so in order to be punished

by the inevitable hangover. O. Henry gave evidence of fitting both masochistic molds. He was not only a convicted embezzler but also an alcoholic, teetering on the border of skid row, and ultimately dying of cirrhosis of the liver at the age of 48 with his entire fortune of 23 cents in his pocket and nine empty whisky bottles under the bed.

Whether guilty or innocent, O. Henry's criminal record haunted him like a ghost, and its concealment was apparently one of his overwhelming needs. He covered up the time served in prison by falsifying his age to account for the missing years. In interviews he omitted any mention of his residence in Austin. He made his close friends feel that there were areas in which they were not permitted to pry.

Even after they all knew his secret, he acted as though it was still hidden from them. Will Irwin, the writer and friend of O. Henry, exclaimed, "Why didn't one of us go to him and say, 'Stop trying to hide yourself from strangers for fear of running across someone with knowledge of a secret that is no secret at all.'"

There is evidence that O. Henry himself was responsible for arranging the conditions whereby his secret was no secret at all, that in his methods of concealment he was preparing his self-betrayal.

To Al Jennings, a bank robber and close prison-mate, O. Henry resolved, "I will bury the name of Bill Porter in the depths of oblivion. No one shall know that the Ohio Penitentiary ever furnished me with board and bread."

Could it be that with the reverse irony that was O. Henry's trademark, he took an alias that was in truth a "pen" name?

Sheriff Howard W. Fitzpatrick To Be Chairman of Democratic Dinner

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD an article which recently appeared in the Boston Herald and which was authored by my very good friend, Edward Devin, of that newspaper. It refers to our beloved Sheriff Fitzpatrick, who has accepted the post of chairman of the $100-a-plate Jefferson-Jackson Day dinner coming up in February. The Honorable Howard W. Fitzpatrick is the sheriff of Middlesex County in Massachusetts, the largest county in the United States.

I commend the article to my colleagues in the House, for it is a perfect illustration of how a successful and prominent businessman may also be successful in the political field; but let the following speak for itself:

FITZPATRICK, CHAIRMAN OF DEMOCRATIC DINNER

(By Edward Devin)

Leaders of the Democratic Party have chosen Sheriff Howard W. Fitzpatrick of Middlesex County as chairman of the $100-a-plate Jefferson-Jackson Day dinner, which will be held at the Statler Hilton in mid-February—the date hasn't been set officially yet.

It is fitting that the popular sheriff has been selected as chairman. The chairman of this year's dinner was the late Gov. Paul A. Dever. Fitzpatrick was one of the late governor's closest friends and supporters. He was also Dever's protege in politics, for it was Dever who appointed him sheriff of Middlesex to fill a vacancy.

Fitzpatrick is already making plans to make next February's Jefferson-Jackson Day dinner the most successful in history. And he's just the man who can do it, too.

The most cash the Democrats ever raised from this dinner was $119,000. Fitzpatrick is shooting for $175,000 and without pressuring anyone into buying tickets, either. He has more than a dozen close personal friends working with him on the arrangements.

LOYAL PARTY WORKERS

The Statler Hilton will be bulging with Democrats the night of the dinner. Of course, Republicans are invited, too, at $100 a head.

There is one thing anyone who knows him will tell you about Fitzpatrick. He is a loyal party worker. He works for the party at large and helps everyone in political contests. That's his favorite pastime, incidentally, helping people, even in his job as sheriff, or perhaps most of all as sheriff.

Fitzpatrick was the first Democrat to be elected to office in Middlesex County, formerly a Republican stronghold.

Afted his appointment by Governor Dever, he ran for election and swamped Dr. A. Warren Stearns, the noted penologist. It was the first time a Democrat had cracked Middlesex County. In 1956, Fitzpatrick was reelected sheriff by 70,000.

WORKERS CALMED

Now the Democrats hold all the offices in Middlesex County. The district attorney's office is held by James L. O'Dea, Jr. All the country court jobs went to Democrats and the three county commissioners are of the same political allegiance.

Wren Fitzpatrick first took office as sheriff of the State's largest county there was some trepidation among the employees, 99 percent of whom were Republicans.

"I never let anyone go because of his party affiliation," Fitzpatrick said. "They are all family men who have to earn a living. Besides I owe my success in politics to Democrats and Republicans alike."

He supported a bill passed by the legislature this year making deputy sheriffs court officers, thus protecting their jobs by giving them tenure. He also has a bill in now to make the guards permanent and to take the jails out of politics and run them as efficiently as a business.

Incidentally, Fitzpatrick doesn't take any salary. He accepts the $10,000, of course, but turns it over to a charity fund set up. Friends wanted to throw him a party but he declined. So they held a charity fund dinner in Lowell last year and raised $45,000.

LIKES TO HELP THE PUBLIC

In a year the fund spent $73,000 on good works. Howard and his brother, Robert, with whom he operates a big catering business, made up the difference.

"It makes you feel good to help people," the sheriff said. He must feel very good for he has found jobs for many of his former prisoners, many of them in his own plant. He has "straightened out" many prisoners and helped them and their families with money, clothes and good advice.

There is hardly ever any trouble with the prisoners at the Cambridge jail or the house of correction at Billerica. The sheriff treats the prisoners right and they have the greatest respect for him. He has charge of 320 prisoners at Billerica and 150 at Cambridge and both institutions have been given triple A ratings by the Federal government for their cleanliness and the way they are operated.

Fitzpatrick uses civilian chefs, bakers, butchers and mechanics instead of prisoners. In that way he gets trained help and there is not the turnover there would be if prisoners were used on those jobs.

He said that when he took over, he found the meals served the prisoners were "inadequate," that many men were losing weight and in some cases their health. As an experienced caterer he was able to remedy the food situation in short order, and not short order cooks either.

BLOOD DONATED

Now the men at Billerica donate 70 pints of blood every 2 months to the Red Cross and 40 pints at the East Cambridge jail.

Fitzpatrick has been in politics all his life but he admits he never had the desire to run for sheriff. He accepted the appointment from Dever after talking things over with another former close friend, the late Chief Justice John P. Higgins of Superior Court.

Sheriff Fitzpatrick has operated his jails so efficiently that if he doesn't watch out the State is going to be making a profit. The institutions have 200 acres of cultivated land, a canning factory, a piggery, slaughterhouse, smokehouse and deep freeze facilities. The herd at Billerica produces 250,000 quarts of milk a year. The dairy, piggery and canning factory provide half the costs of feeding the prisoners.

The prison brush and mat shops supply all of Middlesex County and had a $50,000 surplus in their account. They are going to turn back $25,000 to the State.

The late Judge Higgins advised Fitzpatrick to take the job of sheriff. He said he "could do a lot of good." He certainly has.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges Wiley, Mrs. Smith, Messrs. Case of New Jersey, and Martin.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Lakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

Appendix

Milton F. Brown, of Dallas, Tex., Outstanding American Banker

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, January 28, 1959

Mr. JOHNSON of Texas. Mr. President, my State of Texas offers many living proofs of the durability of the principles that form the foundation of our free-enterprise system.

The Horatio Alger legend is not dead. A man can still get ahead in Texas—in America—by hard work and thrift and honesty in his dealings with his fellow men.

A recent issue of Texas Parade magazine, published in Austin, tells the story of such a man—Milton F. Brown, one-time "butcher boy" on a train through Texas, who today is president of the Mercantile National Bank of Dallas, one of the Nation's hundred largest banks.

Milton Brown's story is truly inspiring. I ask unanimous consent that the article from Texas Parade be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BROWN OF THE MERCANTILE NATIONAL—THE MAN WHO MAKES DOLLARS MAKES SENSE

(By Joe Cunningham)

In the year 1892, 400 years had come and gone since Columbus discovered America, but Texas had been a State of the Union for less than 50 years, and Dallas, as an incorporated city, had just turned 21.

The Civil War had been over for nearly three decades. There would be another decade before the Spanish-American War was to break in upon the country's complacency. It is true that, down in Texas, Jim Hogg and George Clark were getting warmed up for a no-holds-barred gubernatorial campaign. But, other than that, all was quiet on the southwestern front.

A placid conservatism was permitting the country to simmer down to a steady, plodding development—a sort of burrowing-in process that was to act, at least, as a partially effective shock absorber against whatever economic upheavals lay ahead.

In the atmosphere of this undramatic interlude the vital statistics were only mildly disturbed when, on July 16, 1892, Milton F. Brown was born. The event occurred at Ennis, in Ellis County, where his father was practicing law.

The county seat was at Waxahachie, some 15 miles away. This, in those days, with roads and means of transportation such as they were, was not an inconsiderable distance. Thus, even the mild milling of gathering citizenry on "court days" and the occasional forensics of the more impressive trials were in a world apart from the little fellow growing up at Ennis.

The most engaging activity of Milton Brown's hometown was the coming and going of the trains. Ennis was an important station on the Houston & Texas Central Railroad. This was the second rail line that had ever been built in Texas. It began in 1853 as the Galveston & Red River, but after 3 years the name had been changed with a change of ownership.

A high percentage of the rail payload in those days was people. The chugging, smoke-snorting engines with their train of plush coaches was the era's most luxurious form of travel. It was thrilling simply to board the cars, and then, in rolling along over the clicking rails, one soon settled down to a sense of satisfaction with the world.

The conductor was a romantic figure. A badge of officialdom adorned his cap, while an enormous, gold-plated chain festooned his midriff and led to a ponderous, snap-lid watch in the pocket of his blue serge suit. Withal, he was a towering functionary who occupied an enviable but, to a very young lad, a wholly unattainable status.

The butcher boy's job seemed more nearly within the range of youthful ambitions.

Milton Brown decided that he was going to be a butcher boy on the H. & T.C. The product of an unpretentious era and developing his personality and character in a quiet, orderly and unspectacular community, it seems that, already, what Milton Brown wanted he set about to accomplish with a sure and steady precision. He not only became the purveyor of fruit pies and other delicacies to the passengers, but was an exceptionally good one. He developed a merchandising technique that was not only pleasing to the customers but profitable to himself. On the special trains to Galveston he often netted as much as $20 a trip. Twenty dollars in those days was important money.

Some indication of Milton Brown's future as a vital factor in the upbuilding of business and community life manifested itself in the desire of the young railroading Merchant of Ennis to become a construction engineer and to have a part in building the roads. No sooner decided upon than done. He switched over to work—hard work—with the right-of-way crews.

His progress was next highlighted when he earned a diploma from Columbia Military Academy. That was in 1909. Then he was shaken out of the dream of an engineering career by learning the fact that college graduates with engineering degrees were paid less than $100 a month, with limited future prospects.

His thoughts turned back to business. Through a series of part-time jobs he got through a business college.

One day in 1911, he encountered a long-time friend who confided to him that he was going to quit his job as a messenger boy, or runner, for a Dallas bank. Young Brown decided that was for him.

Together the two youths went to Dallas, and, as the friend resigned the job, Milton Brown offered himself as a replacement. The beginning salary—$30 a month—was not the deciding factor. Intuitively, he glimpsed the opportunities that were ahead. He was more eager to learn than to earn when he became an employee of the important American Exchange National Bank. It then occupied quarters at Main and Poydras in Dallas. Since that day, more than 47 years ago, Milton F. Brown has been identified with the banking in this important financial center.

One just does not think of Dallas banks and bankers without obeisance to the colorful and dynamic R. L. "Bob" Thornton, chairman of the board of the Mercantile National Bank and longtime mayor of Dallas. Thornton is frequently quoted as having referred to his colleagues in the progressive development of Dallas and the Southwest, as "Dallas' dynamic men." Whether the quotation is accurate or not, invariably a lot of admiration goes along with it.

Ever the discerning man, Thornton had his eye on the young fellow who had not only gotten on the payroll of the American Exchange but had gone to work. An active, aggressive man himself, Thornton was attracted to this individual—a pleasant, determined and personable young man who took to banking "like a duck to water"—and enjoyed it.

In 1917 Brown had a call from Bob Thornton who, with two partners, had, only the year before, established a private banking concern in Dallas. Milton F. Brown was offered the job of assistant cashier in this little bank of modest beginnings. He accepted. The three partners, the new assistant cashier, and one other employee constituted the entire personnel.

The development of the original banking firm of Stiles, Thornton, and Lund, then the Dallas County State Bank, later the Mercantile Bank & Trust Co., and now the giant Mercantile National Bank is one of the epochal accomplishments of the Southwest's most epochal half century.

Today the Mercantile National, of which Milton F. Brown is president, is one of the Nation's 100 largest banks and is third in Dallas in deposits. A recent $5 million increase in its capital and surplus brings that figure to $30 million, with over $6½ million in undivided profits and reserves for contingencies.

The increase, as Brown has pointed out "is another step in keeping pace with the continuing growth of Dallas and the Southwest."

This country could not have built up, says Brown, "without its banks. You tell me what kind of banks and bankers are in any community and I would venture an opinion as to prosperity and progress of that community or the lack of it."

Milton F. Brown was in the banking business when automobiles were a rarity. It was then freely predicted that these contraptions would never replace the horse. He is the first Dallas banker, however, who ever made a loan on an automobile and is probably the first to have accepted an airplane as collateral. The Mercantile was the first bank in Dallas to have drive-in facilities. The imposing institution which Brown quite accurately calls "a financial department store" does not yet have a "Space Ship Loan Department," but one should not rule out the long-range possibility.

An interviewer can jump from automobile loans to the international situation without banker Brown showing the slightest evidence that, to him, the subject has been changed at all. This, of course, is of the greatest significance: we have a world growing smaller, there is no longer such a thing as isolation from any part of any people of this globe, and, perhaps, there may eventually be none from those of other planets. It is obvious that the thinking of the Mercantile is attuned to the most minute banking needs of the individual, yet related at all times to the overall, worldwide picture.

The so-called capitalistic economy of this country, so paradoxically supported, as it is, by the continued communistic threat of war, does not, in Brown's opinion, place continued growth and prosperity in the position of a disturbed situation for its support. "Why," he says, "if we did not have a money circulation occasioned by these defense efforts, America would be spending just as much money, or more, on entirely peacetime pursuits. For one thing, our highway programs would take a big jump ahead. We are a growing country, it is our nature, and this country will continue to grow. It is the responsibility of the banks to be soundly qualified at all times to finance progressive undertakings, large or small, as they develop.

"What is the relation of size to a bank's effectiveness in a community?" he was asked.

"Size is important, of course," he replied, "but every big business used to be a little business, and the all-important thing is to maintain, at all times and at all levels, the human relationship, the friendly attitude."

Milton F. Brown became a vice president of the Mercantile National in 1928, executive vice president in 1943, and president in 1947. He is also chairman of the board of First Federal Savings & Loan Association, a director of Kansas City Southern Railway Co., Southwestern Public Service Co., Mercantile Securities Insurance Co., Cabell's, Inc., Burrus Mills, Inc., and of the important agricultural research facility, the Texas Research Foundation at Renner, Tex. He is a director and past president of Circle 10, Council of Boy Scouts of America, and has been active in Scout work for more than a decade. He is past president of the Dallas Community Chest, vice president of Dallas Clearing House Association for 1958, as well as being a past president of that association, a 33° Mason, and 1956 general chairman of the Methodist Hospital building-fund campaign. He is a member of the Highland Park Methodist Church, Trinity Valley Lodge, Hella Temple, and Dallas Petroleum Club, the Dallas Country Club, the Dallas Athletic Club, Brook Hollow Country Club, the City Club, the Downtown Club, and the Reserve City Bankers' Association.

Asked if he has any hobbies, the busy man looked up in some surprise. "Why, sir," he said, "everything I do is a hobby. I like my work—and then I do a little gardening."

One would guess him to be a gardener when the day's work is through. Milton Brown likes to make things grow.

Soviet Challenge and Western Response

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28, 1959

Mr. JAVITS. Mr. President, I ask unanimous consent that there be included in the Appendix of the RECORD an editorial in the New York Times of today entitled "Soviet Challenge and Western Response." I urge that my colleagues read the editorial for these reasons: First, they will see the stakes which are involved, and the position which is being taken by the United States in respect to Berlin and the reunification of Germany. They will recognize, as the New York Times editorial has recognized, that this is the point of decision, and that if we retire from Berlin on Soviet terms, we shall probably be yielding not only Europe but the "cold war"—the cause of freedom, itself.

The editorial analyzes that subject in the greatest detail. It is very important that Members of Congress, in all of their speeches, and in all of their answers to questions should not be confounded in their ability to answer on the facts. The fact is that the western position is thoroughly sound in terms of law, in terms of statutes, in terms of policy, in terms of the failure of the Soviet Union to keep its commitments, and in terms of our fidelity to our commitment the fact that we have kept them not only in letter, but in spirit.

We may be able to give ground in many ways—and the New York Times editorial suggests fundamental proposals we can make for security, for disengagement, for guarantees against any future German oppression and for nuclear arms limitation—but we cannot give way on the ground that the Soviet Union is attempting to foist on the world in the guise of peace—that we should quit Berlin and leave it as an isolated, sterile, neutralized area. If we yield on the Soviet terms, we shall not encourage peace; we shall have a prelude to war, just as yielding at Munich was a prelude to war. I assure Senators that the parallel is very apposite.

The editorial gives the background of the subject, legally and logically. By reading it every Member of the Congress of the United States will have the capability of answering any questions of any of his constiuents as to whether the policy of the U.S. Government is reasonable or unreasonable. I believe the editorial demonstrates the U.S. policy on Germany is eminently reasonable, and I think it is must reading for every Member of Congress.

The PRESIDENT pro tempore. Is there obpection to the request of the Senator from New York?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOVIET CHALLENGE AND WESTERN RESPONSE

I

Ever since, and even during, the catastrophe of the Second World War, the Western powers have sought to restore to the world a just and lasting peace. To that end they have made innumerable proposals, beginning with the Atlantic Charter, continuing through the war and postwar conferences of Teheran, Yalta, Potsdam, Moscow, London, Paris, New York, Geneva and elsewhere and culminating in the Charter of the United Nations.

These efforts have been frustrated by Soviet Russia, which broke up the wartime alliance, violated its war and postwar agreements, spurned all attempts to control the atomic bomb, and paralyzed the United Nations with its abuse of the veto. Even the peace treaties signed by the Soviets with East European countries were used by them merely to fasten their yoke on these areas.

Now Soviet Russia has offered a new challenge to the West. In what remains, in essence, an ultimatum with a time limit, it has in effect ordered the Western powers to get out of Berlin or risk an atomic war.

II

There should be no mistake about the seriousness of this challenge, whether Khrushchev blows hot or whether he blows cold. What is at stake here is not only the fate of free Berlin and its 2,200,00 free people, or even the fate of Germany, important as both are. What is at stake is the fate of Europe, of our own first line of defense, of peace.

The abandonment of Berlin would force Germany to seek a deal with the Soviets at the price of isolation and neutralization that would make that country a marshaling ground for further Soviet advances. It would undermine the North Atlantic alliance and in the end force a premature American withdrawal from Europe. It would torpedo the whole European unification movement and split the Continent again into isolated and indefensible individual states.

The consequences of such a development for the United States are self-evident.

III

Under the Potsdam agreement and related compacts both East and West agreed that Germany, "within her frontiers as they were on 31st December, 1937," and under the supreme and joint authority of the occupying powers, should be administered as a "single unit," except for territories east of the Oder-Neisse line, put under Polish and Soviet administration pending a peace pact. It was further agreed that the Big Four should prepare Germany for reconstruction of its political life on a democratic basis, with freedom for all democratic political parties, and that the Allied Council of Ministers should prepare a German peace settlement to be accepted by an all-German Government that was to be established as soon as conditions would permit.

The manner in which Soviet Russia destroyed this agreement is history. Unable to impose its will on all Germany under joint control, it detached its zone from the rest of the country and put East Germany under Communist control, suppressed the promised freedoms, sovietized its economy and rearmed it, annexing the eastern territories outright.

In consequence, the Western powers were compelled to organize a new regime for West Germany. And after the Soviet coup in Czechoslovakia they were forced to look to their own defenses. The Western European Union and the North Atlantic alliance were the result. These organizations include West Germany in their common defense and rearm it for that purpose, but also keep it under control. But as they also check further Soviet expansion they are denounced by Moscow as aggressive military groupings and Berlin is to be the apparent instrument of their destruction.

IV

It is against this background that Soviet purposes in the Berlin challenge must be viewed. In the existing situation the Western powers cannot and should not stand merely on their defensive strength. It is important for them to mobilize the moral forces of the world in support of a real peace. It is in this area that the West has failed thus far to take full advantage of its opportunities to state its case effectively.

One principal reason is that, in contrast to the deluge of elaborate and detailed Soviet proposals, the Western powers have produced nothing equally concrete and detailed. It would seem, therefore, to be the first duty of Western statesmanship to work out a comprehensive peace plan so fair, so practical and reassuring to all, that it would appeal to the decent opinion of mankind.

With the force of world opinion behind it, such a plan might persuade the Soviets that they have more to gain than to lose by accepting it.

V

It is beyond the scope of any newspaper editorial to define the terms of such a plan, which in any case cannot be presented on a take-it-or-leave-it basis and must first be negotiated with our allies and then with

Soviet Russia. But certain essential elements of such a plan have frequently been advanced by Western statesmen. Unfortunately, these Western proposals have too often seemed to be put forward in such a tentative, cursory, and piecemeal manner as to fall short of the impact they should have. It is therefore pertinent to attempt to summarize them, to tie loose ends together, and to look at the broad outlines that emerge.

Three of the essential elements of such a plan emerge at once. The first is that any move toward real peace cannot start with negotiations over Berlin alone, as the Soviets propose. The Berlin problem is merely part of the German problem, and the German problem is part of the problem of Europe. Any separate negotiations over Berlin would be really negotiations over the Western right to stay in the city. If that right is admitted by the West to be negotiable, it is immediately undermined, and once that is done a Western withdrawal from the city is in sight.

The second essential element is that Europe cannot afford a repetition of the folly of Versailles. As both President Eisenhower and Secretary Dulles have said, any new attempt to isolate, segregate, neutralize, and demilitarize a people as numerous, vital, and vigorous as the Germans could only turn them again into a restless and dangerous force that could breed another Hitler. This is equally true of any attempt to partition Germany and divide its people by force.

The third element, deriving from the first two, is that a European peace settlement depends on a German peace settlement, and that a German peace settlement cannot be concluded in a vacuum. Militarily, politically, and economically, Germany is too large a factor in the European balance of power for such a solution. Any German settlement must therefore tie Germany into a European security system as West Germany is already tied into the Western security system.

VI

Such a system should first of all provide security for Germany's neighbors—and especially Russia—against a resurgence of German militarism and aggression and provide the basis for the kind of rapprochement that now unites Germany and France. Russia is entitled to have firm assurance in this matter.

The plan must also provide security for Germany itself, in order to prevent a recurrence of the nightmare of isolation that dominated the Germans in the past, prompted them to try to play off East against West and in the end produced the paranoia that led to disaster.

The logic of these considerations argues, therefore, that a European peace settlement should begin with the reunification of Germany and the creation of an all-German Government capable of accepting for all the German people the obligations of such a settlement. Such reunification, which would also automatically solve the Berlin problem, should rest on the will of the whole German people, and that will can be ascertained only by a free expression of opinion.

This means free elections, for which no one has found an acceptable substitute. Free elections may not necessarily be the first step toward reunification, but they should certainly be the last step. If the Communists are as certain of popular support as they claim, they should be willing to take their chances in such a test of popular opinion, together with all other parties.

The Soviets themselves agreed to such elections at Geneva, and they make a poor case when they propose that reunification be left to the German people but prevent these people from acting on that demand.

VII

A Germany reunited in freedom should be free to organize its own international relations and choose its own associations and alliances. The West makes no secret of its hopes that a reunited Germany would stay within the North Atlantic alliance. But the mutual security of both East and West also demands that the military balance of power should not be changed thereby to the detriment of either side. For that reason the Western Powers, including West Germany, have already offered various proposals which should be further explored, clarified and formalized.

These proposals include:

1. An undertaking by the North Atlantic alliance not to move its defenses eastward beyond their present positions, if a reunited Germany should choose to remain in the alliance, and to treat East Germany as a demilitarized buffer zone containing only ordinary police forces to maintain internal order.

2. No missile bases to be built on German soil, East or West. This is again an assurance to which Russia is entitled.

3. A thinning out of foreign forces in West Germany in return for a thinning out of Soviet forces in East Germany—a process which lessened tensions after the achievement of German reunification would make increasingly possible.

Over and above these measures in Germany itself, the Western Powers have suggested broader security measures. These include: (1) an overriding European security pact superimposed on both the North Atlantic alliance and the Warsaw Pact powers, which meets the Soviet proposal for an East-West nonaggression pact, and (2) a worldwide system to prevent surprise attack. Such pacts must be self-enforcing through an effective inspection and control system. But once such a system was put into operation, the way would be open to further measures of control that would lift from all nations the burden of present-day armaments and the dread of an atomic holocaust.

VIII

We believe that a comprehensive plan presented to the world, not in bits and pieces, but as a consistent and self-contained whole, would win the support of all men of goodwill, as Wilson's Fourteen Points once did. It would demonstrate the peaceful purposes of the Western Powers and should be allowed to penetrate the Iron Curtain to appeal to the Soviet masses, which also dread war.

It must be hoped that the discussions which are now beginning between the Western Allies will give consideration to such points as these and that from these discussions there will emerge a positive program to meet the crisis now threatened for the end of May.

Oilmen as Creators

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28, 1959

Mr. MONRONEY. Mr. President, a few weeks ago Oklahoma honored a group of its citizens by selecting them for the State's hall of fame. The three college presidents, two oilmen, and two distinguished women singled out in 1958 were Dr. John W. Raley, president of Oklahoma Baptist University, Shawnee; Dr. Oliver S. Willham, president of Oklahoma State University, Stillwater; Dr. W. Max Chambers, president of Central State College, Edmond; Mrs. Charles Page, Sand Springs, philanthropist; Miss Alice Marriott, Oklahoma City, author; Dean A. McGee, president Kerr-McGee Oil Industries, Oklahoma City; and K. S. (Boots) Adams, chairman of the board of Phillips Petroleum Co., Bartlesville. Each of these individuals has made a very real contribution to Oklahoma, and we are proud of them. In paying tribute to these individuals for their accomplishments, Frank Porter, president of the American Petroleum Institute, made a speech in which he wove the history of our State into a dramatic story of pioneers and the creative force they provided. I share his conviction that "the force of creation is stronger than the force of destruction," and applaud his statement that "wisely led, soundly educated Americans can both gain and guard the good life that is due them."

I ask unanimous consent that the text of the speech entitled, "Oil Men as Creators," delivered at Oklahoma City, Okla., on November 17, 1958, be printed in the Appendix of the RECORD. I make this request notwithstanding the fact that I have received from the Public Printer an estimate that the printing of the address in the RECORD will require 2¼ pages at a cost of $182.25.

The PRESIDING OFFICER. Is there objection?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OIL MEN AS CREATORS

(Address of Frank M. Porter, president, American Petroleum Institute, before Oklahoma annual hall of fame banquet, Biltmore Hotel, Oklahoma City, Okla., November 17, 1958)

The idea of this annual hall of fame banquet has always appealed strongly to me. I believe a State that takes this means of paying tribute to its distinguished citizens testifies to its own merit as well as to theirs. By the very act of acknowledging the contributions of its outstanding people, Oklahoma proves it deserves their contributions.

Certainly in this age, when there is a marked tendency to submerge the man in the mass, it is heartening to participate in a ceremony that singles out individual achievement.

The occasion reminds us of a sometimes forgotten fact: No matter how favorably situated a State may be, no matter how abundantly supplied with natural resources, that State cannot hope to rise above the performance and capabilities of its individual citizens. Far more than any natural advantage of geography, the character of the people determines the character of the State, and decides to what extent it will be successful, prosperous and productive.

Oklahoma has been doubly blessed. It has been blessed with a lavish supply of natural resources, particularly oil and natural gas; it has been blessed again with the kind of citizens who have the intelligence, energy and initiative to make the most of nature's bounty. Without the right people, the richest resources would be but idle monuments to incompetence.

This, to my mind, is the theme of our gathering tonight: The theme of human achievement.

It seems particularly fitting that the men and women chosen for this year's tribute should include educators and oil men. Both occupations have done much for Oklahoma, both have an enormous potential for future service, and both are being drawn closer and closer together by the circumstances of their respective professions.

When I entered the oil business, 42 years ago, many an experienced wildcatter would have scoffed at the suggestion that there was any mutuality of interest between oil and education.

Yet, events have shown that even then the petroleum industry was in a transition stage, though few of us noticed the change. Science was replacing hunches in the search for and production of oil, the businessman was supplanting the speculator, and the industry was moving toward a maturity of outlook. Not that it was getting old and hidebound. I hope it never gets that way. But in my starting days the industry was outgrowing the restless impatience of its adolescence and beginning to make practical plans for a long future, as only adults do.

I had the advantage of taking part in some of the oil industry's most exciting years right in this State. I had the privilege of knowing and working with men whose careers are almost legends in the industry today. I had the thrill of being in many of the historic boom towns at the height of their booms. And I shall never forget the sights and the sounds of those towns that sprang up almost magically at the first show of oil. They were noisier than bedlam and as crowded as a New York subway at rush hour.

Not for anything in the world would I have missed the experience of those boom days. And yet, as I look toward the future of this State and of the oil business, I must confess a feeling of envy for the coming generation of oil men, too. Their experiences will be altogether different from mine. Their environment will be totally changed from the one I lived in during my early years in the business. They will never know the thrills I had, or the discomforts either, but they will encounter many thrills of their own, of a different kind, but equally exciting.

The first pioneers pushed back the wilderness and opened nature's storehouse. Their successors—a new kind of pioneer—will push back the wilderness of ignorance and pry from nature its most carefully hoarded and deeply hidden secrets.

And that's where education and educators come in.

The oil pioneers got their advanced training in the toughest and most expensive school of all—the school of experience. The qualities they needed to pass their examinations are not the kind you usually expect to acquire in classrooms—qualities like physical endurance, the ability to stand up under the hardest blows of fate, courage to the point of folly, daring to the limit of recklessness, and total inability to calculate the odds against any venture.

Sometimes these qualities were carried to extremes by the tough, hard-bitten pioneers; the early oil boom towns were hardly ideal communities by any standard of civic pride. But still courage, fortitude, stamina, and determination are not to be despised. They are virtues rated high in the American heritage. I hope that parents and educators will continue to instill respect for these qualities in the next generation of Americans, and especially in those young men and women who choose to make their careers in the oil business.

But from educators much more will be needed to prepare future oil men and women—all the learning they can get in school, plus the enthusiasm to continue their education throughout their lives; and, beyond that, an unswerving desire to create, to bring forth something new in the world.

For whatever else may be said of the oilmen of the past—the pioneers—they were first, and above all, creators. Oklahoma stands today as living proof of their creative force.

Repeated over and over again in human history is the tragic record of energy, intelligence, and talent misspent on unworthy and destructive endeavors. It is our sorrow and our loss that sheer destruction has so often proved the motive for vast undertakings, and that opportunities for discovery and creation have been neglected for the hot pursuit of predatory aims.

That is why I'm proud of my association with the oil industry; it is an intensely creative enterprise, wholly dedicated to bringing something more to people, instead of taking away from someone's stock of things that already exist on the earth's surface.

I think the contrast is well made by episodes from the history of this very State.

Just a bit more than four centuries ago Francisco Coronado wandered through a vast territory of the Southwest, including Oklahoma, in pursuit of a phantom. His quest had been inspired by reports of the Seven Cities of Cibola—seven cities reputed to be so rich that they glittered with gold and the buildings were ornamented with precious stones.

And so Coronado ventured forth with a large expedition—and larger hopes for gold and glory. Even after the Seven Cities proved to be a fraud, he plodded on, goaded by fresh rumors of another great metropolis laden with treasure for the taking.

It is ironic that in the course of his expedition he traversed some of the richest land in the whole world. He passed through areas where gold and silver abounded, where there were huge stocks of another treasure—then unknown—oil, waiting for the man who would free it from its prison in the earth. But he found nothing. He returned to Mexico with empty hands and a broken heart.

Coronado found nothing because he looked for his treasure in cities already built, and the treasure wasn't there, it was hidden in the ground; the cities he sought had not been built, they were waiting for the builders to come.

Centuries later they were built, when the right men arrived—the creators—who were willing to dig for their treasure and bring forth something new in the world. But because he came to loot and plunder what others had already found, and never thought to make discoveries of his own, Coronado failed.

The Seven Cities of Cibola were a myth, as Coronado learned to his lifelong sorrow, but today real cities thrive across the land he searched because creative men came to enrich that land and nourish its prosperity. Who were the real conquistadores? The oil men—for they did not contend with other men, but with nature itself, and they did not have to loot the treasure of others; they had the vision to find treasure of their own.

I shall not attempt to recite all the advantages oil men have brought to Oklahoma. It would take too long to tell with any degree of completeness, and it would only mean repeating what all of you know and have observed with your own eyes.

However, a few figures are worth recalling just to remind us of the size of Oklahoma's economic benefits from petroleum. It is estimated, for instance, that up to the first of this year the value at the wells of the crude oil produced in this State, from the start of commercial production here, totaled close to $13 billion. Last year alone the value at the wells of the crude oil produced in the State totaled nearly $652 million, with natural gas liquids accounting for another $50 million, and natural gas itself for nearly $54 million.

Up to January 1, more than 7½ billion barrels of crude oil had been produced in Oklahoma, and there's a lot left in the ground. Proved crude reserves run to nearly 2 billion barrels, with an additional 343 million barrels of natural gas liquids, and some 14 trillion cubic feet of natural gas.

Oil or gas or both are produced in all but 8 of this State's 77 counties, and at the year's beginning there were 77,887 producing wells scattered across every part of Oklahoma. Close to 68,000 Oklahomans make their living directly in some part of the oil business.

Of course, there is no need to dwell on the ways Oklahomans, who are not even remotely connected with the petroleum industry, gain from its operations—the landowners, the merchants and business people, the royalty owners, the farmers, and many others into whose pockets flow, from one direction or another, money generated by petroleum activities.

This is truly a creative force, a purely constructive force, unleashed by the pioneer oil men who brought forth a boon from the earth that would endure long after they had spudded in their last wells. And the people we honor here tonight are men and women who have carried on this tradition by giving something new to the world—whether it is the world of machinery and chemicals, in the case of oil men; or the world of thought and learning, in the case of the educators.

I want to address myself especially to the educators when I express the hope that the schools of this State and of other States will continue to supply us with oil men and women capable of carrying forward the trail blazed by the pioneers. For the industry now and in future years has great need for such people, and the American public has a constant, growing need for the benefits they can confer.

Next year the oil industry will be 100 years old. We've climbed a long way in that first century, but only to a height that gives us a clearer view of the distances expanding before us—the limitless possibilities, the boundless opportunities, the seemingly infinite capabilities of the stuff known as petroleum.

As of now, there are more than 2,300 products made by the petroleum industry, but nobody believes the limit has been reached—or anything approaching the limit. Scientists of the future will find many hundreds, more likely thousands, of new uses for petroleum, some of them unprecedented and unparalleled by anything being done today. Here is a challenge for the creative mind, the mind aroused by education to break through the barriers surrounding our present knowledge of what petroleum can do.

Can we guess the services these new products will perform? Perhaps there'll be new fabrics to make life more comfortable for those who must work in difficult climates—the tropics or the polar regions. Perhaps they'll take the form of some simple, but prized, household improvements, a new kind of plastic or paint. Perhaps we can look for some medical discovery that will tame a terrible disease, relieve pain and suffering, or significantly prolong human life.

It may even be some present student's glory to contrive a petroleum fuel powerful enough to break with ease the grip of earth's gravity and transport the first men to see the dark side of the Moon, to pierce the clouds of Venus and solve the mystery of those canal-like markings on Mars.

Anyone who thinks petroleum has become a staid and routine wrapped business, with no chance for thrills and excitement, hasn't considered the exploits and adventures still to take place in laboratories, where a new breed of pioneer—with the old breed's imagination plus a modern education—ventures into regions that no human mind has yet explored.

That's only one of the broad avenues for the creative brain, the constructive brain, in oil. Let's look at some of the others.

Those of you who lived through the oil boom days in Oklahoma have memories of the waste that resulted from weakness in technology. The great Oklahoma City oil field, in its early stages, is a case in point. We've learned plenty since those days, but we've got much more still to learn.

Though the industry has made giant strides in the prevention of waste and the conservation of oil, it is far short of its goal. In the early days, the producer could usually expect to recover only 10 to 15 percent of the oil in a pool. Today, we're doing substantially better—recovering about 35 to 40 percent as a rule, and even more in some fields where conditions are especially favorable. But even a threefold gain in the recovery of oil from a typical reservoir leaves no room for complacency. Needed are new methods that will step up our recovery rate and bring us closer and closer to the only acceptable aim—full, one hundred percent recovery of all the available oil and gas in a pool.

There's another chance for a scientist to prove himself, and, at the same time, automatically multiply the Nation's oil reserves. And there's a chance for educators to discover and encourage students who give evidence of having the kind of skill and interests that could lead to such an important development. Just consider what it would mean to the country to have its petroleum reserves virtually tripled by improved recovery methods.

Consider also what it would mean if some scientist came up with a new and better way of drilling for oil and gas, so the wells could go deeper than they are going now, without a prohibitive increase in costs, and perhaps expose huge new oil reserves presently beyond our reach.

Here's another hint as to how today's science-minded student can prepare himself for a career ripe with opportunity: Last year over 80 percent of the 747 wildcat wells drilled in Oklahoma were dry holes. For the entire oil-producing country, the dry-hole figure was nearly 86 percent. We've greatly improved our exploration techniques, but, as these figures show, we're still playing a game that bears an uncomfortable resemblance to blindman's buff. The scientist who can do anything to reduce the odds oil producers now have to buck, who can give us more reliable ways of telling where oil is—and where it isn't—will earn the gratitude of the entire industry—and every consumer of its products. We've been waiting years for this man. I hope he comes along very soon.

I've mentioned only a few suggestions for future creative accomplishments by the highly educated and thoroughly trained oil men who will carry on with the work begun by the pioneers.

And I'm not thinking only of scientists either, though we'll need all we can get in the oil industry over the years to come. We need the right people for other occupations, too—executives for the future, mentally and morally capable of managing the industry's enterprises; highly skilled marketing people to keep the flow of products moving steadily from well to consumer; and certainly there's a very pronounced need for men and women who can do a better job of interpreting the oil industry to the public, so petroleum will stop being a national scapegoat and start receiving the understanding it deserves in the nonproducing States.

This is one of the oil industry's biggest problems today—lack of public understanding and deliberately fostered misunderstanding of our business. But we're not alone in our troubles. The whole private enterprise system is taking a beating from clever propagandists who know how to use words as weapons. No matter how brilliantly private enterprise performs, it will keep on taking punishment from these people unless it prepares itself to meet them on the battleground they have chosen, and refute their melodramatic propaganda with an equally appealing presentation of the facts. The private enterprise system is in mortal danger right now. It can't take many more propaganda blows without permanent hurt in public standing and misguided public laws. If this system is to be rescued in time, and preserved against future attacks, we must find more people with the talent and the training to wage a victorious fight for the ideas and ideals of American freedom.

You can increase the output of oilfields and the throughput of refineries to meet changing demand, but there isn't any way yet known to enlarge the supply of human talent to meet the tremendous demand now being felt in all walks of life. However, we can, and we should, look to this country's educators, and aid and support them, in developing and stimulating the best abilities in the young people given to their care. For, in large measure, what happens in our schools, our colleges and universities today will decide what happens in our country and the world tomorrow.

When we look into the future, it is with a feeling of awe at the possibilities that lie ahead. The average span of life has already been lengthened significantly and it can be lengthened more—giving people, as the saying goes, "more years in their life and more life in their years." The mobility of the present, when people think little of hopping oceans in a plane, may seem narrowly confined 10, 15, or 100 years from now. It is not at all impossible that our descendants may get away from it all by spending a vacation on the moon, as casually as one of us might take a trip to Santa Fe.

The plagues that tormented the middle ages have already been subdued in the Western World, and other diseases are yielding. Polio, once the bane of childhood, has already given way. We can hope that cancer, arthritis and the mental ills will soon be in full retreat.

Science, education, learning hold out all the prospects for a life so much better than anything we now know as to make our highest living standards seem lowly by contrast.

There is just one cloud—one threatening, ominous cloud—hanging over the future's landscape. That is the cloud of a total perversion of science in some form of destruction—either the physical destruction of war or the moral destruction of a totally regimented society. We could look happily toward the future, we could send our children and grandchildren into it cheerfully, if it were not for the specter of the kind of life described in "1984" or the end of all life in an atomic holocaust.

But I submit that the same powers of mind which are capable of inventing the advances a peaceful future can bring are equally capable of averting the catastrophes that we fear. I maintain that the force of creation is stronger than the force of destruction, and that wisely led, soundly educated Americans, can both gain and guard the good life that is due them.

We in the oil industry want them to have this good life. We have dedicated ourselves to creation—to drawing oil out of the earth and converting it into products that serve and advance human society. We want to build cities, not destroy them. We want to spread happiness and comfort, not tears and agony. These are our wishes, these are the aims we work for, these are the aspirations with which we enter the second century of our enterprise.

But we cannot realize these aims alone. We must have the help of educators, and of enlightened people everywhere, who can work with us to make this wish into a living faith, who can spread the light of learning until it overflows the boundaries of our own land into nations now groping in the darkness of ignorance and hate.

Once the people of the world understand what creative forces can do, fear and envy will be banished from human life. For when creative energies are let loose, there is no need to think of gain in terms of taking from another what rightly belongs to him, no need to struggle to grasp a small share of a dwindling stock of goods, no cause to believe that a man can get richer only by making some other man poorer.

Creation—as oil men have practiced it here in Oklahoma—as scientists are practicing it every day and will practice it even more in the future—means tapping unlimited abundance by bringing to people something they did not have before. And as this creative force advances, the evils of poverty, disease, and despair will be forced to withdraw. There will be no room for them in the world.

Let us, therefore, shun the narrow view of poor, misguided Coronado, who thought he could only increase the wealth of his own people by diminishing the possessions of another race. Let us look at life instead with the steady vision of the oil pioneers who knew that they could not enrich themselves except by enriching others, by bringing out of the earth a treasure that was denied to all until they found it.

As we approach the end of oil's first century, and look back at the obstacles surmounted, the difficulties overcome, as we consider what oil and oil men have done in this very State, and the courage and perseverance they needed to do it, we can draw upon the past for confidence in the future.

The qualities these men possessed are still being produced on American soil. They are not common today, they never were common, but neither are they scarce. The past gave us men and women with creative vision, and the future will keep up the supply. We look to our educators, and our clergy, and the other leaders of American thought to provide the inspiration and the moral incentive for the new kind of pioneers to come, so that oil's second century will shower the land with new advantages, and accelerate the progress of a State that counts its blessings and properly honors its benefactors.

The President's 1960 Budget

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. MULTER. Mr. Speaker, the Democratic Advisory Council, under date of January 21, 1959, issued a statement on the President's 1960 budget. I am pleased to commend to the attention of our colleagues this excellent statement which reads as follows:

THE PRESIDENT'S 1960 BUDGET—A STATEMENT BY THE DEMOCRATIC ADVISORY COUNCIL, WASHINGTON, D.C., JANUARY 21, 1959

The brave and new words in the President's state of the Union message have now been followed by the weak and inadequate programs contained in the President's budget message. The President says that we need to do more, but his budget proposes to do less.

The President attempts to justify this inconsistency by the claim that he is presenting a balanced budget. That claim was spurious a year ago; it is spurious today. A budget that does not meet the economic

needs of the Nation and the people cannot meet the financial needs of the Treasury.

The new Republican budget comes close to being a fraud on the American people. President Eisenhower and his advisers, if they have read the lessons of the November election, have rejected them all. They have decided that the American people want not advance but retreat, not expansion but contraction, not an imaginative step toward the future but a selfish and sullen retreat into the past. The new budget shows, above all, that in the GOP administration there are no modern Republicans and no conservative Republicans but only men who put pocketbook before people. This the people of the United States will surely remember.

What is bad for people is also bad for pocketbooks, both private and public.

The new budget talks confidently of a great expansion in income and output. This underlies the forecast of a great increase in revenue without any important increases in taxes. But at the same time national programs, far from keeping pace with the normal increase in needs and capabilities, are cut back from the levels of past years. The effect of such cutbacks is not to expand but to repress the economy. In any case, public services must keep pace with private expansion. Neither the United States nor any other country can afford to base its policy on such false reasoning and foolish inconsistencies as are manifest in this budget.

The individual budget items and the related legislative program are an intricate combination of defeat, deception, and denial. National Defense outlays are reduced, and reduced even more when proper allowance is made for price changes. This means that the administration is disarming not by negotiation, a solution that it apparently rejects, but by unilateral action. It proposes to assist our friends and meet the challenge of the Soviet Union in the uncommitted world with a big reduction in economic aid. The new Development Loan Fund and the provision for technical cooperation are to remain at low or starvation levels. Indeed, nowhere in the field of foreign affairs does the budget show the slightest imagination, or indeed, even the most elementary realization of the nature of the world in which we live.

The mistreatment of our own people is callous. The budget shows no thought of the needs of an expanding population or of an improving level of popular well-being. Nothing is deemed so important by the administration as a reduction in appropriations. As a result, there is no program for school construction, no new aid to education, nothing to show that the anxieties and concerns of the post-sputnik and space era have made the slightest impression on President Eisenhower and his Republican budget makers. Increased needs for parks, conservation, forest protection and improvement, reclamation and assistance to low-income farmers are all met with budget levels below past years.

In recent years, as the Federal Government has lagged in meeting its responsibilities, States and localities have endeavored to the best of their abilities, to fill the gap. As a result, at a time when the Federal debt has changed only slightly, State and local debt has gone up severalfold. State and local spending has increased far more rapidly than that of the Federal Government. Nevertheless this Federal budget, either in ignorance or indifference to these rising burdens, proposes to transfer numerous responsibilities of the Federal Government to States and localities. This would include some or all of the present Federal responsibility for urban renewal programs, for assistance to impacted areas, for flood control, for waste treatment and pollution control, and for feed and seed loans in areas that have suffered disaster.

In the new budget the costly and ineffective farm program is made somewhat more ineffective by a cut in support prices. Due to the ineffectiveness of the program, costs will continue to be tremendous, and as a result of the Benson mismanagement of the corn program they will probably be even higher than the present budget estimates suggest. There is an unjustifiable reduction in funds for hospital construction and for medical research programs. Veterans are to be rewarded with increased interest costs as are Rural Electrification Administration borrowers.

Nothing better symbolizes Republican attitudes than the one big increase in the budget. That is for interest charges, which rise from $7.5 billion in the present fiscal year to $8.1 billion in the next. This is exclusively the result of the increase in interest rates. The only people who benefit in the big way from the new budget are those who have money and lend it to the Government. This shows, incidentally, that the tight money policy is to be renewed with its menace to expansion.

This is the budget of an administration which has lost respect for the American people, and which seems to have lost respect even for itself. The country is fortunate in having a Democratic Congress which is alive to our needs, both at home and abroad, and which will seek to provide for these needs in an honest and responsible way. We Democrats are not for spending for the sake of spending. But we do believe in doing what must be done for the preservation of the peace and for the protection and well-being of our people.

Is Inflation Inevitable?

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address entitled "Is Inflation Inevitable?" delivered by Henry C. Wallich before the Federal Bar Association.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

IS INFLATION INEVITABLE?

(Excerpts from remarks by Henry C. Wallich, assistant to the Secretary of the Treasury, at the monthly meeting of the District of Columbia chapter of the Federal Bar Association, Washington, D.C., Jan. 21, 1959)

President Eisenhower's balanced budget submitted to the Congress on January 19 will be a major factor in the battle against inflation. It promises to remove one of the chief sources of inflation—the Federal deficit. At a time when the Nation is moving toward new peaks of prosperity, a balanced budget is essential.

President Eisenhower's budget will have anti-inflationary effects that go beyond removal of the deficit. It is balanced at $77 billion, well below the $80.9 billion expenditures expected for fiscal year 1959. It thus avoids excessively high Government expenditures which can be inflationary in periods of booming business, even if fully covered by taxes.

In the Economic Report issued January 20, the President gives details concerning further action against inflation. He proposes an amendment to the Employment Act so as to make stable prices an explicit goal of Federal economic policy. A continuing Cabinet Committee on Price Stability for Economic Growth is to follow Government and private activities affecting costs, prices, and economic growth. Another committee is established to follow specific Government activities that affect prices and costs, including procurement, construction, stockpiling, and commodity price support. Fuller public information on matters relating to inflation was also proposed by the President.

These governmental efforts will be important to control inflation. But inflation does not spring from one single source, nor can the Government, in a free economy, control all possible sources of inflation. The consumer contributes to inflation if he goes overboard in his expenditures, if he is not conservative in the use of credit, and if he fails to shop carefully. The businessman contributes to inflation if he engages in sudden large variations in capital spending, if he makes injudicious use of credit, and if he does not practice restraint in the pricing of what he sells. Labor contributes to inflation if wage demands are not kept in line with the growth of productivity. All these activities must be avoided if we are to fight inflation successfully.

In a free economy, the actions of consumers, businessmen, and labor cannot be controlled, they must be voluntary. The responsibility which this imposes is all the greater.

It is futile to believe that as a nation we can protect ourselves against inflation by pressing for higher wages, by buying ahead, and by seeking out inflation-proof havens for our savings. Some may succeed and a few may even gain a temporary advantage. But in the long run inflation hurts the entire economy and we are all hurt with it. Against the damage done to our productive system, there is no way of hedging.

Inflation long continued will undermine also our posture in the cold war. It threatens us with a new economic isolationism. If inflation is allowed to proceed, we may price ourselves out of our export markets and be less able to compete at home with imports from abroad. Inevitably, there will come new demands for tariff protection and the like. Inevitably, our ability to strengthen the free world economically, through private investment and Government aid, will be reduced. We must not let that happen at this critical juncture.

Inflation certainly can be controlled. We know that it poses a threat to the very essence of our free economy. A mature nation will not let that threat materialize.

Discrimination in Military Pay Law

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28, 1959

Mr. KUCHEL. Mr. President, the Washington Sunday Star of January 25, 1959, commented editorially that it was encouraging that a large number of Senators and Representatives have sponsored proposed legislation to prevent discrimination in retired military pay and to equalize the pay of retired members of the uniformed services.

I agree. Discrimination by statute among the combat veterans of American wars ought not to be, indeed, must not

be, tolerated. I hope legislation may be given early and favorable consideration by the Congress.

I ask unanimous consent that the entire text of the editorial comments in the Washington Star be placed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RANK DISCRIMINATION

There are gratifying indications in Congress that a highly discriminatory provision in the 1958 military pay law will be eliminated at this session. This provision, in effect, set up an inferior and a preferred retired list for pay purposes. Relegated to the inferior list were all officers who retired prior to June 1, 1958, the day the law became effective. They were limited to a retirement pay increase of 6 percent. All officers retiring after that date are on the preferred list. They are entitled to a much larger increase, based on the traditional relationship between active duty and retired list pay scales.

Among the penalized inferior group are many of the combat leaders of two World Wars and the Korean war. They have been cut off arbitrarily from the benefits which they justifiably had expected under a century-old formula. Yet officers retired since last June 1 and those hereafter to be retired are entitled to the full benefits of this formula (50 percent of present base pay of rank for officers with 20 years' service, 75 percent for those with 30 years' service). The unfairness of this so-called economy measure may be seen by the fact that a major general or rear admiral with 30 years of service who retired the day after the law became operative receives $1,884 more a year than an officer of like rank and service who had the misfortune to retire on the previous day.

The storm of protest which has arisen among active as well as retired officers of the three services is based not only on the inequity of the plan but on fear that departure from the established formula last year may set a precedent for future congressional economy. As the Cordiner report on armed service pay persuasively pointed out, the relationship between active duty and retired pay has been a vital force in stabilizing the military career service over many years. To abandon this relationship is to impair morale by holding over the services the threat of an unstable retirement-pay structure.

Hence, it is encouraging that nearly 30 Senators and numerous Representatives have sponsored identical bills at this session to equalize the pay of retired members of the uniformed services. This legislation, involving amendment of the 1958 pay law, merits early passage—in the interest of a more stable and stronger Military Establishment.

Indiana Dunes on the Shore of Lake Michigan

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent article entitled "Will New Congress Save the Dunes?—Vast Tract To Be Either a Park or a Steel Plant," published in the Chicago American of January 24, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL NEW CONGRESS SAVE THE DUNES?—VAST TRACT TO BE EITHER A PARK OR A STEEL PLANT

(By Basil Talbott)

A strip of Indiana dunes on the Lake Michigan shore east of Gary promises to become a battlefield in the new session of Congress.

The issue is a simple one. Shall this shifting landscape, with its unusual flora and soft contours, be preserved as a natural resource or shall it be consigned to vast industrial development?

Leading the forces to keep the area as it is, is the Save the Dunes Council, of which Mrs. James Buell of Ogden Dunes, Ind., wife of an Ogden Dunes physician, is president.

Unable to find an Indiana member of Congress to carry its spear, the council appealed to Senator DOUGLAS, Illinois Democrat, and found him willing and eager. He introduced a bill in the 85th Congress to make the area a national park. It got nowhere, so he is to introduce it again this session.

The council is backing him up with an army of 300,000—people who have signed petitions for the preservation of the dunes.

There is a hitch. A year and a half ago, Bethlehem Steel Co. began buying up duneland. It now owns 4,000 acres—a reported investment of $7 million—and seeks more.

ONE AND ONE-HALF MILES OF SHORELINE

The purchase takes in one and a half miles of shoreline—including the area the council wants to save for a park. At the time the steel firm began making its purchases, Eugene Grace, the board chairman, was asked what Bethlehem intended to do with the property.

His answer, rated as the quote of the year, was:

"We certainly aren't planning to put up a bird sanctuary."

Grace has subsequently retired as board chairman.

Having bought the land, Bethlehem recently evicted 58 families of dunes dwellers. These were summer residents who had rented their plots—some as long ago as 20 years—for $125 a year and put up makeshift cabins. These structures lacked modern conveniences, such as electricity, gas and plumbing.

In effect they were told to leave and take their homes with them. The sites are inaccessible except by jeep or foot. One had to be a true dunes lover to live there. Most of these dwellers obeyed only the first part of the command, which was to leave.

WEST OF PRESENT PARK

The Bethlehem property is west of, but not adjoining, the Indiana Dunes State Park at Chesterton, which attracted more than 400,000 people last year.

Citizens who are fighting against the "dooming of the dunes" contend the building of a steel plant so near would damage if not destroy the recreational facilities of the park as well as other nearby areas.

The same group also contends that efforts to get the Federal Government to build a deep-water harbor would, if successful, be a gift to Bethlehem in the event the steel firm erected a mill.

Surveys have shown Chicago's Calumet Harbor would suffice to serve the needs of the Indiana steel industry, the group claims.

Besides the slice bought by Bethlehem, there is adjoining dunes property acquired by National Steel Co. 20 years ago. Whereas Bethlehem has indicated it wants to put up a plant there, National has disclosed no plans. The stretch of dunes owned by both firms includes 4 miles of shoreline.

TENANTS TOLD TO LEAVE

National also has dunes tenants and has ordered them to leave. This firm has its headquarters in Pittsburgh.

In a speech last year, Senator DOUGLAS said:

"The (Army) Corps of Engineers has blueprinted a harbor to slash through the middle of this park, eliminating the historic trails, uprooting the botanical and biological exhibit, closing down the way stations for migrating birds, driving out the wildlife, draining the bogs, eliminating for all time the moving, lifting, shifting landscape that has been the source of inspiration to artists, writers and just plain people for generations.

"What is worse, the construction of mills on this site will irrevocably damage the State park, polluting its waters and air, surrounding it with a symbol of industrialization, walling it up with noise, making it more like a neglected vacant lot in the city than a protected area."

ESSENTIAL TO ECONOMY

Senator HOMER E. CAPEHART (Republican, Indiana), has been quoted as saying the steel mills are essential to Indiana's economy and that he had received no mail supporting the Douglas bill.

Gov. Harold W. Handley, of Indiana, reportedly remarked that Douglas should mind his own business and take care of Illinois.

DOUGLAS' answer:

"Handley ought to be ashamed of himself for taking this land from the people of Indiana. The attitude of many Indiana citizens and politicians is: 'Why should we spend money to provide recreation for Illinois?'

"This site is largely but not exclusively used by the people from Illinois and Chicago."

The dunes have attracted fishermen, campers, picnickers, bathers, photographers and other outdoors lovers since 1912 when it was brought to the public's attention by the Chicago Prairie Club, a hikers' group.

NEGOTIATE ON MERGER

A possible clue to Bethlehem's plans for use of the dunes property is supplied by the firm's recent merger negotiations with Youngstown Sheet & Tube Co., whose plant is in Indiana Harbor.

Several months ago, a New York Federal judge ruled against such a merger, saying it would tend to create a monopoly.

Bethlehem spokesmen say the decision is being studied with the possibility of initiating an appeal.

Among the groups joining the campaign of the Save the Dunes Council are the National Parks Association, Indiana Federation of Women's Clubs, Garden Clubs of Indiana, Nature Conservancy, National Wildlife Federation, Wildlife Management Institute, Wilderness Society, American Nature Association, Council of Conservationists, American Planning and Civic Association, Conservation Council of Illinois, Trustees for Conservation, and the Sierra Club.

Thailand Invites Private Investment

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28, 1959

Mr. JAVITS. Mr. President, there has been much notice of late in the United States of the importance of ac-

celerating the rate of U.S. private investment abroad from the present net of approximately $3¾ billion annually to a more realistic and needed $5 billion annually. However, this is not a one-way street, for not only must the private funds be made available from this country but there must be an atmosphere conducive to the encouragement of private investment in the countries receiving the funds.

In this regard, the changes recently enacted in the foreign investment law of Thailand are worthy of interest. The United States Department of Commerce, for example, is inviting the attention of American businessmen to the new law as an incentive to investment.

I ask unanimous consent to have printed in the Appendix of the RECORD an announcement by the Government of Thailand which invites private investments from the United States. Those, like myself, who are deeply interested in overseas investments have emphasized that there must be receptivity to such investments. Thailand is making an effort in that direction.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

ANNOUNCEMENT OF THE REVOLUTIONARY PARTY

Since the provisions of the industrial promotion act of B.E. 2497 are not deemed adequate and may constitute an obstacle to the establishment of industrial enterprises because of delays in completing the required formalities and, furthermore, because the facilities offered are not sufficiently attractive to induce both domestic and foreign private investment in industrial enterprises in Thailand, the revolutionary party, therefore, deems that the said act should be revised once the legislative assembly is constituted. In the meantime, and pending the constitution of that assembly, some measures must be taken with a view to promoting internal industrial development as promptly as possible, so that the country may receive benefits therefrom.

The revolutionary party, therefore, issues the following ordinance:

"ARTICLE 1. Such industrial activities which have already been the object of promotion by decree or by ordinance of the leader of the revolutionary party may be engaged in by private persons acting individually or jointly or by juristic persons, irrespective of whether they are corporations or limited companies and whether they are Thai or foreign. These physical or juristic persons enjoy similar rights and, once they receive necessary authorization from the committee empowered by the present ordinance, shall benefit from the following guarantees from the state:

"1. The state will not create new industrial establishments to compete with the authorized industries.

"2. The state will not transfer private industrial establishments to state ownership.

"ART. 2. The industries authorized by the committee in accordance with article 1 above shall enjoy the special rights as follows:

"1. Exemption from import duties on machinery, accessories, and equipments to be used by industrial establishments as they are first set up or for their major expansion. Such exemption shall not cover items which are produced or may be purchased in Thailand.

"2. In case the industrial undertakings are corporations or limited companies at the moment when they begin their industrial activities they shall be exempted from payment of taxes or their income derived from the sales of the products of their industries, for a period of time to be determine in each case by the committee. Such period shall not be less than 2 years and not more than 5 years.

"3. Normally the export of products of the authorized industries shall be permitted. In certain cases of necessity required by national economic interest, export may be prohibited.

"4. Remittance abroad in foreign currency is permitted for capitals and for profits derived from capitals brought into the country from abroad, after payment of taxes as required by law. Authorization must be obtained through official channel and favorable consideration shall be given to any request for remittance as far as the monetary situation will permit.

"5. Skilled workers and industrial experts shall be permitted to enter the country, even in excess of immigration quotas, if the committee empowered by this ordinance deems it appropriate.

"ART. 3. The industrial undertakings authorized by the committee empowered by the present ordinance may receive the following special rights and benefits which the committee may deem appropriate taking into account the requirements of a particular industry:

"1. Exemption from or reduction of import duties, for an appropriate period of time, on materials which are required for use in an industrial establishment and which are imported from abroad. Such materials shall include those which are consumed in the manufacturing process but will not include those which can be purchased in Thailand.

"2. Exemption or reduction, for an appropriate period of time, or export duties on manufactured products to be sent abroad.

"3. Protection through import prohibition for an appropriate period of time, of manufactured goods of the same category.

"4. Protection through increase of import duties, for an appropriate period of time, on manufactured goods of the same category.

"5. Protection through prohibition, for an appropriate period of time, of new industrial enterprises for the manufacturing of products of the same category.

"ART. 4. The committee empowered by this ordinance shall be the economic advisory committee set up by the head of the revolutionary party.

"After a government has been constituted, the committee empowered to carry out the above functions shall be the committee which the government shall designate.

"ART. 5. From the date of the effective application of this ordinance, it shall be noted that:

"1. The present ordinance shall not affect the rights or benefits which have been acquired under the industrial promotion act of B.E. 2497.

"2. Such provisions in this ordinance which may contravene those of the industrial promotion act of B.E. 2497 shall prevail over the latter.

"3. The rights and benefits accorded by the present ordinance shall accrue to those who are engaged in industries which have already been the object of promotion by the industrial promotion act of B.E. 2497. Nevertheless, these rights and benefits may not be claimed retroactively. In particular, those specified in article 2 (2) shall accrue only to the extent as will be determined by the committee.

"ART. 6. The industries which are the object of such promotion shall be listed and published subsequently."

Issued on December 5, B.E. 2501.

Field Marshal SARISDI DHANARAJATA,
Leader of the Revolutionary Party.

An Open Letter to Governor Almond

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a sermon entitled "An Open Letter to Governor Almond," delivered by Rev. Ross Allen Weston, minister of the Unitarian Church of Arlington, Va., on Sunday, January 25, 1959.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO GOVERNOR ALMOND

(Sermon delivered by Rev. ROSS Allen Weston, minister, Unitarian Church of Arlington, Va., Sunday, January 25, 1959)

JANUARY 25, 1959.

The Honorable J. LINDSAY ALMOND,
Governor of the Commonwealth of Virginia, Richmond, Va.

DEAR GOVERNOR ALMOND: My first task must necessarily be one of self-introduction, for you will want to know who it is that presumes to disturb with his tiny and insignificant voice your vast preoccupation with the complicated affairs of our Commonwealth. I am a relatively young man, the father of three children all of whom are in public schools, the minister of a Unitarian Church in Arlington, a community with which I am sure you are acquainted. I find it a fascinating and exciting place in which to live and work, and I hope that someday you will be able to spend some time here so that you can get to know us better.
